American-Flag Lines in Foreign Trade

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent that the address of Mr. James A. Farrell, Jr., president, Farrell Lines, Inc., made at a luncheon sponsored by the World Trade Center in New England in Boston, on March 4, be printed in the Appendix of the RECORD.

Mr. Farrell has presented an excellent exposition showing the great contribution which our merchant marine has made to the economy and security of our Nation and of New England in particular. I am sure that everyone interested in the American-flag fleet will find Mr. Farrell's comments stimulating and rewarding.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY MR. JAMES A. FARRELL, JR., PRESIDENT, FARRELL LINES, INC., BEFORE A LUNCHEON SPONSORED BY THE WORLD TRADE CENTER IN NEW ENGLAND, AT THE SHERATON-PLAZA HOTEL, BOSTON, MASS., MARCH 4, 1958

It is a distinct privilege to be here with you today. While those of us in America's steamship indsutry are not the most garrrulous lot you could name you will find that when there is an industry opportunity to speak in New England, the competition among candidates become stiff, indeed.

This, of course, is because we can always anticipate a hearty welcome here in are cradle of our industry.

I am particularly pleased to be here, from a personal point of view, because New England is my home in every sense. My grandfather came to Connecticut from Ireland in 1838. My father was born in New Haven where I went to college. Now I reside in the Nutmeg State and vacation as often as I can at Martha's Vineyard.

Nor are my company's ships strangers to there parts. You will see Farrell Line flags flying in ports of New Bedford, Providence, Boston, and Portland.

So you can understand, perhaps, why I am grateful for this occasion to talk to my neighbors about this New England community of ours.

My assignment this afternoon is to share with you information picked up over the years on the impact of foreign trade and United States shipping on the economy and future of New England.

Those of you whose day-to-day professional activities involve you in matters of import and export may have some reservations—which, I frankly, share—that nothing I might say in a few minutes could adequately express in sufficiently forceful terms the tremendous influence of foreign trade and ocean shipping on this area.

It is of timely significance not only to New England, but to our country as a whole under present-day conditions, that foreign trade makes jobs.

Now, in respect to the other topic which I have been asked to discuss—the United States merchant marine—let me first acknowledge the obvious: that there is no area in the country in even the same league with New England when it comes to ocean shipping.

New Englanders wrote the book on the merchant marine.

Our merchant fleet and New England grew up together from colonial days.

The first seagoing vessel launched in America, in fact, was the *Virginia*, of Sagadahock, built on Maine's Kennebec River. Her master, George Popham—founder of the historic Popham Colony—told us in his log that she displaced all of 30 tons.

The first half of the 1800's saw Nantucket's famous whalers adding proud, colorful pages to the annals of our merchant marine during their 2- and 3-year voyages to Antarctic waters.

As a matter of fact, about that same time, New England had more sailors than farmers and New England's role in our gallant maritime history shone nowhere more brilliantly than in the Revolutionary War.

Time, unfortunately, doesn't permit a chronicle of all of New England's contributions to our Nation's maritime heritage.

It is a fascinating, real life drama of which this area can always be proud. Much of it has been faithfully retained at colorful Mystic seaport and the Marine Museum there. In its own way Mystic is as fine as the maritime museums of Salem, New Bedford, Nantucket, and Edgartown.

The great names that echo through the history of this industry bespeak volumes about our country's debt to New England:

Bowditch, for instance, Salem ship chandler's apprentice, whose text on navigation remains the standard work on the subject to this day.

Or Donald McKay, father of the famed clipper ships with which Boston will always be identified. McKay's greatest achievement, the *Flying Cloud*, on her maiden voyage logged 374 miles in a single day.

But this overlong concentration on sail, as is now well known, ironically sounded the death knell for America's supremacy of the seas. It delayed, too long, a timely acknowledgment of steam as the world's new propulsion system.

It was 100 years before America recaptured the blue ribbon of the Atlantic. This time it was with the *United States*—at an average speed of 35.59 knots; or, for the benefit of our lubberly friends, more than 40 miles per hour.

New England, of course, was again well represented. William Francis Gibbs, gifted designer of the *United States*, is a Harvard man.

The Nation today stands at a point where with a twelfth of the free world's population, we are consuming more than half of all the materials it produces.

As for exports, today the United States ships overseas about 9 percent of all the things we make.

Considering the volume of our Nation's trade, inbound and outbound, and the contribution of both to the economic strength on which our military security depends, it is plain why President Eisenhower has asked Congress to extend the reciprocal trade agreement program.

Indeed, when you take the long view—weighing dispassionately all the arguments of import competition against those for expanding our foreign markets and sources of supply—it is impossible not to find that the balance tips well toward the President's view.

It is clear that the trade-agreements program should be extended—and extended for a period sufficient to inspire confidence abroad in the stability of our foreign-trade policy.

Reflect with me for a moment on what international trade means to New England's 10 million persons in terms of steady employment and the prospects for increased income.

The area's share in 1956 of 9 United States exports, alone, was valued at $654 million, according to research recently conducted by the Committee of American Steamship Lines.

According to the World Trade Center, New England's share of our gross national product is about $25 billion.

The center's conservative estimate is that 1¾ million of this represents New England's stake in foreign business.

Altogether, some 1.2 million New England workers are in jobs that depend in whole or in part on the area's imports.

Think, for instance, what the 1956 import of 150 million hides meant to New England's leather and shoe industry, which produces more than a third of the Nation's shoes.

Or consider New England's rubber footwear industry—and the dependence of towns like Fall River, Malden, Naugatuck, and Providence on rubber and latex imports.

Sumner Street here in Boston means wool the world over—and wool is New England's most valuable import. Shipments in 1956 from Argentina, Australia, South Africa, and elsewhere were valued at $87 million. That year, in fact, more than half the wool used in the United States was imported.

I want to thank the World Trade Center in New England for being our host here this afternoon. I congratulate President Ernest Henderson, and his associates, for the progress the World Trade Center has already made in the short time since its founding. Nothing is more needed for this area than an organization to undertake here the same sort of world trade development work accomplished so successfully for the Mississippi Valley by New Orleans' famous International House.

In its first year, the center, I am informed, has been highly successful in placing buyers abroad in contact with New England producers; in placing overseas sellers in touch with New England buyers; in referring thousands of trade inquiries to New England exporters and importers; in establishing a meeting place where prospective transactions can take place; and in arranging conferences between New England businessmen and visitors from abroad representing trade, diplomatic, and governmental agencies.

Still another source of possible optimism for New England's economy is the impact that may be felt in this area as a result of what I view as a genuine rebirth of the American merchant marine. The renaissance of shipping has, to date, been most evident in actions taken by the members of the Committee of American Steamship Lines, of which our company is one.

These companies, 14 in all, are those engaged exclusively in foreign trade on the Nation's essential trade routes. They operate, as you may know, under contracts with the Government.

Under the terms of these contracts the lines are required to replace their ships periodically and prior to the expiration of their economic life.

APPENDIX
J11
.R

Since most of their vessels were constructed during World War II, the lines face the problem of block obsolescence.

To solve the impossible requirement of replacing over 300 passenger and cargo ships within a 4- or 5-year period, the lines, in cooperation with the Government, have undertaken a phased-out replacement program to modernize their fleet.

Already 4 of these ships are under construction and 15 are on order. It is difficult not to be confident that New England shipbuilding, already holding more than a billion dollars in orders, stands to benefit by its share of this replacement program.

We see promising evidence of what the future may hold in the leadership New England has already shown in the unfolding age of the atom and its application to the sea.

Witness that our Nation's first underwater nuclear vessel—the *Nautilus*—was launched from New London.

While the prototype of a future fleet of nuclear-powered merchant ships is being built in Camden, who is to say that other such ships will not be built in the shipyards of New England?

And let us not forget that much of the pioneering developmental work of applying nuclear propulsion to shipping was undertaken in the laboratories of the Massachusetts Institute of Technology.

Already the contract lines have made long-range commitments totalling more than $2 billion for the construction of new ships over the next 15 years.

Think how New England industry, entirely apart from its shipbuilding sector, will prosper by the modernizing of this fleet.

Some 2,500 workers at General Electric plants in Lynn and Fitchburg are at work making propulsion turbines, reduction gears, turbo generators, and other marine equipment, much of it to be installed in American-flag ships.

For 134 years Plymouth Cordage Co., largest New England firm in the industry, has produced dependable products for America's merchant fleet. Annually, some 30 to 35 million pounds of cordage are consumed by the maritime industry alone. I am pleased note that our company—Farrell Lines—for 26 years has been privileged to serve and be served by Plymouth Cordage.

United States merchant ships without Raytheon radar equipment are hard to find these days.

Ships without Waterbury speed gears have always been hard to find.

Just a look at part of a list compiled by Grace Lines shows that Connecticut, for example, has provided many, many products for the line's new passenger ships, *Santa Rosa* and *Santa Paula:* Gaskets from Bridgeport; mosaic decorations from Litchfield, hinges from Beacon Falls; ceiling lights from Essex; stop valves from Stratford; electric cable from New Haven; and heating elements from Hartford.

New England's opportunity to benefit from our maritime construction program stems from a critical decision made by our Government 22 years ago. Then, as now, American shipowners could build their ships in foreign yards at half the cost of even the most efficient domestic yard.

But the Government recognized the need to maintain essential shipbuilding facilities and skills. With the Merchant Marine Act of 1936 it authorized payments to American shipyards to compensate them for their higher wage structure and put them on a competitive basis with foreign yards.

Why, you may ask, are the reasons for the Government's payments to the 14 American-flag lines in foreign trade?

If my estimate of the New Englander's free enterprise proclivities are accurate, there might be some among you who believe that if American ships cannot carry our trade as inexpensively as foreign lines, then let the foreign lines have it.

There are many reasons, which this country has learned through experience, why this may make a sensible theory, but proves disastrous in practice.

American-flag shipping has never sought a monopoly of the sea lanes, nor will it.

We recognize that ships of other nations give good service.

We are convinced that the American shipper benefits from the spirited competition provided over essential trade routes of the world by American-flag shipping.

Our Nation's maritime policy is based on reciprocity. We sell to foreign countries, and we buy from them. Their merchant fleets, and ours, participate in the carriage of these goods.

No American shipowner would expect more than a fair share of this two-way trade. But, conversely, he does not want to be excluded from the trade by artificial barriers and by discriminatory laws of other nations.

All this, of course, was carefully considered by Congress when it established the Merchant Marine Act of 1936. The act called for a contractual relationship under which the Government agrees to make certain payments to American lines if they, in turn, agree to the terms of the Government contract.

Among other things, these contracts require American lines to build their ships, and repair them, in American yards; to man them with American crews; and to supply them, wherever feasible, from American sources.

In addition, the contract lines are required to serve on—and only on—certain clearly established trade routes classified as essential to the Nation's commerce. Currently, the 309 ships of the contract lines are plying 33 such routes over which 95 percent of the Nation's commerce is carried.

The lines are further required to sail on regular advertised schedules, leaving on time whether they are profitably loaded or not.

Acceptance of these contractual obligations inevitably place the American shipowner at a cost disadvantage with foreign lines. Recognizing this, Government seeks, in part, to compensate him.

This is accomplished through operating differential payments—subsidy—paid in return for discharge of his obligations to the Government.

An interesting aspect of these differential payments is that, when earnings permit, they must be repaid to the Government, up to the full amount of the payments received. This is the only Government program where Uncle Sam stands to get his money back while losing none of the benefits of this initial investment.

The maritime industry, along with millions of American factory workers dependent on exports and imports, owe a debt of gratitude to the many New Englanders who have worked for and supported a strong United States merchant marine. Sherman Adams, Joseph P. Kennedy, and his distinguished Senator son John, Leverett Saltonstall, John McCormack, Edward Cochrane, Sinclair Weeks, among others, will be long remembered for their part in assuring the Nation of reliable ocean transportation.

Certain it is that New England will continue to supply our merchant marine with outstandingly capable mariners, the men who prepare for a life at sea through such fine institutions as the Maine Maritime Academy at Castine, Maine; the Massachusetts Maritime Academy at Buzzards Bay, and the Coast Guard Academy at New London.

Basic, also, to New England's growth, whatever form its new endeavors may take, will be its other assets; its great financial institutions which have had such an influence on the course of the Nation's history; its unrivaled research and educational facilities; its outstanding training schools, for skilled labor and management alike; its great natural ports.

Match these assets with the indomitable spirit of the New Englander and the future of New England products, moving in both domestic and international commerce, seems bright indeed.

Need for Agricultural Research Programs

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2, 1958

Mr. NEUBERGER. Mr. President, I have received many letters in recent days which eloquently plead for desperately needed increases in all the research budgets, but especially those requested and administered through the Department of Agriculture. One of these letters is from Dr. John R. Richards, chancellor of the Oregon State System of Higher Education, and it categorically sets forth the logic for increasing the research budget in fiscal year 1959. Chancellor Richards directs his emphasis with great force on several striking points.

I hope every Senator will consider what Chancellor Richards has to say, and to that end I am asking unanimous consent that his letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OREGON STATE SYSTEM
OF HIGHER EDUCATION,
OFFICE OF THE CHANCELLOR,
Eugene, Oreg., March 24, 1958.

The Honorable RICHARD L. NEUBERGER,
Senate Office Building,
Washington, D. C.

DEAR MR. NEUBERGER: You are aware of the fact that Oregon agricultural research officials are urging support of a proposed $6 million increase in grants to the State experiment stations for projects in agriculture, home economics and forestry.

A March 21 letter from the Oregon Agriculture Research and Advisory Council urged such support and pointed out its importance to Oregon agriculture with its direct pay rolls of $144 million (1956).

I would like to add several points to the case for the added support as follows:

1. With added interest now developing in the training of scientists—both as research workers and teachers—it should be pointed out that graduate students in many fields of science receive research training and experience through graduate fellowships offered by the agricultural experiment stations. The Oregon station is now training over 100 such graduate students. Any increased funds directed to fellowships thus have twofold benefits—productive research and training of scientists.

2. Predicted population increases for the United States and in the world require that research enable us to produce food and fiber for this ever-increasing demand.

3. There is a great need for increased support for basic research with a constant demand and pressure on State funds for the solution of applied research problems. The Oregon station must rely on Federal funds

and other grants to strengthen its basic research programs.

4. At this time of increased unemployment we must recognize that the production and processing of agricultural products represent a direct payroll in Oregon in excess of $144 million annually. Oregon agriculture depends heavily on the experiment station for utilization and marketing research, disease control methods, quality improvement, and other research to keep the lands in a healthy and competitive position.

Your continuing interest in adequate support for agricultural research in the Northwest is very much appreciated.

Sincerely,

JOHN R. RICHARDS,
Chancellor.

Conditions in the Textile Industry

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2, 1958

Mr. SPARKMAN. Mr. President, on March 19, 1958, Mr. Robert E. Pomeranz, president, Roberts Co., Sanford, N. C., gave a statement to the Small Business Administration in which he made some very pertinent suggestions regarding the situation presently prevailing in the textile industry of this country. I commend its reading to all Senators.

Accordingly, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY ROBERT E. POMERANZ, PRESIDENT, ROBERTS CO., TO THE SMALL BUSINESS ADMINISTRATION, MARCH 19, 1958

The United States textile industry has long been stigmatized as sick and backward.

Yet, events of the past 10 years prove contrary to this popular misconception and reveal the industry to be possessed of tremendous energy and drive that has seen it make remarkable advances, both in the methods of its operation and in the variety and quality of its products.

Technological developments by this industry in the last decade alone can increase man-hour productivity in the mill by more than 50 percent, well above the average increase for all industry. A growing variety of new, better quality, and better designed fabrics have been introduced. The industry spent nearly $4.5 billion for new plant and equipment just since 1948.

These definitely are not the accomplishments of a sick and backward industry. Rather, this initiative, creativity, and capacity to adjust to change have given the textile industry the necessary resiliency to withstand frustrations and misunderstandings that would have long since scuttled a less dynamic industry.

Nevertheless, when the Government maintains a passive attitude toward the textile industry, as evidenced by the confused cotton situation and encouragement of foreign competition, the industry must eventually suffer the consequences no matter how dynamic it may be.

This is the serious situation in which the textile industry is caught and which prevents it from realizing its huge potential as a basic industry so necessary in our national economy. As unreasonable pressures continue to mount, and particularly in light of the current economic recession, the small and medium-size textile mills have been forced into an untenable position that threatens their existence.

This is a strange and certainly unwarranted fate to a majority of the 8,000 mills in an industry that employs a million workers, and upon whose profitable existence depends the livelihoods of millions more in the apparel and related industries as well as the populations of thousands of mill towns throughout the country.

With annual sales of about $13 billion, the textile industry itself pays wages of some $3.5 billion a year and in conjunction with the apparel industry provides employment for 1 out of every 7 production workers in the labor force.

If this industry is forced to retrench further, the resulting widespread unemployment would trigger a dangerous chain reaction to the whole economy. Just within the past year textile mill product employment declined 81,000.

It must be remembered that the textile industry is truly exemplary of our free enterprise system, being composed of a representative number of large companies in addition to its traditionally numerous small and medium-sized mills.

Through its technological achievements the industry now possesses the means of its own salvation with which to halt this attrition, elevate itself, and add immeasurably to a healthy national economy. But years of enduring an unwholesome economic climate, in which profits dwindled and normal reservoirs of credit became exhausted, have left the bulk of the small and medium-sized mills financially incapable of taking advantage of new capital equipment which can mean the difference between operating in the black or the red.

Banks are unable to meet adequately this pressing need—primarily because they are not permitted to lend moneys for capital equipment purchases on long terms.

It has become imperative today, more than ever before, for a better understanding and relationship to exist between the Government and this industry. I urge that the Small Business Administration use its powers to help achieve this much-needed cooperation.

It is a paradox that this country goes to great extremes to help foreign governments and foreign industry finance faltering or just starting industries abroad. Yet at the same time it overlooks the plight of a domestic industry.

I would like to propose a practical program for prompt consideration by the Government which would help solve a basic problem in the textile industry and enable it to flourish and expand on a sound economic basis. This program, to be administered by the Small Business Administration or some other appropriate agency, would include the following provisions:

1. A revolving loan fund to extend substantial credit on terms of 10 years.

2. A 10-year tax depreciation schedule for new textile capital equipment or mill modernization.

The establishment of a special revolving loan fund from which well-managed but financially-strapped textile mills may borrow at low interest rates, the necessary moneys to finance the purchase of modern, efficient and more productive machinery and modernization equipment would be a major stimulus toward stabilizing and modernizing this industry.

It is also necessary for the furtherance of such a program to establish it outside of the traditional SBA format.

A huge number of mills lacking the financial ability to pursue modernization fall outside the province of the Small Business Administration, even though they are considered small by industry standards. And, their financial needs for modernization almost always exceed the sums that can be borrowed from this agency.

The Government would lend money to these mills with the full expectation and assurance of getting it back. The capital equipment financed by such loans would be the collateral. This is not just a case of charity beginning at home, for the benefits of such a fund would be considerable and the whole economy would be favorably affected. Nor is it subsidization, because such loans would be repaid at low interest rates. Best of all, it would cost the Government and the taxpayer nothing.

It is understood that Treasury officials presently have under consideration revisions in the tables listing the useful life of machinery for tax purposes. This is welcome news to those cost-beset mills who have been further hampered in financing modernization programs by unrealistic depreciation rates on capital equipment. The old regulations were written more than 20 years ago and fail to take into consideration technological advances since then, or the much more intensive production schedules under which the industry operates today.

As of this date we do not know how extensively these outmoded tax laws will be changed. But we need a realistic depreciation rate which would allow the industry to write off the purchase of capital equipment for tax purposes within a period of 10 years rather than the much longer term now specified.

Present tax laws are as obsolete as much of the machinery they force the textile industry to work with, and have been resulting in the demise of many small- and medium-sized mills and the steady loss to industry of both domestic and world markets.

Inability to finance modernization programs is perhaps the biggest current roadblock to a healthy textile industry. This double-barreled proposal for a 10-year loan and 10-year tax depreciation is a perfect answer to the original depreciation intent. Repayments on the machinery loan match exactly depreciation amounts. It would be the profits resulting from use of the machinery so financed that would enable depreciation to be earned and the loan repaid.

Stymied in its attempts to modernize, the industry is operating under the shadow of creeping obsolescence that is estimated to have hit as high as 60 to 75 percent of its capital equipment. In spindles alone, by which the capacity of the cotton and synthetic textile industry is generally measured, some 60 percent of the 18 million operational spindles are over 10 years old and several million are over 30 years.

Mills that fail to curb the spread of obsolescence and old-fashioned, costly methods will find themselves further overwhelmed by domestic and foreign competition able to efficiently produce more and better quality goods at lower prices.

And as ridiculous as it may sound, if a group of experts had specifically developed a program calculated to depress or kill off an industry, it could not have come up with a better one than that which has been inadvertently brought to bear upon the textile industry.

Can you imagine any manufacturing company opening up its secrets and techniques to a competitor, helping this competitor finance installation of the most modern machinery and the purchase of raw materials, aiding the competitor to purchase materials cheaper than it itself can, paying its workers up to 10 times more than its competitor pays, and then buying back the competitor's finished goods when its own inventories are high?

Yet each and every one of these intolerable economic practices has been and still is forced upon the textile industry.

In cotton, for example, the United States Government controls the availability and price of this raw material to its domestic industry by restricting acreage and creating artificially high man-made prices via its price-support programs. At the same time it permits, rather dictates the sale of this cotton to foreign competitors at prices sharply lower than that available to domestic mills. United States moneys are used to help these foreign mills finance the purchase of raw material, machinery, and even build new plants.

These foreign mills also enjoy the advantages of rigid import quotas, favorable tax conditions, and very cheap labor in comparison with the high cost of United States labor. And to top it all off, the United States has been lowering its own tariff rates, thus enabling foreign soft goods produced with the advantage of United States aid and often of United States cotton to enter in large quantities an already glutted American market.

By all rights, the United States textile industry should have been thriving during the past decade under the stimulus of fast expanding markets created by a population that has leaped 29 million to over 172 million. But such is not the case.

Foreign aid and peaceful coexistence is something everybody wants. But this must work both ways. In all fairness, the textile industry needs recognition of its plight and equal opportunity rather than the discrimination it has had to endure under the present foreign-aid programs and domestic price-support policies.

Action is essential and past due on this problem which impedes a major and basic segment of our national economy. Action should and must be taken before it is too late.

Carl Sandburg—An Appreciation

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2, 1958

Mr. ERVIN. Mr. President, a recent meeting in Raleigh, N. C., paid tribute to its adopted son, Carl Sandburg, the great poet and historian. Our scholarly State treasurer, Edwin Gill, delivered an inimitable address entitled "Carl Sandburg—An Appreciation." Inasmuch as this address presents such an accurate and illuminating analysis of the poetic and historical work of this great American writer, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CARL SANDBURG—AN APPRECIATION
(By Edwin Gill)

On behalf of the State of North Carolina, I welcome Carl Sandburg to Raleigh and hereby declare him to be secure in the affections of our people. He has adopted us and we have adopted him.

Every generation produces artists, poets, and singers of songs who broadly echo the past. Although they show originality, it is usually disciplined by the prevailing mode, the accepted style, the approved canons of taste. Even in their daring they stay well within metes and bounds. Even in their innovations, there is an unmistakable air of conformity.

And then quite suddenly, without rhyme or reason, the human race produces an original—a personality so new, so fresh, so devoid of self-consciousness, so naive in its spirit, so starkly objective in its vision, and yet so loving in its approach as to render the usual tools of criticism quite inadequate.

In the presence of such a person we can only shout with joy—here is something that has never happened before. Here is something new under the sun.

Now our guest of honor, Carl Sandburg, is an original—something that has never happened before—something new under the sun. And how does this come about? Those schooled in science might call it a mutation. Those steeped in religion will call it a miracle. Of course, after making a bow, both to heredity and divine intervention, Mr. Sandburg might add that he had something to do with the result in terms of the sweat of hard work and the toil of patient effort.

I do not mean to suggest that men like Sandburg do not owe a debt to the past—all men do. I simply mean that they absorb all the influences of the past and with that alchemy that is the essence of genius, put words or other component parts of a masterpiece together in a way that is quite new and without precedent. And may I say that Mr. Sandburg, both in his method and in his outlook, is as modern as the latest invention of the space age and as timely as the morning paper.

In his autobiography Mr. Sandburg has told us in a heartwarming way of his parents who were so wonderfully strong and vital, but I am thinking now of his literary kinfolks. And I thought it would be interesting to speculate for a moment with respect to his uncles, cousins, and other literary relatives. Now it is perfectly natural for a southerner to discuss family ties and, when we feel so inclined, to claim kinships with even third and fourth cousins. On the other hand, we do not hesitate to disclaim relationship with those of whom we are not proud and, on occasion, to deny that we ever knew the proverbial black sheep. So, if I now have the temerity to assign certain literary kin to Mr. Sandburg, I would remind you and him of the right of disclaimer if it is felt that the alleged relationship is tenuous.

Surely free-swinging Walt Whitman was his great-uncle and shy, sensitive Emily Dickinson was his great-aunt. Among his distant relatives I find Bret Harte and Mark Twain, while his first cousins could be Vachel Lindsay, Edgar Lee Masters, and Robert Frost, and I would think that among his nephews we might even find our own Thomas Wolfe. But when I come to name his literary father, I hesitate, and then go on to say that he could have been that tall, angular man with the stovepipe hat who went to Gettysburg one day and made there a brief, immortal address. And if I were to be so bold as to attempt to name his spiritual ancestor, I would suggest that patriarch whose gifted hand wrote the book of Job.

Mr. Sandburg is a poet, a novelist, an essayist, a singer of songs, a teller of tales for children. He is also a biographer: Reverently, through the years, he has followed in the footsteps of Abe, saturating his mind and his heart with Lincoln's spirit. Had he done nothing more than give to us a clear picture of Lincoln—not the marble Lincoln in Washington, but the very human Lincoln who could laugh at good stories and yet was subject to dark moods, who could joke and gossip with the boys around the cracker barrel and yet could write like the psalmist—had he done nothing but show us Lincoln, that would have been enough for any one man to do. Mr. Sandburg, we can pay you no higher tribute than to say that if fate had allowed you and Abe to be neighbors, swapping stories and laughing together, Lincoln would have loved you.

The Bible speaks of those who having eyes see not and having ears hear not, suggesting that some of us are not fully aware of the world around us—that we are only half alive—that our senses are dulled and blunted—that only on rare occasions do we really sense the wonder of the world through which we move. So it is necessary that we have poets—and I include in the term "poet" artists, composers and all those creative minds that are gifted with inner vision—for poets are people whose senses are keener and more highly developed, who see, hear, taste, smell and touch with greater insight than the rank-and-file of men.

Through the wonderful poetry of Sandburg we experience sounds that we were never conscious of before: For instance, we may hear the stirring of the soil in springtime, the patter of the fog as it comes and goes, the movement of growing corn, the recoil of leaves and grasses as they are smitten by the frost. We may hear the slow but inevitable turning of the seasons. Now only a poet can hear such things—only a man like Sanburg can hear "the thunders of silence."

His verse can be as mild as mist and as consoling as rain, but it can also be as hard as steel and as raw as a slaughterhouse. When Sandburg sings his song of America, he does not hesitate to use the bold, pungent words that are required to convey his powerful meaning. And believe me, there is music in it all.

In Sandburg's verse you hear the plain talk of plain people, the gossip of farmers, laboring men, white collar workers, women talking with women about neighborhood affairs, the latest jokes, the brightest sayings, the pearls of wisdom, the fables that are on the lips of the common people in all the fields, factories, filling stations and crossroad stores—and through it all the contagious laughter of children.

He tells us that the people can blow hot and cold, that they can be cruel, misguided, foolish, but that they can also be brave, compassionate and capable of great sacrifice—and that in the great crisis of life, when the chips are down and the issues of right and wrong and of life and death are clear, the people can be magnificently right.

Jury Trials and Contempt

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Jury Trials and Contempt," published in the Washington Post and Times Herald of April 2, 1958. I call the attention of the Senate particularly to the excerpt from the opinion by Justice Frankfurter, in which he admonishes the Court not to become a third branch of the legislature. I sincerely hope that the Court will take the admonition seriously.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JURY TRIALS AND CONTEMPT

Last summer Congress fought for weeks over the use of juries in criminal contempt cases and finally compromised. Now the Supreme Court has wrestled with the same issue and divided 5 to 4. These isolated facts accurately measure the highly controversial nature of the issue. Yet it seems to us that the majority of the Court has come up with the best answer from the viewpoints of history, law, and orderly processes of government.

The Court has adhered to the concept of the contempt power that has been written into the law since the country was founded and which has been repeatedly upheld by the Court itself. Consequently it found no fault in the sentencing of Gilbert Green and Henry Winston, Smith Act convicts, to 3 years in prison (in addition to their 5-year sentences under the Smith Act) for contempt of court. Their contempt consisted of disappearing for 4½ years after they had been ordered to be present for sentencing.

Were the sentences unduly severe? Justice Harlan, writing for the Court, answered "no" because the contempt was a "most egregious one." The sentences were shorter by a year than that imposed on one other Communist fugitive in the Smith Act case. Congress has since provided a 5-year maximum penalty for bail-jumping.

Why were not the fugitives indicted and prosecuted for bail-jumping with a trial by jury? Nearly everyone seems to agree that this would have been the more satisfactory procedure. At the time the offenses were committed, however, bail-jumping was not a Federal crime. This fact would not, of course, justify the courts in resorting to arbitrary procedure. But it certainly left the door open for application of the contempt power in the same manner in which it has been used for a century and a half.

Justice Black's sweeping dissent, in which Chief Justice Warren and Justice Douglas joined, would outlaw this use of the contempt power as a violation of the Bill of Rights. In other words, these three dissenters (Justice Brennan stood on other ground) insisted that the defendants were entitled to be tried by a jury after indictment by a grand jury and in full accordance with all the procedural safeguards required by the Constitution for all criminal prosecutions. Justice Black hammered vehemently on his thesis that the Court has been wrong in the past and that it has an obligation to correct its error.

To this Justice Frankfurter replied in a concurring opinion that the power to punish summarily for contempt has been accepted without question by the Supreme Court in at least 40 cases. By way of making his point more effective he called the roll of 53 Justices who have participated in these decisions, including Marshall, Story, Bradley, Holmes, Hughes, Brandeis, Stone, Cardozo and Jackson. Mr. Frankfurter cut close to the heart of the issue when he wrote:

"To be sure, it is never too late for this Court to correct a misconception in an occasional decision, even on a rare occasion, to change a rule of law that may have long persisted but also have long been questioned and only fluctuatingly applied. To say that everybody on the Court has been wrong for 150 years and that that which has been deemed a part of the bone and sinew of the law should now be extirpated is quite another thing. Decisionmaking is not a mechanical process, but neither is this Court an originating lawmaker. The admonition of Mr. Justice Brandeis that we are not a third branch of the legislature should never be disregarded."

Congress may require jury trials in contempt cases when that seems appropriate, as it has sometimes done in the past. But when Congress has repeatedly given the courts power of summary punishment for contempt and when the country's ablest judges over a long period have found no barrier in the Constitution, it would be drastic indeed for a few justices to sweep away the whole structure. There is still much wisdom in judicial restraint.

Easy Prey for the Russians

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Courage Never Goes Out of Fashion", written by Mr. William Loeb, publisher, and published in the Manchester Union Leader of March 22, 1958.

The editorial lauds the reporting of Mr. Constantine Brown when he recently made a trip to some of the trouble spots of the world.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

COURAGE NEVER GOES OUT OF FASHION

(By William Loeb, publisher)

Constantine Brown, world-famous war correspondent and Washington observer and columnist, has been making an on-the-spot check of serious danger spots in the world. Some of his most interesting columns have been written from the Near East.

We would especially like to call your attention to some of his remarks on the courage and fighting spirit of the people who have come from all over the world to settle in the new state of Israel.

Brown tells of talking to an Israeli taxi driver who said: "I occasionally read English and American newspapers. It seems that you are in a hell of a fix because of the Russians. That comes from being too fat and comfortable. If some of your people were to come here and live for 24 hours a day, with the conviction that the Arabs will descend upon you at any moment, you will forget how to be scared and will think only how best to beat them back."

The taxi driver went on to speak of the settlers driving their tractors, with one hand on the steering wheel and the other on a rifle, and compared that spirit to that of the American Colonists who cleared their land with rifles always close at hand to defend themselves against surprise Indian attacks.

There is no doubt in this newspaper's mind, as we have repeatedly told our readers, that at the root of our wishy-washy appeasing foreign policy, which continually belly-crawls to the Russians, is the fact that by and large unfortunately, the leaders of the American people and many of the American people themselves have become so soft as to make comfort and ease their main objectives in life.

Such people are easy prey to the rough, tough, and ruthless Russians.

Unless we can recapture some of the rugged, virile, and vital traits of spirit, mind and body which characterized the Founding Fathers of the United States and which now shows up in the determined people of Israel, this nation will not survive because it will have lost the will to survive.

There is no use arguing about the justice or injustice of it. If the United States wants to continue to exist, the happy, easy, soft days are gone for all of us.

Commendatory Reviews of J. Edgar Hoover's Masters of Deceit

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 31, 1958

Mr. KEATING. Mr. Speaker, the flow of words commending J. Edgar Hoover for his new book, Masters of Deceit, continues to grow with each passing day. And rightly so, for this is a story that needed to be told, told not in pedantic words of the detached observer, but in the living prose of the man who has for so long been on the direct firing line in the fight against subversion.

Too many people, otherwise well-informed people, in recent years have come to the conclusion that communism in the United States no longer poses a serious threat to our national security. The drop in the membership of the party has been used as a yardstick of its effectiveness.

I have never subscribed to the view that we should relax our antisubversive measures just because the threat which shows above the surface appears to be diminished. Now we have a book which should clear the air once and for all. Mr. Hoover strips away the veil of fallacy and exposes the Communist movement in its true light. He shows it is a conspiracy dependent not so much on numbers, but on position and dedicated discipline. He stresses that one zealot in the right spot, is more dangerous than a thousand who are not.

The role of the reviewer is an important one in gaining a wide readership for any book. Among the many fine reviews of Masters of Deceit which have been written are those by William Edwards of the Chicago Sunday Tribune and Roger Stuart of Scripps-Howard in the Washington Daily News. With clarity and perception they have told the story of the book and indicated its importance to all Americans. Under leave previously granted, I insert both reviews at this point in the RECORD:

[From the Chicago Sunday Tribune of March 9, 1958]

HOOVER WARNS OF COMMUNISM IN UNITED STATES

(Review of Masters of Deceit by Willard Edwards)

No American has delved more deeply into the nature of the American Communist movement than the Director of the Federal Bureau of Investigation. For 38 years, he has been studying and analyzing this conspiracy under foreign control to establish a Soviet United States.

In this dawn of the space age, J. Edgar Hoover finds a nation largely apathetic to the activities of the Communist Party U. S. A. He has looked upon his fellow citizens and found their eyes focused on Russian satellites overhead, not on potential spies and saboteurs underground. Billions are being spent in frantic haste to cope with Soviet ICBM's; the Kremlin's record of conquests by boring from within is ignored.

Deeply disturbed, drawing upon the vast files of the FBI for supporting data, Hoover

has set himself the task of warning that the American Communist Party remains today a powerful conspiratorial group "operating under modern conditions as an arm of revolution."

This contention is bound to stir sharp dissent in certain intellectual circles where communism has never been regarded as much of a threat at any time. Party membership has dwindled from a peak of 80,000 in 1944 to a current level of some 20,000. The Daily Worker, party organ, has suspended publication. Communist leaders like Howard Fast and John Gates have deserted the ranks, crying that the party is dying and will quietly expire if left alone. The Supreme Court has set free a large number of convicted Communist agitators on the ground that they are just noisy talkers with no real harm in them.

Only a man of deep convictions, great knowledge, and immense prestige could have braved this climate of complacency. Of surface indications that the Communist Party is fading in influencec and power, Hoover cautions:

"Its present menace grows in direct ratio to the rising feeling that it is a small, dissident element and need not be feared. As we relax our protection and ease up on security measures, we move closer and closer to a fool's paradise."

Having stated his thesis, he proceeds to support it. Something close to a literary triumph has resulted. This professional policeman has produced a classic—a severely simple history of communism and its strategy, tactics, growth and operations above and underground. This is enlivened with colorful illustrations and anecdotes. The result is a vastly readable book.

The opening chapters under the heading, "How Communism Began," are brilliant. Marx, Lenin, and Stalin become living, breathing characters. Dialectical materialism is stripped of its mystery in six lines.

There is an illuminating discussion of the motives which induce native Americans to betray their country for a foreign tyranny. The everyday life of rank-and-file Communists is described. The deadly efficiency of Communist spies, skillfully directed from Moscow, is stressed. All this is buttressed with case histories from the FBI files.

Another section pinpoints the consistent anti-Semitism of the Soviet Union and punctures the "malicious myth" that those of Jewish faith have something in common with communism.

Hoover rigidly avoids controversy and sensationalism—to the rather extraordinary extent of ignoring the 1948–54 period when the Alger Hiss case and the Communists in Government issue stirred the Nation and excited world interest. These are curious omissions in a work subtitled, "The Story of Communism in America," but understandable in the light of the author's objective: to present a calm and factual recital, devoid of political implications, which will enable the American people to recognize and fight the enemy in our midst.

Here is a textbook which educates as it entertains. It ought to be in the hands of every college student. It is also recommended reading for the President of the United States, who confessed last year that he had difficulty arguing the comparative merits of communism and capitalism with a Soviet marshal.

[From the Washington Daily News of March 6, 1958]

NEW HOOVER BOOK EXPOSES UNITED STATES REDS

(By Roger Stuart)

Next week, a new kind of "do it yourself" book will hit the bookstalls: J. Edgar Hoover's Masters of Deceit. It is the story of communism in this country, designed to show how Americans can fight it.

Mr. Hoover's comprehensive knowledge of communism has been acquired over a period of nearly 4 decades. He's convinced that it was never a greater threat than it is now.

He has reason to know that an expanded program by a revitalized Communist Party in America has been launched in recent months. This follows the carefully planted myth that the party had cut itself off from Kremlin direction, which the FBI chief has sought, through speeches, articles, and testimony before congressional committees to controvert.

HE KNOWS

So the idea of the book was conceived. For, though his highly qualified investigative agency can do much, no one knows better than Mr. Hoover that the G-men alone cannot possibly win.

It is essential, he believes, that citizens throughout the Nation understand how communism originated, what its aims are and the frequently devious manner in which it operates.

So he has written a sort of textbook to help Americans preserve their way of life from a highly organized, day-and-night movement dedicated to the destruction of liberty.

Mr. Hoover says he hopes that Communists, too, will read his book. He believes that once they are shown how they were taken in, they will shed their allegiance to it.

This isn't the first time J. Edgar Hoover has written about the nature of communism. Not long ago he described in a year-end report to Attorney General William P. Rogers how the Communist Party within the past year had been encouraged by its success at invoking legal technicalities and delays in court actions against them, as well as by growing public complacency toward domestic threats to America's internal security.

It was an assignment from another Attorney General, some 39 years ago, that launched Mr. Hoover, then special assistant to the head of the Justice Department, on the road to acquiring his vast store of knowledge concerning communism.

In 1919, scarcely a year after the end of World War I, the new Soviet Government in Russia hardly had settled down to business. But already Red organizations were at work in the United States.

REQUEST

Mr. Hoover, an energetic young graduate from the George Washington University Law School (he's a native of the Capital City), was asked by Attorney General A. Mitchell Palmer to prepare a legal brief on the Reds.

In succeeding years, as the FBI (of which Mr. Hoover became director in 1924) has perfected its investigatory techniques, the veteran chief has learned a great deal.

Mr. Hoover hopes his fellow citizens will join him and the FBI in preventing it from capturing, by subterfuge and deceit, their birthright of freedom.

The Liberal

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by D. Bruce Shine, editor of the Pioneer, the student publication of Tusculum College at Greeneville, Tenn. I have known Bruce Shine very favorably for many years. He is an outstanding and highly intellectual young man. This is a thought-provoking comment by one of our youths of today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pioneer of Tusculum College, November 8, 1957]

THE LIBERAL

(Written by Editor in Chief D. Bruce Shine)

Where has the college liberal of the twenties and thirties gone? Today on every major college campus in the Nation the average student is content to be satisfied with the everyday happenings of the world. Gone is the spirit of creative thought that perhaps here might be a better way than the present road our world is following.

We do not mean to be partisan in any respect when we suggest the college student should question the present world events. To find the true spirit one must go out and explore the new and free pathways of the world.

It seems in the machine age that we are living in today we tend to turn our minds into a mechanical apparatus. To us this is more than wrong, but rather an attempt to seal ourselves from the duties of life. Public service has always been of prime importance in the running of the world, but today fewer college students are entering into the field. If this is allowed to continue the world will find itself being run by a group of incompetents.

The college liberal has in the past served as a herald of a coming age, but today few, if any, such liberal souls appear on the scene. Why? We might ask ourselves. Could it be that one finds life far more enjoyable sitting at home after dinner reading the newspaper, rather than going out to do something to remedy the problems he easily reads about? There can be no room in our lives in the fear of speaking out on issues of prime importance, rather we say to you, "It's your duty." Criticism is always accepted when it is accompanied with constructive suggestions to help relieve the situation.

We have all witnessed people who perform one single task on a job; it might be the attaching of a button or tube to a piece of machinery. If the trend in our present-day life continues as it is, the educated citizen of today will become no more than that unskilled laborer. The world has never been guided by narrowminded individuals, but rather by the person who has entered life with a broader picture of the world and its problems.

It is our hope and our prayer that young America will grow quickly out of the trend to which it is heading. If we are to face tomorrow with the conviction of making this world a better place to live in we must alter our course considerably. If we fail to do this there can be no hope for our way of life, our ideals. Of this we are most certain.

Pensions for Former Presidents

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. BOLLING. Mr. Speaker, the editorial which follows appeared in the Monday, March 31, Kansas City Star,

and powerfully states the case for a bill which has been too long delayed:

PENSIONS FOR FORMER PRESIDENTS

We recall from history the tragic story of Ulysses S. Grant, a dying man, devoting his waning energy to completing the memoirs that might pay his debts. The picture is brought to mind by the renewed effort in Washington to provide pensions for former Presidents. Such a bill passed the Senate last year and now Speaker RAYBURN and Representative MARTIN are pressing for House action. They deserve full bipartisan support.

Petty opposition developed in the lower Chamber last year because of the feeling toward Harry Truman. It was cheap politics. The question is not the need of Mr. Truman or Mr. Hoover, or the possible need of President Eisenhower after he leaves office. The question is a much broader one which deals with the attitude of the Nation toward any man who has held its highest office.

In the last quarter century we have become a pension-minded people. Yet we have done little (except for some free postage) for the retired citizens from the No. 1 office. Grover Cleveland, out of office, had considerable difficulty making ends meet until friends created a life-insurance trusteeship for him. Coolidge was in similar financial trouble.

Having led the most powerful Nation in the world, no man can slip into obscurity. Nor, unless he is independently wealthy, can he hope to save enough in office for a comfortable retirement.

The Senate bill would provide an annual compensation of $25,000 and other benefits for former Presidents. With an allowance of $70,000 a year for clerical staff the total cost would be about $100,000 a year for an ex-President. America has rewarded almost every retired civil service from judge to dog catcher. For far too long, however, we have neglected the men who must make the long move from 1600 Pennsylvania Avenue.

Dr. George

SPEECH
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1958

Mr. MORRISON. Mr. Speaker, it is always a sad occasion when we meet together in this House after learning of the loss of one of our Members. I believe that serving together draws the Members more closely together than any other association of men and women.

An even deeper sense of grief than usual is mine today, because the Member we have lost is my very close and dear friend, GEORGE SHANNON LONG, affectionately known as Dr. GEORGE, not only by our Louisiana delegation but by the entire membership. Dr. GEORGE is one man, above all in my experience, who lived by the Golden Rule.

His deep religious and moral principles were reflected in every action in his daily life. It may truly be said that his dignity, courage, and diligence were in the highest traditions of this House. Yet, these attributes were fully equaled by his deeply sympathetic approach to the problems of others, and his thoughtfulness, courtesy, and friendliness to everyone who came in contact with him.

I have often felt, but have not taken the occasion to say it until this moment, that every individual who met or talked or worked with Dr. GEORGE was the better for the experience.

It has been my great privilege to enjoy the close personal friendship of GEORGE LONG and his fine family for many years. Time will not permit a recitation of his many kindnesses to me and to all of his associates. I know that these things will stand to his credit in a higher place.

Dr. LONG's life story is the story of a self-made man—a man who literally made a high place for himself in the councils of his State and his Nation. He is a credit to his chosen profession of dentistry and to the people of the Eighth District of Louisiana, whom he has represented so effectively since 1953 in this Congress. He was just coming into his own as one of the great leaders and statesmen that typify the outstanding leadership the South has furnished since the birth of the United States. It is not ours to question the wisdom of He who called Dr. GEORGE from among us. Dr. GEORGE had well and faithfully carried out his duties in this life. His absence will be felt and mourned, but his accomplishments will go on to benefit the people of his State and his country.

Dr. LONG, in his conscientious devotion to duty, simply drew too deeply on his vast reservoir of energy and vitality in his endeavor to achieve, in the span of his service in Congress, advances that would have taken many years longer in the hands of another man. He is truly a martyr to his devotion to duty.

Let us, then, count ourselves fortunate to have known this wonderful man, and to have had our paths in life cross his. Though mourning his loss, we may be consoled that the good he did lives on.

They cannot wholly pass away,
How far so e'er above;
Nor we, the lingerers, wholly stay
Apart from those we love:
For spirits in eternity,
As shadows in the sun,
Reach backward into time
As we, like lifted clouds, reach on.

The Magnificient, Humanitarian Work of UNICEF

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, April 2, 1958

Mr. WILEY. Mr. President, one of the great humanitarian organizations of this world is the United Nations Children's Fund—known popularly as UNICEF.

On many occasions it has been my pleasure and privilege to praise this outstanding organization. Last year, its 11th year of service, it aided no less than 45 million children and mothers throughout the world.

I was pleased to note in the publication issued by the United States Committee for UNICEF two very fine articles describing UNICEF's work. I may say that, dollar for dollar, I know of no single appropriation made by the Congress which does more good for more people than the modest eleven-or-so-million dollars which this country provides to this great organization.

I send to the desk the text of two articles from the United States committee's publication, and I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

UNITED STATES COMMITTEE FOR UNICEF,
UNITED NATIONS, N. Y.

Board of directors: Mrs. Guido Pantaleoni, Jr., president; Clarence E. Pickett, vice president; Robert Thrun, vice president; Cass Canfield, treasurer; Mrs. Charles Poletti, secretary; Norman Acton, Mrs. Arthur F. Anderson, Gen. Frederick G. Atkinson, Mrs. Chester Bowles, Mrs. J. Cheever Cowdin, Miss Gertrude Ely, Miss Frances K. Kernohan, Mrs. E. Bliss Parkinson, Chauncey G. Paxson, Dr. Joseph Stokes, Mrs. George P. Taubman, Jr., staff; Norman Acton, executive director; Jeannette Fritsche, deputy executive director.

THE SIZE OF THE UNICEF DOLLAR

(EDITOR'S NOTE.—This is the first of a series of articles in which News of the World's Children will discuss the principal characteristics of UNICEF's operations. Comments and questions are welcome.)

An important reason for the broad base of support enjoyed by the United Nations Children's Fund is the success it achieves in translating available funds into maximum assistance to children. The total figures for any year provide ample evidence of this success. In 1956, for example, UNICEF assisted child health, nutrition, and welfare programs in nearly 100 countries and territories, programs which directly benefited an estimated 40 million children and mothers and indirectly aided uncounted millions more. In that year, net expenditures of the Children's Fund were only $17,690,357.

What makes a UNICEF dollar so large? Here are some of the factors:

Administrative costs are low. The Children's Fund practices rigid economy to insure that a maximum share of each dollar will actually go to the assistance of children and mothers. Taking 1956 as an example again, only 7.37 percent of expenditures was for administrative purposes. The balance of $16,386,618 was used to assist the programs and the children and mothers mentioned above.

The staff is small. The vast accomplishments of 1956 were realized with a total staff of 326. Headquarters assignments, including secretarial, clerical and warehousing tasks as well as professional direction, occupied 126 of these. The remaining 200 manned regional area, and country offices in 25 locations throughout the world.

Volume procurement and shipping reduce unit costs. By purchasing medicines, insecticides, vehicles, and other materials and equipment in large quantities on the international market, UNICEF achieves maximum economy. Thus, the shot of penicillin which cures a child of yaws costs only 5 cents, the sulfone tablets for 3 years' treatment of a child with leprosy costs only $1, the technical equipment for a small maternal and child health center costs only $54. The United States contributes surplus dried skim milk and UNICEF pays the ocean freight,

It is thus possible to provide a large glass of milk for one-fifth of a cent.

Operational costs are low. Governments receiving UNICEF aid accept the responsibility for the operation of services in their countries, with guidance from UNICEF and the U. N. specialized agencies. This not only encourages local initiative, it also holds the children's fund's expenditures for operational services to a minimum. In 1956, these accounted for only 6.47 percent of UNICEF expenditures.

The effect of a UNICEF dollar is measured not only by the factors listed above. It is measured also by the matching investments of the countries receiving aid, for in that factor rests evidence of the fund's success in mobilizing resources to solve the health, nutrition, and welfare problems of the world's children. Receiving countries are required to match the value of UNICEF aid on at least a dollar for dollar basis. In fact they greatly exceed the required ratio and in 1956 matching funds committed by the governments of the receiving countries amounted to $2.29 for each UNICEF dollar. Stated another way, the UNICEF Executive Board in 1956 approved allocations for assistance in that and future years totaling $22.4 million and brought about a mobilization of local resources for children in UNICEF-aided countries through commitments of their governments valued at $51.3 million.

Whether it comes through the Halloween trick or treat in the United States and Canada, through the sale of UNICEF greeting cards in some 70 countries, through private efforts in many other countries, or through the voluntary contributions of more than 80 governments the UNICEF dollar or pound or yen or franc or rupee or peso is a big coin. It buys full value in the health and happiness of children and in constructive cooperation among adults.

FOR THOSE WHO HELP THEMSELVES

(Editor's note: This is the second of a series of articles in which News of the World's Children will discuss the principal characteristics of UNICEF's operations. Comments and questions are welcome.)

In 1957, the Executive Board of the United Nations Children's Fund approved allocations totaling $24,150,000 to bring to 320 the number of child health, nutrition, and welfare projects being assisted in 104 countries and territories. At the same time, the countries receiving this UNICEF aid committed $57 million as their matching investments in these same projects. Required by UNICEF policy to provide local services and facilities which match the fund's grants dollar for dollar, the assisted nations in 1957 far exceeded that formula. Their commitments averaged $2.79 for each UNICEF dollar.

Behind the above statistics lie many encouraging stories, but none is more significant for the future of the world's children than the story of how UNICEF aid stimulates initiative and action by people and governments whose children need help. With 600 million children living in needy areas, with sickness, hunger, and other suffering being the products of an inadequate standard of living for two-thirds of the world's people, it is obvious that real improvement will become permanent only when governments, communities, and parents have acquired the ability and the knowledge to create a better life for their children.

Here is how UNICEF stimulates self-help:

First, a government desiring aid from UNICEF, or from any member of the U. N. family, must request assistance. This request may be for a survey to determine what the problems are or for help in solving a known problem; in either case it means that the country has recognized a child health, nutrition, or welfare problem and has accepted responsibility to do something about it.

Next, in cooperation with UNICEF, the World Health Organization, the Food and Agriculture Organization, or the U. N. Bureau of Social Affairs, the government must work out a plan to attack the problem. U. N. technical assistance representatives also participate when appropriate. Such a plan includes not only the technical and operational details, but also provisions for necessary administration, budget, local personnel, public education measures and building facilities. Thus there is established a framework of the ingredients essential to permanent child care programs. The participation of the U. N. agencies insures that the experience and skills of other nations are available to help make these plans a success.

When planning is complete and the proposed project goes to the UNICEF Executive Board for approval, the country requesting aid has completed a detailed plan of operations and agreed to accept the responsibility for the carrying out of the project. It is not a UNICEF project, or a WHO project, or an FAO project; it is a country project, assisted by one or more of the U. N. agencies for a stated period of time.

When operations are underway there is technical guidance when needed by international personnel, supervision by UNICEF of the utilization of the supplies and equipment it has provided, and reviews of progress by the participating agencies. But the work is carried out by the country concerned and the people it has enlisted, both through employment and as volunteers, in the execution of the plan. Thus, UNICEF staff in the field totals only some 200 at a time, when more than 100 countries and territories are carrying out fund-aided projects benefiting 45 million children and mothers annually.

Added together, these practices make possible the dramatic and far-reaching results obtained by the Children's Fund. Results which are measured, to be sure, in immediate and humanitarian accomplishment to save millions of children from disease, malnutrition, and other suffering; but which are also measured by the new willingness and ability of nation after nation to mobilize its own people and resources to the end that the future will be brighter for its children than it is today.

When some future historian sums up the role of UNICEF in the progress of mankind he will find value in the millions of children protected against malaria and tuberculosis, cured of yaws, trachoma, and leprosy, made stronger by improved nutrition, and made safer by adequate maternal and child-health services. We predict, however, that he will find even greater value in the fact that people, their voluntary organizations, and their governments, thanks to the Children's Fund, been encouraged and assisted to initiate, develop, and support their own services for the care of their own children—and their children's children.

Needless Handicap to an Industry in Tennessee

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the March 21, 1958, issue of the Louisville Courier-Journal which points out the need for a broadening of the Merchant Marine Act of 1920.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEEDLESS HANDICAP TO AN INDUSTRY IN TENNESSEE

The development of a newsprint industry has been one of the significant factors in the economy of the South in the past decade. It uses large timber reserves that are otherwise of little value. It is operated under conditions that improve the forest regions of the South, rather than denuding them.

A major development was the building of a $100 million mill by Bowaters Southern Paper Corp. in the hill country of east Tennessee. Now an unexpected complication handicaps the success of the firm. Bowaters, in making the investment, had counted on running its own barges on the Tennessee and Mississippi Rivers and on the inland waterway, in order to bring wood into the mill and to ship out newsprint to distant points at a reasonable rate.

Now it has been discovered that the Merchant Marine Act of 1920 provides that a corporation under foreign control cannot own or operate barges on the inland waterway. Bowaters is an American subsidiary of a British company.

The Merchant Marine Act was passed just after World War I, and obviously was intended to govern situations entirely different from the shipment of newsprint paper in peacetime. We can see no good reason why it should apply to the Bowaters operation. Neither can Senators KEFAUVER and SMATHERS, who are proposing an amendment to the 1920 act.

This new provision would extend the right of owning and shipping by barge to any corporation which could meet the following requirements: that a majority of the officers and directors, and 90 percent of the employees be citizens and residents of the United States, and that substantially all the raw material be purchased in this country. These provisions would allow Bowaters Southern to operate. In the interest of southern newspapers and of the economy of the South in general, we believe the Kefauver-Smathers amendment should be passed by Congress.

Questionnaire Results From Michigan's Sixth District

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks, I would like to include the results of a questionnaire sent to nearly every family in Michigan's Sixth Congressional District. The overall response of more than 11,500 questionnaires and the thousands of comments I received on a wide range of legislative subjects reflect the tremendous interest of my fellow citizens in the problems of their Government.

The results of the poll also indicate impressive support for President Eisenhower as well as his major foreign and domestic policies. The tabulation, con-

ducted by an impartial agency of IBM, showed that 68 percent of the respondents approve of the manner in which President Eisenhower is doing his job, with 21 percent opposed, and the remainder giving no opinion.

In view of the fact that the Sixth District is considered to have more automobile workers than any other single congressionad district in the United States, I feel that the reply to a question dealing with the administration's recommendations for labor-management legislation has particular significance. The tabulation shows that 87 percent of the respondents are in favor of this legislation, with 6 percent opposed, and the remainder giving no opinion.

I appreciate the cooperation of the many volunteer workers as well as the thousands of Sixth District residents who responded to make this survey such a resounding success. While I accept the final responsibility for casting my vote on the issues that come before the House, I am conscious that, in the results of this survey, I have a valid and very helpful indication of how the people back home are thinking. The results of the tabulation are as follows:

Poll results

Questions	Percent		
	Yes	No	No opinion
1. In your opinion, does the world situation demand that we forego a balanced budget for reasons of national security?	51	39	10
2. Do you feel that Federal taxes should be reduced now?	35	57	8
3. Do you favor continuance of the mutual security program of military and economic aid to friendly nations?	62	25	13
4. Do you favor the extension of the Reciprocal Trade Agreements Act?	59	7	34
5. Should a separate Department of Science (with a Secretary of Cabinet rank) be created to promote and coordinate scientific research?	51	33	16
6. Do you feel a need exists for some form of Federal assistance to encourage scientific education?	55	36	9
7. Should college education be encouraged by allowing income tax deductions to parents?	62	31	7
8. Are you in favor of the Federal Government retaining its present regulator control over prices which producers can charge for natural gas?	81	9	10
9. Do you favor Secretary Benson's proposal for a flexible program of Federal price supports for basic farm products, ranging from 60 to 90 percent? (Answer only if engaged actively in farming, please.)	7	5	88
10. Do you favor, at this time, a Federal flood-control project for the Flint River (cost $2,500,000) and Grand River (cost $13,000,000)?	28	54	18
11. Do you approve of the proposal to establish pay television on a trial basis?	11	81	8
12. Do you favor the President's labor-management program?	87	6	7
(1) Filing public reports of welfare and pension funds.			
(2) Financial reports by labor unions.			
(3) Secret ballots for union elections.			
(4) Employer reports of financial dealings with unions.			
(5) Establish office of labor reports.			
(6) Make misuse of union funds a Federal offense.			
(7) Amend secondary boycott provisions.			
13. Do you feel that a nationwide civil defense atomic shelter program is needed now?	29	54	17
14. Do you favor increasing social-security benefits with corresponding increases in individual and employer contributions?	57	36	7
15. Do you favor a summit conference between President Eisenhower and Soviet leaders on current East-West differences?	54	29	17
16. In general, do you approve of the manner in which President Eisenhower is doing his job?	68	21	11

Citizens and Government Economy

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. HERLONG. Mr. Speaker, the struggle for real economy and efficiency in the operations of the Federal Government is a never-ending one. Bureaucracy has an inbred capacity for expansion. Scores of governmental activities which were undertaken years ago as temporary expedients have become permanent elements in the Washington scheme. The Federal establishment has become so extensive that it is virtually impossible for the individual citizen to comprehend the scope of its operations.

Most Americans are conscious of waste and duplication of effort in Federal bureaus, but few of them are able to devote time to a study of specific cases. In this connection, an important service in public information is being performed by the Citizens Committee for the Hoover Report, a private organization campaigning for the effectuation of Hoover Commission recommendations on economy in Government.

Many of these recommendations called for action within the executive branch. Others urged legislation. While those of us in Congress who believe governmental functions should be held to the minimum demanded by the public interest may not agree with each and every Hoover Commission proposal, I think all of us recognize that we shall achieve just so much economy as public opinion demands and no more. The easy way is to leave things as they are—to reconcile ourselves to a steady growth in the Federal establishment.

In continuing to inform the public as to specific areas of waste and inefficiency in Government, therefore, the citizens committee shows that economy is practical—that it can be accomplished if citizens want it to be, and are articulate in their views.

The citizens committee has been particularly helpful in focusing attention on the thousands—yes, there are literally thousands—of Federal operations which compete with private enterprise. This week, at its climax drive workshop program in Washington, our Virginia colleague, BURR P. HARRISON, spoke to this point. Under leave to extend my remarks in the Appendix, I include his significant remarks on this occasion.

A year ago, I was privileged to take part in a conference similar to this. We met then, as we do today, to assess the progress, or lack of progress, made with respect to the various recommendations of the Hoover Commission. The atmosphere, then, seemed encouraging for real progress in the drive for greater efficiency and economy in the operation of the Federal Government. Citizens were aroused. They were taking pens in hand to write to the White House, and to Members of Congress, to demand vigorous action. The Appropriations Committees of the Congress took a stern view of Presidential budget estimates, and there was reason to hope that it was the year—the year in which we finally might reverse the tide.

Now, in the near-panicky preoccupation with trying to spend our way out of a recession, depression, or readjustment—call it what you will—we meet again in Washington. Presumably, we are here because, irrespective of political faith, we hold in common the conviction that the very future of our economic system may well depend on whether or not the citizens of the United States really want to part with the expensive socialism which is centered in the bureaucratic citadels of their Nation's Capital.

I did not come here to preach defeatism, but there is no point in denying that, if we are the defenders of the faith, we are sorely beset. There is something pathetically analagous to the proceedings in Lewis Carroll's Through the Looking Glass in our meeting to discuss economy in a city where talk of a balanced budget now draws only a cynical smile. It is grimly appropriate, perhaps, that we meet on April Fool's Day to urge again a reduction in the size and scope of Government, while all around us rage demands that the Government take a bigger hand in the manipulation of what we still claim is a free enterprise system.

The Federal Government continues to be the biggest lender, the biggest insurer, the biggest producer of electric power, the biggest promoter of housing projects. The Government has become so enmeshed in the construction industry that the economic well-being of this great industry, and of all its suppliers, is dependent on how many dams, office buildings, and post offices the Government plans to build, and how liberal it will be in guaranteeing home loans.

The Government is the biggest investor and subsidizer. It uses taxpayers' money in the support of steamship lines and airlines. Through unrealistic postal rates, it helps pay the operating costs of highly profitable national magazines. The direct mail advertisers insist they cannot survive without the Government as a financial backer.

I was assigned the topic, Government Competition Is Not Competition. Obviously, Government competition is not competition as we know it in the sphere of private enterprise. There it is a contest for consumer acceptance on the basis of relative production and merchandising ingenuity, with the competitors presumably starting the game all even. When the Federal Government takes a hand however, the cards are stacked, and the new player's pile of chips is virtually unlimited.

There are all sorts of excuses, of course, for putting the Government in business. In one instance, it may be contended that the operation is a "yardstick" to protect the Government from being gypped when it deals with private suppliers for similar merchandise or services. In another case, it may be contended that the operation is essential to keep Government employees happy, as in a commissary-type enterprise. The clincher argument, with which we are not supposed to differ, is defense necessity.

Nearly 2 centuries ago, William Pitt, a British statesman of some asperity, declared in the House of Commons:

"Necessity is the plea for every infringement of human freedom."

As recently as 1956, a worldwide inventory of business-type governmental operations conducted by the Budget Bureau, turned up no less than 19,771 such operations. Undoubtedly, each one of these could be defended at length by the bureaucrats engaged in managing, or mismanaging it.

In 1933 a special committee of the House of Representatives studied Government competitive enterprises and located 232 such activities created to meet the emergency demands of World War I—but still existing 15 years after the war ended.

You might be interested in the conclusions this committee drew from finding 232 business-type operations. I quote from its report:

"The evidence in general indicates that the operations of the Federal Government in the field of private enterprise have reached a magnitude and diversity which threatens to reduce the private initiative, curtail the opportunities, and infringe upon the earning powers of tax-paying undertakings while steadily increasing the levies upon them."

That was a straight-from-the-shoulder observation calling public attention to a national problem. Imagine what this committee might have said had it discovered not 232 business operations, but upwards of 19,000 with a capital investment twice as great as the entire Federal budget in that long-ago year.

Last year, I was honored by an invitation from the citizens' committee to sponsor one of the bills intended to carry out recommendations of the Hoover Commission. This bill, H. R. 5826, is designed to pin down claimed justifications for any new business-type enterprises proposed to be established under Federal auspices, and to encourage the orderly liquidation of existing ones. Ten other Members of the House, from both sides of the aisle, offered similar bills, and companion measures were introduced in the Senate.

I do not happen to be a member of the committee to which my bill and its companions were referred. Before we waste any time in castigating the committee for inaction, however, let us recall that the advancement of legislation is a competitive enterprise. You and I might agree here and now that we have gotten together behind a fine bill; that there is no question about the desirability of its becoming the law of the land. But we have to face the fact that, so far, this legislation, in the argot of show business is not "box office." It has not generated widespread public excitement. At the moment, a bill to open a post exchange on the moon to serve our first space exploration expedition might have a much better chance.

The success of legislation to limit the Government's incursion into business endeavors depends on two things; first, evidence of an aroused public opinion which insists on congressional action—for, whatever its faults, Congress remains responsive to what it believes to be the public will. And, second and even more important, evidence of a determination in the executive branch to move vigorously to place the legislative policy in effect.

It has been estimated that 10 percent of the civilian personnel of the Federal Government are on the payroll of business-type activities. We know, too, that these activities generally fail to reveal their true cost to the taxpayers; that, except in rare instances, these activities pay no taxes and little or no interest on investment capital; that they seldom charge depreciation, and that they sometimes fail to carry their directing personnel on the payroll.

The citizens committee refers, hopefully to 1958 as the climax year—the year in which really substantial progress could be made toward effectuating the Hoover Commission recommendations. There have been a few glimmers of light, such as the congressional action on the budget reform proposals.

But let us make no mistake—this could be a climax year of another sort if we do not succeed in meeting and besting the forces of benevolent quasi-socialism now seizing on the business downturn as the ideal lever with which to raise public support for new Federal adventures in business. We could lose the game once and for all.

I said at this meeting last year, and the present clamor for the Government to do more about the state of business impels me to reemphasize it today—private enterprise, despite the vaunted prowess of its Madison Avenue sales psychologists, has not yet done the wide-spectrum selling job which must be done among all citizens if the Government is to be put out of business—out of business which could and should be handled by private capital and private management.

Any businessman, any trade association running to Washington today to plead for extended or increased subsidization, whether by liberalized Federal credit or by any other means, should pause and consider whether another shred of the tattered fabric of free enterprise is being bargained away to relieve an immediate economic pinch. Whenever business goes to Washington with pleas for financial cushions or bailing buckets, it is seeking to unload on taxpayers generally a poor business risk, a risk it admits it cannot get underwritten within the business community.

There does not seem to be much sex appeal any more in the old virtues of frugality, individual initiative and balanced budgets. Deficit financing, a horrid word a year ago, is viewed with complacency today.

Yes, this may well be the climax year, but a tremendous job of public education remains to be done if it is to be a climax favorable to the cause of lean and efficient government as envisioned by Thomas Jefferson. Public indignation built this Republic. Public indignation has spurred its defense in times of crisis. An aroused public still could chop the Government down to size, but the hour is late.

Tax-Exempt Fund Gets New Backer

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. HORAN. Mr. Speaker, under permission granted me to extend my own remarks in the RECORD, I am pleased to include a clipping from the New York Times relative to legislation first introduced by the Honorable THOMAS B. CURTIS, of Missouri, by me, and then by the Honorable A. S. HERLONG, JR., of Florida. This measure would permit tax-exempt interest to be passed on, in the form of tax-exempt dividends, to stockholders in investment companies. We believe that this would provide a wider market for municipal and district bonds, and also that in the end it would not cost the United States Treasury any loss of revenue.

TAX-EXEMPT FUND GETS NEW BACKER
(By Paul Heffernan)

Recurring appeals for a broadening of the market for State and local government securities received timely support last week from the Chamber of Commerce of the State of New York.

Its tax division threw its weight behind proposals now before Congress that would permit tax-exempt interest to be passed on, in the form of tax-exempt dividends, to stockholders in investment companies.

Some of the proposals before Congress would restrict this privilege to companies that are at least 90 percent invested in local government bonds; others would give it to all investment companies.

The principle endorsed by the chamber group is not new. Economists and municipal finance interests have been plumping for it for years.

Probably it got widest notice 2 years ago when President Eisenhower came out for it as a means of keeping down the cost of local government borrowing and encouraging localities and States to bid in the public market on an enlarged basis for the use of the savings of the people.

The formal declaration of the Chamber limited itself to an endorsement of the general principle of communication of the tax-exemption to the dividends collected by shareholders of investment companies.

It did not mention any specific bills before Congress, of which there are six. Three of these bills—H. R. 8810, H. R. 8111, and H. R. 8112—would require 90 percent investment in local government securities to qualify for the exemption. The other bills—H. R. 8702, H. R. 10613, and H. R. 9058—carry no such limitation.

The latter approach has won the greatest support in municipal finance circles. Known as the broad proposal, it is backed by the American Muncipal Association, which represents 12,500 cities—including all those having a population of more than 100,000—as well as leagues of municipalities in most States. In behalf of the American Municipal Association, Harold M. Tollefson, former mayor of Tacoma, Wash., appeared before the House Ways and Means Committee this winter to urge enactment of the idea.

The broad proposal has also won the backing of the National Education Association, the National Association of County Officials, the Council of State Chambers of Commerce, and the American Farm Bureau Federation.

Enactment of the broad proposal would give some incentive for an investment pool estimated at more than $19,400 million to buy local government bonds. Making up this pool are three great aggregates of investment assets, namely (1) assets of regulated investment companies of the mutual fund type, totaling $9,105 million (2) assets of regulated closed-end companies totaling $1,335,572,000, and (3) assets of unregulated investment companies totaling about $9 billion.

The appeal of the idea outside of the professional financial community is twofold. On the one hand, it holds out the promise of widening the market and thereby keeping down the cost of local government borrowing. On the other, it insists that the Treasury has nothing to lose.

The reasoning is this: The tax-exempt bonds, on whose interest income the Treasury will receive nothing, will be sold in any event. Whatever bonds are bought by investment companies in a broadened market represent just so many bonds that individual investors—usually rich persons taxable at a heavy rate—will not be able to buy.

This reasoning may be oversimplified, but there is enough substance in it to warrant the assertion of the proponents of the broad bill that the likely loser from the

legislation would be not Uncle Sam but the high-income refugee from taxes.

The prime beneficiary, of course, would be the municipal and State governments, for which a widened market would be made available. Secondary benefits would flow to investment companies, which would have a wider field in which to apply their managerial skill, and to their shareholders, whose tax liability would be lightened.

What gives timeliness to the legislation now before Congress is the recurring tendency in the bond market for the spread separating the yields of corporate bonds and municipal bonds to shrink to a point where the historic tax advantage loses much of its value.

Last month, for instance, New York State borrowed $50 million on bonds at a cost of 3.12 percent, tax-exempt. Only a fortnight before, bonds of the Pacific Gas and Electric Co. were offered for public subscription at a yield of 3.65 percent.

There is real risk, then, that the tax advantage now enjoyed by local governments in market borrowing may be whittled down in forthcoming months by the impact of continuing large investment supply. This probably accounts for the support that municipal finance associations and other civic groups are giving to proposals to widen the investment market.

Missile-Carrying Submarines

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Manchester Union Leader of March 25, 1958, "Missile-Carrying Submarines are 'Must'," written by Mr. William Loeb, publisher.

This editorial praisingly draws attention to the persistent efforts of my able colleague, the junior Senator from New Hampshire, Senator NORRIS COTTON, in calling for a large fleet of missile-firing submarines as a major defense in the future survival of the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Manchester (N. H.) Union Leader of March 25, 1958]

MISSILE-CARRYING SUBMARINES ARE "MUST"

(By William Loeb, publisher)

Again, more power to Senator COTTON in his persistent campaign for a large fleet of missile-firing submarines to beat the Soviet Union to the punch.

Senator COTTON is suggesting something very rash. This Government doesn't believe in beating the Russians to the punch. That isn't considered gentlemanly any more. This Governments prefers to let the Reds get in the first punch and then hope we'll live through it.

The Navy has requested authority to start six more missile-carrying submarines in 1958. Three submarines have already been ordered. Senator COTTON is disturbed and properly so, by the report that the Defense Department has slashed the Navy's request from 6 to 2 or 3 missile-carrying submarines.

As Cotton says: "Our national security demands immediate construction of far more than six. * * * The missile-firing submarine can provide us with the best defense at the lowest cost."

This Nation should have at least 100 missile-firing submarines. In this way we could have secret, movable hydrogen bomb and missile bases located where it would be almost impossible for the enemy to discover them. Moreover, they would be ready to attack the enemy at the first sign of threat.

Senator COTTON will serve New Hampshire and the United States best by carrying on continual battle until this Nation has a mighty battle fleet of missile-carrying submarines.

On COTTON'S winning this battle may very well depend no less than the future survival of the United States.

Oregon Wheat Growers League and Overseas Markets

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2, 1958

Mr. NEUBERGER. Mr. President, from time to time, I have called to the attention of the Senate the excellent overseas program of the Oregon Wheat Growers League as an instrumentality for goodwill in the Orient, where their work has centered. Evidence that this is recognized by the Department of Agriculture, the Department of Commerce, and the State Department comes in the form of a news release issued from the league's headquarters in Pendleton, Oreg. So that all the members may have this information, I ask unanimous consent that it be printed in the Appendix of the RECORD at the conclusion of my brief statement.

The news release announces that the Trade Fairs Branch of the Department of Agriculture has appointed Jack L. Smith, president of the Oregon Wheat Growers League, to be the official United States wheat-barley commodity representative at the Osaka International Fair to be held at Osaka, Japan, April 12–24.

Recently we voted to extend the Public Law 480 program for 2 more years. In the course of the floor discussion, I made reference to the cooperative efforts of the Oregon Wheat Growers League in working with the people of Japan, South Korea, India, and Pakistan to increase the use of wheat in the oriental diet.

Following the 480 hearings last summer, I made extensive reference to the impressive testimony there given by Richard Baum, the league's executive officer, who has made four trips to Asia in the interest of this program. I included a substantial part of his statement in the RECORD at this time.

Mr. President, it well may be that long after this program of surplus food production has been forgotten, the people of the United States and the people of Japan, South Korea, India, and Pakistan will be enjoying the fruits of one another's respective labors to an even greater extent because of the vision and enterprise of some Oregon wheat farmers.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

PENDLETON, OREG., March 24, 1958.—Another laurel was handed the wheatgrowers of the Pacific Northwest when Jack L. Smith, president of the Oregon Wheat Growers League, was appointed official United States wheat-barley commodity representative by the Trade Fairs Branch of the Department of Agriculture, Washington, D. C., at the Osaka International Fair to be held at Osaka, Japan, April 12–24.

Kenneth Krogh, Foreign Agricultural Service, Department of Agriculture, pointed out that the United States Government will have exhibits representing all 5 basic commodities exported to Japan from the United States (wheat-barley, soybeans, cotton, tobacco, and dairy products) with each exhibit booth manned by a well-qualified American prominent in those commodity circles. Krogh stated that since the Oregon Wheat Growers League has been the No. 1 grain organization in the United States with a functioning overseas market development program, primarily designed for Far East markets, it is especially appropriate that its president should represent all United States grains at the Osaka Fair.

Smith will be a guest of the United States Department of Commerce, with all expenses borne by that Department, and paid in foreign currency derived from the sale of surplus farm commodities.

Smith, who was born on a ranch near Condon, Oreg., which he now farms, has long been active in wheat and farm affairs. He is currently vice president of the National Association of Wheat Growers and has served on special assignments representing both the Oregon League and the National Association on legislative recommendations in Washington, D. C. He is a past winner of the State Soil Conservation Man of the Year award and was State chairman of the Soil Conservation Committee for 2 years. Active in the Congregational Church, married and with 4 children. He has served on many school and community projects. Smith will bid "Sayonara" to Oregon when he departs for Japan in early April. While in the Far East, he will confer with Joe Spiruta, Far East representative of the OWGL.

John P. Busarello Retires as President of District No. 5, United Mine Workers of America

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD an article from the March 31 issue of the Pittsburgh Sun-Telegraph. On April 1, 1958, John P. Busarello retired as president of District No. 5, United Mine Workers of America, Pittsburgh, Pa. He served in this capacity from 1942 until the time of his retirement. He has been associated with the coal industry for some 50 years. His first union office was that of secretary of the local union at McDonald, Pa. He was then only 15 years of age. During

the years he has established a fine record of service and achievement. He has devoted untiring efforts in behalf of the members of the UMWA and has always been deeply concerned for them and their welfare. His is a well-earned retirement and I want to join with all of his many other friends in extending best wishes for health, happiness, and good fishing in his new leisure. The article follows:

FIFTY-EIGHT YEARS WITH UMW, BUSARELLO RETIRING

(By George Shradle)

Memories from 58 years in western Pennsylvania's coalfield go with President John P. Busarello of United Mine Workers District 5 as he retires today.

The years spread from boyhood around the McDonald district pits through the hectic coal and iron police days of the futile 1925–28 strike and on to today's mechanized mines.

Mechanization is held partly responsible for the big reduction in the number of working miners; but Busarello reflects that it saved the mining industry and still provides some work.

As Busarello sees it:

"It's a good thing because otherwise there would be little or no mining.

"The cost of producing coal under the old hand method would have gone so high that other fuels would have been cheaper and would have replaced coal."

OFFICER AT AGE 15

The work force of miners has gradually dwindled through mechanization and the closing of scores of old mines but Busarello fears the day will come when there may not be enough men.

He explains that seniority rights keep unemployed men in line for job openings. This gives little chance for younger men to get started in the mines.

Busarello held the presidency of district 5 for 16 years after being in union offices for 55 years. His first office—at the age of 15—was that of secretary of UMW Local 1046 at the Partridge mine near McDonald.

He was born into a mining family 70 years ago in Baden, Germany.

His late father worked in ore and coal mines.

The family came to the United States in 1892 when John was 4 and settled at Primrose, near McDonald.

John has lived since then always within a 10-mile radius of McDonald. He will spend his retirement at his home in Oakdale, where he has lived since 1919.

At the age of 12 John went to work with his father as carboy in the old Primrose mine.

He explains that each miner was given only two cars a day. His father could have three with a carboy and that bought an extra loaf of bread.

Busarello became a trapper 6 months later at 50 cents a day. He soon became a pumper at $1 to be followed with driving the mine mules at $2.10 a day in 1904.

The union was being organized when he started in 1900 and 3 years later he became the local's secretary. In the years until 1916, he also was treasurer and president. He then was elected a district 5 representative.

THE COAL WARS

John remembers the brutality of the coal and iron police during the 1925–28 strike and relates how miners and their families were evicted from company houses and forced to live winter and summer in tents and barracks.

He has several souvenirs of those days. They include three police badges, a pistol, holster, and cartridge belt taken from police in rough-and-tumble struggles.

That strike broke the UMW but the union started reorganizing in 1933 with the advent of the NRA which gave labor the right to organize.

Busarello was assigned to the Youghiogheny River area from McKeesport to Perryopolis and organized 18 locals before being assigned as statistician at the district office.

John was elected district vice president in 1941 and 2 years later became president.

He saw the district comprised of Allegheny and Washington and parts of Fayette, Beaver, and Westmoreland Counties grow to 31,000 working members and dwindle to the present 7,300.

As he bade goodby to delegates at last Friday's constituitonal convention, John remarked:

"I've brought out my tools and am throwing them over the slate dump."

FISH AND FLOWERS

John retires as district 5 tightens its belt to cut operating costs by eliminating the vice presidency and by combining the offices of president and international board member. The board member, Joseph Yablonski, 48, assumes the dual post.

John has no plans other than to fish and help his wife, Bernice, in the flower garden.

Need for More Efficient Administration in Department of Defense

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Bridges-Mansfield Bill," and published in one of New Hampshire's leading daily newspapers, the Manchester Union Leader, on Thursday, March 27, 1958.

The editorial, which expresses support of Senate bill 3544 recently introduced by the distinguished Senator from Montana and myself, points out clearly the necessity for retaining the integrity of the various branches of the military service, as well as the desirability of attaining more efficient administration of the Department of Defense.

In view of the vital importance which attaches to this question of defense reorganization, I believe this editorial warrants the careful attention of not only Members of Congress but the general public.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRIDGES-MANSFIELD BILL

The bill recently introduced by Senator BRIDGES and Senator MIKE MANSFIELD to reduce the size of the Defense Department's civilian staff from 2,400 to 600 should have the support of every thinking American. BRIDGES and MANSFIELD will need that support, for the entrenched bureaucracy has ways of fighting back against those who would seek to halt its growth.

It's not that anyone in Washington will disagree with you when you point out the Defense Department's wasteful duplication of the work of the military departments. Not anyone will disagree with your contention that there has been a circumvention of the desire of the Congress that the military departments shall be separately administered by their respective secretaries under the control of the Secretary of Defense. It's just that few congressmen have had the courage to tackle this bureaucratic growth for fear of reprisals.

Senators BRIDGES and MANSFIELD are to be praised for their insistence on better and more efficient administration in the Defense Department.

The Consumer Is King

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2, 1958

Mr. JAVITS. Mr. President, it is often said that the consumer is king. I have a deep conviction that the eventuation of our American system, because of the standard of living which has been achieved, has enhanced the private economy of the United State in an increasingly beneficial way.

For this reason, I am deeply interested in the work of Life magazine's board of editors, led by Andrew Heiskell, publisher, concerning the part the consumer plays in our economy and what really makes him king.

I ask unanimous consent to have printed in the Appendix of the RECORD a statement on Life magazine's study of consumer expenditures for the year 1956, together with a detailed explanation of what was found by the study made by Richard H. Ostheimer.

Mr. President, I submit an estimate of $263.25 as the estimated cost of printing, and I ask unanimous consent, notwithstanding, that the material be printed in the Appendix of the RECORD.

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

A STATEMENT ON LIFE MAGAZINE'S STUDY OF CONSUMER EXPENDITURES FOR THE YEAR 1956

(By Andrew Heiskell)

Life realizes that its future success, like that of the United States as a whole, is highly dependent upon the ability of American business to sell its products and services in quantity and at a profit. Life, both as a producer of a product to sell to the United States consumer and as an advertising medium for others to use to reach those consumers, has a big stake not only in the health of business in general but in the economic well-being of each of the hundreds of companies who use its advertising pages. It is this realization that prompted Life's study of consumer expenditures.

In 1954, when plans for this research project were being developed, the great need for more extensive and reliable marketing knowledge was already apparent. Since 1946, productivity per man-hour in manufacturing had been increasing at a rate in excess of 3 percent each year. But while production was thus steadily rising, it was evident that increases in distribution efficiency were not keeping pace. If this ability to produce goods continued to outstrip ability to distribute or market goods, American business could find itself in serious

imbalance. An obvious need was more marketing knowledge to match the technical knowledge already available in production.

It was to contribute to this need for marketing knowledge that Life undertook this study of consumer expenditures. For it was in the area of knowledge of the consumer, the ultimate buyer and user of what business produces, that explorations indicated a considerable lack of available marketing data. Business was being regularly supplied with valuable information on such things as the overall size of the market for various goods and services, on the relative market importance of various areas of the country, on the movement of products through specific retail channels, etc. But due to the difficulty and cost involved in obtaining extensive and reliable information on consumer markets, few companies possessed sufficient information to make possible increased efficiency at this level of the marketing process.

Valuable contributions to marketing knowledge have been made by various Government groups, the Departments of Commerce, Agriculture, Labor, the Federal Reserve Board, etc., and by private companies and organizations through their explorations of consumer markets. It is Life's hope that the information from this study will add to that fund of knowledge and will spark business to additional and broader efforts to bring about more scientific marketing methods.

The first report from the Life study of consumer expenditures was released in the fall of 1957. It originates a series that Life plans to publish during the months ahead. Based on the findings of this study, subsequent reports will provide further analyses of consumer expenditures as related to other characteristics of the consumer population, to the retail place of purchase, to the seasonality of expenditures, to magazine audiences.

Here follows a description of the first report which will serve to introduce the reader to the research techniques applicable to the entire study as well as to provide a general definition of the findings contained in this report. The summary was prepared by Richard H. Ostheimer, Life market research manager, and appeared as an article in January 1958 issue of the Journal of Marketing.

Who Buys What? Life's Study of Consumer Expenditures

(By Richard H. Ostheimer)

Life magazine has published the first volume in its study of consumer expenditures. This initial report marks the beginning of a long-range program that will supply American business with current marketing facts which, when analyzed and interpreted in the light of other knowledge, can be applied to specific marketing decisions and thereby contribute to increased efficiency in marketing.

This first volume covers virtually the entire spectrum of consumer expenditures during 1956 as determined from a nationwide survey of United States households. The overall purpose is to describe the markets for each of the various goods and services which consumers buy. "Who spends how much on what?" This is answered by measuring how much of the total expenditures in each of the consumer markets is accounted for by households of various types.

The most recent source of data on this broad a scope is the survey by the Bureau of Labor Statistics which covers 1950 expenditures in urban markets. These findings are currently being tabulated and published by the Wharton School of Finance and Commerce under a grant from the Ford Foundation. In addition, more recent expenditures on particular goods and services are collected by the Department of Agriculture and the Board of Governors of the Federal Reserve System.

Description of Contents

Kinds of expenditures

The basic statistic presented in the first Life report is average annual dollar expenditures per household in 1956. Because these averages are computed from a probability selected sample of all households, the findings are projectable to the aggregate dollars spent by all 49 million households in the United States. Total current expenditures are divided among 8 major types of expenditure: food, beverages, and tobacco; clothing and accessories; home operation and improvement; home furnishings, equipment, and appliances; medical and personal care; automotive; recreation; and other. More detailed expenditure categories are then shown within each of these 8 major groups, such as baby foods and prepared mixes under food, men's and boys' footwear under clothing, and tires under automotive. In total, there are 57 such product groups, a relatively small number among all those collected.

To increase the report's value to marketing, individual products were classified according to the use consumers make of them, rather than according to the standard industrial classification which emphasizes where the item originates in the production process. Thus, ice cream, for example, was classified in this study under desserts, rather than in the standard industrial classification category of dairy products.

Kinds of households

Expenditures are analyzed by seven household characteristics: household income (1955 money income from all sources before taxes); age of the household head; occupation of the household head; education of the household head; stage of the household in the life cycle (young single persons or young married persons without children, households with children, etc.); geographic region (with metropolitan areas separated from nonmetropolitan areas within each region); and market location (within different market sizes, inside central-city areas are separated from the balance of the market area). Another household characteristic related to consumption is its size, and average number of persons per household is reported for the households in each classification.

Budget and market shares

In addition to average dollar expenditures per household, budget-type figures are computed which show what shares of all the money spent by all households in a given classification went for food, for clothing, etc. The third statistic is a percentage based on the projections of average expenditures per household to dollar totals. These percentages show what share of the total dollars spent on a product or product group were accounted for by households of various characteristics, thus directly describing the nature of the market for each of the variety of goods and services sold to consumers. The comparison of the share of total dollars accounted for by households described by a certain characteristic with the share these households numerically represent of all households offers a meaningful measure of the importance of this characteristic in the demand for a given product or service.

Present and future markets

A finding, for example, that 35 percent of all households are in a certain stage in the life cycle but account for 50 percent of the sales of some product has many marketing implications. One that comes quickly to mind is in long-range planning. Given projections of the number of households in this stage of the life cycle in future years, this relationship of life cycle to the purchasing of some product is a key to the sales outlook for this product in future years. In broader terms, by presenting the means for measuring the association between household characteristics and consuming habits, these findings provide the market analyst and economist with the bases for estimating the likely effects on consumption of the demographer's projections about the size and characteristics of the future population.

The universe of expenditures is the total of current expenditures on all goods and services made by housekeeping households for personal or nonbusiness purposes. Data were not collected on savings and income taxes, nor were capital expenditures such as downpayments on homes and purchases of stocks included. Emphasis is on those goods and services marketed through normal channels of distribution; and the totals exclude outlays for philanthropic gifts, educational expenditures, and vacation expenditures for accommodations and for travel.

Conduct of the Survey

The survey was conducted for Life by Alfred Politz Research, Inc. A separate technical report describes the methodology in detail, including sample validations and estimates of sampling errors. Following are some highlights of the techniques.

The sample

The sample was selected on a multistage area probability basis, using 103 primary sampling units covering 191 counties. Within each of the primary sampling units, 2,340 smaller areas (city blocks and clearly defined areas in open country) or locations were selected through a random process, and 1 segment averaging about 7 adjacent households was selected at random from within each location. These segments yielded 17,173 occupied households, of which 15,003 supplied some information. The expenditure finding in this first repart are based on the 10,243 households which supplied complete expenditure data. Since households that drop out tend to be associated with particular characteristics, ratio estimates on three of these characteristics were applied to make the 10,243 households more similar to the 15,003 households interviewed at least once. No substitutions or replacements were permitted at any time.

Four interviewing waves

The information was collected from each household in four interviews or waves. There was a 4-week interval between waves, and thus each household was interviewed 4 times over a 13-week period. Beginning in October 1955, over 200 new households entered the sample each week continuing through October 1956; and interviewing went on throughout the 15-month period ending in December 1956. While the average household was interviewed for 8 hours in total, the individual interview was made more palatable by being spread over 4 periods.

Period of recall

In an effort to minimize response errors—particularly errors which are the result of overtaxing the ability of respondents to remember accurately—two methods were used to collect expenditure information. In general, those expenditures which are relatively large and made infrequently, such as consumer durables, were obtained by standard recall questions with explicit reference to specific goods. The recall period was varied with the item, from within the last 12 months for automobiles to 3 months for mortgage payments.

A household record

All other expenditures were collected by a technique which combined the use of a diary, recall aids, and personal interview. On the fourth wave, the interviewer left with the household a household record in which all expenditures by the household within the following 10-day period were to be entered.

* * * * *

Housewife the recorder

The household member responsible for the major portion of the household expenditures—usually the housewife—was the principal source of the information. She had the responsibility for maintaining the household record and, in a sense, acted as the interviewer within the household by asking each member for his daily expenditures. Where it was not feasible for a household member, such as a nonrelated boarder, to reveal his expenditures, separate records and schedules were used for obtaining income and expenditure information which was subsequently combined with that of the rest of the household.

Some expenditures collected on the recall schedules, such as clothing, were obtained by interviewing each household member individually. On major purchases such as refrigerators, the housewife was the respondent but she was urged to consult with other members when there was any doubt in her mind. In the case of automobiles, expenditures were specifically asked of the household head.

Skilled interviewing

Highly trained interviewers worked under close supervision and quality checks. The principal means of obtaining cooperation was interviewing skill and perseverance, plus questions on a wide variety of subjects designed to arouse the interest of respondents (baseball, movies, neighborhood, juvenile delinquency, hobbies). As many as eleven callbacks were made in an attempt to complete a wave of questioning. If the household had moved to within a reasonable distance, the interviewer went to the new address. With the exception of an inexpensive clock mounted on a platform on which the daily record was kept and a small lint brush at wave two, no premiums were used.

Time reference

All expenditures obtained from the household record refer to 1956. Those obtained from the schedules refer to 1956, plus all or parts of 1955. Expenditures on automobiles, for example, represent an average of 1955, and 1956 expenditures (more accurately, the 2-year period of November 1954, through October 1956). All household characteristics are those at the time of the interview with the exception of income which is 1955 money earnings from all sources before taxes.

What is a household?

The recipient unit is the household or housekeeping dwelling unit. No criteria of blood relationship or pooled income were applied. To qualify as a separate unit, a household within a dwelling unit had to have at least its own mailbox, or entrance, or cooking facilities. When there were more than four boarders, a dwelling unit was treated as a hotel and excluded from the sample.

FINDINGS

Income and spending

The survey shows that the average United States household spent annually $4,110 for the goods and services which were measured, or a total of about $200 billion for all households. The dominant influence of income on expenditures is clearly evidenced in the findings. The top row of table 1 shows a consistent movement of larger total expenditures with higher incomes, but also a tendency for the increases in dollar expenditures to diminish as households move up the income scale. Up through incomes of around $3,500, an increase in income of $1,000 is associated with an increase in spending of about $900, but the increase in expenditures is only $400 to $500 in the range of $3,500 to $8,500 and probably about $350 per $1,000 income increment for incomes over $8,500. Income taxes, philanthropic gifts, educational and vacation expenses, and savings account for larger and larger shares of these income increments as income gets higher.

Expenditures actually tend to exceed income among the lower income households (under $4,000). While some of this dissaving represents the incurring of debts to be paid out of savings from future earnings, it also doubtless represents the dependence of retired persons on past savings (note the smaller household size among the lower-income groups).

TABLE 1.—*Percentage division of total spending among major goods and services*

	All households	Household income before taxes						
		Under $2,000	$2,000 to $3,000	$3,000 to $4,000	$4,000 to $5,000	$5,000 to $7,000	$7,000 to $10,000	$10,000 or over
Total annual expenditures per household	$4,110	$1,933	$2,924	$3,839	$4,363	$5,016	$6,063	$7,946
Percent of total expenditures	100	100	100	100	100	100	100	100

Average number of persons per household	3.3	2.7	3.2	3.4	3.4	3.6	3.7	3.8

[1] Expenditures on automobiles in this category refer to net outlays after trade-in allowances.
[2] Includes life insurance premiums and nonmedical professional services.

Similar budgets

Table 1 shows how households of different incomes divide their total spending among major expenditure categories. As expected, least responsive to income are food expenditures, and hence they account for around a third of the total for households with incomes under $4,000, but for only a quarter for those with incomes over $7,000. With this exception, however, the dominant impression of these findings is the overall uniformity in the share each income group allots to satisfy these broad categories of needs and preferences. The spending patterns are very similar within the numerically large income group of $4,000 to $7,000. The fact that this group represents 39 percent of all the households and accounts for 44 percent of all the dollars spent in the market place gives increased emphasis to the concept of a mass market of homogeneous tastes. (When households are classified by incomes after taxes, the differences between income groups narrow still more because of the effects of progressive income taxes.)

Other tables in the report generally support this impression of conformity in overall spending habits among households of various types. The professional and managerial occupations are not radically different from the clerical, skilled, or unskilled workers in the shares of total expenditures going to each broad category. The findings are quite the same for households of different educational attainments and ages, and for households in different geographic regions. The proportionate distribution of the total dollar is even very similar among households in various stages of the life cycle. Metropolitan households, however, spend significantly larger shares on food, clothing, and shelter and smaller shares on durable goods (particularly automobiles) than do households in nonmetropolitan areas.

Market prospects

Conformity of spending habits as measured by the shares of the budget allotted to major categories does not mean that all households are equally good market prospects. Since income is so important in determining expenditures, upper income households account for disproportionately large shares of total spending relative to their numbers. Table 2, which divides all households roughly into thirds by income, shows that the top third ($5,000 and over incomes) accounts for almost half of all the dollars spent. The middle third, which earns $3,000 to $5,000, spends exactly in proportion to its numbers (34 percent); while the bottom third, households with incomes under $3,000, spends slightly less than a fifth of all the dollars. The expenditure categories most responsive to higher incomes are home furnishings, equipment, and appliances; alcoholic beverages; automotive, recreation, and clothing. Food and tobacco expenditures, on the other hand, are noticeably less income-sensitive.

Education and spending

The findings on more specific expenditures are of most interest in this question of identifying markets for the seller. By way of illustration, Table 3 shows 4 specific product groups from the 57 in the first report which show a particularly high positive association with the educational attainment of the household head. Although an underlying cause of this relationship is the close correlation between a household's income and the education of the household head, income does not explain all of the association between spending and education. Since income correlates very closely with total expenditures, we can roughly hold constant the effects of income by contrasting the behavior of expenditures on selected items with that of total expenditures. For instance, total expenditures by the college households average $5,442, slightly less than double the $2,807 spent by the households whose heads did not finish grade school. But the higher educated spent on the average 2½ times the amount on housing (rent, mortgage, school and land taxes) and communications (telephone), 3 times as much on frozen vegetables and juices, and 4 times as much on photographic equipment.

TABLE 2.—*Percentage division of total spending among households of various incomes*

	Household income before taxes		
	Under $3,000	$3,000 to $5,000	$5,000 or more
United States households	32	34	34
Total expenditures	19	34	47
Food, beverages, tobacco	22	35	43
Food	23	35	42
Alcoholic beverages	20	30	50
Tobacco	22	36	42
Clothing, accessories	17	35	48
Home operation, improvement	18	35	47
Home furnishings, equipment, appliances	17	32	51
Medical, personal care	21	33	46
Automotive	16	34	50
Recreation	17	34	49
Other [1]	16	33	51

[1] Includes life insurance premiums and nonmedical professional services.

TABLE 3.—*Expenditures on selected items by education of household head*

	All households	Did not finish grade school	Finished grade school	Some high school	Finished high school	Some college or beyond
Total United States households (thousands)	49,140	9,380	10,170	9,080	10,860	9,650
Average number of persons per household	3.3	3.3	3.3	3.6	3.4	3.2
AVERAGE ANNUAL EXPENDITURE PER HOUSEHOLD						
Total expenditures	$4,110	$2,807	$3,576	$4,032	$4,612	$5,442
Frozen fruits, vegetables, and juices	14	8	10	13	17	23
Housing	442	260	334	432	514	663
Communications	39	21	31	38	48	54
Photographic equipment	11	4	7	11	14	17
PERCENTAGE DIVISION OF EXPENDITURES						
Total United States households	100	19	21	18	22	20
Total expenditures	100	13	18	18	25	26
Frozen fruits, vegetables, and juices	100	11	15	17	26	31
Housing	100	11	15	18	26	30
Communications	100	10	17	18	28	27
Photographic equipment	100	8	13	18	29	32
Sample base	10,243	2,143	2,186	1,907	2,188	1,819

The lower part of Table 3 presents the share-of-market statistics for these products. Combining the 2 upper groups into high-school graduation or beyond, this group constitutes 42 percent of all households and 51 percent of all the dollars spent, but 61 percent of the photographic-equipment dollars, 57 percent of the frozen-vegetable dollars, 56 percent of the housing dollars, and 55 percent of the communications dollars.

On the other hand, there are some products on which expenditures are inversely associated with educational achievement. One conspicuous example is cooking and baking ingredients; spending on this category tends to decrease as the educational and economic level and degree of urbanization—of the household rises.

Life cycle and spending

The stage of the household in the life cycle is another nonincome characteristic affecting the demand for many goods and services. Households with young children represent particularly good markets for prepared mixes, major appliances, and household waxes and cleaners—illustrations cited in Table 4. Items such as these (not to mention the more obvious ones of baby powder, cereals, and toys) rank high on the priority list of the budgets of these households and hence average expenditures are large relative to total spending. In 1956, these households with small children numbered 40 percent of all households and did 45 percent of the total spending, but they bought over half of all the consumer sales of prepared mixes, household polishes, and major appliances.

TABLE 4.—*Expenditures on selected items by stage in the life cycle*

	All households	No children, single or married head under 40	Children		No children	
			Under 10	10 to 19 only	Married, head 40 or over	Single, head 40 or over
Total United States households (thousands)	49,140	3,710	19,640	7,980	11,340	6,470
Average number of persons per household	3.3	1.9	4.7	3.8	2.3	1.4
AVERAGE ANNUAL EXPENDITURE PER HOUSEHOLD						
Total expenditures	$4,110	$4,332	$4,607	$4,881	$3,639	$2,350
Prepared mixes	5	3	6	5	4	2
Major appliances	84	87	107	89	68	33
Household waxes, polishes, cleaners	5	4	7	5	5	2
Women's and girls' clothing	210	236	196	208	195	158
PERCENTAGE DIVISION OF EXPENDITURES						
Total United States households	100	8	40	16	23	13
Total expenditures	100	8	45	19	20	8
Prepared mixes	100	5	53	18	19	5
Major appliances	100	8	51	17	19	5
Household waxes, polishes, cleaners	100	6	52	16	20	6
Women's and girls' clothing	100	9	37	23	21	10
Sample base	10,243	726	4,103	1,676	2,474	1,264

Spending priorities change when the children of the house are in their teens. The expenditures on women's and girls' clothing shown in table 4 are particularly high for this group of households—accounting for 23 percent of the total of such expenditures, in contrast to 19 percent of all spending. Incomes on the average tend to be somewhat larger for this slightly older group, as indicated by the $275 increase in total spending over households with small children. However, this is only 6 percent larger, while expenditures on women's and girls' clothing are $100, or 50 percent, larger. The washing machines had been bought (average expenditures drop from $107 to $89 on major appliances), and the housewife was now better able to buy the clothes for herself which she had previously abstained from buying, and to buy the clothes necessary for her teen-age daughter.

Suburban spending

There is no doubt that suburban living, in some ways, establishes unique patterns of consumption. By way of an approximation of suburban dwelling, tables in the report separate those households within metropolitan markets which are in areas outside the limits of the central cities. The marketing significance of these households for particular industries is illustrated by the findings that they spent 47 percent of all the dollars on removable floor coverings (rugs and linoleum), 45 percent of the total on sports goods, and 40 percent of the dollars for prepared pet foods, while representing only 27 percent of all households and 31 percent of all spending. Their absolute dollar expenditures on these products were considerably higher than those by households in other market locations, and also higher relative to their larger total expenditures and income.

The 12 million rural households in nonmetropolitan places under 2,500 population account for a disproportionally small share (a fifth) of total expenditures. However, with some specific product groups, such as gasoline and oil, their expenditures are more important in the total market.

Regional differences

The importance of other household characteristics—notably regional location, age and occupation of the household head, as well as household income—in the demand for various products can be similarly inferred from the report. It may be observed, for example, that a good share of the variations in spending between geographic regions can be ascribed to different degrees of metropolitan market development, rather than to what might be interpreted to be characteristics of the region itself. The Northeast, for example, had the highest per household total expenditures ($4,637)—40 percent higher than the South which had the lowest per household spending. When between-region comparisons are made for metropolitan and nonmetropolitan areas separtely, the Northeast's lead over the South shrinks to 25 percent among metropolitan areas and 24 percent among nonmetropolitan areas. Differences between regions in the mix of the population in respect to characteristics which affect spending, such as age and occupation, underlie many regional differences in expenditures on particular products.

APPLICATIONS

The economist

Surveys of consumer expenditures, first of all, provide economists with the weights necessary for constructing indexes of prices. In addition, they make it possible to test theories which seek to explain consumer behavior and its role in aggregate economic activity. Knowledge, for example, of how expenditures vary among households of different incomes is the basis for estimating what effects a redistribution of incomes would have on the Nation's total propensity to consume. Underlying many of these kinds of analyses are projections into the future and guides to public policy in the areas of taxation, credit control, and social security. The primary purpose of the Life survey, however, was to describe the markets for a great variety of specific goods and services, with the consequence that some of the information which an economist would want for analysis was not collected, such as additions to savings and indebtedness, past and expected incomes, capital position, sources of income, and income and other taxes.

Older Workers

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2, 1958

Mr. HUMPHREY. Mr. President, for the past several years I have become increasingly alarmed about the policy of employers toward older job seekers. One has only to look at the help-wanted columns of our daily papers to learn how a man or woman's birth date is considered sufficient evidence to bar him from consideration for employment. In far too many instances no consideration is given to ability, experience, or the degree of willingness the applicant may possess.

Advertisements such as "wanted, secretary (under 40, please); draftsman—to 35; laborer (those over 40 need not apply); sales ladies—18 to 35" are common place. To the qualified worker beyond the specified age limits, such ads can mean only one thing—"We don't want you—your services are not needed." This treatment is not only an unwarranted economic blow to the older worker, who in all probability must provide for several dependents, but, in addition, it is bound to be a severe test to the morale of even the strongest and most determined individual.

Mr. President, some months ago this situation was brought forcefully and personally to my attention. I have described it, and have listed a number of steps which I think we should take to help alleviate the harsh and unfair condition, in an article I wrote for the Eagle magazine. I ask that "A Challenge for All," which appeared in the April issue of the Eagle, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHALLENGE FOR ALL

(By HUBERT H. HUMPHREY)

"You've got to help me, Senator."

The man sitting beside my desk in the Senate Office Building was husky and appeared to be in good health. I estimated his age at 50 years, perhaps a year or 2 either way. His ruddy complexion indicated that a good part of his life had been spent out of doors, and the calloused hands that gripped the edge of his chair told me this man had known hard physical labor.

"I know you are a busy man," he went on, "but I just don't know where to turn." There was a certain desperation in his eyes, and it was obvious that he had encountered a force that could not be pushed aside by his strong hands alone. My secretary had asked what he wanted to discuss with me, and he told her that it was personal, so at that point I knew nothing of his problem. I was not a little disturbed when I learned what it was, and since that time I have done considerable investigating, and what I have found has shocked me.

He told me his story, haltingly and with some embarrassment. Here was a strong man who had worked hard since childhood, and had always provided well for his family and to whom the word unemployment signified a lack of ambition. Yet, here he was, in good health, more than willing to work and still he had not had steady employment for more than a year.

"They say I'm too old. I am 53 and have 2 daughters in high school and a boy in junior high. My wife is not well, and she worries about this. What can I say to them, Senator? Can I say, I cannot support you any more because I am too old? Can't the Government do something?" he pleaded.

Well, perhaps the Government can do something. Yes, we may have to do something to alleviate the unhealthy practice that has grown in our society of job discrimination on the basis of age. Senators NEUBERGER, KEFAUVER, MCNAMARA, and myself have introduced a bill into the Senate providing for a White House Conference on Aging to be called by the President prior to December 31, 1958. One purpose of the conference will be to deal with the outmoded practices in the employment and compulsory premature retirement of middle-aged and older persons.

With the assistance of dedicated supporters such as Judge Robert Hansen and the Fraternal Order of Eagles, who have already done so much in this field, we will get this bill passed. However, our American employers can do much more and do it in a more efficient manner. Legislation is not always the final answer, but industry must realize that it is inevitable if the morale-destroying and economically foolish practice of job discrimination on the basis of age is not terminated.

Let us briefly analyze the background of this unfortunate situation. In the early days of our Nation, while our ancestors were fighting for survival in their battle with the elements, a high premium was placed on youth. Later on as we struggled for freedom and then began to push the frontier beyond the Mississippi, over the Great Plains, past the Rockies to the Pacific Ocean, the rugged life demanded a degree of physical prowess found only among the young. The rigors took their toll, and even as late as 1900 a man could expect to live only 46 years. So, of course, a person of 40 was old, and even a man of 35 had likely passed his most useful and productive years. Now things have changed, and a male child born in 1954 can reasonably expect to live 67 years and a female child 73 years. We have shifted from a country, largely agricultural, to a highly industrialized, essentially urban society. The physical challenges are no longer as great, and thanks to the wonderful progress in medicine and social services, our people can now not only live longer, but they are able to enjoy good health and extend their productive years far beyond the past expectations.

But unfortunately, the old ideas that persons of 40, 50, and 60 are not good employment risks, have remained with us. This is little more than a numbers game and an employer who arbitrarily limits the age of those he will consider for work is following a short-sighted policy. The shift in age composition has been dramatic and far reaching. The results have not yet been fully tabulated, but we do know that a very large part of our manpower resources now lies in this group of middle-aged and older men and women. Even though we were not faced with a battle for survival with the Communist countries, this productive force would be necessary to the continued economic growth of our Nation. Unfortunately, however, this is not the case.

Our Nation is faced with what is probably the gravest crisis in our history. We have fallen behind Soviet Russia in rocketry and other types of scientific military achievement. It is not an exaggeration to state that we could be in danger of becoming a second-class power. We will need all of our wisdom, courage, determination, and talent if we are to maintain our position as the leader of the Western World. Certainly, in a situation of this kind, the maximum utilization of the skills and productivity of all of our people no matter what their age, becomes essential.

Now, even were we to disregard the effect on the morale and lives of our older workers who encounter age discrimination and consider the problem only in an economic light, there is still no justification for this practice. The Department of Labor has made a number of comprehensive studies on the employment of older workers and among their findings they point out that these employees show a greater degree of stability and have fewer separations in proportion to their employment. In each of the seven large cities studied, this was the case. Also the investigators found out that the average output per man-hour shows no significant decline with age and that a great many older workers exceed the average output of younger age groups.

The University of Illinois bureau of business management, in a significant study of 3,077 persons, 60 years and older, went directly to the immediate supervisors to obtain evaluations of their older workers' performance. This is what they found:

1. Supervisors in business and in industry consider a majority of their workers, 60 years of age and older, to be as good as or superior to average younger workers with reference to overall performance, absenteeism, dependability, work volume, and human relations.

2. There is no specific age at which employees become unproductive.

3. Supervisors indicate that organizations which require employees to retire at a certain age, such as 65, are losing much valuable productivity.

4. Supervisors believe that one-fourth of their workers, 60 years and older, will be able to continue working indefinitely.

5. Supervisors said that they had experienced favorable results with new employees recruited from the ranks of the middle aged.

Almost without exception, studies have shown that the older worker experiences the greatest difficulty when his job is terminated for one reason or another through no fault of his own and then must seek new employment. It is at this point, when the ugly phrases such as "too slow, cannot meet production requirements, lacks skill and flexibility, cannot meet physical demands" are offered in the place of a job. It is little less than cruel and inhuman when an American citizen, in search of a job, must comb the columns of the help-wanted section of a newspaper to be greeted by "wanted, secretary (under 40, please); draftsman, to 35; laborer, those over 45 need not apply; sales ladies, 18 to 38." For the older persons who are seeking employment, this attitude can mean only one thing—we do not want you. You are no longer of value. I think that Dr. Edward L. Bortz, former president of the American Medical Association, has summed up the tragic paradox of forced unemployment, among older workers in periods of full employment, in one sentence. "With one hand, modern society does everything possible to extend the life of man; while with the other it writes him off as useless because of the date on his birth certificate."

So what can we do to alleviate this harsh and unfair condition?

1. Employers should be urged by citizens' committees and interdepartmental committees to investigate the advantages of flexible retirement policies. Many State governments are setting an example by establishing such practices for their employees.

2. States may pass legislation to ban discrimination due to age alone. Massachusetts, Rhode Island, and Pennsylvania now have such laws on the books. While we know that a law of this kind will not end discrimination, it will stop the discrimina-

tory want ads, will aid in the education program, and most certainly will jar employers into taking a second look at their archaic employment practices.

3. States could and should provide special counselors in the State employment service to guide older persons in employment, assist other public and private agencies in employment opportunities, and to instruct employment interviewers in ways to help the older job-seekers. Massachusetts and New York have recently instituted this program with encouraging results.

4. States may wish to take the lead in retraining and reclassifying their own employees when skills or abilities in one vocation lessen or become obsolete. Part-time work for the semiretired is also an area that should be investigated thoroughly. In addition, many study commissions have also determined that it is wise for States to take leadership in setting up a system for counseling their older workers in retirement problems. Retirement eventually comes to all of us and an activity of this sort can be of great assistance in finding ways to creative leisure and in meeting problems of finance and time budgeting that will be unfamiliar to many newly retired workers. The Department of Civil Service in New Jersey has instituted such a program and all employees retiring during the next 5 years will be counseled.

5. Federal and State governments, State and local committees and commissions, should undertake to a greater degree the task of educating employers and personnel directors to the desirability of giving the older worker a trial.

6. All of us must recognize the danger inherent to our people and our country if we permit an expanding and growing segment of our population to lapse into a feeling of rejection, loneliness, and insecurity. Mental deterioration is a real and terrible danger, unpleasant even to contemplate, but it is a threat unless our society makes sure that our older people enjoy their rightful role as contributors to our way of life, and live their twilight years with a feeling of pride in their day-to-day accomplishments. Human resources are the Nation's most valuable assets, and we cannot possibly afford to continue the shameful waste of the past. The still secret Gaither report and the Rockefeller report (recently made public) should be fair warning that we must act and act now to pull together all of the resources at our command. We need the skills and productivity of our older workers as never before.

Fortunately, we were able to locate a position in a fine Minnesota firm for the man whom I described at the beginning of this article. He is doing an excellent job and his employer is well pleased with his performance, but he was only one of the thousands and thousands of workers who are unemployed simply because they are over 40. All of us must do more. Business, Government, labor, and citizens groups can contribute in important ways. The problem is not insurmountable, but neither can we merely look the other way and wait for it to disappear.

Flint "You Auto Buy Now" Campaign Sets Pace for Nation

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following front-page editorial which appeared in the Flint Journal, Flint, Mich., entitled "'You Auto Buy Now.' But Where Is Reuther?"

I am proud of the effort being made by Flint merchants to stimulate sales of automobiles to counter the effects of the current decline in automotive production and the resultant unemployment. They are using the old-fashioned techniques of spirited competition and salesmanship which President Eisenhower advocated in his recent news conference. This campaign has spread from Flint to many other cities throughout the Nation.

The Flint Journal's editorial also urges that the present contracts between the United Auto Workers and the automobile manufacturers be extended to relieve uncertainty, pry loose hoarded funds, stimulate buying, not only of automobiles but of everything else, and be an important step toward the quick return of full employment.

As you will recall, this was my purpose in writing to Mr. Walter Reuther, president of the United Auto Workers, several weeks ago. I urged that he consider making a public declaration of the union's willingness to accept an extension of the present contracts. At the same time, I wrote to the leading automobile manufacturers urging a reevaluation of their price structure in the interest of stimulating automobile production and employment.

The "You Auto Buy Now" campaign, inaugurated by Flint businessmen, is an encouraging step. I hope that the Flint Journal's editorial will receive close study by all who are interested in restoring full employment to this important industry.

"YOU AUTO BUY NOW"—BUT WHERE IS REUTHER?

Today marks the start of a campaign in Flint designed to stimulate business, reduce unemployment, and bring back the kind of prosperity everyone so earnestly desires.

Literally thousands of people in Flint are participating, either directly or indirectly, in this effort. Under the slogan, "You Auto Buy Now," hundreds of automobile salesmen are out ringing doorbells, making telephone calls and personal contacts, asking everyone they meet, "Do you know anyone who wants to buy a car?"

We have heard such remarks as these: "I'm buying a new car just to help this thing along," and, "I don't really need a new car, but I could be talked into buying one."

All over the Nation, similar campaigns are being planned. That means that millions of people will take part in this great American effort to end the business slump. The campaign is not confined to automobile sales. It is sponsored in Flint by the auto dealers and the chamber of commerce. Thus all businesses are involved.

This voluntary, largely spontaneous campaign is encouraging because of the participation of so many people and organizations, and because of the enthusiasm being shown.

This is the American, the democratic way of tackling a problem, by individual and group initiatiye, determination, and aggressiveness.

The Government is participating. It has taken several steps designed to give our economy a shot in the arm. Defense contracts have been speeded, particularly to areas where unemployment has increased. Credit has been eased. A determined effort is being made to reduce or repeal the excise tax on cars. The highway program will be speeded. The same is true of Federal construction projects. The Government will provide a multibillion dollar stimulant through these and other projects.

But people everywhere are unwilling to wait for these Government measures to take effect. They are determined to help themselves. Who says the old American spirit of self-reliance is dead?

This is one of the most heartening developments in a long time. Nearly every segment of American life is represented in this campaign to pull ourselves out of the business slump.

But one important segment of American life is conspicuous by its absence, even though it stands to profit more by the success of the effort than the others.

Where, it must be asked, is Walter Reuther and the UAW–CIO in this effort to beat the recession?

The answer is not hard to find. At a time when everyone else is engaged in an enthusiastic, cooperative effort to pull themselves up by their own bootstraps, Reuther and his cohorts, against the obvious wishes of the very people they represent, are stamping on those same boots, trying to drive them deeper into the economic mud.

Reuther, by his own admission, is out to get the biggest pay raise in history—at a time when such a pay raise can only harm the economy by bringing about even higher prices and more consumer resistance.

The economic climate calls for reasonableness, flexibility, and responsibility. He is being unreasonable, inflexible, and irresponsible.

At a time when he could allay fear of the future, help restore confidence in the economy, and stimulate the sales of the product upon which his members rely for their living, he is depressing confidence and promoting insecurity.

One simple act of labor statesmanship could remedy this—extension of the present contract.

That would relieve uncertainty, pry loose hoarded funds, stimulate buying—not only of automobiles but of everything else—and be an important step toward the quick return of full employment. It would be the "shot in the arm" our economy needs.

Reuther apparently has defective hearing regarding grassroots rumbling within his membership and from the general public. In common with such labor leaders, Reuther thinks his very job always depends on getting wage increases and additional fringe benefits each time a new contract is negotiated. In this instance he is making an issue of a garment not suited to the figure. There is no doubt that among the rank and file the predominant desire is to work. Rather than a strike or the risk of one, they would rather go to their jobs under present terms, which include the escalator clause which provides readjustments conforming to living costs.

This has been suggested by GM president Harlow H. Curtice. Reuther should bring his thinking up to date.

Accelerated Shipbuilding Program a Means of Combating Recession

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column which appeared in the Independent-

Press-Telegram, Long Beach, Calif., on Sunday, March 23, 1958. This column, which discusses an accelerated shipbuilding program as a means of combating the recession, was written by an outstanding analyst and commentator, Mrs. Virginia Kelly.

In this article, Mrs. Kelly quotes a distinguished Member of Congress from California, the Honorable CRAIG HOSMER, as well as Rear Adm. A. G. Mumma, Chief of the Bureau of Ships, as stating the desirability of increasing our combatant ship production in the interest of national defense. I concur in this position and, with reference to the construction of new submarines, I earnestly hope that decision will be made to place even greater emphasis on submarine construction at such leading yards as Portsmouth, N. H.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOSMER SEES SHIPBUILDING AS BIG HELP IN RECESSION FIGHT

(By Virginia Kelly)

Representative CRAIG HOSMER (Republican, California) believes an accelerated and augmented Navy shipbuilding program would be one of the soundest ways of fighting the recession. A Naval Reserve commander, Mr. HOSMER has just returned from Navy maneuvers at Guantanamo.

Mr. HOSMER stressed that the President has properly put his foot down on make-work programs. The Long Beach legislator said that a Navy shipbuilding program would not be leaf raking but would be necessary for adequate defense. The program, HOSMER said, would benefit not only shipbuilding areas but the entire Nation. For example, the Kaiser Steel Co. in Fontana, Calif., will start rolling plates for ships next summer.

Representative HOSMER said he would recommend building the nuclear carrier recently knocked out of the Navy building program, and the building of additional submarines. He said bluntly that the only way to hold in check the menace of 500 Soviet submarines—many of them missile bearing—is by an enlarged program of United States Navy submarines. At present, HOSMER said, the Polaris and hunter killer sub programs are battling for funds. The two programs should be separated, he asserted, and each should be given adequate funds.

From other sources, this reporter learned that Vice President NIXON is giving close study to the advantages of a shipbuilding program. The President and his advisers are contemplating restoring the nuclear carrier.

The Navy's Bureau of Ships Chief, Rear Adm. A. G. Mumma has completed the first draft of a paper showing the impact a Navy building program would have on the recession and unemployment.

Admiral Mumma has already discussed the matter with Navy Secretary Gates and with Chief of Naval Operations, Admiral Burke. The Mumma paper makes no specific recommendations as to types of ships needed but Admiral Mumma said the nuclear carrier and additional submarines would be "very welcome." The admiral pointed out that steel and many other ship components would benefit the whole country as well as the most depressed areas in the Northwest, along the Great Lakes, and the Atlantic seaboard. Money availability is the present problem, Admiral Mumma said, but he recalled that 34 Navy ships were built under NIRA during the depression of the 1930's.

He refused to comment on the report current on Capitol Hill that Defense Secretary McElroy has cut back the Navy's Polaris submarine program from 9 to 5 or 6. Other sources assert that as of March 17, Secretary McElroy had not definitely issued the order to cut back.

Admiral Mumma said no announcement has been made as to the weaponry that the Navy's first atomic cruiser, the U. S. S. *Long Beach* will carry but he said it would be possible for the *Long Beach* to be armed with Polaris.

Navy Under Secretary William Franke believes badly needed Navy housing would be a useful way of fighting the recession.

Stand of Woman's Christian Temperance Union on Tobacco and Price Supports

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2, 1958

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an effective and informative excerpt from the Washington Letter by my friend, Miss Elizabeth A. Smart, which is a regular feature of the Union Signal, official magazine of the Women's Christian Temperance Union.

This article by Miss Smart asks why there has been no consideration of my proposed bill, S. 2569, to remove tobacco from the list of crops qualifying for Government price supports—particularly in view of recent medical bulletins regarding the adverse impact of cigarettes on human health.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

[From the Union Signal of March 8, 1958]

THE WASHINGTON LETTER

(By Elizabeth A. Smart)

Cigarettes and price supports. Senator RICHARD L. NEUBERGER, of Oregon, who induced the United States Public Health Service to get out a leaflet warning the American public that tobacco can cause cancer, has introduced a bill (S. 2569) to get the Government out of the business of giving price supports to tobacco. He said in an article in the Christian Century: "If ever there was a situation where the left hand knoweth not what the right hand doeth, it is in the policy of the United States Government with respect to tobacco and cigarettes. While one agency of Government warns that cigarettes may be a factor in causing the most terrible disease afflicting the human race, another Government agency subsidizes and encourages the growing of the product from which cigarettes are made.

"Late in July I introduced a bill in the Senate which reads as follows: *'Be it enacted, etc.,* That notwithstanding any other provisions of law, beginning with the 1958 crop, no price support, marketing quota, acreage allotment or acreage reserve program shall be effective with respect to tobacco.'

"The statement of Dr. Burney (Surgeon-General Leroy E. Burney) of the United States Public Health Service: 'Many independent studies thus have confirmed beyond reasonable doubt that there is a high degree of statistical association between lung cancer and prolonged cigarette smoking.' Once the surgeon-general had issued such a statement, it seemed to me the height of irony for the Government to continue to regard tobacco as a 'basic' crop. If tobacco is a causative element in spreading the grimmest malady which may plague large numbers of Americans, then the growing of tobacco should not be subsidized out of the taxes collected from the American people."

You might ask your Senators why this bill has been indefinitely postponed.

Resolutions Adopted by the Detroit Common Council

EXTENSION OF REMARKS

OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mrs. GRIFFITHS. Mr. Speaker, the following three resolutions were unanimously adopted by the Detroit Common Council:

Inauguration of a food stamp plan for the distribution of surplus foods.

Reactivation and approval of housing project Michigan 1–11.

Continuation and acceleration of the urban renewal program.

All three programs are of vital importance to the city of Detroit and their enactment is long overdue.

Whereas housing project Michigan 1–11 has been approved by the Public Housing Administration and all agencies of the Government concerned; and

Whereas land for the first portion of this project has been acquired by the city of Detroit; and

Whereas prompt approval of the first 1,250 family dwellings of this project will provide urgently needed additional public housing for large families and for elderly single persons and couples of low income; and

Whereas the construction contracts and equipment contracts of this first 1,250 dwelling units will total more than $15 million and will aid materially and beneficially in relieving the unemployment situation in the Detroit area: Therefore be it

Resolved, That the Public Housing Administration be and is hereby requested to immediately reactivate the Michigan 1–11 project by prompt approval of the development of the first 1,250 dwelling units at a cost of approximately $17,600 per unit; and further

Resolved, That Detroit's Representatives in Congress and Senators MCNAMARA and POTTER are hereby requested to urge the approval of this project.

Adopted unanimously, March 27, 1958.

Whereas the President of the United States has expressed a desire for the quickening of the urban renewal program as a means of strengthening the national economy; and

Whereas the city of Detroit is mindful of this fact and has obligated itself in the undertaking of an expanded urban renewal program, both in the field of redevelopment and conservation in 55 neighborhood areas; and

Whereas the city of Detroit is aware of the great assistance afforded the construction and related trades in this type of program; and

Whereas the continuation and acceleration of the urban renewal program depends upon the provision of additional Federal funds: Now, therefore, be it

Resolved, That this common council take steps to advise the Federal Government of

its desire that additional funds be made available for the continuation and acceleration of the urban renewal program as a means of strengthening the national economy.

Adopted unanimously, March 27, 1958.

Whereas the city of Detroit since January 1955, has been engaged in distributing food commodities to needy citizens, including not only families receiving public assistance but other needy individuals; and

Whereas in the month of February 1958 the city distributed 120 tons of surplus foods to 20,946 families, representing 70,758 persons; and

Whereas it is reported that approximately 15 percent of the labor force in this area is unemployed thereby increasing the number of persons receiving food commodities; and

Whereas this common council has adopted resolutions urging the inauguration of the so-called food stamp plan, similar to the plan in effect during the years 1939 and 1943, which would eliminate the present complicated, cumbersome and costly plan of distribution of surplus commodities: Therefore be it

Resolved, That this common council again urges that the food stamp plan be reactivated by the Federal Government to permit distribution of surplus foods in the normal business channels which has operated successfully at little expense; and further

Resolved, That copies of this resolution be sent to the President of the United States, the Members of Congress and the Secretary of Agriculture.

Adopted unanimously, March 25, 1958.

Vital Statistics

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks in the RECORD I should like to submit a friendly letter received from one of my constituents this morning. Naturally I approve of the tone of his communication but I also think he has made a good point:

WILDWOOD, RED HOOK ON HUDSON, N. Y.,
March 31, 1958.

Hon. J. ERNEST WHARTON,
United States Representative,
House Office Building,
Washington, D. C.

MY DEAR MR. WHARTON: For many weeks I have refrained from informing you of my views on vital matters of prospective legislation by Congress; and today I am addressing you a communication intended only for your indulgent scanning in a moment of respite from your important and difficult duties as a statesman in 1958. I hope that, in a mood of levity, you may find the vital statistics which I copy below from a New York City newspaper column as hilariously amusing as I have found them:

"From William H. Van Thusen, Inc., comes the following, which is labeled 'Some vital statistics.' Goes like this:

"Population of the United States, 173 million.

"Those over 65, 61 million; left to do the work, 112 million.

"Those under 21, 54 million; left to do the work, 58 million.

"Government employed, 25 million; left to do the work, 33 million.

"In the Armed Forces, 10 million; left to do the work, 23 million.

"In State or city work, 19 million; left to do the work, 4 million.

"In hospitals or asylums, 3,800,000; left to do the work, 200,000.

"Bums who won't work, 175,000; left to do the work, 25,000.

"In pens and in jails, 24,998; left to do the work, 2."

Or perhaps the paragraphs above quoted isn't as humorous as it sounds.

With every friendly wish for your continued health and your customary sane-and-sensible statesmanship on Capitol Hill, I remain,

Respectfully and sincerely yours,
HARRIS N. COOKINGHAM.

State Port Plan Needs Reciprocal Trade Spur

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, March 10, 1958

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article from the Jackson, Miss., State-Times:

STATE PORT PLAN NEEDS RECIPROCAL TRADE SPUR

(By Robert Webb)

Eager to develop its port cities, Mississippi has more than casual interest in the proposed extension of the reciprocal trade agreements program.

Too often people away from port areas reject reciprocal trade agreements without thinking. They adopt the protectionist view that any program to lower tariffs and promote world trade harms the domestic economy.

Actually the opposite is true in that the international exchange of goods not only provides markets for domestic production but also encourages goodwill toward the lasting peace all wage earners and investors seek.

From the economic standpoint, Dr. Robert W. French, director of the port of New Orleans, has carefully analyzed the position of world trade as it influences living standards in Mississippi and throughout the midcontinent area. Not alone would further import-export freedom benefit New Orleans.

TRADE PURSUIT VITAL

Calling attention to Greenville and the other Mississippi River ports, as well as to the gulf coastal interest, Dr. French writes that "if the great potential assets of the river and region are to be fully realized, the United States must continue to pursue the kind of foreign trade policy represented by the reciprocal trade agreements."

A distinguished economist who formerly headed the Tulane University School of Business Administration, Dr. French took a leading role in the southern assembly on international stability and progress at Biloxi in January. Leaders of business, labor, agriculture, education, Government, and professions composed the assembly, which gave reciprocal trade agreements unequivocal endorsement.

As Dr. French's analysis makes clear, the phenomenal industrial development of the New Orleans-Baton Rouge area would have been partially checked, perhaps blocked, without these pacts which increased foreign trade. Industries need the foreign markets. And they need the raw material imports.

Almost $2 billion of new industrial development in the riverfront stretch from New Orleans to Baton Rouge is a good example of what Mississippi can do with its port development and support of the proposed Tombigbee Waterway. Gulfport, Biloxi, and Pascagoula, each with port programs of its own bid well to enhance the State economy through the trade impetus of reciprocal agreements.

GOOD NEIGHBOR SPURT

Since 1934, when the good neighbor policy was instituted, foreign trade has shot up as an economic and diplomatic servant of this country. At New Orleans, for example, the value of imports and exports soared from $226,200,000 in 1934 to just shy of $2 billion last year.

Admittedly these mutual agreements between the United States and other countries were not wholly responsible for this increase. But, as Dr. French said, they were a great factor.

In the estimate of Commerce Secretary Sinclair Weeks, urging extension of reciprocal trade, 4.5 million American workers owe their jobs to the export-import business. What the side benefits total defies the wildest estimate, but it must be fantastic.

Dr. French believes the whole South ought to get behind the bipartisan effort to extend and strengthen the ties of reciprocal trade. If you stand with Dr. French and the southern assembly, which included some of Mississippi's ablest representatives, your Congressman ought to know.

The Mid-Continent's Contribution to World Prosperity

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. BYRNE of Illinois. Mr. Speaker, under rule to extend my remarks in the RECORD, it is a pleasure for me to insert the address of Father John Francis Bannon, S. J., of St. Louis University at the World Trade Convention of the Midcontinent Trade Council in 1949.

This address is inspiring and heartening and in my opinion the thoughts projected by Father Bannon are just as timely today as they were when he delivered this beautiful address.

Illinois and our sister States have had an important part in our trade affairs and in the days just ahead, we will be playing an even greater part in world trade. When the St. Lawrence seaway is completed, Chicago will become a greater world port.

We have in the past, the midcontinent States will continue to contribute immeasurably to the safety, security, and economic progress of America.

THE MID-CONTINENT'S CONTRIBUTION TO WORLD PROSPERITY

(By John Francis Bannon)

From the Alleghenies to the Rockies, from the northern woods to the Gulf of Mexico, stretches a band of territory, half a continent, which is one of the richest and most resourceful in the world. Nature has blessed

this land with a bounteous hand. In its subsoil she had hidden precious treasures to serve man's needs; iron ore, coal, petroleum, natural gas, lead, zinc, bauxite, sulphur, and many more things of high value and utility. Its topsoil she has endowed with marvelous fertility, covered it with woodland stands and rich prairie grasses. Its climate ranges from the sultry heat of the subtropic Gulf Coast to the chill of the northern woods, with the largest expanse set in that temperate belt wherein man lives and works at his best. More than that, nature has stretched across the area a network of waterways, which permitted man both access and communication until the day when he was able to lay his machine-age lines of transit across the vast expanse. Down the middle of the strip runs the great "Father of Waters"; from both sides this "Ole Man River" can make connection with the farther reaches of his valley through numerous tributaries—the Ohio, the Tennessee, the Illinois, the Wisconsin, the mighty Missouri, the Arkansas, the Red, and more. This is the North American midcontinent.

Long before the white man came to North America, purposefully, to settle and exploit, this middle strip was the home of other men. Indians, Columbus misnamed them. These native Americans were not as numerous as one might imagine, noting the millions of later Americans who have made their homes in the midcontinent. Not being farmers, at least to no great degree, the Indians failed to sense the primary wealth of the lands which they occupied; that is to say, the fertility of the soil. The Indians were above all else hunter folk. Perhaps, as things turned out, the scattered character of the native American population was a blessing, since the white man, when he arrived, encountered no serious opposition as he occupied the territory in question.

The Spaniards were the first Europeans to venture into midcontinent. In the decade of the 1520's there were Cabeza de Vaca and his fellow castaways, who for years ranged through Texas, until, finally, they found their way to the white man's towns of Mexico, or New Spain, as it was known in those colonial centuries. Next, as the 1530's were waning, came the De Soto band, possibly even to this very site where today we recall their exploits. And about the same time Coronado was on the Great Plains farther west. Out of the New Mexican settlements in the next two centuries Spaniards betimes ventured out on Coronado trails and covered more of the central valley. But to the Spaniard the midcontinent proved a distinct disappointment. It gave no promise of immediate return in those two things which the Spaniard prized most: the precious metals and souls to be saved. The men of Spain, therefore, missed midcontinent's real treasure: its land and land's magnificent potentialities.

The 17th century was fast running out before Spain made a first move toward occupation of midcontinent. This and subsequent advances into the area were prompted almost wholly by strategic considerations. The French had recently established themselves on the gulf coast, in positions which one day might prove too convenient and ready springboards for aggressive expansion against prized portions of Spain's North American empire. For this reason Spain chose to make counterestablishments in the area of the future Texas. And back to those 18th-century days can be dated a later and important midcontinent industry, stock-breeding. The western cattleman is the economic heir of the vaquero of Spanish Texas.

Frenchmen had ventured into the upper reaches of midcontinent earlier in the 17th century. Jean Nicolet was on Green Bay in 1634, and there he picked up rumors of the great river to the west. Not many years after midcentury adventurous coureurs-debois, Radisson and Groseilliers, of Hudson Bay Co. fame, possibly touched the sources of that river, but fur fields farther north soon drew their attention and their energies. Not until 1673 was the great middle valley opened in a true sense, when Louis Jolliet and Père Jacques Marquette explored the Mississippi from the mouth of the Wisconsin to the mouth of the Arkansas and reported to the world on the land and its people. They resolved one torturing geographic question mark in the process—the great river flowed into the Gulf of Mexico and not into the Vermillion Sea (Gulf of California), as the French had hoped. Men were still interested in a gateway to trade with the Orient. Before long, however, nature's disposition of the Mississippi's course proved less a disappointment than was first thought.

In the next decade, the 1680's, intrepid La Salle followed the river to its mouth, worked back to Quebec, and made off to France with a scheme for occupying the gulf coast and for stringing a chain of forts along the western side of the Alleghenies to check expansion from the English-held Atlantic seaboard. A few years later at his Texas post, Fort Saint-Louis, La Salle met a violent death at the hands of untrue friends and his scheme threatened to collapse. But soon there were others of his countrymen to carry on, both in the middle valley and along the gulf. Fur traders were active in the upper and middle valley reaches; missionaries and settlers followed in their wake. In 1699, while Iberville and his companions were laying foundations along the gulf coast, seminary priests from Quebec were establishing headquarters at Cahokia, in the Illinois country. And before the new century was old, the Illinois country could boast of several settlements; Kaskaskia was the most important, but there was also Fort de Chartres, and a couple hundred French traders and farmers were in the area. During the same years towns and posts in the lower valley multiplied. In 1718 New Orleans was laid out and 4 years later superseded Mobile as Louisiana's capital. Even though the company in charge had blown the Mississippi bubble to a bursting point, the colony was not seriously hurt. Progress, though hardly phenomenal, continued.

The men of the Illinois country had made a momentous discovery. Traders had already begun to tap the fur resources of the western tributaries of the great river, and prospectors had uncovered rich lead deposits in the middle valley. But the farmers had come up with the most valuable find of all—the fertility of the soil. The Illinois country soon became a granary for both the older settlements of New France in the Great Lakes region and the Saint Lawrence Valley and for the less ancient posts of Louisiana. Again, another of the signal contributions of midcontinent to world prosperity thus had its humble beginnings in colonial times.

During these years, farther down the river, in Louisiana's capital, a trade center began to develop. True, this commerce did not take the men of New Orleans very far beyond France's island possessions in the Caribbean, but a pattern was set on which the future was destined to build. In these lower reaches of midcontinent several enterprises of later importance had a beginning, notably the cane industry, introduced from Santo Domingo by Jesuit missionaries around 1750.

In the decades around mid-18th century war clouds hovered over North America. In the 1750's the showdown fight for supremacy in the continent got underway. The eastern gateway to midcontinent, the forks of the Ohio, was a major prize, with France and England contesting warmly for control, both realizing very definitely the tremendous potentialities of the lands beyond. The English victory was sealed on many fronts, and a desperate and disheartened France, seeking to save something of her American empire for a future and brighter day, persuaded Bourbon cousins in Spain to accept the trans-Mississippi. Without too much enthusiasm, Spain yielded to the pressure, with the result that France came to the peace table of 1763 with only the trans-Allegheny portion of midcontinent to turn over to victorious Britain. France hoped at a later date to take the trans-Mississippi back from Spain and there to build an American empire which would endure.

In the days when the plenipotentiaries in Paris were drafting a new version of the North American map, the French Governor of Louisiana, unmindful of secret treaties and the peace dispositions in the homeland, was drawing up a patent for the firm of Maxent, Laclede & Co., granting the partners a trade monopoly along the Missouri and the right to found a post near its confluence with the Mississippi. St. Louis came into being the following year, 1764. Midcontinent was being readied for future greatness. To the anchor point near the valley's end was added a key at its center, and from the crest of the Alleghenies the pioneer flood was poised for its westward rush.

There were already trickles beginning to dribble down the Appalachian slopes. Pennsylvania traders, Virginia surveyors and land speculators, restless Carolinians, colonial militiamen with Braddock and with Forbes had seen the West and sensed its potentialities. Fearing grave dangers from the Indians, at least until the original owners could be rid of their French-inspired distrust of the Anglo-Americans, the British crown sought to stay the flow of men into the great valley. But Indians or no Indians, proclamation line or no, the colonials were not to be denied. Into midcontinent they moved—Boone, Henderson, Robertson, Harrod, Sevier, and hundreds more. And when the Colonies gained their independence and by treaty right added the trans-Allegheny to the national domain, the pace of the movement quickened. By 1792 Kentucky became the 15th State; 4 years later Tennessee added another white star to the field of blue. The new century was not old before enough Yankees were in Ohio to win her statehood; and more folk, from New England and the southern commonwealths, were lapping over into Indiana and into Illinois.

The year 1803 is a red-letter date in the midcontinent calendar. The young West had its problems, disquieting and distressing problems. France, having regained Louisiana from Spain and planning to reestablish herself in midcontinent, shut off the Mississippi outlet at New Orleans, the pioneer's only economically profitable gateway to a growing seaboard, as well as to a foreign market. He could not pack his bulky grain across the mountains, and Alexander Hamilton's excise tax kept him from turning it into whisky. He had to have the Mississippi and the deposit at New Orleans. Jefferson realized that not only was the prosperity of the West at stake but, also, perhaps, its very loyalty to the Union. He took instant action. His emissaries to Napoleon succeeded beyond expectations. Instead of New Orleans simply, the Emperor would part with the whole Louisiana claim—he could use the $15 million to fill his war chest, particularly with an invasion of Britain projected. By the Louisiana Purchase the young United States rounded out its midcontinent holding, except for Texas which was to be acquired at a later date. From the Appalachian highland to the Rocky Mountain cordilleras the land and its resources invited men of vision, energy, and hardihood to come to explore, to settle, to exploit.

The occupation of midcontinent during the next decades is one of the epic chapters in the United States story, and one of the more important. They came. The Yankees

up the Mohawk Valley, across the Genessee Tract, into the Western Reserve, the Seven Ranges, and beyond. The Pennsylvanians across the hills, along the old military roads, to the forks of the Ohio. Southerners—Virginians and Carolinians—through Cumberland Gap, along the Wilderness Road and the early traces. Once the highlands had been negotiated, the rivers did their bit and brought the frontiersmen into the heart of the continent. Before long Indiana was a State (1816); Illinois was filling up; and Missouri was no longer a region peopled only by Frenchmen. Explorers and fur men were heading up the Missouri and traders soon found a way across the plains to Santa Fe. Gradually, in the land of the trans-Allegheny, men forgot their initial prejudices against the prairie and learned to put its vast flat stretches to more profitable use than could be made of the timbered lands of the river valleys which had first drawn them westward.

Meanwhile, too, there was movement into the southern reaches of midcontinent. Eli Whitney's invention had turned cotton into a valuable crop, and England's mills offered a market readymade. The lands of the seaboard had almost worn out. If cotton was to be king, and the southerners had so decreed, then richer lands must be found for the new empire. Alabama's black and red belts and the Mississippi bottoms were inviting, and men quickly accepted the call. Louisiana had already attained statehood, in 1812. Before long bands of restless and ambitious folk began to eye Texas and schemed to wrest its vast stretches from the Mexicans.

The decades around midcentury witnessed two significant developments in midcontinent. First, this mid-America ceased to be a frontier and became both a gateway and a feeder for a farther West. Men forged out over the great trails—to Santa Fe, to Oregon, to California—as the inspiration of manifest destiny was born and grew in the American mind. Texans revolted against Mexico and, as soon as national politics allowed, were incorporated into the Union. The Oregon country agreement with Britain and the Mexican War added, officially, vast territories which pioneers had already usurped. As for the second development, these decades saw an important human element arrive, to fuse with pioneer predecessors in order to give birth to midcontinent's outstanding contribution, the American man.

Down to the 1830's the majority of westerners were of native stocks, that is to say, of families which had been in North America for, perhaps, several generations. They were not all Anglo-Saxon in origin, but the other stocks, such as the Scotch-Irish or the German of middle Pennsylvania or the Huguenots of the Carolinas, had already gone far along the road of Americanization. The second quarter of the 19th century, however, saw the beginnings of large-scale immigration, with the Germans leading the way. A number came in the 1830's, the so-called Dreizigers. More followed around midcentury, the forty-eighters, coming in the wake of the disturbances which shook middle Europe in that year and turned the eyes of many a thwarted liberal to fields afar. Most of the Germans sought out the Middle West, where land was easily available. They settled in Missouri in considerable numbers, both in St. Louis and outstate; others went a bit farther north, to the new territories of Wisconsin and Iowa; still others stayed in the older States of the old Northwest. In general, and this was particularly true of the liberal forty-eighters, the Germans steered away from the South, with its plantation economy and its aristocratic and slave-labor society. They objected to the violation of the human right of liberty, but even more they did not wish to compete in an economy built on slave production.

Around midcentury, too, the volume of Irish immigration increased. Many of the folk from the Emerald Isle remained in seaboard centers, often held there by lack of funds and not infrequently by the insistence of the clergy who feared leakages in the West, still understaffed with priests to keep the faith alive. However, many Irish did come west, to add another healthy element to the midcontinent meltingpot. Later decades brought other strong stocks to midcontinent, like the Scandinavians to the northern tier, the middle border, and new contingents of Germans and Irish. The Slavic peoples of East-Central and Eastern Europe and the folk from the Mediterranean, with one or other area excepted, have not exercised a predominant influence in the formation of the midcontinent type.

The tempo of development in midcontinent stepped up considerably in the latter half of the 19th century. The War Between the States brought a setback to the southern half of the area and, for the moment, disrupted life and work even in the Union States. But once the conflict was closed, progress took up where it had been halted. The railway network was flung across the Mississippi and on out to the Pacific; homesteaders and more immigrants poured into the vast unoccupied tracts; mines at the western rim of midcontinent gave up their treasures; the ranching industry moved northward from its Texas home; villages and little towns grew into cities, with bustling populations, expanding markets, and varied economic enterprises; and the industrial revolution with its machines began to invade sectors of midcontinent. As the century moved toward its final year, midcontinent man began to expand his vision and his dreams beyond his own area and to include more than even his Nation in plans for the future.

In evaluating midcontinent's contribution to world prosperity, there may be a tendency to confine attention simply to goods and products—of which, to be sure, the list is truly imposing. Mention has been made of what should be termed the greatest contribution, namely, the American type. Too much insistence cannot be laid on this point.

The pioneers crossed the Alleghenies still colonial in outlook, even though they may not at the time have been still dependent on the mother country in fact. Those folk who were left behind in the seaboard settlements were of like mind and often have not, even to this modern day, completely divested themselves of this colonial or imperial mentality. In subsequent decades other waves of Europeans touched North American shores, and many of the immigrants who remained on the Atlantic side of the mountains tended to perpetuate and feed this colonial mentality. Across the mountains, however, a new man was born, the American man, to whom Europe quickly became another world, one to which he might and frequently did look for inspiration and, perhaps, with fond remembrance, but one which soon ceased to be his land.

Midcontinent man transferred his loyalties to the woods and prairies, the hills and plains, the lakes and rivers of his new fatherland. Toward Europe he developed a sane and salutary realism. He refused to be content to live his life, even though in independence, in Europe's shadow. He recognized that he had a tremendous challenge set before him, half a continent to conquer. It was an all-absorbing task, and he set himself to it with energy and enthusiasm. The seaboard chided him as an isolationist. In reality he was an American realist. He knew that before his midcontinent could be put to the service of the world, its own potentialities had to be tested and developed, its transportation and market problems solved, its economic health strengthened and protected. It is true that for long years midcontinent man had no time for the rest of the world and felt that the Nation as a whole should have remained equally preoccupied with its own problems. Yet, even so, midcontinent was contributing in significant, if indirect, fashion to world prosperity. As it helped to clothe and feed the industrial East and to furnish a large share of its raw materials to her products, midcontinent shared in the world influence which the seaboard was developing.

If midcontinent was isolationist in the early states of her history, she is no longer so today. She looks east and west, north and south, always confident that she can serve them all. Her diversity is astounding, and her versatility. Yet when it is all added up, products and goods and raw materials, the American man remains midcontinent's great contribution to the world. This harried, worried, bungling world needs his energy, his optimism, his ingeniousness, his willingness to work, his quick human sympathy, in a word, his youth and his realism.

Executive Secrecy

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2, 1958

Mr. CARROLL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "How Much Executive Secrecy?" published in the Northern Virginia Sun, of Arlington, Va., in the issue of March 26, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW MUCH EXECUTIVE SECRECY?—USE WITHOUT ABUSE

Senator THOMAS HENNINGS, of Missouri, is engaged in a battle with Attorney General Rogers about the legal authority of the executive branch of the Government to withhold documents from Congress.

Mr. Rogers contends that this authority stems from an 18th century statute which gives to executive departments the custody of their departmental records. This statute, he says, represents a recognition by Congress of a constitutional executive privilege to withhold internal documents.

Senator HENNINGS favors legislation which would forbid executive agencies from relying on that statute to withhold documents.

We have always believed that the executive branch must have a certain degree of privacy in its internal communications. This is essential to the proper separation of governmental powers.

The problem is how to permit the use but prevent the abuse of this privilege. As it is, the privilege is being invoked by numerous Government officers at many levels, high and low. Obviously, the excessive use of the privilege can bring the practice itself into disrepute, since it is never possible for an outsider to tell whether it is being used to protect truly secret communications or wrongdoing.

We suggest that the best way to control the use of the privilege of executive privacy is to limit the number of officers who can authorize that use. Perhaps there should be a requirement that the invocation of the privilege be personally authorized either by the President or by the head of the department or agency involved.

In any event, we think Senator HENNINGS is on the right track in seeking to limit, while not eliminating, the exercise of this executive privilege.

Railroad Conditions Subject of Real Concern

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pasadena Star-News of Tuesday, March 11, 1958:

RAILROAD CONDITIONS SUBJECT OF REAL CONCERN

It is clear to those who follow the news that the country again has a railroad problem. In earlier years this was obviously cause for national concern. But now the question may be fairly asked, "Does the railroad problem really concern the general public?"

In this day of trucks and superhighways, planes and buses, is the railroad an anachronism? Will it go the way of the stagecoach and canal boat? If this is bound to happen anyway, why worry about all the inequities in governmental treatment of the railroads?

Perhaps, however, before the American people write the railroads off as obsolete they should look more closely into their true economic place in the scheme of things.

Such a close look is sure to prove that a widening gap between current, realistic conditions existing in the transportation industry and governmental regulations supposed to meet these conditions prevents railroads from capitalizing on their greatest inherent advantage—long, heavy hauls at low cost—and passing along these benefits to the public.

In a recent survey made by the Guaranty Trust Co. of New York this comment appears:

"The same political authority which has encouraged the development of competing modes of transportation, multiplied railroad taxes, and allowed the purchasing power of the dollar to fall while railroad costs rise to unprecedented heights is now denying the railroads the opportunity to compete freely."

Thus the railroads are unable to utilize their strongest competitive weapon—their ability to carry goods in large quantities over long distances at low cost.

Strikingly, since 1929, the railroads' share of commercial intercity freight traffic has declined from 75 percent to less than 50 percent, and their share of passenger traffic has dropped from 71 percent to 35 percent. During that same period their tax burden has almost tripled.

A portion of this revolutionary change in the position of the railroads is the result of governmental initiative and financial support for competing modes of transportation.

Highways, canals, airports, and river and harbor improvements have all been objects of public expense. The railroads have thus been placed in the position of paying taxes on their own facilities in order to finance their competitors.

The present regulatory policies of the Interstate Commerce Act were written about 75 years ago. They no longer apply to present-day conditions. Yet the railroads of the Nation are supposed to live by outmoded rules.

It is to be hoped that the Government will realize the continuing importance of railroad transportation and bring their regulations up to date before it is too late.

Greek Independence Celebration

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. MACDONALD. Mr. Speaker, I had the privilege of delivering an address on the occasion of the 137th anniversary of the Greek independence celebration which was held at the Symphony Hall in Boston, Mass., on March 30, 1958.

This celebration was held under the auspices of the Greek Orthodox Communities of Greater Boston. Other speakers included the Ambassador George V. Melas; Thomas Pappas, Special United States Ambassador to Greece and head of the Greek war relief program; Charles Maliotis, president, Greek Orthodox Cathedral of New England; and the Right Reverend Athenagroas, Bishop of Elaias and Bishop of New England Diocese of the Greek Orthodox Church.

My remarks were as follows:

Mr. Chairman, Ambassador Melas, distinguished guests, and ladies and gentlemen, I feel very honored in having the opportunity to speak before this distinguished group this evening on the occasion of the 137th Greek independence celebration.

I do not have to remind you that the 25th of March 1821, is the day to be remembered by all the freedom-loving people of the world. It was on that day the Greek heritage of liberty took on a new meaning as the courageous Greek people threw off the yoke of the oppressors which had weighed them down for almost 400 years.

The heroism of Salamis, Marathon, and Thermopylae still excites the world. As with other freedom-loving people, the Greeks have had to fight for their freedom both governmentally and religiously. The heroic task of the people who kept both their religion and belief in their form of government alive is tremendous. The Greeks have also proved their devotion and skill in defense of their freedom. As a matter of fact, who can forget the courage of the Greek response to the Axis ultimatum and the heroism of the battles that followed in 1940 and 1941?

Today, Greece is a valued ally and a trusted member of NATO. Greece preached democracy to the world during the golden age of Greece and the lessons of that time have produced splendid results here in the United States. The foundation of American democracy is rooted deeply in the culture of ancient Greece. In fact, we of the West, owe much to them.

We are indebted to the Greeks for nearly all the noble ideals that have become distinct hallmarks of all civilized men. Perhaps the noblest of these are the ideas of liberty, of freedom, group, and national political independence.

I would like to point out that I had the privilege last fall of visiting Greece. I returned to the United States with vivid recollections of the courage and determination that are typical of Greece and her people. Greece has suffered, and has paid a tremendous price for freedom that has few parallels in the history of the world. Fortunately the Greeks are a resourceful people and the Greek-Americans have been most generous in their assistance. While in Greece I was told that over one-fourth of the population are now sustained by Greek-Americans. Much of this assistance has been on a private-citizen-to-private-citizen basis. CARE, the National Catholic Welfare Council, the Church World Service, and other voluntary agencies have also made notable contributions. American foodstuff distributed by these agencies is literally keeping alive thousands of people.

In spite of terrible hardships, Greece provides one of the most spectacular examples of the value of foreign aid. Aid to Greece, a proven friend of the United States, has not only helped our national interest, but it has greatly aided the cause of freedom generally. Our assistance has helped Greece to recover from the German occupation of World War II, win a bitter guerrilla war, and make a significant contribution to NATO.

In my opinion Greece and the Greek people desperately need our continued support. We must continue to see that Greece gets sufficient economic aid so that her friendly government is not jeopardized. We must redouble our efforts in aiding their program for vocational education. Greece also needs more food and additional electric power.

This celebration gives us an opportunity to pay tribute to the influence of Greece on our civilization and our life. We, in Massachusetts, are proud of our fellow citizens of Greek ancestry and of their many contributions to our State, just as we are proud of the enrichment which has come to us from Plato, Aristotle, Homer, Pericles, and many others.

As we are gathered here tonight on this occasion I cannot help but think about Cyprus. Events of the last few years there only emphasize the love of freedom which characterizes the Greek people. The people of Cyprus will inevitably gain the right to choose their own government, which is the cornerstone of freedom. I hope the lessons of Greek Independence Day will sink into the hearts of those who possess the power to solve this problem so that justice and freedom will prevail in Cyprus.

In joining with the people of Greece and their sons and daughters around the world who have themselves done so much to enrich our culture, I express my deep appreciation for the heritage they have given us. May it soon be not only a western heritage, but the heritage of all the people of the earth.

In conclusion, let me say that I wish the Greeks nothing but peace and prosperity in their homeland of glory and splendor. Let us all join in sending our best wishes and our assurances that their past sufferings will not have been in vain.

GOP Fiddling

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following very interesting article which appeared in the Chelsea (Mass.) Record on March 27, 1958:

GOP FIDDLING

Whether you are a Republican or a Democrat, it must be utterly obvious to all that

the Eisenhower administration is fiddling around and doing absolutely nothing while economic conditions get worse by the day.

There is absolutely no reason for the inaction. There was plenty of warning that we were facing into a recession and plenty of time to make at least some preliminary plans.

The wait-and-see policy cannot be tolerated any longer.

There are bread lines in Maine. Men are being laid off by the dozens and the hundreds right here in Chelsea.

Times are getting serious.

It's time for the Republicans to get off their seats and on their feet.

Pay Raise Legislation

EXTENSION OF REMARKS
OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. LANKFORD. Mr. Speaker, I request permission to insert in the extension of remarks the following article written by W. O. Rittenhouse which appeared in today's issue of the Government Employees' Exchange. The Exchange began in its December 11, 1957, issue to publish a cost-of-living survey form. The purpose was to solicit valid statistical data from employees which could be presented before Congress in an effort to emphasize their need for prompt action on pay legislation.

Beginning with the January 22, 1958, issue, the early results of this survey were published in articles developed by W. O. Rittenhouse. Additional comments on the survey have appeared in every issue since that date. As the survey now draws to a conclusion, completed questionnaires have been received from employees living in every one of the 48 States and the District of Columbia, as well as in some of the Territories of the United States and in some unidentified foreign countries.

The articles which have appeared in the Exchange on this subject have clearly demonstrated that many Federal employees are not able to maintain themselves and their families on their Government salaries. Neither are they able to invest in homes and otherwise establish their future economic security. In many cases, it requires the combined effort of husband and wife, both working at full-time jobs, and with the husband in some cases holding down a part-time job, to make ends meet.

I am certain my colleagues who have read these articles on the subject are impressed with the need for immediate action on pay legislation for Postal and Classification Act employees of the Federal Government. Further delays will only serve to reduce to a lower point the purchasing power of these deserving employees, with obvious adverse effects upon the economies of the communities in which they reside.

The article follows:

CONGRESS FOLLOWING DELAY WITH DELAY IN FEDERAL PAY RAISE ISSUE

(W. O. Rittenhouse)

Several years ago, a substantial salary increase was approved for Members of Congress. The bill was presented, referred to the responsible committee, approved and signed by the President with a matter of several weeks. The economic problems necessitating this action were not dramatized by extended hearings and costly surveys. It was the general consensus of opinion of Federal employees and other taxpayers that the increase was well deserved.

In returns to the cost-of-living survey conducted by the Exchange, several employees have expressed the wish that their economic problems were recognized with similar spontaneity. One employee in Philadelphia, Pa., wrote: "If our Congressmen were as considerate of our needs as they have on several occasions been of their own, a pay bill allowing a real increase would have been approved the day Congress met. Many of us in our local feel Congress has let us down by unnecessary delays on pay legislation."

NINETEEN HUNDRED AND FIFTY-SEVEN PAY LEGISLATION

Adequate pay raise legislation for Postal and Classification Act employees has been needed since the last modest increase was approved in 1955. This need was not seriously recognized until January 1957, when about 30 bills on this subject were presented and referred to the House Committee on Post Office and Civil Service. About this time last year, the several employee unions rallied in support of the proposed legislation. They dramatically and emphatically presented the economic problems that confronted their membership. Also, many employees expressed their individual opinions in correspondence with their Congressmen.

No agency of the Federal Government made strong representation in the interest of pay legislation last year. Representatives of civil service who appeared before the committee suggested that further study was needed of the entire pay structure within Government before action should be taken. As was reported in this column in the July 10, 1957, issue of the Exchange, Congressman CHET HOLIFIELD, of California, in an exclusive interview, stated: "The failure on the part of the United States Civil Service Commission to realize its responsibility, as the so-called central personnel agency of the Government, to assure that Government employees receive remuneration on a level with employees in private industry, is in my considered opinion a dereliction of its duty. Opinions expressed by that agency have been neither realistic nor impressive." Since then, Civil Service has completed no study on the subject, nor has it especially encouraged prompt congressional action on pay legislation.

Several legislative proposals of interest to Federal employees were discussed in this column in the January 9, 1957, issue of the Exchange. The following forecast was made on pay legislation: "If any pay legislation is approved by Congress, and that possibility is remote, it will not be signed." As all employees clearly recall, Congress did approve a pay bill during the closing days of the last session. It was promptly vetoed by the President on the excuse that the modest increase proposed for a small and widely dispersed segment of our total working population would cause inflation in the United States.

NINETEEN HUNDRED AND FIFTY-EIGHT PROGRESS

The inflationary trend in the United States began long before 1957 and has continued at an increased pace since then. The Government last week reported that the cost of living, both in the Washington area and in the Nation as a whole, rose to new high levels in February 1958. The index for the District of Columbia area increased to 120.3 percent of the 1947–49 level. This was a rise of eight-tenths of 1 percent since November 1957, and was 2.4 percent higher than February 1957. The national index stood at 122.5 percent, which was two-tenths of 1 percent higher than in January, and up 3.2 percent from a year earlier.

In view of the continued upward trend in the cost of living and the action taken last year by Congress, several Members of Congress promptly introduced pay bills when this session convened in January 1958. Prominent among these were Congressmen RICHARD E. LANKFORD, of Maryland, and JOEL T. BROYHILL, of Virginia. Every effort was made by these and some other distinguished Members of the House and Senate Committees on Post Office and Civil Service to expedite committee consideration of the bills. Nothing new had to be added to the record by extended hearings. Congress had expressed a majority opinion last year, and it was an established fact that the cost of living had continued its upward trend. Further, the cost of living survey conducted by the Exchange served to emphasize the immediate need for favorable action on pay legislation. Yet, no conclusive action has been taken to date.

First, the chairman of the House Committee was ill for sometime. More recently, the chairman of the Senate Committee was absent from the city. Apparently, no provision could be made for reporting a bill out of committee until they resumed their duties. Starting April 3, Congress will take its 10-day Easter recess. The House-Senate conferees probably will not reach agreement on pay legislation until sometime in May.

ACTION NOW

Federal employees have in the meantime enjoyed no recess from the persistently mounting financial problems that have confronted them since 1955. Constant money worries have chafed them like an ill-fitting shoe. The communities in which they reside have suffered from the reduced buying power of Federal employees.

An employee in Long Beach, Calif., in response to the cost-of-living questionnaire, wrote: "Thank you for the opportunity to show you that I have exactly 20 cents left of my salary each week, and the future for myself and thousands of other classified Federal employees who must be in the same fix, does not seem very bright." One in Ogden, Utah, wrote: "It would require a 24 percent raise to break even." Another in Fort Bragg, N. C., commented: "I am trying to buy a mobile home and with wanting to own something, it has caused us much worry and no money for anything other than debts." One in Takoma Park, Md., observed: "I do believe that at least 10 percent to 12 percent is well justified for GS positions to come even equal to living expenses, or a job equal to mine in private industry."

An employee in the District of Columbia listed his expenditures, which approximated $272 a month, and commented: "Impossible you say when my monthly income is only $256.88? Well that's what is increasing loan company and credit union interest. I'd like to make enough to live off without borrowing." Another in Richmond, Va., carefully demonstrated how his $85 weekly take-home pay was used and closed with this prayerful statement: "Thank God my wife and myself are basically healthy. Sickness of any duration would plunge us into poverty very soon. We cannot afford hospitalization. We haven't had a vacation in 10 years. We wouldn't dare indulge in a hobby or recreation."

The statistical data reported in this column in previous issues of the Exchange, supplemented by comments from many employees, have clearly demonstrated the need for urgent congressional action. Economic conditions prevalent today add further arguments for adequate relief for Federal employees. The time for action is now for these full partners in the great business of Government.

The Right To Work Slogan

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2, 1958

Mr. CARROLL. Mr. President, I have been reading Colorado press reports about the prospect of a long, hard-fought, bitter campaign involving the false and misleading slogan, "the right to work." Such a campaign will divide our people by creating hostility and animosity at the very time when we are just beginning to understand each other's problems.

I want the people of Colorado to know that these deceptive campaigns have been carried on in other States and it is crystal clear that the ideas, the propaganda, the plan, and pattern of action were mastermined from a national headquarters. Simply stated, this is an important part of a national plan to destroy the basic principles of collective bargaining between management and labor in the State of Colorado. I am happy to report that in most of the forward-looking, progressive States these deceitful campaigns have failed.

I am confident that the people of Colorado will continue our leadership as one of the most intelligent, constructive, and progressive States of our Nation. I believe the people of Colorado will resent this outside interference in the internal affairs of their State. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

For my part, I am amazed at the colossal gall of these carpetbaggers who dare to spread their mischievous influence throughout the great and growing and prosperous State of Colorado in a bold and brazen attempt to sow the seeds of distrust, discord, and discontent at a time when management and labor are peacefully and harmoniously working together under present State and Federal laws.

I commend Gov. Steve McNichols, Mayor Will Nicholson, other public officials, civic and business leaders, and the leading newspapers of Colorado for their forthright stand against these troublemakers.

Five million Americans are pounding the streets today looking for work. Their families are suffering; so is their State and our Nation. They are not interested in a specious, phony discussion about the right to work; they want the opportunity to work; they want a job, a paying job. This is what they bargained for, collectively. The President, the Congress, and the people of the United States, collectively, will see to it that these unemployed Americans regain the opportunity to work. This is the democratic way, the majority way, the American way. This is the way we, as a people, have become the leader of the free nations of the world.

We in Colorado are especially fortunate and should be thankful that management and labor and our people in Colorado have not, as yet, been caught in the serious economic depression which exists in other parts of the Nation. All of us are deeply concerned with the very real and live pocketbook problems which must be solved in our own self-interest. Why, then, waste our time and our energy and our thinking on foolish questions. This is no time to tinker, in this fashion, with our State laws dealing with labor and management. Both have learned through bitter experience that collective bargaining is the best way, the democratic way, to settle our differences.

I realize that there are those in Colorado who have an honest difference of opinion about this matter and I defend their right to express their convictions. But I remind them that Colorado has been blessed with a minimum of labor strife, thanks to the enlightened attitude of employers, employees and those government officials whose responsibility it is to supervise existing laws. And I also say to them that if they persist in pressing for this type of an amendment to the Colorado Labor Peace Act they may easily sow the wind that reaps the whirlwind.

As for these outside masterminders, these buttinskis, let them mix and serve their devil's brew elsewhere, Colorado doesn't need it, Colorado doesn't want it.

Reynolds Technicians, Workers Build Entire Ballistic Shell of Jupiter-C

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. JONES of Alabama. Mr. Speaker, it is with pleasure that I call to the attention of the House an editorial which appeared in the Thursday, March 27, issue of the Florence Times, Florence, Ala.:

[From the Florence Times of March 27, 1958]

REYNOLDS TECHNICIANS, WORKERS BUILD ENTIRE BALLISTIC SHELL OF JUPITER-C

Reynolds Metals Co. missile plant at Sheffield, Ala., fabricated the entire ballistic shell of the Army Jupiter-C which just launched the third American satellite. Reynolds technicians built the tail section, the center section which contains the fuel tanks, the nose section of the main stage holding the guidance and control mechanisms, and the spinlauncher for the upper stages.

The ballistic shell was fabricated for assembly by Chrysler Corp., prime contractor for the Army's Redstone and Jupiter IRBM missile systems.

Reynolds missile plant constructed a number of other Jupiter-C ballistic shells on special contract for the Army Ballistic Missile Agency. One of these complete shells was used on the Army Jupiter-C which on August 8, 1957, successfully tested a nose cone. President Eisenhower, displaying this nose cone during his nationwide television address in November 1957, explained that it had gone hundreds of miles to outer space and returned intact. This test solved the difficult problem of preventing an object from burning up when it reentered the dense atmosphere of the earth.

BACKGROUND

Reynolds joined the United States Army missile program in 1952 when the firm's fabricating experts, under the personal direction of Vice President William G. Reynolds, helped Army scientists solve some aluminum construction problems on the Redstone ballistic missile shell.

Then Reynolds set up its missile plant at Sheffield, Ala., just 70 miles away from the Army missile center at Redstone Arsenal, and helped turn out some prototype ballistic shells for the Redstone missile.

When Army Ordnance decided to produce the Redstone missile in volume, Reynolds engineers and technicians then redesigned the Redstone ballistic shell so it could be produced in quantity utilizing available machine tools and industrial know-how. The Reynolds developments, for example, reduced the amount of welding required to form the aluminum fuel tanks, thus making them more reliable and cutting production costs.

Since then Reynolds has been fabricating Redstone missile ballistic shells for the Army as a subcontractor to the Chrysler Corp.

JUPITER-C BALLISTIC SHELLS

With this experience and accumulation of skills in design and development of aluminum shells for missiles, Reynolds was designated by the Army Ballistic Missile Agency to fabricate the more difficult ballistic shell for the Jupiter-C rockets.

The main stage for the Jupiter-C is a modified Redstone liquid fueled rocket. The modifications in fabrication of the more complex Jupiter-C missile and the Redstone demanded the highest degree of accuracy.

WELDING NOSE SECTION

For example, the nose section for the main stage of the Jupiter-C was formed from thin aluminum sheets welded together. In order to form these sheets into the exact tapered design, Reynolds technicians had to work with tolerances far more precise than the scientists had demanded.

Reynolds technicians welded these thin aluminum sheets on automatic welding machines at a speed of 60 inches per minute. Once the machine was started, it had to do a perfect job. Otherwise the welded joint might have weak spots and would not remain airtight. This nose section had to withstand rather high pressures. When it was tested under air pressure, the aluminum sides could be send ballooning out. Yet it remained airtight.

LIQUID FUEL TANKS

The same rigorous standards applied to the huge liquid fuel tanks. More than 13,500 inches of linear joints were welded on the Jupiter-C shell. Every inch of welding was X-rayed to insure that no weak spots existed. All fuel tanks were air tested under pressure, then pumped full of water, also under pressure, then every inch of welding examined for possible leaks.

In addition, 24,560 spot welds went into each Jupiter-C ballistic shell for extra strength.

SPIN-LAUNCHER

The spin-launcher, which gives gyroscopic stability to the upper stages of the Jupiter-C when they are fired, also had to be fabricated to exacting requirements. The launcher bucket which holds the upper stages was constructed from two sheets of aluminum, rolled to form a cylinder and then welded along the length. These welds, each 48 inches long, had to be absolutely perfect. No repairs were permitted. Once the high speed automatic welding machine had started, it could not be stopped. If the machine passed over a gap in the joint, the cylinder had to be rejected and another one started.

When the Jupiter-C started to blast off, this bucket was rotated by electric motors mounted within the nose section of the main

stage. The gear system which actually spun the bucket also was built to precise tolerances. The spinner wheel had to fit exactly and revolve on its shaft, otherwise the upper stages could have been thrown off course when fired. The orbiting satellites testify to the accuracy of the Reynolds technicians.

RUDDER TORSION BARS

The aluminum rudder torsion bars which connect the steering mechanism of the main stage with the rudders are also made to fit with the precision of a fine watch. If they varied more than a few thousandths of 1 inch, the main stage could not be steered with the absolute accuracy it achieved.

The proximity of the Reynolds missile plant to the Army Ballistic Missile Agency facilitated development of both the Redstone and Jupiter-C ballistic shells. Reynolds technicians are able to confer at a moment's notice with the Army scientists.

The aluminum company technicians worked from marked-up blueprints while building the Jupiter-C shell. Within days after the scientists modified the shell design, the changes were incorporated into the finished product. And these changes kept coming during the entire construction time.

DETAILED INSPECTION

The aluminum used to fabricate the Jupiter-C shell had to be perfect. To insure this, the plates used to form the missile skin were first inspected for scratches, blemishes and weak spots as soon as they entered the Reynolds missile plant. Inspectors examined the plates with electronic instruments, searching for weak spots that might fail under pressure. The width and thickness of each plate was measured to tolerances within a few thousands of 1 inch.

Samples were sent to the lab for chemical analysis. Each sheet of aluminum and every other part was assigned a lot number. A complete history was kept of all the components that went into each missile shell.

After each sheet passed inspection, it was covered on both sides with special adhesive paper to protect the surface from scratches and damage while it was being shaped into the shell. This paper guarded the mirror-like aluminum until the shell was ready for final finishing.

CLEANER THAN BABY'S BOTTLE

After the long center section certified to be perfectly free from possible weak spots, it was then scrubbed cleaner than a baby's bottle. The inside of the fuel tank was hand-washed, then purified by 8 hours of washing with a strong chemical cleanser. Once the fuel tanks had been pronounced surgically clean, they were sealed. The slightest speck of dirt could cause an explosion when the rocket fuels are pumped into the tanks.

To maintain the high degree of accuracy demanded in fabrication of the Jupiter-C (and Redstone shells) Reynolds uses one inspector for every three technicians in the missile plant. This represents a corps of inspectors comprising one-quarter of the total missile plant work force.

TO OUTER SPACE

The role of Reynolds Metals Co. in the United States missile program does not end at the firm's missile plant. It is probably the most unique part played by any firm participating in American missile development.

Reynolds' role goes all the way back to the basic raw material, the bauxite clay of earth which contains aluminum ore. In Arkansas and Jamaica, Reynolds miners extract the clay which is shipped to the United States where Reynolds refineries in Corpus Christi, Tex., and Hurrican Creek, Ark., convert it into powdery alumina (aluminum oxide).

Then Reynolds experts in six reduction plants in Listerhill, Ala.; Arkansas; Troutdale, Oreg.; Corpus Christi, Tex.; and Arkadelphia, Ark., produce the pure aluminum.

This then is converted into sheet and plate at Reynolds rolling mills in McCook, Ill., and Listerhill, Ala. From Phoenix, Ariz., comes aluminum extrusions and tubing. More extrusions are made in the Grand Rapids, Mich., plant, while Plant 12 in Louisville, Ky., stamps out the vital fuel tank bulkheads on a special 1,700-ton press.

Nearly all Reynolds workers thus have a hand in the process of converting the clay of earth into the gleaming aluminum shell of the space-conquering Jupiter-C missile.

Relief Up to Executive Whim

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 26, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial concerning the textile industry which appeared in the Lawrence (Mass.) Evening Tribune, on March 31, 1958:

RELIEF UP TO EXECUTIVE WHIM

There is a slim ray of hope for the textile industry and the manner in which it has been injured by foreign competition.

President Eisenhower has assured United States industry that safeguards in the Trade Agreements Act are being strengthened to cope with the uneven impact of import competition. At the same time, however, he warns against any destruction of the statute which would tear down the reciprocal trade program and thereby injure the safety of the free world.

It should be gratifying to textiles to observe that the President has finally conceded that some import problems arising from free trade policies, and affecting particular industries, are real and identifiable and demanding of action.

This development cropped up late last week.

Previously, the President turned down proposals that more textiles and other goods be purchased from United States sources than through offshore program. This was his reply to representatives of textiles, who asked him to consider invoking restrictions on offshore procurement.

His refusal then just about took care of the request of all 12 New England senators who asked his Trade Policy committee to protect the woolen and cotton textile industry in this section from competition with foreign imports. They asked that imports of fabrics be regulated with duties and quotas to protect the American textile industry.

Whether or not the administration has the slightest intention of exposing any of this country's existing industries to alleged injury in order to obtain tariff concessions benefitting other industries remains to be seen.

For example, United States Labor Secretary Mitchell is of the opinion that the jobs of thousands of wool top and yarn makers depend on continued United States free-trade policies. When he believes that complaints of injury by domestic industries have been exaggerated he could not have taken a close look at the textile situation. United States textile interests have had their cards, as they relate to foreign competition, on the table for years.

Mills continue to close and thousands of textile operatives have to start all over again. All that is sought to help them is consideration along the lines of adequate duty and quota regulations.

Relief for industries which have suffered hardship under the Reciprocal Trade Agreements program is left to executive whim by present law. The noble idea of the original good intentions of the reciprocal-trade theory—that foreigners would sell us goods which were in oversupply and which we needed, while we would sell them what they needed of our surpluses—has disintegrated.

It is a battle against the impossible competition of imports subsidized by the American taxpayer's dollar as far as textiles, and shoes too, are concerned.

Statement of Thomas J. Dodd, Former Representative From the State of Connecticut, Before the House Foreign Affairs Committee on the Proposed Mutual Security Act of 1958

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. FOGARTY. Mr. Speaker, many of us in the Congress are concerned over the present administration's lack of effective policies toward Latin America. On March 6, 1958, a former member of this House, Hon. Thomas J. Dodd, appeared before the House Committee on Foreign Affairs and in straightforward language pointed out what must be done about this dangerous gap in our foreign policy.

In behalf that my colleagues will be interested in his carefully thought-out statement, under leave to extend my remarks, I include the statement of Mr. Dodd:

STATEMENT OF MARCH 6, 1958, OF THOMAS J. DODD, FORMER REPRESENTATIVE FROM THE STATE OF CONNECTICUT, BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE ON THE PROPOSED MUTUAL SECURITY ACT OF 1958

Mr. Chairman and members of the committee, I appreciate the privilege of appearing before the House Foreign Affairs Committee in support of a continuation of the mutual security program for fiscal year 1959.

As a former member of this committee and of its subcommittee on Latin American Affairs, I want to say that it gives me a good feeling to be back here, seated at this table which has witnessed many long hours and weeks of hard work by this committee, which is truly the architect of many provisions of the mutual security legislation. I know from firsthand experience how thoroughly this committee considers proposed legislation and to what extent the imprint of its own experience, thinking and labor is impressed upon the legislative product as it emerges from the Congress.

It is only fitting, therefore, that I appear before this committee to discuss with you some of the principles which I feel need special emphasis in the mutual security program. It is my intention also to suggest certain changes and amendments in the draft of the proposed provisions submitted by the executive branch on the development loan fund.

I am, of course, aware of the importance of other areas of the world to United States security, United States economic interests, and the building of a free world. No area of the world is unimportant to us. This is true because of our fundamental American history and tradition. Our people spring from roots and traditions outside the United States in origin. We have a tradition of caring about other peoples and what happens to them. That is why we are so deeply concerned about the Communist menace. We know of the inhuman activities of the Communists, and we know of their future plans which remain constantly unchanged. We also know that if we are to have wholesome trade relations, we must have free and independent nations to deal with, and we are, of course, aware of the importance of having bases located in strategic areas of the world.

LATIN AMERICA

There is one area in particular which, it seems to me, merits constant attention by the United States through mutual programs that will benefit both the United States and that area. I refer to Latin America—that great area to the south embracing 20 republics and comprising a population larger than that of the United States—approximately 184 million, as compared to our population of some 170 million. I refer to that area—that great area to the south—making up almost 8 million square miles, as compared to the 3 million square miles in the United States.

While serving as a member of this committee and of its Subcommittee on Latin American Affairs, I became deeply impressed with the importance of Latin America to the United States and to the whole free world. It was my privilege to visit Latin America to conduct a study of conditions in that area while serving as a member of this committee. I know that you are likewise deeply concerned about our relations with our neighbors to the south. Some of the progress which has been made in United States-Latin American relations is due directly to your efforts. The reports of the various study missions conducted by this committee in Latin America attest to the real concern which you have with respect to our relations with Latin America.

It is, however, essential that there be created within the executive branch of our Government a deeper consciousness of the importance of this area, not only to the United States but to the whole free world, coupled with plans and programs of assistance to Latin America which will meet at least the minimum needs of the 184 million people of Latin America. This is an area seething with a tremendous urge to improve its social and economic conditions, with a population that has since World War II been rising about 2.3 percent a year. People want to be free of disease and hunger. People want to house, clothe, and educate their children. People want medical and hospital facilities. People want means of communication.

Latin America is a giant which is beginning to stir. How it stirs and to what it stirs depends largely upon United States foreign policy, policy translated into programs that will fit the various needs of the people of Latin America, rather than a policy which takes them for granted.

This is especially essential if we are to block any effective inroads by the Communists who have demonstrated that Latin America is an important area to them. What happened in Guatemala can happen elsewhere in Latin America. We must never permit this to take place.

While serving on this committee and while listening to the various presentations made by the executive branch on the mutual security program, I was impressed with the fact that Latin America was an area which was always treated last by the executive branch. It was always treated, as indeed it is treated this year by the executive branch, as the also ran of areas. There has been a certain condescension about the area—a certain attitude of "Well, they'll go along with us anyway."

As I glance through the little booklet prepared by the executive branch and titled "The Mutual Security Program, Fiscal Year 1959, a Summary Presentation, February 1958," beginning on page 109 which deals with Latin America, I find that Latin America is taken up the hill and then kicked down. The presentation booklet talks about Latin America in these terms: "Importance to the United States," "Latin America is important to United States trade," "United States is Latin America's best customer," "Latin America depends on United States capital," and so on. But when we translate these terms into programs, we find that the magnitude and extent of the programs proposed by the executive branch for Latin America for the next fiscal year total only $92,808,000. By contrast, the proposed program for fiscal year 1959 for the Far East and the Pacific, as outlined on page 97 of the presentation booklet, totals $1,027,120,000. I am fully aware of the fact that $399,120,000 is requested for military assistance and $595 million is requested for defense support for the Far East and the Pacific. I am also aware of the fact, as this committee is of course aware, that a huge program of military assistance to Latin America is not called for at this time—indeed it is not expected by the Latin Americans themselves.

However, the proposed program for the Far East demonstrates that there is a solicitude and that there is a desire to demonstrate that solicitude in tangible terms for an area which indeed is extremely important to the free world and to the United States. But why should not an equal solicitude be demonstrated in tangible terms for Latin America, this great area without whose support the United States would find itself in extreme danger?

We must remember this: Even if we should have successful policies toward the Far East, even if we should have successful policies toward Europe, even if we should have successful policies in other parts of the world, if we do not develop and maintain successful policies toward Latin America, the other policies would be meaningless and ineffective. It is abject folly to try to build up a free world without a strong and free Latin America. It is abject folly to hold the line against communism in Europe only to yield it to the Communists in Latin America, or to the Far East for that matter, as we seem to be doing.

I would respectively urge, therefore, that there be an end to programs of complacent cooperation. I would suggest that there must be developed a bold stroke of leadership that will catch the imagination and kindle the hope of the people of Latin America. To this end, there must be a mobilization of talent and of energy of our Government officials concerned with Latin American relations, in cooperation with American business and labor interests, large and small, dealing with Latin America to consider:

1. What have been the major principles of the United States Government and international agencies, such as the International Bank, the International Monetary Fund, and the International Finance Corporation governing relations with Latin America?

2. How have those principles been implemented?

3. Reasons for Latin American dissatisfaction with United States policies and implementation thereof.

4. Reasons for American business dissatisfaction with United States policies and implementation thereof.

5. How can the United States meet the criticisms of our policies and to what extent can those criticisms be met?

(a) Through legislation;
(b) Through executive branch action;
(c) Through multilateral channels; and
(d) Through private enterprise channels.

I would like to see something of this kind embodied in the proposed mutual security legislation before this committee in the form of, perhaps, a sense resolution. The adoption of such sense resolution embodied in the mutual security legislation itself will create the proper climate through a new emphasis, an emphasis which will highlight the importance of Latin America, instead of treating it as a fourth-rate area, always last on the list of mutual aid. In connection with this proposal, I would urge further a detailed presentation by the executive branch of the problems of each of the 20 Latin American Republics. I would hope that there would be a fuller discussion of Latin America on the floor of the House in the context of the mutual security program. It is my earnest hope that this can be done without the necessity of a crisis such as Guatemala presented to the United States when it was under Communist domination. We must transform the atmosphere of disillusionment which prevails in Latin America with respect to the United States into an atmosphere of hope and then into a record of fulfillment and we must never again approach an inter-American economic conference with an empty briefcase, to borrow a phrase so appropriately used by Congressman JAMES G. FULTON, a gentleman who sits on the other side of this table and who has time and time again demonstrated his friendship for Latin America.

I am happy to say that the schoolchildren of Connecticut are acutely aware of the importance of Latin America to the United States. This awareness can be inferred from a news item which appeared in the February 23, 1958, issue of the Hartford Courant entitled "Third Graders Agree Spanish Rates Highest Among Favorite Studies". In the Town of Glastonbury, a community not far from Hartford, the third grade students are practically unanimous in choosing Spanish as their favorite subject. The plan to encourage students to learn Spanish has now spread to the practice teaching program at the Teachers College in New Britain, Conn., and the Yale Master of Arts teaching program in New Haven, Conn., and from reports which I have received, this interest in Spanish is spreading across the entire State of Connecticut.

I hope that the example set by Connecticut will be followed by other States. In this connection, Connecticut has produced a number of great linguists in Spanish. I am sure that you are all aware of the proficiency in Spanish of my former colleague and a member of this committee, Congressman AL MORANO. While serving on a study mission with him and other members of this committee to Central America in June 1955, we heard him address the legislative bodies of Nicaragua, El Salvador, and Guatemala in fluent Spanish.

DEVELOPMENT LOAN FUND

I now which to turn to the language in the committee print of the bill before you which is entitled "The Mutual Security Act of 1958," specifically those provisions proposed by the executive branch with respect to the Development Loan Fund.

For the sake of convenience, I refer to the Ramseyer rule print of the Mutual Security Act of 1958 dated February 20, 1958, a committee print document which is before you on the committee table. As you can see from page 10 of that print, the executive branch proposes to establish a board of directors of the fund consisting of a number of Government officials. I believe that there is some merit to the establishment of a

board of directors of the fund, with a managing director and a deputy managing director, and other officers as required. It is, however, essential that the fund not be hamstrung by interagency squabbles, rivalries and redtape. It should be noted from the executive branch proposed amendment to section 413 (b) (4) that the investment guaranty program, now administered by the International Cooperation Administration, will probably be transferred to the Development Loan Fund, if that amendment is adopted. That can be seen from the language which the executive branch proposes to delete from existing legislation as outlined on page 20 of the Ramseyer print. It is therefore essential that the management of the fund be reposed in those who are at least not unsympathetic to the investment guaranty program.

This committee well knows the maneuvering in the past, particularly by the former Director of the International Cooperation Administration, to divest that agency of the investment guaranty program and to transfer it to the Export-Import Bank. That attempt failed primarily because of the strong objections of this committee, which indeed has been the watchdog and ward of the investment guaranty program. Also, if the fund is to be administered with imagination and flexibility, it is imperative that the composition of the Board of Directors be carefully considered by this committee.

I do not agree with the composition proposed by the executive branch. I do not agree that the Board of Directors of the Development Loan Fund should include the Deputy Under Secretary of State for Economic Affairs as Chairman, nor the Chairman of the Board of Directors of the Export-Import Bank nor the United States Executive Director of the International Bank.

I respectfully urge this committee to adopt an amendment directed toward the composition of the board of directors of the fund. I would strongly urge that the managing director of the fund, whoever he might be, should be the chairman of the board of directors. The other members of the board should comprise the Secretary of State, to insure coordination with our overall foreign policy, the Administrator of the International Cooperation Administration or of any other agency administering nonmilitary assistance, and four members appointed from private life by the President of the United States by and with the advice and consent of the Senate. The four members so appointed should be respectively representative of labor, industry, small business and the public at large. I feel that such representation will insure a proper implementation by the executive branch of the intent of the Congress and of the legislative policies governing the administration of the fund. It would also insure that those agencies which have in the past indicated animosity toward the investment guaranty program would not be represented in the active management of the fund.

Because of the importance of his position, I would also recommend that the proposed Deputy Managing Director be appointed by the President, subject to Senate confirmation.

It is essential that the Development Loan Fund not be bogged down in the mire of interagency conflicts, jealousies, and endless red tape. The fund is capable of exerting a tremendous impact on the economies of the underdeveloped countries. I believe that the composition as proposed by the executive branch might well lead to a stultification of the growth of the Fund as expected by the Congress. If the composition of the board of directors of the fund such as I have suggested, or something similar, should be adopted by this committee, I would then have no hesitancy in permitting a transfer of the administration of the investment guaranty program to the fund.

Mr. Chairman and members of the committee, as this brings my statement to a close I cannot help but feel nostalgic and fondly remember those days when I served with you on this committee. To read off the provisions of the mutual security program, which you have written into the legislation, would take up much more time than I have consumed this afternoon. I wish at this point to salute you and commend you for the tremendous service you have rendered and are rendering to the people of the United States and to the free world. Frequently in my travels I find people who are not fully aware of the tremendous part played by the legislative branch in formulating foreign policy and in making the implementation of foreign policy possible. The mutual security legislation is your legislation—legislation which you have hammered out by dint of concentrated study and diligent work. Yours is not an easy task. I know personally that every recommendation made before this committee is carefully considered. It is with that note that I wish to thank you for affording me this opportunity to see you all again and to express my views on legislation which is so vital to the cause of peace.

Mr. Speaker, in the Washington Evening Star of March 30, 1958, there appears the following article:

TOP UNITED STATES ENVOYS TO TAKE NEW LOOK AT LATIN TIES

A top-level stocktaking of the state of United States relations with Latin America apparently is in the making.

The review, to be carried out over the next few months, could lead to a reassessment of United States economic and political policies toward the 20 nations to the south.

It apparently is President Eisenhower's answer both to new Russian threats of economic—and political—penetration in Latin America and to congressional criticism that not enough attention is paid to that vital area.

STEPS ARE LISTED

The stocktaking will be done by:

1. Vice President RICHARD M. NIXON, who last week announced that, at the President's request, he would make an 18-day swing through 8 South American nations, beginning April 26. The countries to be visited are Uruguay, Argentina, Paraguay, Bolivia, Peru, Ecuador, Colombia, and Venezuela.

2. Dr. Milton S. Eisenhower, brother of the President, who, as the President's personal representative, will make a goodwill tour of six Central American nations in June, according to a White House announcement yesterday.

3. Secretary of State Dulles, who is reported to be considering personal visits to individual countries. Brazil—omitted from Mr. NIXON's tour because of a 1956 visit—is regarded as one of the likeliest possibilities for such a stop.

4. President Eisenhower himself, who this week lunched with Costa Rican President-elect Mario Echandi, and who is scheduled to receive President Carlos Ibandez del Campo of Chile on a state visit in late April and early May.

OTHER TRIP RECALLED

The White House, in announcing Dr. Eisenhower's tour today, described it only as a good-will trip.

But it immediately was recalled that Dr. Eisenhower, president of Johns Hopkins University, in 1953 made a 30-day tour of the 10 South American nations, and later presented his brother with a detailed report.

The report made concrete recommendations on United States policy, some of which were acted upon later.

The announcement of the trips of the Vice President and Dr. Eisenhower follow closely on Red trade overtures to a number of South American nations with which Russia does not now have diplomatic relations.

The Soviets have been offering to buy Brazilian and Colombian coffee, Chilean copper, and have, in fact, bought considerable quantities of Cuban sugar and Uruguayan wool. Argentina recently sent an economic mission behind the Iron Curtain to see what it could purchase there.

United States economic experts also are known to be concerned over the effects on shaky Latin American economies of the recent declines in the prices of some minerals, particularly copper.

While it is too early to predict the results of such a stock-taking by the executive branch of United States-Latin American relations, it does indicate that forceful statements like those of Mr. Dodd are beginning to awaken the Department of State to a need for a vigorous policy toward Latin America rather than a policy of "complacent cooperation." Let us hope that such an apparent awakening leads to implementation.

Ambassador Menshikov

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Menshikov Enjoys United States Type Satire but Wouldn't Recommend It at Home," written by Alfred Friendly, and published in the Washington Post and Times Herald of March 31, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MENSHIKOV ENJOYS UNITED STATES TYPE SATIRE BUT WOULDN'T RECOMMEND IT AT HOME

(By Alfred Friendly)

Mikhail A. Menshikov says he got a bang out of his attendance at the Gridiron dinner 2 weeks ago but doesn't see that famous Washington institution as suitable for his own country.

The new Russian Ambassador suggests that each nation has its own devices of criticism and what's appropriate for one may not be for the other. The ferocious, if hilarious, satire of the Gridiron doesn't fit the Russian way of life, he indicates.

Moreover, he says the Russians would never criticize their Government as a whole, because they believe in it and in what it is doing. Nor would they criticize the minor failings of any individual who is generally admired and respected.

UNDERSTOOD MOST OF IT

"Smiling Mike" was the first Russian Ambassador in many years to attend a Gridiron function. At its annual banquet March 15 he was observed by the audience as apparently enjoying himself.

In a recent interview he said he found the affair amusing. He thought he understood about two-thirds of what transpired.

The difficulty of following songs in a foreign language, and the topical nature of the gags accounted for the portions he missed.

In a mood considerably more dour and defensive than that in which he has generally displayed himself, Menshikov anticipated (correctly) a newsman's question on whether the American kind of press criticism—at its apotheosis in Gridiron operations—would be a good thing in the Soviet Union.

Press criticism, he observed, has been established here and if the Gridiron's glorified form of it satisfies everybody, that's all right with him. He would, he said, avoid statements bearing on any nation's form of internal life. He implied that it would be a good idea if there were some reciprocity on this attitude.

EACH TO HIS OWN

"Some countries have some other ways of making fun and of criticising themselves," he said.

"In our own country we have a lot of criticism. Sometimes it's called self-criticism. Those in charge criticize themselves. And sometimes it comes from outside sources. Self-criticism is the principal form, and actually it's encouraged because we think it has a good constructive purpose."

You can find criticism everywhere in public gatherings, he insisted. And although this may not always be reported in the press, you can find critical articles in every issue of the principal Russian papers, he declared.

Was there anything similar to the stem-to-stern satire by the Gridiron of all three branches of the Government, he was asked.

No, said Menshikov, Russians don't criticize their government as a whole; and if Americans are baffled by this, they must understand that the Russian way of life is different.

ON RUSSIAN ELECTIONS

"For example," he said, "Americans ask how is it possible that in Russian elections 100 percent of the people vote and all vote in favor of the candidates. You say 'something must be wrong because it doesn't happen that way here.'

"But the Russians are satisfied with their system and those candidates.

"If someone is universally respected, they don't make fun of him.

"If someone makes a mistake, or if something goes wrong, he is criticized, but the government isn't criticized, because our people believe in the government and in what it is doing."

Asked about the Gridiron's mordant spoof of President Eisenhower, though the song, "Every Day Is Labor Day With Him," Menshikov replied more in sorrow than in anger:

"I've found among all the people I've met that they respect the President." Accordingly, as to the critical song, "in our case, people wouldn't do that when the person is respected."

Russians love to crack jokes, he concluded, but they make fun of each other in family and social gatherings. As for the American system, "you're used to your way of life and think it good, so we have nothing against it."

Tony Pastor Reaches Peak

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 28, 1958

Mr. MORANO. Mr. Speaker, last week, together with my Connecticut colleague the Honorable ALBERT CRETELLA, I had the pleasure of dining with an illustrious son of Connecticut, the famed musician and vocalist, Tony Pastor, whose orchestra is appearing at the beautiful Blue Room of the Shoreham Hotel here in Washington.

It was a thoroughly enjoyable evening. I learned that Tony Pastor has a similar background to mine. He is a first generation American of Italian descent. His parents were born in Sicily; mine were born in Cosenza.

Tony was born in Middletown, Conn., and was educated in Connecticut schools. The Italian love of music was deeply imbedded in his soul. But his father was a New England cabinetmaker and was determined that his son should follow in his footsteps.

Tony did learn woodworking. But from the day he got his cherished saxophone at the age of 16, he knew that music was the prime factor in his life.

Tony first reached musical prominence in the orchestra of another great Connecticut musician, the erudite and accomplished clarinetist from Hartford, Conn., Artie Shaw.

It was with the Vincent Lopez Orchestra that Tony started singing. But it was the Artie Shaw recording of Indian Love Call that skyrocketed Pastor into musical prominence as a vocalist.

The record, featuring the new vocal style of Tony Pastor, sold over 1 million copies. On the other side was an unheralded arrangement of Begin the Beguine, a record that has become identified with Artie Shaw and which became top best seller of all time.

The success of his initial record was Tony's biggest single break. It gave him a chance to organize his own orchestra, and after a series of trials and tribulations, he found himself a top maestro with a worldwide following.

The secrets of Tony Pastor's popularity are simple ones. His warmth, sincerity, and facility of expression are expressed in his music.

He has been strict in his adherence to the public's dancing demands. He gives his audiences just what they want. Whatever they play they play well, with just a little extra Pastor personality tossed in.

Tony's unique singing style has become so popular it has almost eclipsed his great talent as a saxophonist.

When I asked Tony to what he attributed his great success in an area where most new ventures are doomed to failure and where many successful bands diminish in public favor after a period of years, he replied "Style is the basis of musical success. The bands that gain a definite mark of recognition are in the best position to attain lasting popularity."

Tony is a firm believer in some sort of signature through music.

His own vocal ability and the manner which he renders a song are known to lovers of popular music everywhere. His voice, to say the least, is unusual, and he is very wisely particular in his choice of songs.

They must be suited for his style. That he has chosen his songs wisely and performed them exceptionally is proven by the fact that a very great percentage of his featured vocals have gone on to the top of the Nation's song hit parade and his records have enjoyed phenomenal success.

In 1955, Tony took his large organization to the frozen north, where they appeared for the GI's at Ladd Air Force Base in Fairbanks, Alaska. Not only his music, but his exhilarating personality made an immediate hit with the Air Force personnel in the far-off base. He remained there a full week.

Tony is married to the former Dorothy Petroissi of Hartford, Conn. The Pastors have three sons.

Guy, the oldest, 22, recently graduated from the University of Connecticut, and is now singing with his Dad's band. His vocal style contains the warm qualities of his father, but is more in the romantic style of the lyric Italian tenors. A great future is in store for the younger Pastor.

Of the two other sons, Tony, Jr., 22, is an actor; the other, John Francis, age 12, is in school.

The Pastors, a happy, talented, and close-knit American family, are now living in Beverly Hills, Calif., but make periodic trips to Connecticut to visit their mother, who still lives in Middletown.

Suggestions Designed To Stimulate Business Activity and Increase Employment

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. BEAMER. Mr. Speaker, it has been gratifying to me and I know to other Members to receive letters and suggestions from people in our respective districts who sincerely are interested in offering suggestions designed to stimulate business activity and increase employment.

One of the suggestions passed on to me is of special interest and I have forwarded it to various officials, not as my own suggestion but as an idea that is thought provoking.

The rather simple and perhaps incomplete suggestions to be used in meeting the present unemployment situation would involve three basic areas: First, automobiles; second, new homes; and third, industrial expansion.

First, a suggestion is offered that a tax credit, perhaps in the form of a refund, should be given to each person who purchases an automobile. This should have some limitation, perhaps $400 or $500 or whatever amount might be felt desirable to stimulate that particular industry.

A similar suggestion is made that a tax credit, not to exceed $1,000, should be allowed to each person who builds new houses.

For new industrial expansion, again it is suggested that a tax credit, perhaps not to exceed 50 percent of the present 52 percent corporation tax, should be allowed.

All of this, of course, would have a limitation of 6 months or 12 months, or

whatever period would seem to be advisable. The basic philosophy is to release some of the large amounts of money in savings, in credit unions, in investments, in cash or lockboxes; to encourage purchases of hard goods and specifically, automobiles; for the construction of new homes; for industrial expansion to make it possible to employ many more people who presently are unemployed and, also, to increase the demand for goods that would be used in the manufacture and building of these specific items.

This is an interesting approach which comes from a businessman in the fifth district of Indiana and it seems to offer an immediate method or approach that could be put into effect without a long delay and, perhaps, without the necessity for long-delayed legislation.

Science and the Control of Arms

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made to the annual luncheon of the National Planning Association, Monday, March 31, 1958, by Richard S. Leghorn. Mr. Leghorn is the chairman of NPA's Committee on Security Through Arms Control:

SCIENCE AND THE CONTROL OF ARMS

(Remarks by Richard S. Leghorn, chairman, Committee on Security Through Arms Control, National Planning Association, for the annual luncheon of the National Planning Association, Washington, D. C., March 31, 1958)

Science and technology are well known in our land for their tremendous contribution to economic growth. They are well known for the creation of the fantastic weapons which now feed the unrestrained arms race. What is not generally recognized is that science and technology could also make a major contribution to bringing the arms race under control. Virtually no scientific and technological effort has yet been marshalled to deal with the perilous madness of the current competition in armaments.

A year ago, the National Planning Association established a Committee on Security Through Arms Control, to explore and demonstrate contributions which planning by private citizens might make to this critical issue of our age, and to help bring about a broad and sustained national effort to develop more rational world security arrangements.

Our committee has begun its work rather undramatically by estimating the world's arms situation in 1970. This survey has given us some insight into the nature of the problem, and will usefully serve our future work on solutions.

You will be interested in a brief review of some of our conclusions. Between now and 1970, which is less time than has passed since the end of World War II, the world will spend almost $2 trillion, that is $2,000 billion, on armament. For the United States this will represent about 10 percent of the gross national product and can be readily sustained. For Western Europe and Russia, the economic cost of the arms race is more consequential and represents a serious handicap to these less flourishing economies. The economic consequences are, of course, more serious still for the underdeveloped countries whose growth is retarded by the diversion of so many of the world's resources to the construction of arms.

And yet, the economic costs are far from the most serious. Of greater consequence are the technological costs. The United States, the most technologically advanced country of the world, is devoting 50 percent of its technological resources to the arms race. The world's second technological country, Russia, is devoting an even higher percentage to armaments. The third major scientific and technological group, that of Western Europe, is not far behind in these dismal percentages.

Even more important than this unbelievably high technological waste is the cost of the arms race in terms of human values. How can freedom flourish when all the world's peoples live under a Damoclesian sword of instantly poised, thermonuclear missiles and radioactive poisons? How can humanity advance its spiritual and cultural heritage when man's energies and creative skills are the slaves of the god of war?

Is it truly beyond the wit of man to devise a less costly and less perilous security system to protect him from organized violence by his fellow men?

Before suggesting ways in which man's wit can be channeled to this task, it will interest you to consider the world of 1970 without action in this field.

If man manages his present madness for another 12 years without sparking by miscalculation or accident a general nuclear war, what armaments are then most likely to be in the stockpiles?

We find that smaller nuclear explosions represent a more likely trend than larger explosions. Huge explosions, of course, are technically feasible. One occasionally hears talk of gigaton weapons representing the equivalent of billions of tons of TNT, but the military usefulness of such weapons is open to serious question.

More significant than the amount of explosive force will be the size of the weapons themselves. We already read of atomic and hydrogen weapons small enough for fighter aircraft, missiles, and artillery pieces. Suitcase A-bombs have been mentioned. We can expect the trend toward a bigger bang per cubic foot of bomb to continue further before practical limits are reached. Clean weapons, of course, represent another design trend, but it is not yet clear just how clean a nuclear device can become. Under many conditions of explosion, even clean weapons produce a dirty result in terms of radioactivity. But probably most of the long-persisting products can be avoided.

The world is beginning to test ballistic rockets whose speed approaches the velocity needed to escape from the earth. This means that the practical limits of velocity for terrestrial wars have been reached. While reentry speeds may become greater, we cannot expect the speed of weapons to targets on earth to increase significantly beyond the speeds now being tested. There will, however, be two significant trends in delivery systems.

First, bases will become more mobile, more dispersed, much smaller and less detectable, and therefore less vulnerable. In-hand or immediately foreseeable are rocket launchings from underground sites and from mobile platforms on the ground, on the sea, under the sea, and from aircraft. While launchings from space platforms will be technically feasible, it is not likely that space launching sites for terrestrial wars will offer advantages.

Second, what is known as the reaction time of delivery systems will shorten appreciably. Today the countdown time necessary to prepare long-range missiles for test firing is about the same—10 hours or so—that it takes long-range aircraft to fly between continents. But the development of missile systems, particularly improvements in solid propellants, will soon shorten the time needed for preparation. We can foresee that before many years 1,000- to 2,000-mile rocket weapons will be maintained in a state of readiness permitting nearly instantaneous firings. The readiness time of 6,000-mile missiles can be shortened to minutes instead of hours, and they may eventually be instantaneously ready. Thus, the reaction time from the instant of command to megaton explosions 1,000 to 6,000 miles away will soon run from about 10 minutes to about half an hour.

These trends in the design and development of weapons produce a number of troublesome consequences. For one thing, the arms race is already producing the so-called *n*th-country problem—known to the British as the fourth-country problem, and to the French as the fifth-country problem, and to others by various numbers. In the absence of arms controls, modern weapons will come into possession of more and more nations either through gift, sale, or local development. Ownership of modern weapons by many nations, some of which may be irresponsible or even fanatical, will introduce a major factor of instability into the world's security arrangements.

Furthermore, the increasingly fast and automatic response characteristics of modern weapons will lead to concentration and delegation of control. There will be much less time for investigation, diplomacy, and decision making. The dangers of accidental war or the accidental spread of limited war to total war become increasingly significant.

Finally, reliable physical inspection for possession of nuclear warheads is already impractical. With the decreasing size of warheads and the growing ease of hiding bases, many other inspection and control problems will approach practical insolubility. Man faces steadily increasing difficulties in backing out of the corner into which he is now boxing himself.

Thus the technologically unrestrained arms race not only represents fantastically huge charges against human progress; it also is a direct security threat in itself. Both capitalism and communism are just beginning to recognize that the chief security threat in both their futures lies not so much in the ideology or power of the opposing group, as in the perilous instabilities and civilization-destroying powers of the new weapons systems. These are fast becoming the common enemy, and the basis for hope of East-West agreement.

Can we construct a more rational world security system capable of blocking military aggression and simultaneously dealing with the threat of the arms race?

First, it is useful to ask just what is the purpose of arms control? I would like to suggest that at this moment in history, the object of arms control is not, as commonly assumed, either arms reduction or disarmament. I do not mean to infer that reductions and disarmament are not desirable objectives, or that the world might not ultimately achieve security arrangements where armaments are held by a world police establishment, controlled by the U. N. under a system of law enforceable on individuals. Such an ultimate goal is desirable and is to be advocated; it would be the world security system with the minimum level of armaments. But I do believe that such heaven on earth cannot today be the primary, immediate purpose of practical international politics.

Let me explain this notion in another way. Man can pursue international peace in three ways. First, he can endeavor to eliminate the causes of international con-

flict through political settlements, through strengthening peaceful methods for settling disputes and through trying to resolve ideological and economic causes of war. But necessary though these approaches are, it is difficult to believe that by themselves they can be successful in preventing war.

The second approach, popular particularly since the turn of the century, has been to say: "If we cannot eliminate the causes of international conflict, then let us eliminate the means of international wars. Let us disarm." The world has made three major attempts since the turn of the century to do just this. There was the European attempt lead by the Russians prior to World War I, in which the United States did not participate. There were the elaborate negotiations and naval treaty of the 1920's. And there is the post-war attempt, beginning with the Acheson-Lillianthal proposal of 1947 and continuing through the present work of the U. N. Disarmament Commission. Without attempting to analyze the reason for these failures to date I would simply point out that they have not born fruit, and that very probably attempts directly to eliminate the means of war cannot yet provide the key to the door we are trying to unlock.

But now let us examine the third approach man can take in seeking security from war. This approach in earlier centuries was known as the balance of power and in the current period is known as deterrence. The general idea is to present a potential aggressor with a situation where the probabilities are high that he will lose more than he can possibly gain through armed aggression. We should note that this is the same approach society has found successful in controlling and limiting violence by individuals. The potential criminal is presented with a situation—punishment—where the probabilities are high that he will lose more than he can probably gain.

The limitation and control of war through deterrence offers more immediate promise than does either the elimination of conflicts of interests or the elimination of the means of war. But in a world in the midst of technological revolution and organized as an anarchy of nations, the pursuit of deterrence presents two major problems.

The first difficulty with deterrence is that it is not self-stabilizing. A world security concept based only on national deterrent forces is, in a period of ideological conflict, a guaranty of an arms race.

The second difficulty is the problem of war initiated by accident, miscalculation, or fanaticism. This problem will become extremely serious in the coming decade of more and more nuclear nations and of global weapons of nearly instantaneous response times, whose control will become increasingly concentrated and delegated to the hands of minor officials—or even, if some advocates had their way, to electronic computers.

These two difficulties with deterrence can be minimized by arms controls. A broad international exchange of arms information would not only greatly reduce the dangers in deterrence but would at the same time greatly strengthen deterrence. It would warn of surprise attack and thus reduce the temptations of preemptive war. It would warn of any production or experimentation that might upset the stability of the security system. It would encourage and permit the abandonment by both sides of the so-called counterforce strategy, which is the current doctrinal source of the arms race. It will permit a much cheaper military standoff. And it would insure that potential aggressors would not underestimate the retaliatory strengths arrayed against them.

Lastly, such an exchange of information would become the basis for subsequent arms reductions. While we should recognize that the first purpose of arms control is to stabilize deterrence and check the arms race, arms reductions can be planned as a later phase in the building of a rational security system for our war-weary world.

In the 1950's, we have made much of weapons systems. I would suggest that in the 1960's we must make much of information systems. Weapons systems for deterrence and information systems for stability and control.

In this connection we should seize every reasonable opportunity the Soviets offer for exchanging inspection. On May 10, 1955, the Soviets offered a fairly elaborate exchange of ground-control posts to warn of surprise attack. We badly mishandled this opportunity. Last year, their counter-suggestion about partial aerial inspection was miserably dealt with in confusion and delays. Last year they also offered inspection in connection with a nuclear test suspension. It is now reported that the United States Government is seriously contemplating just such a plan. But our indecisiveness and delays may again seriously reduce a superb opportunity to press for inspection. If the Russians, as now rumored, unilaterally suspend tests, they may argue convincingly to the world that inspection is not necessary.

United States purposes in dealing with the nuclear-test issue should, I believe, be principally five:

1. To avoid at all costs any military inferiority vis-a-vis Russia (please note that I am not saying we should continue to seek military superiority).
2. To get started with mutual inspection.
3. To disengage from the disgraceful political position on tests into which we have drifted in the opinion of the world.
4. To inhibit the proliferation of nuclear weapons among additional powers.
5. To reduce to the very least possible the radioactive effects of nuclear weapons.

The latter purpose is, of course, the controversial one. But no physical inspection system has yet been conceived for nuclear warheads, and they will be around the world for a long, long time. Human frailty and history provide no encouragement that some or many will not be used, perhaps by accident, miscalculation, or fanaticism. A very strong case can be made for substantially decreasing the radioactive poisoning of nuclear weapons through development and testing.

Our 5 purposes in the nuclear test matter—to avoid military inferiority, to start inspection, to "get off the hook" politically, to inhibit the *n*th country problem, and to minimize the radioactive hazards from accidental war—these 5 purposes could be served by policies somewhat as follows. I offer these comments by way of illustration of a possible solution with no suggestion that they necessarily represent the optimum balance in the extremely complex problem-area.

1. While continuing to maintain pressure for the other disarmament steps, we would separate the nuclear-test issue from all others.

2. The United States would continue testing, but only for the purposes of developing nuclear dynamite for peaceful purposes and so-called "clean" weapons, i. e., those which produce quite small percentages of the long-lived fission products, such as strontium 90 and cesium 137. These tests would be registered in advance with the U. N., and we would invite the U. N. and other nations to observe them. After "clean" weapons are developed, we would negotiate in good faith with other nuclear powers for an exchange of clean weapons know-how. When nuclear dynamite is perfected, the United States will make it available to any user in the world, provided the use is approved in advance and controlled by an appropriate U. N. agency.

3. At the end of 1958, the United States will voluntarily suspend all tests of dirty weapons, i. e., those which produce relatively high percentages of the long-life fission products, and will continue the suspension provided (a) that before the end of 1959 an adequate number of mutual inspection stations, say a few dozen, have been established; (b) before the end of 1960, a full international agreement is reached providing for a worldwide inspection grid, for the registration and international inspection of all testing of clean weapons and peaceful devices, and providing for the prohibition of tests of all dirty devices, which can be detected by the inspection grid (this might be yields above 1 kiloton or 10 kilotons, depending on the effectiveness of the grid).

4. After the development of clean weapons, the United States will convert most of its dirty stockpile to a clean stockpile, reserving only sufficient dirty weapons to deter any nation from using dirty weapons against it. After adequate conversion of world stockpiles to a clean variety, the United States would be interested in further limitations on nuclear testing provided an international cutoff of nuclear production has been arranged. In deciding on these further test limitations, the United States is willing to negotiate internationally, or is willing to be subject to the will of a majority vote of the U. N. General Assembly.

How can science and technology help in this first phase of checking the arms race and stabilizing deterrence? There are countless possibilities. In closing these remarks, I would like to sketch one approach.

Consider a U. N. Arms Information and Research Agency. As with its predecessor in the League of Nations, this agency would compile and publish arms information from open sources. But additionally, it would collect information with the most modern means. It would receive and process information from inspection satellites, whose advent is imminent. It would receive and process photographic results from mutual aerial inspection, and operate its own aerial inspection force over areas of the world not covered by mutual agreements. It would man ground inspection stations instrumented with the vast array of detection devices which science is making available. The combination of ground, air, and space inspection could soon stabilize deterrence and bring the arms race under control.

But this agency would do more than collect, digest and distribute arms information. It would openly study and develop the tools of a world security system. Like the Rand Corp. for the Air Force, the Operations Research Office for the Army, and the Institute of Defense Analyses for the Defense Department, the scientists of this agency would employ the latest disciplines and tools of operations analysis, systems engineering and gaming. Deterrence would be openly researched and wars would be openly fought as games with teams of experts and with computers. The agency could probe for and publicize instabilities in the world's security arrangements and opportunities for force reductions. Human ingenuity would be marshaled to devise efficient and safe methods both to deter war and to control armaments.

Before science can be freed from the slavery of the arms race to serve the nobler purposes of man, it has one critical task to perform. Science must assist in the creation of a safe and decreasingly expensive world security system. Science, which has created the instruments of deterrence, must now turn its attention with even greater vigor to the problems of arms controls. To contribute to this reorientation of the Nation's scientific effort is the aspiration of N. P. A.'s newest activity, its Committee on Security through Arms Control.

Why Soviets Lead

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an interesting, in fact, an amazing article written by Dr. Ellis A. Johnson, director, operations research office of Johns Hopkins University, appearing in the Boston Sunday Globe, of March 30, 1958.

The statement and charges made by Dr. Johnson are such that appropriate committees of Congress should look into them. If true, in whole or in part, the President and appropriate departments and agencies of the executive branch should take necessary steps to rectify the situation.

The article follows:

WHY SOVIETS LEAD—GAINED FIRST PLACE IN ARMAMENT RACE DESPITE OUR OVERWHELMING TECHNICAL SUPERIORITY BECAUSE OF PENTAGON INEFFICIENCY AND SECRETIVENESS

(By Dr. Ellis A. Johnson, director, operations research office, Johns Hopkins University)

(EDITOR'S NOTE.—Dr. Johnson, a former naval officer, is in charge of a just completed 16-volume study of American defense. The following remarks are excerpts from an article which he wrote for the April issue of the international magazine Western World.)

Inefficient use of research and development resources, poor organizational structure, deficiencies in planning, lack of incentives for industry, and excessive secrecy are mainly responsible for the free world's falling behind the Soviet Union in the development of military weapons.

In spite of the recent launching of the Explorer and other evidence of the free world's being well ahead of the Soviet Union in basic research, total technical resources, and other factors—all evidence points to our being behind the Soviet in the development of military weapons.

I will try to identify the factors responsible for this.

The guidance and management of industry's defense effort are in the hands of military officers in the Department of Defense.

Almost all civilians with military research and development experience have, with rare exceptions, been organized out of all the positions of management responsibility and authority for military research and development programs in the Department of Defense.

No civilian scientist, regardless of his status, can make any signficant or important decision in his field.

This is a deliberate action taken by the three armed services acting in concert, beginning shortly after the end of World War II, and culminating in the dissoltuion of the Research and Development Board and the Office of Scientific Research and Development (OSRD).

The direct influence of civilian science and engineering within the Department of Defense, and at higher echelons of the Government is now almost nil. It depends primarily on scientific advisory committees, with no responsibility or authority, and unacquainted with the military-technical problems involved.

Almost the entire creative burden of developing weapons, therefore, falls on private industry.

The industrial contractor, however, may learn the tactical and strategic military requirements, only after he has a contract. This has led, and still leads to study contracts, extensive informal discussions, formal or informal proposals by industry, a time consuming examination cycle on the compatibility of the proposal by the Defense Department and finally the returning of the requirement to industry for competitive bids.

This random and grotesque procedure not only extends the time from concept to beginning of development, but also diminishes the chances that the development chosen is the best suited to meet the strategic requirements of the United States.

This process can last as long as 5 years before actual development begins.

About the total time required by the Soviet Union to do the whole thing.

Even after a development is pronounced desirable, industry must still make a profit to survive. It must also give steady employment for scientists and engineers in its industrial laboratories.

It takes approximately 3 years to make a new employee fully productive and industry needs a large backlog of orders to provide steady employment.

Under such circumstances the development time for each project is stretched, increasing the lead time.

On the other hand, if there is no backlog of contracts for development, the work program on the current contract is slowed down, while the sales engineers of the company work desperately to get new contracts to ensure survival of the development laboratory.

Present estimates indicate that as many as three times too many development engineers are employed as are actually needed for each project in United States defense industry, which doubles the length of time for development, and brings the overall cost of defense research to six times what it ought to be.

Large and healthy profits as a reward for good performance would cut the Government's cost by half and might well double the rate of successful development. This is what we must have.

Insufficient planning also wreaks havoc.

Such planning is the task of an integrated pyramid of high level Government groups. They must guide the military development programs, yet not in such detail as to prevent the creation of new knowledge and new weapon systems. These groups are needed in the National Security Council, the Department of Defense, Army, Navy, and Air Force, industry and military laboratories.

Such planning does not now exist in the United States, and the situation is even worse in other NATO countries.

Security regulations, also, are in the United States so rigidly enforced that classified libraries of industry do not contain accounts of prior or parallel work by other industrial or military laboratories * * * and an industrial laboratory is to make proposals based upon choice of the best.

This is not the fault of private industry but of the military managers of the Defense Department.

A research scientist can seldom give a blueprint of the specific thing he is trying to find, and yet it is often rambling search impossible of definition that brings about the most important scientific discovery. The value cannot be appreciated until it is found.

The need-to-know restriction also limits communication within the Department of Defense itself, resulting in repeated solving of old problems.

Obstacles within the Department of Defense itself definitely extend the development of weapons production.

In all honesty we must admire the achievements of the Soviet Union. However, the technical resources of NATO are so overwhelmingly superior that the Soviet research advantage need be only temporary.

By using existing NATO resources we can recapture our previous superiority.

Now, to remedy this whole situation, I suggest that the United States and the free world return immediately to the development methods used in World War II, when we and other countries were both speedy and productive in developing new weapons, including atomic weapons.

The methods used by the Soviet Union in weapons development are almost exactly similar to those the United States used at the peak of weapons development during World War II.

All evidence indicates that the Soviet Union considers its laboratories as permanent. Running out of work is never a problem for research and development personnel. The Soviet also provides firm support to applied research, component development and subsystem development prior to, or along with and independent of, specific end-item weapons production.

I can see only one lesson in this for the United States and the free world. Let's get back in the groove of our World War II weapons procedures.

Labor Rackets

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. ALGER. Mr. Speaker, I believe attention should be called to an article entitled "Labor Rackets" which appeared in the March 31 issue of Newsweek magazine. I am inserting it in the RECORD.

This Democrat-controlled Congress is not interested in the enactment of remedial legislation so obviously needed for the protection of the rights of the individual union member. It is quite evident that the Democrats are beholden to labor-union leaders and seek to do everything they can to preserve them in their positions of arbitrary power, regardless of the rights of the union members, the average workingman, management, and the general public.

The article follows:

LABOR RACKETS: SHADOW OVER THE SENATE

The big, pressing question that hung over the Senate Labor Rackets Committee this week was that of the committee's own existence. Would it finish its second year of investigations or would it fall apart? The answer depended on the outcome of what, in the final analysis, was a test of political strength between the Republican members of the committee and 1 man: Walter Reuther, president of the United Auto Workers.

The Republicans were determined that the committee should keep going long enough to give them a healthy crack at Reuther, whose power as a kingmaker in the Democratic Party was clearly shown at the last Democratic convention, where he shattered the Harriman boomlet not only by swinging the more than 40 UAW member delegates to Adlai Stevenson but also by persuading about 150 other CIO member delegates, and Gov. G. Mennen Williams, of Michigan, to come out for Stevenson, too.

On Reuther's side, a group of Senate Democrats were equally insistent that the investigation of his UAW's strikes should be wound up right now.

One day last week, Senator BARRY GOLDWATER, of Arizona, who since the committee's earliest days has been calling for a

hard look at the UAW chief, was talking to a reporter outside the Senate Chamber. He pointed dramatically toward the Chamber and explained: "It's extraordinary that Reuther's power can reach right into the Senate."

Senatorial courtesy would not let him go further. But there could be no doubt that what he had in mind was the scene on the Senate floor when 6 Democratic Senators arose to blast the current activities of the rackets committee and to call for its reformation or abolition. The 6, all of whom have received campaign contributions and help from the UAW, were PAT MCNAMARA, of Michigan (a member of the committee); WILLIAM PROXMIRE, of Wisconsin; JOHN CARROLL, of Colorado; RICHARD NEUBERGER, of Oregon; PAUL DOUGLAS, of Illinois; and WAYNE MORSE, of Oregon.

Such demonstrations are never spontaneous in the Senate. The content of the speeches must be prepared in advance. The statistics and tables placed in the record must be carefully worked up. It was evident that the 6 Senators were working as a team.

M'CLELLAN'S PLANS

Listening to their attacks on the committee was its chairman, Democrat JOHN L. MCCLELLAN, of Arkansas. Finally, looking pale and drawn—reflecting the high tension within the divided committee—JOHN MCCLELLAN took the floor: "Whenever I come to the conclusion that the usefulness of this committee has come to an end, I'll walk on the Senate floor and so report. If the Senate doesn't agree with me, I'll ask to be relieved of my arduous duties."

Later, MCCLELLAN indicated that he expected the labor-rackets committee to finish its allotted year. Its future investigations, he said, would cover the infiltration of the Mafia and other gangsters into unions and tie-ups with so-called management associations.

Meanwhile, the anxiety of the committee Republicans to keep the committee alive was responsible for their shelving temporarily an attack on counsel Robert F. Kennedy, whom they accuse of leaning to Reuther's side. Behind their proposed attack on Kennedy was this story:

As the current hearings on the Kohler strike dragged along, the witness stand was being held one day by Donald Rand, who has headed the UAW's efforts to have Kohler products nationally boycotted. Rand's answers to questions were vague, his memory was short. Republican Senator KARL MUNDT saw Bob Kennedy slip a note to attorney Joseph A. Rauh, Jr., counsel for the UAW. MUNDT asked to see it. At the end of the hearing, Kennedy retrieved the note and handed it, with a smile, to MUNDT. It read: "Rand, go home."

The incident was forgotten, but a day or so later, four Republican women visited the hearing and were seated just behind Attorney Rauh. At one point Bob Kennedy came up and said to Rauh: "How are we doing?" The women reported the incident to MUNDT. He in turn reported it to Minority Leader WILLIAM F. KNOWLAND and said that he and his colleagues on the committee were considering making an issue of the episode. KNOWLAND told him to go ahead.

It was GOLDWATER'S urging that finally decided the Republican group to hold off. GOLDWATER pointed out that such an attack on Kennedy might light the fuse that would blow the committee out of existence—and that would be just what the Democrats wanted.

Meanwhile, the subcommittee was continuing hearings on the UAW strike at the Kohler plant, outside of Sheboygan, Wis. The witness was Leo Brierather, a former editor of the UAW strike bulletin. He read an affidavit from an elderly Sheboygan man who had been a Kohler employee at the time of the strike there in 1934 (with which the UAW had no connection). In the shooting by company guards that broke the strike, the former employee's affidavit stated, he had been wounded by shotgun pellets fired by a company man named Lyman C. Conger.

What made this far-off story dramatic was the fact that Lyman Conger is now the company's counsel at the hearings and he was sitting there as the affidavit was read. When Brierather finished reading, Conger rose and strode angrily forward. He denounced the affidavit as a lie and challenged anyone in the UAW to repeat the statement outside of the hearing room. It was brought out that Brierather himself, at the time of the 1934 strike, had been working on a farm 20 miles away.

Healey: How To Start Disengagement

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the noted British member of Parliament, Denis Healey, entitled "How To Start Disengagement," from the March 31, 1958, issue of the New Republic magazine:

Stripped to its essentials, disengagement means drawing the armed forces of NATO and the Soviet Union apart from one another and establishing joint control over the area in between. It implies substituting cooperation for conflict along the sensitive frontier of the cold war. Now that the thermonuclear stalemate offers no alternative to coexistence but no existence, both sides can expect to benefit by disengagement, since it provides the possibility of peaceful change in areas of great instability, and reduces the danger of an unnecessary world war should that instability nevertheless erupt in violent explosion. Above all, it represents a first step toward ending the futile, back-breaking, and perilous weapons race by establishing a pilot project in the techniques of arms limitation and control.

I have outlined a concrete plan for disengagement in central Europe. What immediately emerges from study of such a plan is that it involves a solution of some of the most intractable political problems of the postwar world. And though these problems become infinitely easier to handle in the context of military disengagement, even with good will on both sides the process is likely to take years rather than months. Moreover, some of the purely military problems of disengagement—the problem of sanctions against aggression, for example—require the West to adapt its strategic doctrine and organization to the revolution in military technology. This adaptation is only just beginning, although it is just as necessary if the West is to produce a military posture suitable for protecting the existing status quo in Europe.

The idea of military disengagement has figured in the diplomatic proposals of both West and East more than once in the last few years, but largely as an element in the propaganda battle. Now for the first time both sides are beginning to consider it seriously, and are examining the risks and opportunities it offers with a caution they did not display before. Under careful scrutiny disengagement is seen to involve an unprecedented revolution in the political attitudes of both the West and Russia, since it assumes a form of positive cooperation going far beyond the negative principles of coexistence as defined in Communist doctrine. And some Western statesmen who are wont to see the cold war as a religious crusade are just as reluctant as the Communists to envisage lasting cooperation.

For all these reasons it is clear that at present neither side is likely to commit itself in advance to a thoroughgoing program of disengagement such as I have proposed. Disengagement can take place only by stages, each of which is complete in itself, in the sense that it is fully susceptible of control by both sides, and that either side can halt the process of disengagement there if it feels it would be too dangerous to go further. Moreover, my own impression after intensive discussion with representatives of all the counties concerned is that, whatever they may say for propaganda purposes, none of the great powers will commit itself in practice at the moment either to the political neutralization of the Central European States or to the total evacuation of foreign forces. Thus the first stage in disengagement must be restricted to the reduction, not evacuation, of forces in the area concerned, leaving the existing structure of alliances unimpaired.

In my opinion, the main western aim at the forthcoming summit conference should be to reach agreement with the Russians on a proposal for the limitation of armaments in Central Europe—this is by far the most important issue on which the bargaining poistions of the two sides are sufficiently close together to justify a moderate optimism. A few years ago Sir Anthony Eden made several proposals for a thinning out of troops in Central Europe, and it is often forgotten that he did so with the support of Mr. Dulles. The United Nations Disarmament Subcommittee last year came close to agreement on such a proposal: the main stumbling block was Western insistence on making a package deal which included agreement on several unrelated issues. There are signs that, having sacked Mr. Stassen, the United States administration may at last adopt his views on the unwisdom of seeking package deals: indeed the Disarmament Subcommittee of the United States Senate has already asked the Government to study plans for reduction of troops in Central Europe. Finally, the Communist governments have already tabled a proposal for arms limitation in Central Europe in the so-called Rapacki plan.

The Rapacki plan, as it stands, contains provisions which are so obviously weighted against the West that it can be considered only as an extreme position from which bargaining can begin. It proposes a total ban on the stationing or use of atomic weapons in Germany, Poland, and Czechoslovakia, without any limitation on conventional forces in the same area. But the West cannot hope to counter the immense preponderance of Russian forces in Central Europe without the use of atomic weapons—although it is conceivable that NATO's atomic weapons might be stationed outside Germany in peacetime, without great military disadvantage. Moreover, the American and British NATO forces are being reorganized and reduced in number with a view to fighting with atomic weapons. If they were forbidden the use of these weapons, it is doubtful whether they would stay on the Continent at all.

In the second place, it is technically impossible to limit any disarmament plan to nuclear weapons alone. Much of the nuclear ammunition now available is small enough to be hidden as easily as footballs, and can be fired from conventional artillery or carried in small aircraft. Thus the inspection of a ban on nuclear ammunition would involve the right to examine every square yard of the territory concerned. Even so, it would

be impossible to prevent clandestine imports of nuclear ammunition in an emergency. If the ban were extended to all possible means of delivering nuclear weapons, it would cover almost all weapons except the rifle, i. e. would involve almost total demilitarization.

Finally, the Rapacki plan involves discrimination against Western Germany as the only member of NATO to be forbidden the possession of nuclear weapons, although she gets thing in return by way of progress toward reunifiction. On the contrary, insofar as the fear of German nuclear weapons provides Russia with an incentive to consider disengagement in its wider sense, the Rapacki plan would enormously weaken the West's bargaining position on German reunification. Moreover, by accepting formal discrimination against Germany, NATO would create resentment against itself which might in time lead the Federal Republic to make its own approach to Russia.

On the other hand, apart from limiting disarmament to nuclear weapons alone, the Rapacki plan includes several dramatic concessions to the western position. It is the first proposal ever made in which the Russians offer to equate Eastern Germany, Poland, and Czechoslovakia on their side of the Iron Curtain with Western Germany alone on the NATO side. In other words, they accept as an area for joint control very much the same countries as Mr. Gaitskell has proposed for his disengagement plan. In the second place they offer detailed provisions for physical supervision of the arms limitation through ground control teams—though the powers and location of such teams remain subject to negotiation. Finally, they have tried to meet western reluctance to have formal diplomatic contact with the Pankow regime in East Germany by agreeing that the agreement should be established through unilateral declarations by the governments concerned instead of by a common treaty.

Not the least important aspect of the Rapacki plan is that it originated last October in Warsaw without Soviet prompting or support. It represents the first important international initiative by a Communist regime which is trying to assert its independence within the Soviet bloc. Since Russia took up the Rapacki plan, it has been further developed in close cooperation with the other Communist states concerned. But there is overwhelming evidence to show that the Polish Government at least would welcome constructive criticism by the West, and hopes for counter proposals which will include a limitation on conventional forces in the area.

It is now urgent that the western governments should agree on concrete counter-proposals to the Rapacki plan which would aim at a balanced limitation of both conventional and nuclear armaments in the area. Such a proposal would involve no more inspection than the Rapacki plan itself—indeed it is the only way of making such inspection effective. The West could only gain by the establishment of arms limitation and control in central Europe. The Russians, too, would have every reason to accept it, if, as they say, they have no intention of using force to change the present status quo.

The main argument against such a plan—particularly in Western Germany—is that by reducing the dangers of the present division of Europe it reduces the incentive to end it. There is, of course, some truth in this argument. But I believe that the establishment of arms limitation and control in central Europe would do far more to encourage the forces on both sides which want peaceful change than to strengthen those who oppose it. The relaxation of tension would encourage the peace camp in Russia itself as well as in the satellite states. And those in Eastern Europe who saw it as the first step toward complete disengagement would be given hope where at present western policy offers them only despair. The danger of a surprise attack by Russia's overwhelming ground forces, which is NATO's main military preoccupation at present, would be enormously reduced, if not eliminated for good. Moreover, once the principle of a balanced reduction in both nuclear and conventional forces were accepted, it would be easy for the West to mobilize world support for massive reductions in Russia's European armies.

Inspection in itself would not be a major technical problem in central Europe, since both sides are able to inspect one another's forces there in great detail already through normal intelligence operations. What would be new if joint inspection were agreed is that the strength of the opposing forces could be published with international authority. For this reason it would be desirable to involve the United Nations directly in the agreement, and to include neutral representatives in the inspection teams. This would still further increase the political disadvantages and military difficulties of mounting a surprise attack.

In my opinion, the change in the whole climate of the cold war if such a scheme were put into practice would in itself encourage rapid further progress toward complete disengagement. And it would be possible in any case to set a time limit for the first stage—to insist that if further progress were not made within, say, 5 years, each side was free to denounce the agreement and return to the status quo ante. It is possible that such a time limit might be necessary to persuade the West German Government to accept a first stage in arms limitation without any progress toward reunification.

In any case, it will be easier to take the first step this year than at any time in the future. At the moment the power of decision lies overwhelmingly with the three nuclear great powers. As nuclear weapons become more widespread, either within the Western alliance or outside, it will become ever more difficult to coordinate a collective policy of disarmament and disengagement.

In my first article, I described the way in which the logic on thermonuclear strategy threatens to disintegrate the Atlantic alliance. The present failure of the leading Western powers to offer any political hope for an end to the cold war is equally damaging to allied unity. NATO will survive only if it adapts itself to the tremendous changes which have taken place in the world since it was founded 9 years ago. But if it fails to adapt itself collectively to these changes it cannot prevent its members from trying to adapt themselves individually. A policy of disengagement is not an alternative to the Western alliance—it is the only way of keeping the Western alliance effective. NATO will have a vital role even after the whole program of disengagement has been completed, as the indispensable basis to insure that the agreement is respected.

At this final stage in the argument, I find that supporters of official Western policy will concede that disengagement is in the Western interest, and start arguing that for this reason Russia will never accept it—and therefore we should not put it forward. I have tried to show that in fact disengagement is in the interests of humanity as a whole—the Russians have no less an interest in it than the West, because they live on the same planet. But even if the Russians do not accept it today, that is no reason why the West should not propose it. After all, we know for certain that Russia will not accept NATO's present policy for a European settlement. Moreover, she can reject NATO's present policy without suffering any harm in world opinion, since no one, even in the West, believes that our present demands are reasonable. If, on the other hand, the Kremlin rejected proposals for disengagement, it would lose heavily in support—among the peoples of the Communist states no less than in the West and the uncommitted world.

Even disengagement is not an end in itself. It must be seen only as part of a far wider development. Indeed it is doubtful whether it would be possible to preserve a system of disengagement in central Europe for long unless progress were made in other fields and other areas toward cooperation between the West and the Communist world. It would be difficult for the two camps to cooperate in Europe if they were in bitter conflict in the Middle East and the West Pacific. Moreover, the countries of central Europe would be unlikely to accept special limitations on their military and diplomatic freedom for long unless they saw hope of other countries accepting similar limitations. Thus disengagement must ultimately lead to world disarmament, involving America and Russia themselves as well as countries in between.

It may seem pathetically over-optimistic even to hint at such a thing today. Yet there is truth in the trite old platitude that in the long run world government is the only alternative to race suicide. The discovery of atomic power is a milestone in the history of mankind beside which even the discovery of fire assumes minor importance. For mankind has achieved the power to destroy itself at a time when its social organization as an anarchy of sovereign states accepts war as a normal means of producing change. Unless mankind can reorganize its international relations so as to eliminate war as an instrument of policy, the discovery of atomic power may prove to be not a milestone, but a gravestone. Disengagement offers hope of beginning this reorganization in the area where it is most urgent and necessary. If there is a better hope in any alternative, those who reject disengagement have a clear duty to say what it is.

Needed More Than Ever: Vocational Education

EXTENSION OF REMARKS

OF

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. SPRINGER. Mr. Speaker, many of us have been interested in vocational education and it is always up for extended comment each year that we have an appropriation before the House. Prof. H. M. Hamlin, chairman of agricultural education, University of Illinois, has written an article for the Nation's Schools for March 1958. I thought those Members of the House who have in the past been deeply interested in vocational education would be interested in the comments of Dr. Hamlin. Mr. Speaker, the article is herewith appended in full:

NEEDED MORE THAN EVER: VOCATIONAL EDUCATION

(By H. M. Hamlin)

We must not fail to recognize that vocational education is an important means of contributing to the solution of many of the critical problems of education that are now under discussion.

We want an educational program that will meet our national needs. Vocational education was brought into the schools because a national need for it was felt. It has contributed for more than 40 years to meeting national needs. The need for vocational education, sensed a half century ago, has been greatly intensified and it will increase.

It is a little odd that many who feared a few years ago that American educators were being influenced by Russia now want us to copy Russian education. If Russia is to be our example, we should at least be clear regarding the nature of Russian education. It is not, as some would have us believe, simply education of the intellectually elite in science, mathematics, and engineering.

THREE LEVELS IN RUSSIA

Counts has reported that "the system evolved in the first 10 years of Soviet power recognized 3 levels of occupational qualification and training—lower, middle, and higher. The first corresponds roughly to the category of semiskilled and skilled labor, the second to that of semiprofessional, and the third to that of professional. Based on the schools of general education and articulating with them at various points, a wide range of institutions was established to prepare youth for the three levels of qualification." [1]

The technicum, one of the institutions for nonprofessional vocational education, alone enrolled 1,800,000 students in 1954 compared with 1,600,000 enrolled in the higher institutions, according to Counts.[2] Many other institutions for providing vocational education, particularly for adults, have been developed, including institutions for offering evening, part-time and correspondence courses and programs for agricultural workers. The Soviets claim to have trained, during the last 15 years, more than 7½ million young workers in 500 narrowly specialized trades.[3]

ISSUES NOT NEW

But we do not have to look to Russia for the issues regarding vocational education. They were thoroughly discussed during the decade 1907 to 1917 before the adoption of the National Vocational Education Act. Unfortunately, most of this generation has forgotten the discussions of 40 years ago, or has never heard of them.

An eminent commission appointed by President Woodrow Wilson reported in 1914: "While many different kinds and grades of vocational education will always be required, the kind most urgently demanded at the present time is that which will prepare workers for the more common occupations in which the great mass of our people find useful employment."

This statement is equally true today. Said the commission: "There is a great and crying need of providing vocational education of this character for every part of the United States—to conserve and develop our resources; to promote a more productive and prosperous agriculture; to prevent the waste of human labor; to supplement apprenticeship; to increase the wage earning power of our productive workers; to meet the increasing demand for trained workmen; to offset the increased cost of living. Vocational education is therefore needed as a wise business investment for this Nation, because our national prosperity and happiness are at stake and our position in the markets of the world cannot otherwise be maintained.

"The social and educational need for vocational training is equally urgent. Widespread vocational training will democratize the education of the country: (1) by recognizing different tastes and abilities and giving an equal opportunity to all to prepare for their life work; (2) by extending education through part-time and evening instruction to those who are at work in the shop or on the farm. Vocational education will indirectly but positively affect the aims and methods of general education: (1) by developing a better teaching process through which the children who do not respond to book instruction alone may be reached and educated through learning by doing; (2) by introducing into our educational system the aim of utility, to take its place in dignity by the side of culture, and to connect education with life by making it purposeful and useful. Industrial and social unrest is due in large measure to a lack of a system of practical education fitting workers for their callings. Higher standards of living are a direct result of the better education which makes workers more efficient, thus increasing their wage earning capacity." [4]

Everything that has happened since 1914 emphasizes the wisdom of the commission's pronouncement. The acceptance of vocational education by the public has exceeded even the more optimistic expectations. Unanticipated values have emerged, particularly the contributions which have been made to the general purposes of our school systems in fields such as agricultural education and home-making education.

Enrollments in nationally aided classes grew to 3,413,159 in 1955–56. Though the national vocational education acts have required only that national funds be matched by State and local funds, the States and communities contributed more than $142 million and the National Government contributed only $33 million in 1955–56 to the cooperative program. In addition, the States and communities supplied the buildings and equipment used. The program has appealed to out-of-school youths and adults, as well as to high-school students; in 1955–56 1,855,630 of 3,413,159 enrolled were in part-time or evening classes.

CONGRESSIONAL SUPPORT

For more than 40 years the Congress of the United States has repeatedly reaffirmed its support of vocational education. Its appropriation for 1957–58, $40,888,412, is the largest in our history.

State legislatures have uniformly added their endorsements. In a test vote on funds for vocational education in the Illinois General Assembly in 1957, the senate voted 53 to 0 and the house, 114 to 3, to continue the appropriation made in the previous biennium.

Thousands of advisory committees made up of representatives of agriculture, business, homemaking, and industry have been glad to spend extensive amounts of time in guiding and supporting local and State programs of vocational education.

A group of 23,928 Michigan citizens, most of them parents of schoolchildren, were asked in 1951–52 to indicate what they would be willing to pay for, in addition to good education in the 3 R's, health, and science, even if it might add to their school taxes. Seventy-four percent said they would be willing to pay for instruction in a vocation and 61 percent said they would pay for instruction in home and family living, one of its phases.

By any criterion, vocational education in the public schools has been one of the greatest successes of the century.

More and better vocational education is a modern necessity. Our civilization is dependent upon technology. Our national defense is dependent upon it. It has frequently been estimated that about 15 trained technical workers are necessary for each professionally trained person.

We should not deceive ourselves into believing that private businesses and industries will provide all of the vocational education needed. It is true that the largest businesses and industries do a remarkable job in training their workers. Their spokesmen are those most likely to be heard. There are, however, no adequate public provisions outside the public schools for the vocational education of farmers, housewives, and those engaged in the smaller businesses and industries. Those omitted from private training plans constitute at least 80 percent of the population. There are few businesses or industries that do not welcome related programs of vocational education in the local schools.

Neither should we be deluded by those who believe that public agencies other than the public schools, such as the extension service in agriculture and home economics, are doing the job so well that no activity on the part of the public schools is needed. Many of these agencies are serving exceedingly well the purposes they were created to serve, but they were always intended to supplement, not supersede, the public schools.

If we were thinking only of providing the best public schools possible, we should want strong programs of vocational education in them to care for individual differences, balance the theoretical with the practical, and relate public education to all elements of the public.

If we needed vocational education in the public schools in 1914, as President Wilson's commission thought, or in 1917, as the Congress of the United States thought, we need it far worse in 1958. If we should weaken or destroy it, we would "kill the goose that laid the golden egg."

One example may suffice. Before vocational education was introduced into the schools, there was fear in well-informed circles that population increases would occur faster than food for the population could be increased. We had been able to provide food for a growing metropolitan population by settling new land, but by 1910 almost all of the new land had been settled. The country was becoming industrialized and cities were growing at an unprecedented rate. However, for the last 10 years, our problem has been, not a shortage, but a surplus of food. In 1910, the farm population was one-third of the total population; now it is 12 percent of the total population.

There were more than 6 million farms in 1910; now about 2 million farms produce the food we consume. The Director of Research of the United States Department of Agriculture has estimated that, if farmers had farmed in 1950 as they were farming in 1940, the housewives of the country would have paid $10 billion more for food in 1950 than they actually paid. Many factors have brought about the revolutionary increases in agricultural efficiency, but vocational education in agriculture in the public schools must be listed as one of the most important.

Though great progress in public school vocational education has been accomplished, we are in an era when much thought needs to be given to its future. The rethinking of vocational education should involve boards of education, citizens committees, administrators, vocational teachers, and other teachers. Vocational education has never been what it should have been; rapid changes call for types of vocational education different from any that would have served in the past.

There has been too much separation of vocational and general educators, though John Dewey and many others have shown that vocational and general education can-

[1] Counts, George S.: The Challenge of Soviet Education, p. 158. McGraw-Hill Book Co., New York, 1957.

[3] American Vocational Journal, 32: 31 (December) 1957.

[4] Report of the Commission on National Aid to Vocational Education, vol. 1, p. 12. U. S. Government Printing Office, Washington 25, D. C. 1914.

not really be separated. But in spite of arrangements which separate artificially, there is more communication between vocational and general educators than there has been at any previous time, and the way seems open for cooperative thinking and planning.

We have attempted to do too large a part of the task of vocational education in the secondary schools. These schools can provide the beginnings of vocational education for some and they can provide counsel about vocations and preparation for vocations. But serious vocational education is largely to be done with persons beyond high school age. If we are ever to do what is needed in vocational education, we must forego the concept that schools are for children and youth, and accept the idea that schools are for any who need education, whenever in life they need it.

We need institutions for education beyond the high school, far different from the traditional 4-year colleges and universities, which will be accessible to everyone in the United States who is above high school age. We have pieces of these institutions of the future in the metropolitan communities; junior colleges, vocational schools, technical institutes. The smaller cities and the farming communities are largely unserved by any of them. Any post-high-school institution we build should provide adequately for preservice vocational education for youth and inservice vocational education for adults of all ages. Such an institution removes from the high school the burden of providing more vocational education than it can appropriately provide. It makes possible serious and realistic vocational education, given at ages when students can best use it.

Comprehensive, balanced, well-knit programs of vocational education are few. Many schools provide only 1 or 2 types of vocational education. Educational programs in agriculture, distributive occupations, homemaking, and trades and industries are much too commonly distinct programs. Counseling is not well related to vocational education. We have not yet made vocational education an integral part of our school systems as we had hoped.

Those who believe that the public schools may serve the public interest in ways that private education is unlikely to serve it may well be concerned about allowing private groups to assume the full responsibility for vocational education. If the public schools default, we shall have more and more vocational education by corporations, labor unions, and farmers organizations. These groups serve legitimate educational functions, but we would not turn over to them all responsibility for nonvocational education. There are equally good reasons why they should not have exclusive responsibility for vocational education.

Responsible school officials, school staffs, and representative citizens might well review their local situations to see whether they have not already gone too far in turning agricultural education over to farmers, industrial education to corporations and labor unions, and business education to business groups, though these types of education are conducted in the public schools and are presumably conducted in the public interest.

We want quality in our educational programs. There is no area of education in which quality performance is more easily seen than in vocational education. Serious students in vocational education must meet the standards of the vocation they are entering or have entered. Could there by any better way of getting quality?

We want our high school students to mature and to take their work seriously. Vocational education does more to mature them than other forms of education because of its close contacts with the serious business of life.

We must think more about local or area institutions which will provide vocational education and other types of education beyond the high school. We are worried about overcrowding our colleges. With 54 percent of our high school graduates going to college, we should be. It is obvious that 54 percent of them are not going to be needed in the professions, though some professions need more workers than they have. With an increasing percentage going to college, we are starting to remake our secondary schools into college preparatory schools on the premise that almost anyone may go to college. Thus we indicate that we expect that vocational education is to be provided by the colleges and that the local secondary schools will be absolved of any responsibility for it.

FUNCTIONAL TRAINING NEEDED

We want more teaching of science and mathematic and we want these subjects taught functionally. It should occur to us that the vocations for which training is needed require science and mathematics and that vocational educators must see that their students are taught these subjects thoroughly and functionally if they are to be proficient in their chosen occupations.

We don't want to waste those who are professionally trained in jobs others could do. We hear of a shortage of engineers, but we hear also that a high percentage of engineers are doing work of less-than-engineering grade. Vocational schools provide the helpers they need. Similar situations prevail with respect to all of the other professions.

We want butter as well as guns. It is possible to have it only if we produce more skilled workers than we have ever had; vocational education produces them.

Actually, there is no real danger that vocational education in the public schools will suffer as a result of current discussions which emphasize science, mathematics, college preparation, and education for an intellectual elite. The raucous voices we are currently hearing are drowning each other out. The public schools are still controlled by the people of 49,000 school districts, 48 States, and the Nation, and the people have made clear their intentions regarding vocational education.

The present danger is that schoolmen and school board members may not understand the public attitude toward vocational education and may temporarily heed the vocal minorities who do not understand it either. School administrators who would like to be around for a while would do well to give vocational education more attention, not less attention, during the next few years.

Cuba

EXTENSION OF REMARKS
OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and related material:

MIAMI, FLA., *March 23, 1958.*

Hon. ADAM C. POWELL, Jr.,
Member of Congress,
Washington, D. C.

DEAR SIR: As a former Prime Minister and President of the Cuban Senate, I read with unusual interest your remarks of March 20 on the floor of the House.

Heartiest congratulations for your courageous and gallant intervention in behalf of my country. Through such speeches, and by supplying such information to your colleagues in the House, you are contributing mightily to the defense of democracy in the Western Hemisphere and to amicable relations between your great country and mine.

You will be interested to know that I have just written a letter to the Honorable Secretary of State, Mr. John Foster Dulles, in which I question the advisability of continuing American military assistance to Dictator Batista, especially in view of the fact that he has violated repeatedly the mutual defense agreement. I also pointed out in my letter that, since there exists in Cuba a state of domestic hostility or civil war, the Government of the United States can and should recall its military mission from Habana. To do nothing is to proclaim that the United States Government is backing Batista in his struggle to maintain himself in power, in opposition to the expressed wishes of the Cuban people.

I enclose, for your information, the following papers:

1. A newspaper report (before censorship was imposed) of the barbaric tortures inflicted upon a 50-year-old schoolteacher, and the courageous protest of the attendant doctor.

2. A copy of a letter written by a group of 11 magistrates to the supreme court, in which they stress the lack of guarantees for the judiciary in Cuba. Batista, through the armed forces, prevents the judges from acting.

3. A copy of my statements to the American press during my recent visit to Washington. You will note that I criticize the State Department, the Pentagon, and the Inter-American Defense Board.

4. My thoughts on why the Cuban Peace Commission was doomed to failure. Although this document is out of date because the Commission failed a few days after I prepared it, it does show that there is no solution to the Cuban crisis as long as Batista is in power.

Hoping you will continue to work for amicable Cuban-American relations, I remain,

Gratefully yours,
MANUEL ANTONIO DE VARONA.

TORTURES UNDER BATISTA

The distinguished educator, Miss Esther Milanés, was subjected to unbelievable tortures after she was arrested last February 24. She was kept at the 12th district police station until the 27th of that month, when she and another woman were released, after undergoing barbaric and cruel tortures. Here's how the doctor's report reads:

"The patient presents multiple bruises and lacerations in the gluteal regions (buttocks) as well as lesions over all her body, serious internal injuries in the vagina, and deafness due to destruction of her tympanum (eardrums)."

In connection with this case, Dr. J. A. Presno, a distinguished physician, has sent the following letter to the president of the supreme court:

HABANA, *March 8, 1958.*

"HONORABLE SIR: According to the press, Miss Esther Milanés has accused certain police officers of grave and inhuman treatment.

"The indescribable odyssey suffered by my patient, performed with inconceivable sadism, makes evident not only a threat to our most elemental human rights, but also a lack of respect toward womankind. This respect, which we men owe to all women, is tied up with the love we feel for our mothers, who gave us life.

"As a son, a husband, and a father, I appeal to this, the highest court in our land, to demand an investigation of these serious

charges" (as reported by the newspaper Excelsior, Havana, Cuba, March 9, 1958).

LACK OF GUARANTIES FOR THE JUDICIARY IN CUBA

The following letter, sent by a group of magistrates to the supreme court, demands guaranties for the judicial branch of the government and describes the terrible conditions prevailing now in Cuba:

"Never before in the history of our country had the administration of justice been so ridiculed and mocked. For example, a soldier shot to death a judge's 2 sons; 2 magistrate's homes were riddled with bullets, while a bomb exploded in another; a judge was imprisoned and kept without food; 2 men, due to appear in court, were found dead.

"All vices are exploited by the same people who are paid to prosecute them. The list of murdered citizens grows by day and the assassins are not prosecuted.

"A fire has broken out or a bomb has exploded in every single court building; a man was found shot to death a short distance from the supreme court and the killers have not been found

"In some municipalities violent deaths are reported daily, but the judges are prevented from acting by the armed forces." (Reported by the press on March 9, 1958, and signed by 11 magistrates.)

STATEMENTS TO THE AMERICAN PRESS BY DR. MANUEL ANTONIO DE VARONA, WHO WAS PRIME MINISTER AND PRESIDENT OF THE CUBAN SENATE IN CUBA'S LAST CONSTITUTIONAL GOVERNMENT, WHICH WAS OVERTHROWN BY BATISTA ON MARCH 10, 1952

On my way through Washington, I wish to inform the press about the most recent barbaric acts committed by Batista's dictatorship.

In addition to the students, farmers, workers, and professionals murdered daily, Batista is employing physical torture on suspects and political prisoners, regardless of age, sex, or physical condition. The most tragic case is that of Esther Milanés, a 50-year-old schoolteacher, who was brutally beaten up by the police in Habana. This infamy has been denounced to the Supreme Court by Dr. J. A. Presno, a distinguished physician. Details are given in a separate sheet.

I feel it is ridiculous to tell the free world that Cuba belongs to the family of democratic nations and to keep an American military mission there. The mission, whose task is to train Cuban officers for continental defense, in reality only serves to prepare officers to defend a crumbling dictatorship which is finding an ever-increasing wave of popular resistance and to squash the democratic aspirations of all the Cubans who oppose Batista.

The concept of hemispheric defense and a mistaken interpretation of the principle of neutrality toward recognized governments, confuses public opinion in Latin America. Since this policy is applied equally to democratic governments and dictatorial regimes, Latin Americans see in this American attitude an open support of American dictatorships.

These errors may be due to the inexperience of ambassadors who are not career officers and who do not inform their government properly of the conditions prevalent in the dictatorship countries. Another source of errors is the Pentagon; still another is the American Defense Board. The designation of officers on good-will missions and the granting of medals to the high military officers who guide and direct the killings and tortures of the dictator's enemies usually come from these organizations.

In the case of Cuba, misguided policies are creating ill will among the Cubans and placing this Government in an untenable position, for it is contradictory to fight dictatorships in Europe and Asia, while not doing the same in Latin America.

It is impossible to play the part of world leaders of democracy while military and technical help, as well as arms, are given to despotic governments, enemies of democracy, which is one and indivisible.

In short, I protest against the military help being extended to Dictator Batista, first because it serves to keep in power an unpopular government, and, second, because Batista violates the letter and the spirit of the Mutual Defense Assistance Agreement.

The worst instance to date of this violation was the inhuman attack against the open city of Cienfuegos, when tanks and airplanes put down by force the uprising of September 5, 1957. These were arms supplied to Batista by the United States Government in conformity with the provisions of the Mutual Defense Assistance Agreement for the defense of the Western Hemisphere.

WHY THE NEW CUBAN PEACE COMMISSION IS INVALIDATED FROM THE START

(Confidential to high U. S. Government officials and legislators)

As a former Prime Minister and President of the Cuban Senate, I would like to tell you, quite frankly, why the new Cuban Peace Commission is doomed to failure from the start.

1. Batista has already outmaneuvered the church. As you know, the Roman Catholic Church is very powerful in Cuba, but it had never before intervened in political affairs.

The proclamation made by the Cuban episcopacy was, at first, a hard blow to Batista. But the dictator is a master strategist. He managed to talk the church leaders into naming a peace commission formed by lay leaders with whom he has always maintained the closest friendship. Thus he tricked the church into turning over its efforts to a pro-Batista group. In other words, it's another stall to consolidate himself in power.

2. The men who make up the new peace commission are not qualified to carry out its high objectives impartially or adequately. Here's why:

Dr. Cuervo Rubio is a former Vice President who served under Batista and is the doctor of Batista's wife.

Dr. Raúl de Cárdenas has received big favors from Batista in the past.

Mr. Víctor Pedroso, banker, intimate friend of the Batista family, has had large financial dealings with the present regime.

Rev. R. P. González, prior to becoming a priest, was under secretary of agriculture in the Batista government. He also used to be assistant to Martínez Saenz, predient of the National Bank of Cuba.

Thus it is obvious that the above men could hardly be expected to tell Batista to go in order to make way for a new national government, as suggested by the episcopacy.

3. The opposition parties have already rejected the idea of any coalition government which includes Batista. There was a time when Cubans would have settled for elections, guaranteed civil rights or almost anything else. The Cuban situation has deteriorated to such an extent, however, that the only acceptable condition is: Batista must go. Unless the tyrant goes, the Cuban problem will remain unsolved.

In conclusion, if any one doubt Batista's intentions, let him read his speech, given today March 10, the sixth anniversary of his treacherous military coup. In very plain language he stated that there would be no concessions forthcoming, except elections in June on his own terms.

TO THE PEOPLE OF CUBA

Once again the Aggregate of Cuban Institutions—made up of religious, fraternal, professional, civic, and cultural organizations—wishes to express publicly its considered opinion in regard to the possibilities of solving, without bloodshed, the grave crisis affecting the nation, and to demand, from the government, the kind of decision this moment calls for, if we, in this last and desperate effort, are to avoid the impending collapse of our fundamental state institutions.

This association, whenever it has raised its voice, has done so with a sense of responsibility and a belligerent attitude for peace, and has often expressed, in frantic appeals, that it was necessary to arrive at a just solution of our grave national crisis. Fearful of the risk that uncontrolled passions would sink the nation into anarchy, it announced that, in such a contingency, these Cuban institutions would know how to fulfill their duty.

The moment has arrived. The government, by ignoring all the appeals for peace and by depending on armed might, has provoked with that attitude the reaction of the young men and women of Cuba, who have exchanged their schoolbooks for war equipment and have started a general movement full of heroism and sacrifices, now admired and followed by all the social classes in our country. Against them, through 6 long, agonizing years, the regime has mobilized its entire repressive apparatus, which has been systematically employed with unsurpassed cruelty. Upon defenseless women and helpless adolescents has fallen the continuous and unmerciful weight of security forces in a manner having no parallel in the history of civil wars.

The regime has refused to look into the motivations behind our youth's actions, and, after subverting the juridical order of our state through an act of force, has suspended again all constitutional guaranties, having just announced a new drive to recruit 7,000 soldiers that might silence, in a war of extermination, all protests. It will all be in vain: the number of victims will increase, but the rebel movement will extend itself, because next to the young people and with them, both openly and clandestinely, is standing by the whole nation.

The people, witnessing with utter amazement the continuous flow of blood of its best human reserves, fails to understand this war of extinction, and cannot comprehend why the military supporters of this regime are fighting so hard to defend a government repudiated by the people.

The spectacle which Cuba's martyrdom offers to the world has not roused the feelings of those who seized power and who pretend to keep it against the will of all. No one hears the loud and excruciating outcry of mothers. No one listens to the voice of institutions not devoted to any particular sect, while the word uttered with pain by our venerable episcopacy receives, by way of answer, the deceiving, harsh imposition of an obstinate will to rule.

The Aggregate of Cuban Institutions has, thus far, proposed reconcilable formulas and civilized understandings. But now, aware of the fact that our nation is on the verge of collapse, we serenely demand the end of the present regime, since it has been unable to carry on the normal functions of government and to fulfill the high aims of statehood. As we request the discontinuance of the present administration through the abdication of those in the executive branch, and the dissolution of Congress, we are moved mainly by the instinct of social preservation, our intention being to contribute, in this manner, to the reestablishment of peace by removing the only cause that prevents a civilized solution.

This petition visualizes and carries with it the formation of a provisional government, formed by citizens of outstanding prestige, designated by all the vital forces of our nation, and having, as its aim, the pacification of the country through the adoption of the

necessary measures that may lead, in a brief period, to free elections under full democratic guaranties, thus fulfilling our historic destiny.

To that end, the provisional government will confine itself to a minimum program, fundamentally containing the aims listed below. The said government will:

(a) Respect private property and be under obligation to fulfill all agreements and pacts, whether bilateral or in conjunction with the United Nations, as well as all promises and liabilities contracted by the republic, deferring to the congress the faculty of determining, at an opportune time, if they were contracted according to our constitution and our laws.

(b) Will declare null and void all the sentences dictated by the tribunals of the republic and courts-martial held after March 10, 1952, dealing with political offenses intended to overthrow the regime instituted on that date.

(c) Govern itself, insofar as its peculiar nature permits, by the constitution of 1940, which will prevail especially in regard to individual rights.

(d) Exercise the legislative powers of government, limiting itself to the promulgation of laws strictly necessary for its good functioning, thus facilitating the return to a constitutional regime by popular consent.

(e) Give preferential treatment to laws promoting the start and development of an electoral process culminating in the designation of constitutional officials.

It is the understanding of this association that this is the only solution to save Cuba from chaos at this dramatic hour of its existence. Conscious, as we are, that we lack the power to remove the regime by force, we urge our citizenry to resist oppression by uniting closely and by exercising the rights that the constitution grants to free men everywhere.

HABANA, *March 15, 1958.*

MEMORANDUM TO THE MEMBERS OF THE UNITED STATES CONGRESS FROM THE CUBAN CONGRESSMEN IN EXILE

1. The undersigned, former members of the Cuban Congress, democratically elected before the military coup of March 10, 1952, have the honor to address the Members of the United States Congress in order to inform them about some aspects of the current state of relations between their two countries and, particularly, about certain facts and feelings that are impairing these relations.

2. There is at present a widespread belief in Cuba that the United States Government is supporting Batista's ruthless dictatorship in contradiction to the repeatedly declared American policy in favor of world freedom and democracy. This belief is buttressing Batista's dictatorship, prolonging the terrible civil war now ravaging the country and seriously impairing the prestige and good will of the United States in Cuba.

3. The generalized Cuban belief in the United States support to Batista is based on the following facts:

(a) The great zeal in the application of the Neutrality Act against anti-Batista exiles and the unnecessarily rude treatment applied to them, as shown by the recent (February 14, 1958) handcuffing of Dr. Carlos Prio Socarras, former constitutional president of Cuba, deposed by Batista;

(b) The public demonstrations of friendship from the United States Army to the Cuban Army, as shown by the bestowal of one of the highest United States military decorations to the chief of the Cuban Air Force (November 1957) shortly after Colonel (now General) Tabernilla had ordered and led the bombardment and strafing of the open city of Cienfuegos (September 5, 1957) and the widely publicized praise lavished upon Batista by General Shepherd, Chairman of the Inter-American Defense Board (December 1957).

(c) The continuous shipments of arms to Batista, supplied freely or almost freely under the Mutual Defense Assistance Agreement of March 7, 1952, in spite of the openly known fact that Batista is using these arms to crush, and not defend, democracy in the Western Hemisphere, contradicting the purpose of the agreement and of the United States acts which authorized it and which supply the funds with which these shipments are financed; and

(d) The maintenance of a United States Army mission in Cuba that is giving the Cuban Army technical advice on the strategy and tactics of the current warfare against the Cuban people, in spite of the fact that article 5 of the Army Mission Agreement of August 28, 1951, clearly stipulates that the agreement "will be subject to cancellation at the initiative of Government of the United States or of the Government of Cuba, at any time, when any one of the two governments finds itself involved in internal or external hostilities" (the quote is a translation of the Spanish text).

4. The undersigned consider that it is not improper for them to inform their United States colleagues of the above-mentioned facts, that may be of interest to them because of their bearing on the foreign policy of the United States, on the current world struggle for freedom and democracy, on the American prestige and good will abroad and on the welfare of one of the three closest neighbors of the United States. The undersigned also consider that it is not improper for them to request the moral support of their United States colleagues for their noble cause and hope that this information and this request of sympathy will be thus interpreted by the United States Senators and Congressmen and not construed as an attempt to interfere in their affairs or influence their conduct.

5. If any United States Senator or Congressman would like to obtain additional information on the facts described in this memorandum, the undersigned would be pleased to supply it to them, either in writing or personally, going to Washington if necessary or desirable. Requests for additional information or personal contact should be sent to: Dr. Lincoln Rodon, 5121 Alton Road, Miami Beach, Fla.

MIAMI, March 27, 1958.

Dr. Lincoln Ródon (Demócrata Party) Former President of the House of Representatives; Former Congressman From Oriente Province; Dr. José Manuel Gutierrez (Ortodoxo Party) Former Senator From Matanzas Province; Dr. Manuel Bisbé, Former Leader of the Ortodoxo Party in the House of Representatives; Former Congresaman From Havana Province, President of the Ortodoxo Party; Dr. Rafael Dominador Pérez (Ortodoxo Party), Former Congressman From Pinar Del Río Province; Dr. Roberto Garcia Ibañez (Ortodoxo Party), Former Congressman From Oriente Province; Dr. Bernardo Utset (Ortodoxo Party), Former Congressman From Oriente Province; Dr. Segundo Curti (Auténtico Party), Former Congresaman From Havana Province; Dr. Ruben Alonso (Auténtico Party), Former Congressman From Oriente Province; Dr. Antonio Acosta Borges (Nacional Party), Former Congressman From Havana Province; Dr. Wifredo Figueras (Demócrata Party), Former Congressman From Camaguey Province.

ANNEX TO THE MEMORANDUM

1. For those Members of the United States Congress that may not be familiar with recent Cuban developments, a brief outline of the origins and evolution of Batista's dictatorship follows.

2. On March 10, 1952, 82 days before the scheduled presidential elections in which he himself was a candidate supported by a small minority, Fulgencio Batista led a military coup, making himself chief of state in charge of organising and directing the executive and legislative branches of government and assuming all their functions. Following the coup, Batista suspended the constitution, prevented Congress from meeting, actually shooting the capitol building when Congress tried to meet, prevailed over the courts, reorganized the army, navy, and police forces, dissolved the political parties and canceled the presidential elections scheduled for June 1, 1952.

3. Two and a half years after the coup, on November 1, 1954, Batista held rigged elections in which he was elected President. The elections were not only rigged but unilateral, Batista being the only candidate. All the opposition parties but one, abstained; and the one that did not abstain, withdrew a few days before the election, owing to the violence and fraud used against it. Even members of the parties supporting Batista admitted publicly that there had been frauds and violence in the November 1954 elections.

4. Batista continues in power and his regime continues to have the same dictatorial nature that it has had from its inception. The constitution was nominally reestablished after the 1954 elections, but its basic rights are continually being suspended and marital law declared. Furthermore, with or without martial law, Batista has violated all political freedoms and human rights, imprisoning, torturing and assasinating his political enemies with utter ignorance of the courts.

5. Batista has sabotaged all the efforts made by prominent Cuban citizens and institutions in favor of a peaceful and digni-

fied settlement of Cuba's problem. In March 1956, the great Cuban patriot and elder statesman, Dr. Cosme de la Torriente, President of the General Assembly of the League of Nations, invited delegates from Batista's and opposition parties to seat together and discuss a solution. The meeting raised great hopes but was broken by Batista's delegates on a point of procedure. The failure of the negotiations closed the door to peaceful solutions and lit the fire that has been ravaging Cuba since then; few weeks after the meeting broke a group of army officers revolted, led by Colonel Ramon Barquin, Cuban member of the Inter-American Defense Board and in successive months rebellion flamed in Matanzas and Santiago de Cuba; Fidel Castro landed and started its successful and ever growing guerrilla warfare, in Oriente; the presidential palace in Havana was attacked and almost taken; the Corinthia expedition landed in the northern coast of Oriente Province; the navy garrison of Cienfuegos uprose and occupied the city, that was later unmercifully bombarded by Batista's air force; several plots were discovered in the army, navy, and air force and Havana police; strong guerrillas began to operate in the central part of the island and Castro's men beat the army repeatedly and spread all throughout Oriente's Province. Simultaneously with these events, a wave of sabotage against cane fields, sugar mills, sugar warehouses, tobacco warehouses, manufacturing plants, hotels, movie houses public buildings, trains, and buses has been rising in tempo up to its current volume: at present, all schools are closed, trains do not circulate by night, movie houses and stores are empty, insurance premiums have risen twentyfold and each week costs the country hundreds of human lives and several million dollars.

6. It is not the purpose of this memorandum to describe Batista's terror or to enumerate its thousands of victims, which include women, children less than 15 years of age, students, workers, farmers, merchants, including two presidents of the National Students Federation, physicians, lawyers, and congressmen. Two fellow congressmen have fallen victim of Batista: Dr. Menelao Mora, member of the house of representatives for the Cuban Revolutionary Party (Autentico), killed while valiantly fighting in the attack on the Presidential Palace, and Dr. Pelayo Cuervo, senator for the party of the Cuban people (Ortodoxo) and its president and leader in the senate, arrested by members of the police forces and assasinated in the outskirts of Havana on March 13, 1957, under the direct orders of Dictator Batista.

7. Following a standard practice of Latin American dictators, Batista is at present trying to perpetuate himself in power by electing a puppet successor. Elections for this purpose were scheduled for the forthcoming June 1 and have been now postponed, owing to the current state of civil war, for November 3 of this year. The electoral plans are supported by Batista's men and some so-called opposition parties, but public opinion repudiates them as a fraud. On February 28, 1958, Cardinal Arteaga and all the archbishops and bishops of Cuba addressed the country requesting the formation of a government of national union, implicitly asking Batista to step aside. On March 15, the national colleges (associations) of lawyers, medical doctors, civil engineers, electrical engineers, agronomical engineers, mechanical engineers, architects, doctors in philosophy and literature, doctors in political and economic sciences, teachers, pharmacists, public accountants, dentists, veterinanians, chemists and sugar chemists; the Federation of Catholic Youth, the Cuban Council of Evangelical Churches, the Supreme Council Grade 33 of Freemasons, the women's club, and Lions club and 18 other national organizations signed a petition for Batista's resignation, for the sake of peace and freedom, in a momentous and historical document. These utterly unusual steps taken by the Catholic and Evangelical churches and by nonpolitical organizations that together represent the whole of Cuba's learned middle class show the state of desperation that the Cuban society has reached and announces the new dawn of democracy in Cuba.

Dr. Lincoln Ródon (Demócrata Party), Former President of the House of Representatives, Former Congressman From Oriente Province; Dr. José Manuel Gutérrez (Ohtodoxo Party) Former Senator From Matanzaas Province; Dr. Manuel Bisbé, Former Leader of the Ortodoxo Party in the House of Representatives, Former Congressman From Havana Province, President of the Ortodoxo Party; Dr. Rafael Dominador Pérez (Ortodoxo Party), Former Congressman From Pinar Del Río Province; Dr. Roberto Garcia Ibañez (Ortodoxo Party), Former Congressman From Oriente Province; Dr. Bernardo Utset (Ortodoxo Party), Former Congressman From Oriente Province; Dr. Segundo Curit (Auténtico Party), Former Congressman From Havana Province; Dr. Ruben Alonso (Auténtico Party), Former Congressman From Oriente Province; Dr. Antonio Acosta Borges (Nacional Party), Former Congressman From Havana Province; Dr. Wifredo Figueras (Demócrata Party), Former Congressman From Camaguey Province.

MIAMI, *March 27, 1956.*

SPEECH BY DR. MANUEL BISBE

A paragraph of the speech made by Dr. Manuel Bisbe, president of the Cuban Peoples Party (Ortodoxo), in the meeting held in the Flagler Theater of Miami on the 16th of March 1958, honoring the memory of Dr. Pelayo Cuervo Navarro in the first anniversary of his death. In his speech Dr. Manuel Bisbe raises the issue of a revision of the Latin American policy of the State Department.

"The dictatorship of Batista is in its last stages. It will fall as fell the dictatorships of Rojas Pinilla in Colombia and of Perez Jimenez in Venezuela. The America of Bolivar, of Juarez, and of Marti will be free as is the America of Washington. But what hurts us is the support that is being given to dictators, and that arms sold to them for the defense of the hemisphere against the Communist danger, are used instead against the people. What hurts us is that a plan of general elections be supported despite facts that have proved that we were right and that Ambassador Smith was wrong. Batista cannot govern with a free press, and if he establishes censorship he cannot maintain order either. Let us go toward a democratic Latin America. Yet in the face of the grave situation of disorder that prevails in Cuba, how can the State Department think that general elections can be called notwithstanding the shameful collaboration that a few politicians of the so-called opposition are lending to the infamous comedy of general elections? The people of our America, with the support of decent army officers who are not willing to use their arms against democracy but to place them at its service, are helping to lay the foundations of a new era of freedom in our sister republics. Let Washington rectify its policy. You cannot hurt people and expect them to trust you afterward. Let the Americas be democratic, and if strength is made use of, let it be against dictatorships, and never against democracy, for I do not admit in the inter-American relationships any other attitude than to isolate dictatorial government, because the time has come that governments understand, as long ago our peoples have understood, that the blow stricken to democracy in any of our brother countries is a mortal blow to the very heart of our America."

Building Communism's Military Machine With the Hands of Non-Communists

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Committee of One Million:

LEADING AMERICANS APPEAL TO JAPAN ON RED CHINA TRADE—BIPARTISAN COMMITTEE WARNS THAT JAPANESE TRADE WITH RED CHINA MEANS DE FACTO RECOGNITION

In a statement issued today, the Committee of One Million (against the admission of Communist China to the United Nations) appealed to the Japanese people and government to reconsider the recent trade agreement signed by private Japanese businessmen and Red China. The statement was issued by the organization's steering committee, including Senators Paul H. Douglas (Democrat, Illinois) and H. Alexander Smith (Republican, New Jersey); Representatives Walter H. Judd (Republican, Minnesota) and Francis E. Walter (Democrat, Pennsylvania); Charles Edison, former Secretary of the Navy and Governor of New Jersey; Joseph C. Grew, former United States Ambassador to Japan and Under Secretary of State.

The Committee of One Million, which includes in its membership 22 United States Senators and 88 Congressmen, cited the political connotations inherent in this presumably "private" Sino-Japanese trade agreement which calls for "* * * favorable customs treatment and complete freedom of travel for Red China's representatives; the use of secret telegraphic codes needed for Red China's business operations in Japan; the right to have an unlimited number of Chinese Communist employees; and, perhaps most important to the Chinese Reds, the right to hoist the flag of Red China in Japan which is the beginning of de facto recognition of the Peiping regime."

The committee's statement said: "Such special concessions to Communist China amount to publicly inviting open subversives into Japan to strengthen the pro-Communist movement there and to exert added pressure for official recognition of the Peiping regime by Japan as well as to provide a cover for the widespread Red spy apparatus. This is a direct threat to the internal security of Japan and, indirectly, to the security of all free-world interests."

The committee said that it sympathized with Japan's need to trade and pledged that they, as individual Americans, would do all in their power to assure reciprocal trade between Japan and the United States. They stated however, that: "It makes it especially difficult for Americans who favor fair and reciprocal trade agreements between the United States and Japan to promote such a policy when our friends choose also to build the potential aggressive power of our enemy."

The committee cited some of the potential war material which the Japanese businessmen have agreed to ship to Red China as part of their agreement: "* * * rolling stock and railway equipment, ships and vessels, various types of heavy and precision

machinery, ingot copper, aluminum materials, steel plate, steel tubes, and sheet iron. Just as the scrap metal some Americans shipped to Japan was returned in the form of bombs, so may this materiel be returned—to Japan and the United States—in the same manner."

The bipartisan American committee appealed to Japan and our other allies "not to build communism's military machine—with the hands of noncommunists. * * * The Committee of One Million, which represents the sentiments of tens of millions of the American people against any strengthening of our common enemy, calls on all free nations to stand fast against tyranny by refusing to arm the tyrant with the products of free labor. We call on our friends, especially Japan, to think long and hard before ratifying any agreement with a regime which could only serve to weaken our common defense against Communist imperialism."

The Committee of One Million's statement warned against repeating the mistakes of the past: "One of the basic causes of the greatest tragedy our world has ever experienced, World War II, was the greed of some people in all the nations of the world who put the dollar, the yen, the franc, and the pound above the security of their own countries and, indeed, the lives of their own children. There are some in the United States who must share this blame. It was this relative handful who, for the sake of being 'realistic' about trade, shipped tons of scrap metal to Japan which enabled its war party to seize control of the Japanese Government, against the interests of both the people of the United States and Japan, and spread the horrors of war throughout Asia. It is these men who put profit above country and above honor—in Japan, in the United States, and throughout the world—who must forever share the responsibility of the deaths of tens of millions in World War II."

Among other leading members of the Committee of One Million with headquarters at 17 Park Avenue, New York City, are Gen. George C. Marshall, Mr. Henry R. Luce, Adm. William F. Halsey, Bishop Bernard J. Sheil, and Gen. Lucius D. Clay.

BUILDING COMMUNISM'S MILITARY MACHINE WITH THE HANDS OF NON-COMMUNISTS—AN APPEAL TO SANITY

(Complete text of Committee of One Million statement on trade with Red China, April 2, 1958)

On June 9, 1957, the Committee of One Million published "An appeal to all free men" in the international edition of the New York Times, entitled "No Trade With the Enemy."

At that time the committee stated: "Throughout history trade with the enemy, whether he be actual or potential, has been considered the lowest form of treason in all cultures and all nations. Any trade with Communist China would, in effect, be strengthening an avowed enemy of the free world. There are those individuals who cry out that opposition to trade with Red China is unrealistic. According to their concept it would be realistic for the free world to build up the economy and war machine of Red China, recognize its enslavement of the Chinese people, and destroy the Charter of the U. N. by admitting a regime which has warred on that body.

"The Committee of One Million, representing the point of view of the overwhelming majority of the American people, does not believe this to be a realistic policy. To follow such a course would invite disaster for all free men, just as the policy of appeasement of tyranny during the 1930's precipitated the holocaust of World War II. We do not believe it is realistic to commit suicide.

"The free world is faced with an issue of transcendent importance, namely the attempt to build up Communist China's economy and prestige through expansion of trade, universal recognition and its admission to the U. N. Such action would be a tragic mistake. It would effectively block efforts for peace and dishonor the philosophy of democratic freedom which all free men cherish."

THE ILLUSION OF 600 MILLION CUSTOMERS

In the months that followed, the situation regarding trade between Communist China and many nations of the free world has deteriorated. On May 30, 1957, Great Britain virtually ended its embargo on trade with Red China except for actual arms and ammunition embargo, which was imposed when the Peiping regime was actively fighting U. N. forces in Korea (including soldiers from Great Britain)—a war which has yet to be ended by the signing of a peace treaty.

Some other nations were quick to follow suit. One by one they relaxed and even dropped their embargoes, attracted by the illusion of profit and by belief in the Communist promises of 600 million customers on mainland China. They did not take into account, however, that slaves make poor customers. They still do not seem to recognize the impossibility of a free economy trying to compete on an equal basis with a government-controlled economy based on slave labor.

TRADE WEAPON FOR RED POLITICAL ADVANCES

Nations that attempt to foster economic relations with Communist China should look back at the words of Lenin on the subject of trade, which are dogma to the Communist world: "We Communists shall be able to direct our national economy if we succeed in utilizing the hands of the bourgeoisie in building up this economy of ours and in the meantime learn from this bourgeoisie and guide the economy along the road that we want it to go, that is, to build communism with the hands of non-Communists * * * sell at the higher prices, buy at the lowest price; 'when living among wolves, howl like wolves.' As for exterminating all the wolves, as would be done in a rational human society, we shall live up to the wise Russian proverb: 'Don't boast when going to war, boast when returning from war.'

The Communist mentality, as epitomized by its leaders who still boast that "we will bury you," and only recently announced "We declare (economic) war on you," cannot separate economics and trade from political advances for the Communist world. The tyrant has always used trade as a weapon. One of the basic causes of the greatest tragedy our world has ever experienced, World War II, was the greed of some people in all the nations of the world who put the dollar, the yen, the franc, and the pound above the security of their own countries and, indeed, the lives of their own children.

There are some in the United States who must share this blame. It was this relative handful who, for the sake of being "realistic" about trade—"if we don't do it, someone else will"—shipped tons of scrap metal and tankers of oil to Japan which enabled its war party to seize control of the Japanese Government, against the interests of both the people of the United States and Japan, and spread he horrors of war throughout Asia. It is these men who put profit above country and above honor—in the United States, in Japan, and throughout the world—who must forever share the responsibility of the deaths of tens of millions in World War II.

JAPAN, LATEST FREE NATION TO ATTEMPT TRADE WITH THE ENEMY

Once again, the world watches history repeat itself, leading us all slowly to another period of carnage and disaster. The latest step in this repetition of history is being made by a people whom we Americans consider as good friends and as one of our strongest allies today in the Far East—the free nation of Japan. On March 5, 1958 a "private" trade agreement was concluded in Peiping by a delegation of Japanese businessmen and a so-called independent Chinese Communist delegation. One of the independent Communist negotiators was Lei Jen-min, a Vice Minister of the Peiping Ministry of Foreign Trade. These Japanese businessmen have agreed to send to Red China, among other commodities, such potential war materiel as: rolling stock and railway equipment, ships and vessels, various types of heavy and precision machinery, ingot copper, aluminum materials, steel plate, steel tubes and sheet iron. Just as the scrap metal some Americans shipped to Japan was returned in the form of bombs, so may this materiel be returned to Japan—and the United States in the same manner.

RED POLITICAL DEMANDS ON JAPAN

In this so-called independent trade agreement the Communists have already included stiff political demands, demands which not only affect Japan but also affect freedom's stake in the Pacific. The agreement provides, among other benefits for Communist Chinese Government officials in Japan, favorable customs treatment and complete freedom to travel; the use of secret telegraphic codes needed for business operations; the right to have an unlimited number of employees; and, perhaps most important to the Chinese Reds, the right to hoist the flag of Red China in Japan which is the beginning of de facto recognition of the Peiping regime. Such special concessions to Communist China amount to publicly inviting open subversives into Japan to strengthen the pro-Communist movement there and to exert added pressure for official recognition of the Peiping regime by Japan, as well as to provide a cover for the widespread Red spy apparatus. This is a direct threat to the internal security of Japan and, indirectly, to the security of all free world interests. The Nippon Times, one of the most respected and influential newspapers in Japan, foresaw this danger over 7 years ago. In an editorial dated September 13, 1951, the Nippon Times said: "* * * the impact of a powerful nation with a fanatical ideology cannot fail to be felt here. China's trade must become a means of spreading its doctrine." Japan has recently been admitted to membership in the United Nations, which is still officially at war with the regime that sends its commercial representatives to infiltrate Japanese economic and political life. Even though this is an agreement between private Japanese businessmen and the government of Communist China, the Japanese Government must give its official sanction because of the political questions involved.

Another major political accomplishment of this agreement, favorable to the Communists' plan of divide and conquer, is the serious split it has caused between two of our strongest allies in the Far East—Free China and Japan.

AMERICAN PEOPLE RESPECT THE NEED FOR JAPANESE TRADE OUTLETS

We respect and sympathize with our Japanese friends' need to trade and we, as individual Americans, will do all in our power to assure reciprocal trade between allies. On March 27, 1958, the President of the United States called for a liberal foreign trade policy of reciprocity between ourselves and all our allies by saying that "* * * we cannot find safety in economic isolation at a time when the world is shrinking. * * * America will move forward strongly along the clear road to greater strength at home, expanding trade with other free nations to assure greater security and opportunity in a

friendlier world for this and succeeding generations * * * we can best serve this great mission today by keeping our country firmly on its chosen course of fostering life-giving trade among the nations."

President Eisenhower speaks of free trade among free nations. That is the field which offers tremendous opportunities and possibilities for expansion of beneficial trade. To seek trade by building up the aggressive political and economic power of such an avowed enemy of freedom, as Communist China is an act bordering on insanity and potential national and international suicide. It makes it especially difficult for Americans who favor fair and reciprocal trade agreements between the United States and Japan to promote such a policy when our friends choose also to build the potential aggressive power of our enemy.

AN APPEAL TO OUR FRIENDS

Once again, the Committee of One Million, which represents the sentiments of tens of millions of American people against any strengthening of our common enemy, calls on all free nations to stand fast against tyranny by refusing to arm the tyrant with the products of free labor. We call on our friends, especially Japan, to think long and hard before ratifying any agreement with a regime which could only serve to weaken our common defense against Communist imperialism.

What Makes the Mare Go?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 31, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following column by Gerald W. Johnson, which appeared in the New Republic magazine of March 31, 1958.

Mr. Johnson properly takes this Republican administration to task for its failure to learn from past mistakes. It is indeed sad when the main program President Eisenhower comes forth with is exhortation to Madison Avenue for better advertising and advice to the consumer to look for bargains during a recession in which prices have gone up rather than declined.

The article follows:

WHAT MAKES THE MARE GO?

(By Gerald W. Johnson)

The most hopeless political comment ever uttered is, "They have learned nothing and forgotten nothing," a French pessimist's note on the restored Bourbons.

But when Herbert Hoover repeats word for word a speech he made in 1931; when the incumbent President repeats the former President's assurance that "prosperity is just around the corner"; and when the incoming president of the United States Chamber of Commerce echoes George F. Baer, the French comment becomes a most apt description of the restored Republicans in Washington.

Baer's unforgettable remark, made in the midst of a great coal strike in 1902, was, "The rights and interests of the laboring man will be protected and cared for—not by labor agitators, but by the Christian men to whom God in His infinite wisdom has given the control of the property interests of the country."

In 1958 William A. McDonnell, new head of the United States Chamber of Commerce, says that the recession will be overcome "primarily in the marketplace rather than on Capitol Hill." That is to say, we shall all be "protected and cared for" by "the Christian men" who have control of property. Mr. McDonnell has neither forgotten Baer, nor learned wherein Baer was a jackass; Mr. Hoover has not forgotten his speech of 1931, and neither he nor Mr. Eisenhower has learned wherein that speech was ridiculous.

By the executive branch at this moment the "trickle down" theory of prosperity is believed as firmly as it was believed by Coolidge, who led us into the panic of 1929, and by Benjamin Harrison, who led us into the panic of 1893, and by Grant, who led us into the panic of 1873. None questioned the wisdom and virtue of "the Christian men." And in each case "the Christian men" played hell with prosperity.

They have learned nothing and forgotten nothing. Eisenhower has the gall to declare that the present trouble centers in the durable-goods industry, so if we rescue heavy industry, all will be well. "What is good for General Motors is good for the United States." Assure Mr. Plutocrat continuance of his dividends and Mr. Plutocrat will "protect and care for Draggle-Tail Bill, for is not Mr. Plutocrat a Christian man to whom God in His wisdom has given property?

No attention is paid the opposing theory, that all too often Mr. Plutocrat is not a Christian man but a subspecies (Homo sus) of the Suidae, whose ruling passion is determination to get all four feet into the swill-trough. Yet Draggle-Tail Bill tends to entertain that theory when 5 million of his kind are jobless.

Nobody in the administration seems capable of mastering the simple idea that what has pinched off prosperity is the agonizing cost of living that has taken more and more of us out of the market for durable goods. Nobody in Washington seems able to imagine that bringing prices down would send buying up. The price structure is too holy to be touched.

For to lay unhallowed hands on prices might precipitate what is the ultimate horhor in the eyes of those who have learned nothing and forgotten nothing. This apocalyptic doom has been described, with immense financial success, in a piece of fiction turned out by some little sister of the rich under the title of "Atlas Shrugged." Atlas is another name for Baer's Christian men to whom God has given everything, including care of the rest of us. Atlas, in the story, got tired of our ingratitude and shrugged, whereupon we all pitched headlong into ruin.

Baer, starting life as a printer, could certainly read, and as a college man he could presumably read a book; therefore he might have winced at the literary style of this novel, but he would have approved its philosophy. Hoover and Eisenhower ought to approve, and their surrounding tycoons do approve as is shown by the way the book has sold.

Yet all this approval does not establish any relation between the fiction and the fact. The country is obviously on the descent to Avernus, but a great many Americans doubt that it is because Atlas shrugged. They incline to the opinion that Atlas has once more stumbled over his own feet and fallen flat on his silly face.

For when it comes to making things, whether swords and spears or plowshares and pruning-hooks, Atlas is good, Atlas indeed is matchless. But when it comes to lawgiving, which is to say, dealing with the minds and spirits of men, Atlas is out of his class and makes a godawful mess of it, because the acquisitive instinct, a powerful and valuable stimulant in the realm of economics, is rang poison in the realm of the arts, including the art of government.

Some of us superficial observers guessed this as early as 1953, when the first Eisenhower Cabinet turned out to be composed of nine millionaires and a plumber; for we knew, pace the proverb, that money alone does not make the mare go.

Democracy in Action

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. THORNBERRY. Mr. Speaker, recently the Giddings Public School at Giddings, Tex., located in the 10th Congressional District which I am privileged to represent, sponsored an essay contest among its students, the topic of which was "Democracy in Action."

Because of the nature of the subject, I feel that the Members of Congress will be interested in reading the essays of Miss Betty Ruth Schroeder and Miss Delores Wagner, who tied for the first place award.

Mr. Speaker, under leave to extend my remarks, I respectfully request that the following essays be inserted in the CONGRESSIONAL RECORD:

DEMOCRACY IN ACTION

(By Delores Wagner)

"We the people of the United States"—simple words we may hear every day, yet not really realize the meaning of. Behind those words of the preamble of the Constitution is the heroic story of fear, bravery, suffering, hardships, war, bloodshed, and death of our forefathers to "form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity."

Making ours a free and independent country is an amazing and picturesque battle, but the joys and freedoms we enjoy is another story in itself.

Simply expressed in the first amendment are our basic freedoms—as religion, speech, press, assembly, and petition. Our wide participation makes our Government one "of the people, by the people, and for the people." America is a many people—coming from different lands, worshiping in different ways, yet who have worked together to make the United States a world leader. This country has experienced two world wars and knows it needs to keep at a pitch of high running a thoroughly efficient armed force for the continued existence of a democracy.

People of foreign lands look to our country as the golden door—to the Statue of Liberty, which lifts her lamp to light the path which will lead to world peace around the globe.

The founding of the United States has been a bold and exciting experience of human intelligence, freedom, and brotherhood. So far, this policy, with the help and guidance of God, has been a success. Its future as a democracy depends on the intelligence, good will, and sense of responsibility of coming generations.

You—you are a symbol of democracy. What will you do?

If you are a good American, you will gladly say, "I am a symbol of democracy. I will do my part to keep this country strong and free, and help make it a country of which the

world will be proud. I will do my best, with the help of God, because I am an American."

DEMOCRACY IN ACTION

(By Betty Ruth Schroeder)

Democracy is the American way of life: This means a great deal to every man, woman, and child. American democracy is not a question of what race is superior, or what religion is best, or what class of people ought to run the country and enjoy its advantages. We say it's the individual that counts. Every citizen has as much to say about his welfare and the way he wants to see the country run as anybody else in it. Everybody has a right to believe anything he pleases. You may speak your mind freely on any subject under the sun, but you cannot force your ideas on another. You are free to do as you please just so long as you do not please to do something that interferes with the rights of somebody else. Every individual has a right to go where he pleases, to work at what every trade he pleases and to own whatever property he can purchase. The three words equality, liberty, and freedom belong to every individual. They mean more to any one than they can fully realize.

The hope of liberty more than anything else in the world, has given meaning to life. Liberty, we know, is gained only by struggle and it can be kept only by everlasting vigilance. This reminds us of the sacrifices of the veterans of our Nation. They paid a tremendous price to make us a free nation. Millions have given their lives for this great cause of freedom. Many others suffered physical or mental impairment. Moreover, there are tens of thousands of widows and orphans who mourn the death of husbands and fathers who died in battle or in the line of duty. All of these paid a price that we might enjoy liberty and our way of life.

There isn't any government in the world that protects the home as the American Government does. A home under the American plan is the most important institution in the Nation. There are many who wonder why the home is so important. Here are only a few reasons: It's the place where many powerful influences are at work to shape the attitude of the child toward life and his fellows. It's here that he first learns tolerance, charity, and love. He must learn to carry his share of the burdens and responsibilities of the family, and in return he shares in its happiness and achievements. He learns self-reliance and he learns loyalty and cooperation.

This week the students of all public schools in Texas should be especially reminded of their wonderful privileges of having a chance to attend schools. Most of the youths are able to finish high school and many are able to go to college. We are also given a right to choose our own careers. Most of the young people don't realize how lucky they are until they take a look at the Communist countries, where most of the boys and girls can only go as far as the fourth grade, because of the high tuitions. Few are able to go to high school, and very few can go to college. They cannot choose their career. The rights and privileges of free men under a constitution have a special place in the education of boys and girls in America. Free public education is a most important principle in a democracy. It is in our schools that we learn to accept the responsibilities of democratic living.

Here in America the people have more hours of leisure than the people in dictator countries. Hours we can use in the pursuit of happiness. We have time to visit our friends, to listen to the radio, watch television, go to the movies. We read books we want to read and not those we are told to read. Millions of us go to baseball, basketball, and football games. This is a great deal of freedom and a good bit of security. It is also a great deal of fun.

The only way America can reach its goal is for each individual, in his own life to hold fast to the great truths on which America was founded—freedom and justice for all. Surely, our democracy is a government of the people, by the people, and for the people.

This country got started right. It is going to stay right so long as the people who live in it remember the way it got started, what it has tried to do, and what it stands for.

Our democracy was founded on noble principles and, by and large, we the people have stuck to them. However, it is true that some dark pages have crept into our history. We do not pretend that our record is perfect.

Perhaps all of us should stop a moment to breathe a short prayer of thanks to our God for having been so gracious, and helping us make America the greatest place on earth in which to live.

No More Little Wars

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. DORN of South Carolina. Mr. Speaker, I commend to the attention of this House another splendid article by Maj. Alexander P. de Seversky.

The article follows:

NO MORE LITTLE WARS

(By Maj. Alexander P. de Seversky)

Once again I am greatly concerned lest the United States make a tragic mistake in its military policy. We are watching the most confusing debate in history on our national defense.

Yet this is clear: We will not achieve the military strength we need to survive until our defense planners grasp one central fact. It is that unless we take leave of our strategic senses America will never again have to fight a limited war. I make this prediction because the logic against small wars, though little understood, is overwhelming.

I know that this statement will be challenged repeatedly. Protests may be even stronger than those made against three previous forecasts I made in This Week. But all three predictions have proved accurate. Now let's turn to prediction No. 4: No More Little Wars.

It has been argued that the United States and the U. S. S. R. are locked in a nuclear stalemate. Now that we have proved our ability to launch satellites, this deadlock has been extended into outer space. It has been concluded, therefore, that nuclear war is too horrible to contemplate and that both sides will try to resolve the issue by fighting limited wars. The case for America fighting such wars has already been well stated in the press, in the Rockefeller report and before Congress. I disagree. It is my conviction that it would be fatal to base our overall strategy on this concept. To explain my reasoning, I must first define the terms "total war" and "limited war."

Total war is one fought primarily between the United States and the U. S. S. R. in which each side makes a supreme effort to destroy completely the other's capacity to fight and in which any and all nuclear weapons are utilized.

Limited war is one in which the forces of communism and the United States may be involved but it originates in territory other than Russia's, America's, or their allies'. Neither side has any intention of letting the conflict spread to its homeland and each side believes that its objective can be accomplished by a limited investment of manpower and weapons. As part of this concept, some people assume (falsely, I believe) that each side would confine itself to conventional preatomic weapons, as was the case in Korea, Indochina, and Suez.

I am convinced that:

1. We cannot win a limited war fought with traditional forces, regardless of whether conventional or nuclear weapons are used.

2. We can make limited war impossible if we make clear to the world that we possess a retaliatory force with the strategic scope and tactical flexibility to crush aggression and so preserve the global status quo.

3. We can generate a great economic abundance to share with the rest of the world by concentrating on a single deterrent force, and thereby we can prove that freedom is dynamic and beneficent.

The average American may ask why it is necessary for him to be concerned with military theories. My answer is this: As long as our strategists see the need to prepare for little wars they will urge expenditures for an endless variety of weapons and limited-war forces to wage all kinds of action, all over the world. Thus our money and industrial and scientific effort will be wasted on all sorts of hardware and secondary projects, from invasion barges to aircraft carriers. This, in turn, is bound to bring unbearable taxes, rationing, price controls, and other distasteful features of a regimented society.

If we continue to scatter our energies, we will be unable to maintain the twin essentials to our survival as a free Nation: (1) The overwhelming deterrent stength which alone can prevent all-out war, plus (2) a healthy, expanding civilian economy.

LITTLE WARS BRING BANKRUPTCY

The logic of geography and the recent development of fantastically efficient atomic weapons mean that continued participation in little wars would, in time, bring us close to bankruptcy. Let me elaborate:

A glance at the globe will show that America is thousands of miles away from most of the world's trouble spots while Russia and her satellites are within easy reach of most of them. Remember that in the Korean war it took nine American divisions transported by a colossal sea- and air-lift to hold the Chinese and North Koreans at bay. And troops from several other nations fought beside us under the U. N. flag. In any future little war, we would need not just 9 divisions, but 90 or more, plus vastly multiplied transport facilities, because we would meet superbly-equipped Soviet forces supported by aviation that is at least equal to ours.

For Russia is far stronger in conventional forces than we are. This massive totalitarian state is able to commit more of her national resources and vast manpower for limited warfare than the United States.

THE SOVIET MARGIN

The Soviet Union has an estimated 4½ million men under arms compared to our 2½ million, and her Navy has more than 450 modern submarines while we have less than 150. Her margin in tanks and jet air transport is just about as great.

Pentagon officials often point to this disparity as an argument for increasing our surface forces. I take just the opposite view: we are under no compulsion to have a large standing army just because Russia is doing so. The United States has no political satellites to police. We operate from a friendly base and have no fear of our neighboring states, Canada and Mexico.

Thus geography, population, and economics all argue against conventional little wars. There is also the strong probability that any future limited war would be fought with nuclear weapons. For atomic explosives are

now both versatile and deadly. Some can obliterate a wide area, while others cna be confined to a pinpoint target. Since nuclear weapons are standard equipment in both Russia's and America's military arsenals, there is strong likelihood that they would be used in any future struggle.

That is why the distinction made by limited-war adherents between nuclear forces and conventional forces is out of date. So, let's not kid ourselves by assuming that any future local outbreak would be waged only with World War II weapons.

Furthermore, if atomic bombs are employed, the small nations involved are bound to be wiped out. Once this tragic possibility is understood, any uncommitted country may well realize that becoming a pawn for Russia's aggressive designs means national suicide.

But, even if started, a little war can only remain confined with the tacit consent of Russia and the United States. This, of course, would produce a stalemate, as was the case in Korea. Only, unlike Korea, since both sides possess equally efficient military technology, the cost would be enormous to both sides in human life.

The very same technology which makes total war between equally matched protagonists suicidal makes a nuclear limited war idiotic.

The only other possibility is that such a deadlock would explode into all-out war—which brings us right back to my primary conclusion that this is the only kind of war for which the United States must prepare.

It is clear to me that Russia has already sensed this new power relationship. That is why she desisted from further inciting Turkey and Syria against each other. Since then, she has continued demobilizing her conventional forces although they are still far larger than those in the United States. She has diverted that manpower toward increasing her strength in total war and broadening her industrial capacity to forge the tools of economic war.

What should our solution be? There are several answers: To meet the immediate danger, we must drastically cut back our land and sea forces while increasing our main retaliatory strength—the Strategic Air Command. To achieve a unity of command and split-second reaction to attack, all present offensive forces on land and on sea which employ planes or missiles should be immediately put under the operational control of SAC.

If Russia should take leave of her senses, this is the only way that the United States can nip in the bud any aggression and retain its overall retaliatory power.

SHORT-RANGE MEASURE

But this can only be a short-range, stopgap measure. For the long run, much more fundamental changes in our national defense must be made. Plans to reorganize the three services are now being studied. But none of them go far enough.

The time is long-overdue for us to integrate our 3 services into 1 single military force, with 1 uniform, 1 promotion list and a single staff. The new establishment must be, for all practical purposes, a congenial Department of Air and Space in which we have a Bureau of Naval Forces, a Bureau of Ground Forces and bureaus of other auxiliary units.

The outcry that the creation of a single staff headed by a single chief smacks of totaliarianism is utterly unwarranted. Such an organization in a dictatorship is one thing; the same organization working under the President and the Secretary of Defense, and under the control of Congress, is quite another.

WE MUST PRESS FOR CHANGE

The changes I have outlined cannot come from the Pentagon. Even though some of our top military leaders individually see their logic and timeliness, they are too regimented to speak out on questions of overall policy without fear of censure. There is only one source from which the necessary changes can come and that is the American people bringing pressure on their representatives in Congress.

Of course, building up our air, space, and missile strength under an integrated single service is not all that we must do. For the Communists are equally adept at taking over uncommitted areas by covert aggression—through infiltration and subversion. To resist this process, we, in turn, must use all our skills and intelligence in propaganda, diplomacy, and in economic aid.

But it is primarily up to our allies to prevent the spread of Communist infiltration, as distinct from all-out war. NATO troops, perhaps under U. N. direction, can police trouble spots and stiffen the will of those nations threatened by Communists. Meanwhile we can concentrate on our deterrent strength. We can mobilize our entire military effort toward building up a vast arsenal of a great variety of nuclear weapons as well as planes and missiles to deliver them swiftly to any kind of target anywhere in the world.

WE CAN LEAD THE WORLD

Our strategists must give up the misguided attempt to prepare for both small and big wars by creating two separate and distinct types of forces. This plan would exhaust our manpower and eventually lead us down the road to bankruptcy.

But if we concentrate on the major job, then the $40 billion already proposed in the coming year for military expenditures is sufficient for us to lead the world in both the offensive and defensive weapons needed to keep communism in check.

I believe that we are still the greatest industrial nation on earth and with 650,000 scientists and engineers in our midst, we have a greater pool of creative brainpower than the Communists. But we need courage too.

Above all, we need the moral courage to abandon the traditions, no matter how noble, which stand in the way of progress and the security of our Nation. Then we can be invincibly strong for the forseeable future. We can further increase our already high standard of living and have plenty to share with the rest of the world. Short of war, the world-wide economic struggle is bound to end in the collapse of the inferior ideology.

And if, in desperation, the Russians resort to force, our superior strength and capacity in the only field that counts—nuclear offense and defense—will minimize the ravages of such a war.

I am confident that freedom will triumph over slavery. I have unbounded faith in the collective wisdom of the American people. Once they understand the futility of limited wars, they will select the right course: a strategy that will provide us with a realistic offense and defense that is in tune with the technology of our times.

I mean by this an overwhelming nuclear deterrent force that can check communism anywhere, in all its forms, by swift action through air and space directly from this continent. Also, an insuperable electronic nuclear defense that can decimate the enemy should he dare to attack us.

Anti-Inflation Drive

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 31, 1958

Mr. MINSHALL. Mr. Speaker, at the request of Mr. Frank J. Ryan, 25 Kemper Road, Shaker Heights, Ohio, I should like to bring to the attention of my colleagues a letter that he recently wrote to the President.

The letter follows:

ANTI-INFLATION DRIVE,
Cleveland, Ohio, March 26, 1958.

The PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: Regardless of politicians, pundits, and pollsters, more people in the United States and foreign countries have more faith in you than in any other national and world leader.

This majority includes AID—the new Anti-Inflation Drive—which appreciates and applauds your courage and capacity in resisting the forces of inflation.

In 1958 the American people are seeing a panic in Washington not unlike the panic in Washington in 1861. Today the immediate cause is the recession; 97 years ago it was the retreat from Bull Run. Now, as then, the Nation witnesses political opportunism and political cowardice rampant.

Just as the moral wrong of slavery produced the rebellion, the moral wrong of inflation (which the Federal Government embraced as a policy in 1933) has produced the recession.

As President Cleveland told Congress in 1895, "All history warns us against rash experiments which threaten violent changes in our monetary standard and the degradation of our currency. The past is full of lessons teaching not only the economic consequences but the national immorality that follow in the train of such experiments."

At this juncture, sir, it appears that you stand in a position as critical as that in which President Lincoln stood in 1861. More inflation, more debauchment of United States currency, will weaken our economy, vitiate the free world, and strengthen communism.

When selfish interests in business, labor, politics and Government put inflationary pressures on you, with the evil objective of exploiting the recession to aggrandize themselves, please do remember that tens of millions of American citizens who voted for you in 1952 and in 1956, now stand with you, for you, and sure of you.

As Lincoln won, may you win.

Yours respectfully,

FRANK J. RYAN.

The Retirement of Lt. Gen. James Gavin

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of March 31, 1958, commenting on the retirement on Monday of this week of Lt. Gen. James Gavin, famous commander of the 82d Airborne Division during World War II, and more recently Army Chief of Research and Development:

A SOLDIER RETIRES

Down at Fort Bragg, N. C. today, the 82d Airborne Division will pass in review before its wartime chief. This will be the last review that "Slim Jim" Gavin, lieutenant general, United States Army, will take in uniform.

General Gavin, Army Chief of Research and Development for the past 2½ years, idea man extraordinary, youthful World War II combat commander and paratrooper and leader of men, is retiring from the Army he loves. The man the airborne troopers are honoring today has given great energy, devotion and moral courage to the Army of the Nation. A soldier most of his life, it will seem strange to the Army and the Nation to think of him out of uniform. But he is still young and he has much to contribute in his new environment. The good wishes of the Nation will go with him.

Gallant Story of U. S. S. "Mississippi" Told at Last

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 10, 1958

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following Associated Press newsfeature, as published in a number of newspapers over the Nation:

GALLANT STORY OF U. S. S. "MISSISSIPPI" TOLD AT LAST

(EDITOR'S NOTE.—Many heroic exploits of World War II were lost in the maneuverings of huge armies, in the security-secrecy of battle or in the mere haste of the time. Here, in a salute to a famous and gallant lady, is the dramatic account of one such episode, which had its beginning in the invasion of Okinawa by American troops on April 1, 1945.)

(By Roger Greene)

How an American battleship broke the backbone of Japanese defense in the bitter struggle for Okinawa was a story lost in the mists of World War II.

Now the tale emerges as an epitaph to a gallant lady of the fleet.

The battleship was the *Mississippi*, oldest of the great battle queens in Navy service as late as mid-1956. She was just past her 39th birthday when wrecking crews tore her apart for scrap.

Her adversary, in what may have been one of the war's strangest engagements, was not a Japanese battleship but an ancient fortress called Shuri Castle.

With its massive stone walls 20 feet thick and 40 feet high, the castle was described by wartime Secretary of the Navy James V. Forrestal as "the most strongly fortified position encountered in the Pacific war."

The *Mississippi* was the second United States warship of that name to visit Shuri Castle.

In 1853 Commodore Matthew C. Perry sailed his flagship, the original *Mississippi*, on his famed mission to open Japan's long-closed trade doors to the world. On the way, he stopped at Shuri Castle to pay his respects to the royalty of the Ryukyu Islands, of which Okinawa is one.

In World War II the Japanese made the castle the cornerstone of their defense of Okinawa which United States troops invaded on April 1, 1945.

Assaulting American marines and soldiers of the 77th United States Infantry Division were stymied by the suicidal Japanese defenders.

By May 1945 the tactical situation was this:

Combined Army-Marine forces had driven the Japanese into the southern end of Okinawa on a line running from Naha on the west coast through Shuri Castle to Yonabaru Airport on the eastern shore.

The gun-bristling castle, built 401 years before, lay about 3,000 yards east of Naha, the capital city.

It would have taken an enormous toll to storm or flank the castle. Field artillery and aerial assault merely nicked the mammoth walls.

On the night of May 24, 1945, while Japanese kamakaze planes struck again and again at American warships offshore, an officer from the 77th Division set out in a small boat for the *Mississippi*. He carried an urgent plan.

"It's a hell of an order," he told Capt. H. J. Redfield, Jr., skipper of the *Ole Miss*, "but it's the only way we can get at the Japs."

The order called for the *Mississippi to* breach the high wall in two places and destroy the rock-ribbed castle itself.

Other warships had found that even direct hits with armor-piercing shells bounced off the walls like flies off a hot stove.

Captain Redfield summoned his gunnery officer, Comdr. Richard Lane.

"Now look here, Guns," he said, "we've got plenty of bullets. Find the range and pour it on thick!"

All through the night, the *Mississippi* navigator, Comdr. Richard E. Bly, studied charts and maps to plot a passage through treacherous shoals for a closer firing position. At 5:30 a. m., with the sun rising in a blurred red ball through the overcast, Bly was ready.

The harsh silhouette of Shuri Castle, shrouded in gray gloom on a distant ridge, was invisible from the ship's bridge. But bombardment expert, Lt. Comdr. John O'Leary, mathematically pinpointed the target range.

Precisely at 7:18 a. m. the right gun of No. 1 turret spewed a sheet of crimson flame into the mist—and the *Mississippi's* calling card was en route to Shuri Castle.

Through his binoculars Redfield tried to catch the wink of fire that would mark the explosion. He could see nothing.

Then, over the radio from an Army fire-control party ashore, came an exultant yell: "It was right in there—no change, no change."

Hour after hour the bombardment continued in six-gun doses. By nightfall the Army spotter reported that 90 percent of the *Mississippi's* shots had scored solid hits—but Shuri Castle looked as impregnable as ever.

Visibility was still bad. Relentlessly, the *Mississippi's* big guns hammered away at the castle all the next day.

On the third day the weather broke fair and clear.

Skipper Redfield called his navigator to the bridge at dawn.

"We're going in there close today, Bly, where we can get at them."

Bly reminded the captain that a few days earlier the destroyer *Longshaw* had run aground on shoals in the same waters. Japanese shore batteries had ripped it to bits.

"Get us in closer, Bly," the captain said.

Now a retired rear admiral, Redfield doesn't remember how close the *Mississippi* got.

"I know we could see the beach. I'm afraid I was too busy to notice the distance," he said in an interview at his home in Charlottesville, Va.

A lean, trim figure in tweeds, Redfield is today an associate professor of engineering at the University of Virginia. He retired from the Navy in 1947 after 31 years of service.

"It's a long time ago to recall details of a battle," he said, "but I'll never forget the Japanese shore batteries.

"They put up a terrific barrage as we approached. We turned sharply, almost went aground, then backed away. With shells dropped all around us, we silenced the batteries one by one."

At the wheel, the chief quartermaster moved the 40,000-ton battlewagon gingerly toward the beach, as her 14-inch guns threw salvo after salvo at smoke-enwreathed Shuri Castle.

The answering attack was so hot that the *Mississippi* was forced to hurry her blitz so ground troops could get in and finish the job.

As the day waned, Gen. Simon Bolivar Buckner, Jr., commanding Army forces on Okinawa, went up to the frontlines and decided the attack was a success.

Said Buckner who was killed later by a Japanese artillery shell: "Now we can move."

Just before nightfall a pilot sent to inspect the castle radioed back: "What castle"?

American leathernecks began cautiously picking their way through the rubble.

Inside, dazed and trembling from the 3-day ordeal, fewer than 50 Japanese survivors waited to surrender. Enemy dead, in bunches of 50 to 500, were scattered all over the castle's underground chambers and tunnels.

Maj. Gen. Pedro A. de Valle, commanding the First United States Marines, said he had feared the final assault would cost battalion-size casualties. Not an American life was lost.

The *Ole Miss* went on to other, less dramatic tasks before Okinawa was reported secured by American forces on June 21.

She was cited for heroism in action—and the citation covered her entire war record. But to her 2,084 officers and men perhaps their proudest memory was the conquest of the fortress of Shuri—where it took a queen to beat a castle in a strange and deadly game of wartime chess.

Do Not Increase Federal Share of Matched Grants for Highways From 50–50 to 70–30

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks, I include a part of my current newsletter, as follows:

Last week the Senate made a change in the system of Federal grants-in-aid for highway construction which is disadvantageous to our area. Federal grants-in-aid for the regular road systems heretofore had to be evenly matched by the States. To receive a million dollars in Federal funds, a State had to match that with a million dollars of State funds.

The new Senate provision lowered the required State matching to 30 percent in some cases. This applied to a $400 million appropriation for primary, secondary, and urban roads.

Federal grants-in-aid for highway construction were originally intended to help the States build roads of national importance, and appropriations were for post offices and post roads. Federal highway aid is divided up among the States under a formula which takes into consideration the area, road mileage, and population of each State. This system of distribution tends to favor the more thinly populated States at the expense of the more thickly settled and more heavily taxed States.

This inequality is, of course, greatly increased when the matching grant basis is changed from 50 percent Federal and 50 per-

cent State to 70 percent Federal and 30 percent State.

When Federal aid was confined to post roads some inequality in distribution was tolerable. But the tendency has been constantly to extend the program both in the amounts of money appropriated and in the types of roads covered.

In a speech to the House on the day following Senate passage of the bill making the above change, I vigorously opposed it, saying:

"With unlimited transferability, this new $400 million can be applied by some States largely to secondary roads, of which farm-to-market roads are a part. While sectional interest should not be overemphasized, the taxpayers of the more thickly populated States should not be asked to contribute indirectly on a basis of 70 percent Federal grants for this type of aid for highways of predominantly local interest."

Stalin Ghost Haunts Soviet

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an informative article, well thought out, and effectively analyzed, written by George Minot, and appearing in the Boston Sunday Herald of March 30, 1958:

STALIN GHOST HAUNTS SOVIET

(By George Minot)

According to the records, Joseph Stalin died 5 years ago this month. Yet such is the state of affairs in the land of the big lie that nobody knows for sure even now if he died when the Russians said he did. Nor do we know whether he died of natural causes, or whether he was done in as so many of his betters were.

The record is clear that 5 years ago Nikita S. Khrushchev officiated at his funeral and then 3 years later branded him from hell and beyond as a murderer, a knave and a betrayer of his people. To carry this fantastic set of facts just 1 degree further, you must not forget that 3 of the men who delivered eulogies of Stalin were Beria, Molotov and Malenkov. None lasted long after that.

THEY NOW DWELL ON HIS MERITS

Today, the Russians don't know what to make of Stalin's ghost. The kept press, the vapid voices of the speechmakers that are controlled by the high tyrants—all waver between condemnation of him and his acts and vindication of him and his memory. A year ago Pravda that is the nearest thing to an official government organ marked the 4th anniversary of his death by proclaiming him an outstanding revolutionary, a devoted Marxist-Leninist theoretician and a great organizer.

Those, of course, are weasel words like most of those that come out of Moscow, but they show that even the bosses don't know how to handle his shade. Only a couple of weeks ago a new picture of Stalin was presented in the latest volume of the Great Soviet Encyclopedia. His biography was cut from 46 to 6 pages in the new one, but he was depicted as a man of greatness, despite faults of character and mistaken judgment. That's letting him down easier than the encyclopedia of any other country would.

Meanwhile, in Russia itself the people seem disposed to let Stalin's memory alone. You might think that after their big boss Khrushchev had accused him of about every piece of tyranny known to humans, the slaughter of thousands on end and brands of cruelty unknown to civilized man that the Russian people might have turned their backs on his memory and relegated his ghost to the ashcan.

Instead, Stalin's embalmed corpse still lies in state with Lenin's. There has been no rechristening of the Stalingrads, Stalinabads, or Stalinos, and it is fashionable now in that dark land to dwell on the monster's merits rather than his vices.

NOTHING BUT BROKEN PROMISES

Perhaps that is not strange in a land filled with so many contradictions. The people have been abused and lied to for so many years, that you cannot wonder they can take little interest in where or when or how Stalin died or the extent of his misdeeds. They have seen so many monsters running the dank and bloody country that one must seem the same as another.

You only have to remember back to the 1917 military coup of Lenin and Trotsky. They promised to make Russia the freest and happiest country on earth. They promised the peasants the farmlands. They promised the middle class it could own its own stores, that the undercover police, the informers, the bureaucrats, and the soldiers would stop their pillage. They promised free elections.

It has been the same ever since then. As one set of tyrants dies or is liquidated another takes its place. Only the mass deportations, forced labor concentration camps, and the eradication of whole villages go on year after year. Beria outlived Stalin less than a year and then was murdered as a spy and traitor. Molotov, after living for years in fear Stalin would have him murdered, now is in exile, or at least somewhere he doesn't want to be.

SAME OLD POLICIES IN EFFECT

Perhaps the most diabolical downgrading of all was that of Marshal Zhukov, disgraced and demoted last year. He was tossed overboard because somebody was jealous or afraid of him, and the workers who have seen so much bloodshed in the last 40 years had nothing to say as to whether their great war hero lived or died. There is no better sign that the Soviet people live in a nightmare of fear than the fate of some of their high personages—Malenkov, Zhukov, Molotov, Stalin, Beria, and the rest.

The only thing clear is that the successors of these men obviously intend to carry out the basic policies of earlier tyrants. Thus you hear the same boasts, the same threats, the same decisions to put weapons and bombs ahead of the needs of the people. The present regime is the same power-hungry set of madmen that have been there for years.

At any minute you may again witness the obscene spectacle of another high and mighty one set upon by his friends and exposed, betrayed and destroyed. The world will stand ashamed and aghast, but in Russia it only will be another chapter in the story that has been repeated hundreds of times since the people thought they were getting freedom.

POLICY AS DECEITFUL AS EVER

The story is the same in Russia's relations with her friends and enemies outside her borders. Thus, although Stalin has been dead for 5 years, Albania, Bulgaria, Rumania, the Czechs and East Germans still are under the heel of men who were brought up and trained in tyranny. Their course in these countries is just the same as it was when their master was alive. Land still is being seized without payment, the press curbed and students who dare to open their mouths dragged off and shot without trials.

Some persons who profess to know say that Khrushchev is trying to ease some of the rugged Stalinist policies at home. Others will tell you exactly the opposite. Hungary proved that mass murder still is a commonplace weapon of the Kremlin. The same thing would be the case should a group of workers in Stalingrad revolt against their masters.

If there has been an improvement in Russia in the last 5 years it has not come to light. Only the dreamers and fellow travelers expect you to believe that the Russian peasants working for less than 2 dollars of our money a day and sometimes walking 10 miles to work are throwing their caps into the air in excitement and pride over scientific achievements of their lords.

Outside, the world can see no change in Russia's policy on the last 5 years. It is just as rigid, gloating, boastful and deceitful as ever, and designed to keep everybody in a ferment and to set no price on peace.

Plight of Small Firms Getting Steadily Worse

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 2, 1958

Mr. SPARKMAN. Mr. President, recently a column by Sylvia Porter carried the heading "Plight of Small Firms Getting Steadily Worse." The article by this fine economist is thought provoking.

I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLIGHT OF SMALL FIRMS GETTING STEADILY WORSE

(By Sylvia Porter)

NEW YORK.—"Within 18 years, all manufacturing and most of the distribution and service business of the Nation will be controlled by corporations having more than $100 million of assets."

So predicted the House Small Business Committee back in January 1957. It qualified its forecast with only one if—"if small business failures and big business expansions continue at the rate of the past 5 years."

With a shiver, I report that the committee's timing for the triumph of industrial giantism in our land is beginning to appear conservative.

For the rate of small business failures is not just continuing. The rate is intensifying by the week.

So far in 1958, businesses are failing at the appalling pace of more than 306 a week, close to 16,000 a year. Businesses are dying at a rate topping anything seen since the thirties and week after week, Dun & Bradstreet's figures emphasize that most failures involve small firms.

At the same time, the business birth rate is slowing down.

In January new business incorporations were 2.3 percent below January a year ago. In 1957 business births were below both 1956 and 1955. In manufacturing and construction particularly, the business birth rate is off sharply.

Meanwhile, the merger trend is as strong as ever.

Voluntarily or involuntarily, dozens of medium-big firms merge and consolidate every day. In addition, the number of companies which do not fail but which disappear nevertheless through merger with stronger firms or through just simple dissolution runs from 350,000 to 400,000 a year now, authoritative sources estimate.

The squeeze of rising costs of materials and manpower is a major force. While this cost squeeze may pinch a big corporation, it often strangles a smaller one.

The difficulty of getting loans and capital is an immense factor. While stiff credit requirements may annoy a large corporation, they frequently destroy a smaller one.

Taxes are a brutal killer. In prosperous periods the tax burden doesn't permit a smaller firm to accumulate a nestegg to carry it through rougher times.

And this new era of fierce competition is proving the final blow to painful numbers of little businesses.

There's nothing new about the plight of small business in our country. The only thing new is that the plight is getting steadily worse.

There still is no convincing evidence of a major effort to solve the problems of financing and taxation of small business. And until this effort is made, our industrial giants will dominate our land more and more. And our economic system will continue to die—fast.

Memo by Hon. Clyde Doyle, of California, on House Un-American Activities Subcommittee Public Hearings Recently Held at Boston, Mass.

EXTENSION OF REMARKS
OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I insert for the information of all the Members of Congress and any other readers, the following texts growing out of the week's work in Boston, Mass., recently of a subcommittee of the House Un-American Activities Committee. We were there in public hearings from Monday to Friday, inclusive.

The letter hereinafter set forth is typical of several I have received and I know, in addition to those which have come to me, our committee office has likewise received quite a few:

CANTON, MASS.

Hon. CLYDE DOYLE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: Through the splendid public service of radio station WBZ, Boston, which rebroadcast your entire House Un-American Activities hearings here last week, I was able to follow the splendid work your committee is doing. I had some insight into the problem as a member of Army intelligence during World War II, and as a county officer of the American Legion, am proud to know we are highly unpopular with the Communists, also that the Legion is strongly supporting your efforts.

I wrote my fellow Legionnaire DICK WIGGLESWORTH today, asking him to support H. R. 9937 as you requested. Please express my appreciation too, of the dignified way the hearings were conducted, and the patient way your members handled those frustrating witnesses.

Sincerely,

THOMAS E. ABELY.

The editorial by the Boston Traveler for Friday, March 21, 1958, herein set forth is typical of editorials made concerning our subcommittee's work:

STRENGTH AT THE CORE

Anybody who's inclined to underrate the strength of the Communist Party in America had better change his opinion.

Testimony given in Boston this week before the House Committee on Un-American Activities has included mighty good evidence that the Reds are far from finished.

Stronger than ever before, is the way the vicious movement is described by Armando Penha, who spent 8 years in the Commie ranks as an FBI counterspy.

This is what FBI Director J. Edgar Hoover has been saying all along. And certainly nobody, including most of the Reds themselves, knows more about what's going on in the party huddles than he does.

The fact that the Communists have pared their ranks does not mean that they've grown weaker. On the contrary, by dropping inept members they have trimmed down to a hard core of dedicated workers. They can work more effectively now than when they were handicapped by weaklings.

Hoover's recent book, Masters of Deceit, points a warning of this situation. And men like Penha, who know what they're talking about, can back him up.

Meanwhile, though, it's gratifying to know that we have a hard core of Americans working undercover in the Commie ranks. The Reds know these agents are around, but they don't know who they are. So much the better for us, to have the Communists biting their fingernails, wondering which men to trust.

Let's keep them bothered and bewildered.

Also, the editorial in the Boston Pilot for March 22, 1958, is also typical and significant. By the way, the Pilot was established by the second bishop of Boston in 1829.

SPOTLIGHT ON THE LEFT

The House Committee on Un-American Activities is now holding hearings in Boston and something like 40 witnesses will be heard before the local appearance of the committee is ended. Along with the old familiar names that have been mentioned for years we have added now a new batch of characters who, in the considered view of the committee, have some connection, present or past, with the Communist operation in America.

Many sophisticated Americans are likely to take the work of the committee lightly; they cannot bring themselves to believe that the Communist conspiracy in the United States is a serious one. It is acknowledged (it pretty much has to be) that we did have a time when a rather impressive section of our intellectuals in America were flirting with Marxism and its implications; further, it must be admitted that some became persuaded Communists, many became sympathizers, and positions of importance in Government, science, education, and communications were infiltrated for espionage and other reasons. Even when all this is allowed, however, many have the feeling that that is all in the past now and the few hard-shell Communists remaining are not significant in the life and thought of our country.

This has a reasonable flavor about it and one of its appeals is that it takes a sort of comfortable, unworried view of our national security. Unfortunately it is not nearly as rational as it appears and if used as a basis for action it can be so unrealistic as to be dangerous. It is true, we may be sure, that there are many less people of Marxist sympathy in Government than formerly, and it is also true that there are many less Communists in the country than in earlier times. People have also learned for the most part not to confuse genuine liberals, even if working for unpopular causes, with Reds or their sympathizers. All of this is gain. It does not however remove the core menace of communism in America.

If the Communist apparatus is pruned at the present time the parent tree is not for that reason less vigorous; the precise opposite may be true. When the peripheral appurtenances are removed the strength may be better conserved in the hard core that remains. This is not to say that its present danger is greater than formerly, it probably is less; it does suggest that its potential danger is still immense and made the more so because people consider it insignificant.

This is the message of the House Committee on Un-American Activities and this explains why it works to expose locally those still involved in the Communist conspiracy and those giving it even clandestine support. Care should be taken always, of course, to protect the reputations of the innocent and to show consideration to those who, once involved, have truly abandoned past connections and sympathies. The committee in its local appearance has shown its concern in this regard and has conducted itself with dignity.

An advertisement intended to welcome the committee to Boston carried, among several others, a text from the executive secretary of the American Civil Liberties Union stating that "The House Committee on Un-American activities ought never to have come into existence, and ought to be abolished." This is almost the only thing that cannot be properly offered against the committee. People can complain, if they choose, about its policy, its practice, its personnel or whatever; they cannot complain about its existence. Congress requires and must have information and assistance in planning its laws on national security and it must provide this through a committee working in this vital area. When it does its congressional duty in justice and dignity it deserves and should receive the respect of all our citizens.

And, Mr. Speaker, since my return from the Boston subcommittee assignment I have been asked by several Members of the House as to what sort of a closing statement I made on behalf of the committee at the close of the hearings. Hence, on account of such expressed interest I am including herewith my remarks publicly made in the court room for the information of all who are especially interested in the work of our House Un-American Activities Committee in connection with our public hearings:

STATEMENT READ PUBLICLY BY ACTING SUBCOMMITTEE CHAIRMAN CLYDE DOYLE, CALIFORNIA, AT CLOSE OF HOUSE UN-AMERICAN ACTIVITIES SUBCOMMITTEE PUBLIC HEARINGS AT BOSTON, MASS., ON MARCH 21, 1958

Mr. DOYLE. Now, I have made just a few notes here which I will refer to in my brief statement on behalf of the committee.

First, I wish to call your attention to the fact which has not yet been emphasized in these hearings, that this subcommittee here in Boston these four days is a subcommittee of a committee of nine. This House Un-American Activities Committee is not a special committee. It is a standing committee of the House of Representatives. It has been a standing regularly qualified committee approved unanimously by the House of Representatives on many occasions ever

since 1946. I will not take time to read the charter. It is here. It was adopted in 1946 and under that charter we are here, duly qualified and following our legal requirements.

I wish further to say this: that because of the thoroughness of the staff investigations and cooperation with the FBI agents, this committee knew in advance that on account of lack of time here in Boston these hearings would be necessarily brief. We could not possibly cover the extent of the Communist operations in this New England area. But we believe we had knowledge, and now we have more knowledge from all reliable sources, of a considerable extensive Communist Party subversive activities in the New England area, amounting to several hundred identified members in the Communist Party in the New England area. If we had time, therefore, we could call up to around 300 identified Communists in this area, your neighbors. To do so would have taken weeks of hearings, instead of just a few days. Furthermore it would require assignment of our capable staff to this area, whereas they have obligations in other areas also.

But in the few days that we have been here, we believe we have had a fair sampling of several phases of Communist subversive operations, especially in this area.

What then has been accomplished, in our judgment, as a result of these hearings? These are some of the objectives of accomplishment.

In the first place, we have seen repetition here in the Boston, New England area, of a pattern of Communist activities and techniques which verifies and confirms the very same pattern of secret and habitually deceitful and subversive activities and tactics throughout our Nation.

We also have brought forth reliable evidence proving that there is in this highly sensitive and important industrial area a Communist Party activity which should be paid more attention by the public officials, both municipal and statewide, in cooperation with the Federal officials. I respectfully make that suggestion.

More specifically, there has been developed here new and convincing evidence regarding the existing loopholes in the Foreign Agents Registration Act, and other existing legislation, designed to identify and stem the flood of Communist propaganda that is daily reaching the source of our Nation from Soviet Russia, and from other people, specifically doing it in cooperation with the Soviet Communist control of the Soviet Republic in this cold war.

And we wish to emphasize that this Communist subversive activity right here in the New England area and throughout our Nation is part of the cold war. It is not chickenfeed; it is not just merely propaganda. It is part of the cold war. There are no bullets being fired, but it is war nevertheless.

There has also been revealed further reliable factual Communist underground strategy and tactics penetrating entirely legitimate and loyal organizations, church groups, labor groups, youth groups, schools, lodges, and public offices.

It has also been revealed further definite information respecting efforts of the Communist Party and conspiracy to penetrate certain vital industries by way of colonizing by Communists, many of whom hold high educational degrees in education, bachelors of science and engineers; and yet fulfilling their Communist Party dedication, they take menial jobs, at far less salaries in sensitive industry in order to carry out Communist Party directives, than they could earn at the profession for which they are especially equipped and trained.

We will take back to Washington for consideration by the Congress all the factual material here gained in connection with our study and consideration for the enactment of legislation.

There is, however, a collateral result, which is very valuable and continuing, as a result of these hearings, which I believe will have a salutary and important effect to this entire geographical area. This should be a daily reminder for you folks who have the pleasure, privilege and inspiration of living in this area of the continuous Communist Party subversive threat, both day and night, not merely as a philosophical concept, but as a menacing dynamic force of intrigue and subversion, operating as part of the Soviet cold war against the American way of life, which was, in fact, born right here within a mile of this building, if you will recall.

We wish to thank the two former FBI agents.

I wish to say just a word. As I have sat here these 4 days, now and then I have noticed when the FBI was mentioned a sort of a sneer, and I mean a sneer, on the face of, thank God, very few in the courtroom. But I have noticed it. You have noticed it. And, of course, the citizen that sneers at the FBI sneers at the constitutional government in the United States.

We wish to thank, therefore, these two American citizens who gave up commensurate income and went to work for the FBI at a mere pittance in order to serve their country. We thank them for their helpfulness to us.

Now, before concluding, I would like to express the appreciation of our committee to our staff, our professional staff. It is no picnic that they have to come into an area and work day and night to try to get factual, reliable information. It is a hard, unpleasant task, and the committee appreciates the thoroughness with which our staff in this area have done their job. They always do it that way.

Then, too, we wish to thank the Federal judges, Francis Ford, the distinguished Federal judge who occupies this courtroom and courteously turned it over to us. We thank United States Marshal Ralph Gray, and all his most capable and thoughtful and helpful deputies. We thank, of course, Capt. Daniel Murphy, the department of public safety, of this great Commonwealth and his very able staff, for helping with our staff and with these hearings.

And then, too, I want to thank the listeners in the courtroom again who have been most courteous these 4 days, and we appreciate it very much.

Finally, I must not overlook, on behalf of the committee, the caretakers of this building, the janitors, the elevator operators, and all these men and women who have gone out of their way to, even after hours and other times, to make it convenient for us and our staff. We notice those things as American Congressmen. We notice those little things. They are very important.

And finally, I would like to express our unanimous and very cordial and sincere thanks to all members of the press, of the radio, and television profession and fraternity. We noticed the thoroughness and the accuracy and the very constructive way in which you have reported and shown these hearings. As a matter of fact, we might put you all on our staff as a part of our educational department. We thank you very much for your consideration to us.

We want to thank, too, the large number of people who have written to us or who have sent us orally their expressions of appreciation for what the United States Congress is trying to do in this difficult field.

Have you anything else, Mr. ARENS?

Mr. ARENS. No; thank you, Mr. Chairman.

Mr. DOYLE. On behalf of the Congress, then, I thank you, and the United States Congress wishes you all well.

(Whereupon, at 11:58 a. m., Friday, March 21, 1958, the subcommittee adjourned, subject to the call of the Chair.)

Summit Agenda Points—Russian Imperialism and the Captive Nations

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. CRETELLA. Mr. Speaker, the position taken by President Eisenhower and Secretary of State Dulles with regard to another summit meeting is strongly supported by many national organizations in this country. One such organization is the Ukrainian Congress Committee of America which is led by its national chairman, Dr. Lev E. Dobriansky, a professor at Georgetown University. It has been my pleasure to observe the constructive work of the UCCA branches in New Haven and the State of Connecticut.

In the view of this active organization, a summit meeting without a discussion of Russian Communist imperialist conquests and the eventual liberation of the captive nations would be tragic for the long-run interests of this Nation. The reasons and arguments sustaining this view have been expressed in a background to the present issue. This background of memorandums, which deserve a place in the public record, reveals a clear consistency of thought and a firm espousal of principles that no sober consideration of a summit agenda can possibly overlook.

The memorandums submitted by the Ukrainian Congress Committee of America to President Eisenhower on the occasions of the third Anglo-American Conference and the NATO Conference clearly show why this organization supports the present administration stand on the summit issue. In one of them Dr. Dobriansky partly rests its case on the authority of both the President and Secretary Dulles, whose declarations are more applicable now than ever before. As the President stated it:

> There can be no true peace which involves acceptance of a status quo in which we find injustice to many nations, repressions of human beings on a gigantic scale. The domination of captive countries cannot longer be justified.

Secretary Dulles has declared:

> Let us also make apparent to the Soviet rulers our real purpose. We condemn and oppose their imperialism. We seek the liberation of the captive nations.

Mr. Speaker, I commend these memorandums to the careful attention of our Members during this period of argument concerning another summit meeting. Under leave, I request that they be printed in the RECORD:

OCTOBER 22, 1957.

The Honorable DWIGHT D. EISENHOWER,
President of the United States,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: Your meeting with Prime Minister Harold Macmillan will represent the third Anglo-American conference held within the span of 3½ years. On the two previous occasions, in 1954 and 1956, this committee of active American citizens felt it morally necessary to express its views on some of the foremost issues confronting our Nation.

In our letter-memoranda then (CONGRESSIONAL RECORD, July 24, 1954, and February 16, 1956) we explained in detail the reasons justifying our certitude that the most basic weakness and vulnerability of Russian Communist imperialism exist in the captivity of non-Russian nations in the Soviet Union. On the basis of this certitude, we specified what could be done to deter permanently the aggressive moves to Moscow. For, truly, a forced entity with unsteady foundations of loyalty could hardly risk the demands of global warfare. Then, as now, our views were tempered by the spirit of your own sound reflection that "There can be no true peace which involves acceptance of a status quo in which we find injustice to many nations, repressions of human beings on a gigantic scale. * * * The domination of captive countries cannot longer be justified" (August 1955).

On the occasion of this third conference and with the same certitude, we wish to advance certain concise points of consideration which we strongly feel are deserving of the studied endeavors of this vital conference. These points rest on the basic lines of analysis developed in the two preceding memoranda. In our considered judgment, although there have been significant military and technological changes in the past 3 years as concerns the two major power blocs, the fundamental issues and the political patterns have remained substantially the same. Various means have changed in quality and quantity, but the ends and objectives are very mush the same. Thus, we set forth the following points in tune with Secretary of State Dulles' fairly recent proposals: "Let us also make apparent to the Soviet rulers our real purpose. We condemn and oppose their imperialism. We seek the liberation of the captive nations" (April 22, 1957).

1. In the light of U. S. S. R.'s scientific, technologic, and military advances, we support the establishment of a free Western scientific pool of knowledge and ability not only to maintain superiority in fields of the highest priority but also to deprive Moscow of heavily propaganda advantages accruing from such advances;

2. Because of our fortunate present recognition that scientific, technologic, and military advances have considerable political and psychological impact upon all nations, we urge also a closer coordination between our psychological and political efforts and those of our Western allies, affixed to a single moral and political standard as provided by a universalized Declaration of Independence which our own Secretary of State advocated as early as 1952. We disagree most strenuously with some who hold that a persistent reaffirmation of principles—notably that of national self-determination, which, as a single standard, is applicable to all nations in Asia and Africa and, particularly, to the captive non-Russian nations both within and outside the Soviet Union—is mere moralizing and should be avoided at this conference;

3. In the rational belief that despite any scientific or technological advancement peoples are, and always will be, the most important factor of consideration for victory in either the cold war or a hot one, this committee advocates that such political and psychological coordination be aimed programmatically, and, in the true spirit of peaceful liberation, at an unceasing creation of pressures and challenges for freedom. With the prime case of Nazi Germany in mind, we cannot depend on the aimless forces of evolution by technical skill and growth. Nowhere can such pressures be more effectively exerted than among the non-Russian nations in the U. S. S. R. Overt support of their aspirations for national independence would counteract the policy initiated by Moscow in 1954 to gain their loyalties and energies in a deceptively designed partnership for world imperialist enterprise. Such support, expressed in manifold ways, would clearly weaken the very foundations of the Soviet Union and make it incapable of encroaching upon the free world;

4. To undermine our support of the captive nations, Communist delegates in the U. N. are presently preparing to push through the U. N. the Draft Code of Offences Against the Peace and Security of Mankind. This code is designed to establish immunity for communism as regards political crimes and to neutralize our propaganda of truth against communism. We earnestly call upon both the United States and Great Britain to take immediate steps to thwart this move in the U. N.;

5. It is also our strong conviction that we have neglected to capitalize imaginatively on the Ukrainian and Byelorussian representation in the U. N. In the last decade, Great Britain saw a glimmer of possibility in this respect. Circumstances surrounding this matter have changed since then and warrant serious study of present possibilities; and

6. With an eye to the widespread cultivation of deep spiritual and psychological alliance of the non-Russian nations in the U. S. S. R. with the West, we urge also on the part of western governments the formation of a cultural exchange program directed especially at the peoples of these nations and to be effected formally through their present governments.

It cannot be too strongly emphasized that an unbalanced absorption with scientific and technological developments can cause us to overlook the prime factor in the potential for victory, namely peoples and nations. As shown by his insistence on coexistence during the Reston interview, Mr. Khruschchev would have us overlook the captive nations so that the Communist empire may enjoy a period of firm reconsolidation before further major moves of expansion can be made.

With full confidence in your leadership and trusting in a most productive outcome of this important conference, I am,

Sincerely yours,

LEV E. DOBRIANSKY,
Georgetown University.

DECEMBER 12, 1957.

The Honorable DWIGHT D. EISENHOWER,
United States Delegation to NATO Conference, the Embassy of the United States of America, Paris, France.

DEAR MR. PRESIDENT: This national committee and its branches and membership throughout the country are greatly heartened by your rapid recovery and by the consequent fact that you are assuming the leadership of our delegation at the NATO Conference. Your inspiring presence at this Conference is undoubtedly a source of tremendous encouragement to all the peoples of Europe.

We are deeply confident that the best interests of the United States and of its many allies in this formal alliance will be served in the economic, military, scientific, and technologic spheres. Like most other Americans, we look forward to a general strengthening of NATO as a defense mechanism against the threats of Russian Communist imperialism. However, in our reasoned judgment, this alone will not be the adequate answer to the sputnik and its psychopolitical implications, nor will it insure the interests of world freedom and the future of our Nation.

Only with breadth of perspective, viewing the essential things in their rationally ordered places, and with depth of moral courage and will, accomplishing those deeds which our reason determines must be done, can we meet the Russian Communist challenge. Only by these agencies can we extricate ourselves from the mire of piecemeal adjustments, recurring frustrations, and unimaginative measures of passive reaction. We are strongly convinced that by these fundamental means of outlook the successive Moscow-created or Soviet-fanned tensions in the free world can be successfully converted into endless tensions within Moscow's farflung empire. For us and countless other Americans it is evident that we can never gain in this protracted struggle against Russian Communist imperialism by having to fight politically and psychologically on this side of the Iron Curtain.

It is in this spirit of thought that we submit views which should receive the fullest consideration of our delegation to this conference for the purpose of maintaining and fulfilling United States leadership in the world. Reflective of a body of thought which duly respects the interrelated nature of our foremost problems, these general views are as follows:

1. A maximum reinforcement of the containment base of America's policy of liberation. Our allies, including Western Germany, should be appropriately equipped with the latest weapons in order to enhance the defensive posture of the free world. In consideration of political and subversive factors, the dangerous notion of a mutual withdrawal from central Europe would be overtly repudiated by this action. The intellectual instability of those who entertain this naive notion is no better demonstrated than by one who allegedly authored the containment doctrine. This action would likewise provide a fitting reply to the propaganda-staged Bulganin notes which are typically designed to sow seeds of confusion, disunity, and delay.

2. A concatenation of NATO with the Baghdad powers, SETO, and free world allies in the Far East. A powerful defensive ring around the Russian Communist empire should be pressed for and speedily realized. Because of unprecedented Russian Communist penetrations in the Middle East, the United States should formally join the Middle East Treaty Organization. There is no reason whatsoever for us to be concerned about Moscow's expected encirclement propaganda. Such propaganda has no meaning for the captive non-Russian nations and peoples in the Communist empire. On the contrary, this encirclement of strength is a basis for sustained faith among these captives in that the future will not and cannot belong to the messianic Russians.

3. A proposal for combined endeavors through the United Nations on capital development projects and technical assistance for the underdeveloped countries in Asia and Africa. Our delegation should resist all attempts to create a NATO financial pool for this purpose. Instead, for maximum benefit, we should advocate U. N. undertakings in this respect. One of the greatest assets of American world leadership is its opposition to colonialism. It bears no stigma of past colonialism. Its standard of national self-determination and independence is revered everywhere, especially today among the captive nations in and outside the Soviet Union. At all costs we must maintain our single moral standard which is applicable both to certain areas in the free world and, vastly more important today, to all non-Russian areas in the Russian Communist empire.

4. A systematic buildup of the most basic deterrent against Russian Communist expansionism, namely the resistance of all captive non-Russian nations and peoples to Moscow. This calls for a full reaffirmation of our standard of national self-determination. It meant an intent to implement our policy of liberation. Nothing is further from the truth than the unthinking assertion that the free world is doing all that possibly could be done in this regard. Ways of doing more to prevent the outbreak of a

nuclear war have been shown time and time again. When the free world had a clearcut physical superiority over the enemy, the latter nevertheless made his advances and gains in many quarters of the world. A close arms race now will not alter this trend. The time is more urgent now than ever before to undertake a winning campaign in psycho-political warfare on the terrain of the enemy, which means not only in the so-called satellite area but, in fact more importantly, also in the broad non-Russian periphery of the U. S. S. R. The paramount problem of these nations is the same now confronting the nations of the free world, i. e., national independence, its recovery and its preservation. To depend on the notion of evolution within the Communist empire is a product of wishful thinking, not one of clear and perspectived thinking.

We earnestly hope that these views will gain expression through the various avenues open to our delegation in this conference. The broad outlines they suggest are directions of thought which we feel are prerequisite to actions necessitated by the symbolic significance of sputnik.

With every good wish for a successful conference inspired by your leadership, I am

Sincerely yours,

LEV E. DOBRIANSKY,
Georgetown University.

A Combat Veteran Sounds Off

EXTENSION OF REMARKS
OF
HON. CHARLES B. BROWNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. BROWNSON. Mr. Speaker, a man who fought as an infantry officer in 3 wars, won 12 decorations, trained his regiment, and actively led it in combat from Omaha Beach to the Elbe River ought to know something about the military and does.

I knew Col. E. B. Crabill when we were both in the 83d Infantry Division then training at Camp Atterbury, Ind. Our colleague, ELFORD A. CEDERBERG, of Michigan, also served with the 83d Division and, in fact, stayed with that fine organization much longer than I did.

In the role of a staff officer with the First Army, I visited the 83d Infantry Division during combat in the Normandy invasion often enough to know of the outstanding job he did with his 329th Infantry and of his almost legendary reputation as a commander.

This month Colonel Crabill, now retired after combat duty in the Korean emergency has made one of his greatest contributions. In the April issue of Harper's magazine he is guest editor of the Easy Chair. Incisively, fearlessly, and bluntly he writes the truth about military leadership, military equipment, military personnel, and wars of the future.

From time to time I have taken the floor in discussion of military matters; universal military training, unification, Hoover Commission recommendations for a service of supply, and the current brass heavy pay-raise legislation. Colonel Crabill says many of the things I wanted to say with telling effect.

This was not an easy article for me to read. As a onetime staff officer on the Army level, his frank comments made me squirm. As a Legionnaire and VFW member representing the home district of the American Legion, his article makes me noticeably uncomfortable although I cannot agree with all his recommendations in this area. As a Congressman, his witty barbs strike home on a tender target.

Mr. Speaker, under unanimous consent I insert Colonel Crabill's article in the RECORD at this point, as follows:

THE EASY CHAIR—A COMBAT VETERAN SOUNDS OFF

(By Col. E. B. Crabill)

(This cantankerous guest editor is better equipped to discuss military matters than most of the experts now issuing daily statements in Washington. He served as an Infantry officer in 3 wars, won 12 decorations, and led the 329 Infantry Regiment in combat from Omaha Beach to the Elbe River. In its many battles, including St. Malo, Hurtgen Forest, and the Bulge, it captured more than 40,000 Germans and lost about 5,000 in killed and wounded. He recently retired after serving as Chief of Research and Development of Infantry Weapons and Equipment in the Army Field Forces.)

Since the Korean war the citizens of the United States have been handed an annual tax bill of about $70 billion. Instead of diminishing, this bill shows every sign of increasing to $80 billion, $90 billion, or $100 billion, unless something more radical is done than the manicuring job normally performed by Congress.

The primary excuse for this astronomical bite is that sacrosanct monstrosity labeled "National Defense—Do not touch." It takes the major part of the taxes now and shows every indication of growing bigger. Why should it be a sacred cow? Have the people so much confidence in the Defense Department that they think it can do no wrong? Isn't there a possibility of a little empire-building mixed up with the real requirements? Isn't is possible that billions are being wasted because of incorrect conceptions of future wars?

Is it true that the only war of the future will be an atomic war, with its attendant suicidal destruction? Isn't it also true that the United States, in spite of these enormous expenditures, may find itself without the means to fight more probable wars? Isn't it possible that by spending on personnel a fraction of the money going into expensive and useless equipment, a better defense force could be built? Have the people in the United States become so intrigued with the glamor of airplanes, guided missiles, and atomic bombs that they have forgotten that ground can be taken and occupied only by men on foot?

What the defense setup needs is a good tough inspection. Let's take a hard look at some of the prevailing sophisms that are responsible for this astronomical spending. Any of them could be the subject of a complete article. For the sake of brevity each will only be touched on here.

THE ARGUMENTS

1. The military leaders in our country are best able to determine our needs for national defense. They might be if they were able to rise above their prejudices, but they are not.

It might be possible to approach a solution by asking an admiral what the Army needs, an Army general what the Air Force needs, and an Air Force general what the Navy needs, but to ask each what his own service needs is like opening the doors of the Treasury and handing him a shovel.

There is an old building in Washington that used to be called the State, War, and Navy Building. Whenever one of our admirals or generals passes it he must shudder because not so long ago it used to house them all and the State Department besides. The empires that have been built in the Pentagon have become so complex that there is a saying in the services that it is impossible for anyone to go there and get a "Yes" or "No" answer to anything.

There is a related evil that goes along with this—the staff buildup, the Indians that do the chief's work for him. The more Indians, the bigger the chief. All Indians have found out that the way to get to be chief is to be on the staff of a chief, ready to step into his job. It is also much pleasanter than to be out in the rain and mud, dodging shells. The result is that the smart boys do bird-dogging for the chiefs and the dumb ones lead the troops in combat. This has two evils—it tends to build up the staffs and it is a little hard on the troops.

2. The money appropriated for military equipment is necessary for the defense of the country. It is about as necessary as it is to furnish each voter in the country with an air-conditioned Cadillac.

The characteristics demanded by the services in their airplanes, ships, weapons, and vehicles are now so expensive that the cost of them is from 2 to 10 times as great as that—with a small loss in comfort, efficiency, or accuracy—of a serviceable substitute. In World War II, a satisfactory liaison airplane cost about $1,500. Ask what the present job costs and hold onto your pocketbook. The Russians have a heavy trench mortar that looks as though it had been machined with a sledge hammer, but it throws a lethal shell a long distance.

The accuracy of our weapons is so far superior to the accuracy of the persons manning them as to be ridiculous. So far I have never seen a time in combat when such accuracy was either necessary or humanly obtainable, though I have seen more combat than most officers. The advent of "human engineering," in recent years, has aggravated this problem. In the old, tough days the personal comfort of service personnel was not a consideration. Nowadays it is one of the most important considerations, which has the dual disadvantage of being extremely expensive and making softies out of the military.

3. It takes 9 men in the rear to keep 1 man at the front. This is a great understatement. It started as least as far back as the British pacification of India, where animal transportation was all that was available and communication was by runner. Nowadays with motor and air transportation, and radio and telephone communication, the proportion of rear-area personnel, instead of decreasing, has increased. In World War II, we who were in combat estimated that all the actual fighting was done by from 2 to 5 percent of the personnel in the battle zone. Within the range of enemy artillery fire there was little visible movement and very few troops to be seen. If you started to the rear however, every mile the clutter of vehicles, the masses of administrative, supply, engineer, ordnance, military police, transportation, signal, medical, and other staff units increased progressively. What they all did we of the infantry could not imagine. The artillery and tanks supported us and we needed daily rations, water, and gasoline, but that required only a small number. The others, as near as we could see, must have been taking in each other's washing.

In Korea I had the task of inspecting some of these rear-area troops. I found not a single unit that was as much as 50 percent efficient—that is, not a single administrative unit turned out as many as half of its assigned personnel for its primary duty. Where were the others? On guard, on kitch-

en police, sick, a. w. o. l., on rest and rehabilitation, running typewriters, answering telephones, or doing bunk fatigue. Most were on duty shifts of 8 hours. The soldiers at the front? Twenty-four hours a day, 7 days a week.

Can anything be done about this? Yes, but it probably will not be done. Why? The big headquarters are always in the rear areas. They want lots of communications so they can keep up their battle maps. That requires signal troops. They want comfortable housing. That requires engineers. They want good food. That requires mess personnel. They want aspirin. That requires medical officers. Then want lots of staff officers so they can get the answer to any problem that arises without having to dig it out themselves. All these people, in turn, have to be furnished rations, shelter, telephones, medical attention, and so on. If there are enough of them around they will be so busy taking care of each other they will have little time left for the troops in the combat areas.

The Red Cross, Special Services, and USO, particularly the feminine personnel, are needed to keep rear-area personnel entertained. Obviously, these entertainment people couldn't go up into the fighting areas, so they are never seen by the combat troops except the rare times the infantryman gets a pass. In World War II, Paris was so completely occupied by rear-area troops that combat troops in reserve couldn't go there because there was no room for them. A more recent example of this is the report by Time magazine of how a naval caretaking detachment in Naples, originally consisting of 45 men, has been parlayed into a Shangri-La of 2,103 military, 534 civilians, and 3,166 wives and children; to take care of NATO South, an organization of 692 officers and men.

4. The officers in our services are brave, intelligent, zealous, and unselfish and the enlisted men, when they put on the uniform, are metamorphosed into crusaders rarin' to fight and die for the good old United Nations and the four freedoms. I would call this about 20 percent correct. We owe our success in wars to a very small group of heroes. The rest just go along for the ride. Nor is this small group made up more of generals than privates or vice versa. It is about the same in all ranks.

George Washington's statement that the patriotism of citizens of the United States was dependent upon what would best serve their selfish interests is as true today as it was then. In order to get one officer who is a real leader it is necessary to hire about three. If Congress ever thought it a good idea to pay service personnel a living wage, as compared to equivalent jobs in civil life, the services could probably get along with half their present boss personnel. Since Congress doesn't see fit to do this, the services manufacture a number of jobs and hope that by hiring three $5,000-a-year men they will get one $10,000 man. This is not only expensive but takes up a lot of time in trial and error, not to mention the casualties caused by poor leadership.

The same economics apply to enlisted men. Two enlisted men in uniform will look alike, but one will fight and the other hide. One is worth 10 times the amount he is paid and the other is a liability. If we paid enlisted men a living wage, instead of babying juvenile delinquents who couldn't get a job elsewhere, the services could eliminate half their personnel who are now in baby-sitting jobs such as military police, excess administrative duty, excess instruction, special service, recruiting, and the like. Military service is just like any other business and it could be run a great deal more effectively on business principles, rather than by the politico-paternalistic methods now in vogue.

5. All soldiers, sailors, and airmen contribute equally to their country's defense and should be equally entitled to veterans' benefits. Baloney.

If you believe this, go out some night when it is raining—it always rains in combat—dig yourself a foxhole with about 4 inches of water in the bottom and spend a couple of weeks there, living on canned rations. Even without the mortar and artillery fire, the ever-present danger of having your arm or leg blown off, or of being killed, about 2 weeks should make a Christian of you. Add the hazards of combat, and if you still think all veterans should be treated alike you should run for Congress.

Battles are won by a very few unusually brave men who are able to do the right thing at a critical time. Battlefronts are now usually too wide for the wily strategy of a Stonewall Jackson or the personal leadership of a Napoleon. More often they are decided by the boldness of some lieutenant or sergeant who makes a breakthrough which is then exploited by higher leaders.

The great mass of so-called veterans in the United States never, in the words of an old Indian fighter, "heard the whine of an hostile's bullet." They probably gave up some personal advantage in return for conversational resources that will last them all their lives. The veterans' organizations are too well entrenched politically to do much about this, but as far as justice to the ex-serviceman is concerned, Congress is shoveling out money indiscriminately so that a few deserving men will get a little of it. Being often handicapped, the deserving will probably be trampled in the rush.

6. Wars of the future will be all-out wars like World Wars I and II. This is highly improbable. The United States military machine is now geared for only one purpose—to fight Russia. This plays directly into the hands of the Russians, who obviously have no intention of getting into an all-out war with the United States. They can gain their desired ends much more easily and effectively by piecemeal tactics. Every time there is a disturbance or outburst of violence anywhere in the world, look for the Communists. If they don't instigate it themselves they will be there shortly after the trouble starts.

"Why," they say, "take a lot of punishment conquering the world the hard way when you can take it a country at a time the easy way, using non-Russian troops?" If they can suck untrained United States troops into a few more Koreas—fine. Every one of them will hurt the United States. If we sand United States troops into the Middle East, after getting Britain and France out, the Russians can hang the invader label on us. They also know they have nothing to fear from the United States where it counts—on the ground. As long as they can keep away from airplanes, atomic bombs, and sea battles, they can have it easy. They have five divisions to our one, and ours are too badly scattered to be assembled for combat anywhere. When the awe-inspiring Sixth Fleet moved into the eastern Mediterranean in the Suez crisis it had just 1,800 ground-fighting troops—one battalion of Marines.

7. Wars of the future will be decided by atomic bombs, airplanes, and guided missiles. Don't you believe it. Any time she chooses to do so, Russia can march across Europe in about 3 months. There is nothing in Europe to stop her. There is nothing that the United States has that could stop her. It is hardly thinkable that if the Russians occupied Bonn we would kill hundreds of thousands of Germans just to stop their vanguard. Nor would it be feasible to destroy Vienna to prevent the Russians from occupying it. It would not be possible to saturate Europe with atomic bombs. The Russians would seek out the unbombed places as the tides of the sea go around the headlands. They might possibly be stopped at the source, by bombing Russian cities and bases. Are we prepared to sacrifice the east coast of the United States for this? That is, are we prepared to commit suicide for a principle? Any Air Force officer knows that no defense will stop all the bombers. It would take only one to destroy a city.

8. Atomic weapons are so devastating that they will eliminate war as a means of settling international disagreements. Don't believe that one either. History is replete with weapons so devastating that war would be impossible. Recent examples are poison gas in World War I, tanks in World War I, saturation bombing, V–1 and V–2 guided missiles in World War II. They had their effects in past wars and may be used again in future wars, but no weapon will ever stop all wars.

In April 1945, when I stood on a hill overlooking the devastation wreaked by American and English bombers on the Ruhr complex, the whole area appeared to me to be completely destroyed. An examining group, after hostilities ended, reported that in spite of this bombing the manufacture of weapons was operating at nearly 80 percent of efficiency when the Ruhr was overrun by United States ground troops.

9. Wars are won by the nations having the best machines. This follows the old saying that God is on the side of the heaviest artillery, and it is not to be depended on. History has too many instances in which a rabble poorly armed and trained but possessing high morale has defeated well-trained and well-equipped armies.

The last and most painful example of this was Korea, though in this instance the troops were not well trained. In Korea, the United Nations forces had complete control of the sea, complete control of the air, and overwhelming superiority in tanks and artillery, but they were unable to defeat a howling mob of uneducated peasants armed with weapons mostly of World War I vintage. In this instance the explanation given was that we were not allowed to bomb beyond the Yalu River. Since our bombers regularly destroyed the bridges south of the Yalu, only to have them back in operation the next day, this appears—to one who was there—to be only an alibi. The Korean war was an infantry war and we failed to win because we did not have enough infantry and the infantry we had was not good enough.

Weapons are superior only if the persons handling them are superior and have high morale. The troops of Israel, recently, went across the border into Egypt and took away from the Egyptians, like taking candy from a baby, the mass of modern weapons that had been furnished them by the Communists.

A BETTER WAY

It is an accepted principle that nobody should criticize the way things are being done unless he is prepared to offer a better way. In compliance with this principle, I offer the following recommendations, none of which I expect to see carried out:

1. Stop depending on guided missiles, atomic bombs, and airplanes to solve allied defense problems. They probably won't be used in small wars and will be suicidal to use in big wars.

2. Keep ready and available in the continental United States at least a dozen tough and well-trained divisions of professional soldiers that can be moved anywhere to back up decisions of the United Nations. Three or four of them should be airborne. They should contain no recruits and should have no administrative duties. They should be provided with sufficient troop-carrying aircraft, under Army control, to transport them with their equipment to any threatened area.

3. Reduce by 50 percent the personnel on duty in the Pentagon, including assistant secretaries, admirals, and generals. Require all lower headquarters to reduce their noncombat personnel 50 percent either by eliminating installations or by reducing personnel in existing installations. The amount

of administrative work deemed necessary always equals the number of people available to do the work. The source of administration is the Pentagon. Reduce it and all other headquarters can be reduced.

4. Revise the military characteristics of war materiel, to eliminate requirements that make it expensive without proportionately increasing its combat value. The excessive cost of war materiel is our most serious problem.

5. Start the pay of enlisted men at $50 a week, of officers at $6,000 a year. This would probably eliminate the draft. To compensate for the increased costs, eliminate all fringe benefits, including transportation. Transport no dependents overseas. Make the minimum tour of duty at 1 post 3 years in the United States and 1 year overseas. Sharply curtain the Military Air Transport Service.

6. Eliminate the Corps of Military Police. This is an outstanding waste of good manpower. Have minimum military police in tactical units. Discharge soldiers who misbehave. Sharply reduce such military activities as Special Service, Information Service, Food Service, and Recruiting Service. Have combat units take care of their own maintenance, recreation, communications, recruiting, and police work.

7. Reduce individual clothing and equipment of military personnel to that which can be carried on their backs or in their unit transportation. They will throw the excess away when they get in combat anyway. The criterion should be not what might add to their comfort—there is no comfort in battle—but what is the minimum with which they can operate effectively.

8. Follow General Bradley's recommendation that hospitalization of veterans at the taxpayer's expense be limited to those whose disabilities were the result of wounds or injuries received in the war.

9. Build no anti-atomic personnel shelters. No presently available warning system would allow time to occupy them, particularly since the bombing would be at night, when the factories and office buildings are empty.

Finally let me forecast the probable trend of the next war. It will start as the Korea, Indochina, or Middle East war started. It will gradually involve Communist nations on one side and non-Communist nations on the other. There will be no declaration of war. No atomic weapons will be used. No guided missiles will be used. No strategic bombers will be used. No sea battles will be fought. First there will be an air war between fighter planes for control of the air, which will be indecisive or won by the non-Communists. This will settle nothing, and the non-Communist force will look around for somebody to take the ground and settle the war. Since only a few ground troops are available, the decision will either go to the Communists or will be delayed a year while the non-Communist countries can assemble some unwilling civilians, train them as soldiers, and put them on the battlefields, to die or be maimed for a cause in which they are not interested.

Hans Christian Andersen

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. MULTER. Mr. Speaker, today is the 153d anniversary of the birth of Hans Christian Andersen, Denmark's most famous author. Through his writing he has brought joy to generations in all parts of the world.

Andersen's life story is an inspiration and a tribute to the indomitable spirit of the Danish people. He was raised in poverty in the town of Odouse. At 14 he left home to seek his fortune in Copenhagen. His name was brought to the attention of King Frederick VI and he was sent to school at public expense. His first work was published at the age of 24 and 6 years later his first volume of fairy tales appeared. Andersen continued to write his world-famous fairy tales at the average rate of one volume a year. In 1875 this gifted life came to an end.

But Hans Christian Andersen's spirit lives on in his many stories. He has left a legacy for the entire world and I'm sure we all join with the Danish people today in commemoration of the birth of this genius of the fairy tale.

A Suggestion To Relieve Unemployment

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD, a letter from the Honorable Ralph R. Ferguson, mayor of the city of Anderson, Ind.

It offers a suggestion which the mayor would propose on a local level to relieve unemployment and to stimulate business activity.

The letter follows:

CITY OF ANDERSON,
OFFICE OF THE MAYOR,
Anderson, Ind., March 28, 1958.

Hon. JOHN V. BEAMER,
Old House Office Building,
Washington, D. C.

DEAR MR. CONGRESSMAN: All good citizens have been following the proposed legislation discussed in both the House and the Senate to combat the recession.

I am not in position to judge the merits or the shortcomings of the many and varied proposals to bolster and strengthen our economy. However, it appears that all of the proposals would require consideration and administration before they can become effective and have any noticeable impact on local communities.

The city of Anderson is a typical industrial city, and we now have many unemployed men and women in the community. Many of these people have exhausted their unemployment benefits and are without funds to purchase the bare necessities of life for themselves and their families.

I am of the opinion that what is needed, is a program that will immediately provide gainful employment for these unemployed. Such a program could be best administered by the city administrations throughout the country. As I pointed out earlier in my letter, I believe Anderson to be a typical industrial community.

If Federal funds could be made available for employment on a local level of persons now idle, there could be many projects undertaken which would be of direct and lasting benefit to this community. These projects include, but are not limited to, repair and rebuilding of streets and thoroughfares; repair of sidewalks, curbs, and gutters; repair enlargement and extension of inadequate sewer systems; the building of dykes, levees, and flood-control projects; the rehabilitation of neglected real estate, establishment of parks and playgrounds; and many other worthwhile constructive programs.

The city of Anderson and all other cities have the machinery and the tools and in most instances budgets out of which to purchase materials and provide proper engineering supervision and inspection. With the coming of the construction season, if Federal money were to be made available to the cities for payroll purposes, many thousands of unemployed persons could be put to work immediately, thus bolstering the economy in every community throughout the country. Inauguration of such projects would create a strong force toward combatting the recession and alleviating the suffering that is now become widespread throughout the country.

I earnestly beg you to give this type of program immediate consideration.

Respectfully yours,

RALPH R. FERGUSON,
Mayor.

John Stillman: Public Official and Party Leader

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. KEOGH. Mr. Speaker, John S. Stillman is the type of young American whom we would all like to have maintain his interest in good government. He also would like to maintain his interest in a major political party. He is presently chairman of the Orange County Democratic committee and also holds the nonsalaried position of chairman of the New York State Bridge Authority. He devotes his entire time to these positions and brings to them great ability, energy, and high purpose. Much has and I suppose a great deal more will be said critical of those political leaders who hold public positions. It is, therefore, refreshing to read the following excerpt from a broadcast by Bill Forrest, of New York, on the point:

FOOTNOTES ON THE HEADLINES
(Excerpt from broadcast by Bill Forrest)

The controversy over whether John S. Stillman should resign 1 of his 2 chairmanships—that of chairman of the bridge authority and/or that of chairman of the Orange County Democratic Committee—on the grounds that the two posts are not compatible, does not impress the average citizen, regardless of his political faith, very strongly. A somewhat similar issue was raised years ago in Middletown by a group of political purists, who happened to be Republicans. It was their contention that it was detrimental to good government for those holding public office to retain membership on the party committee. For a short time an attempt was made to enforce a self-imposed rule that committeemen elected to public office should resign their party posts, but the rule was discarded soon after it was adopted. The reason was quite evident. The elimination from the committee of those committeemen who were capable of being elected to

city or county offices weakened the party organization by removing from the committee those with the ability to supply the necessary leadership to keep the committee functioning. Whether we like to admit it or not, there are few men who are willing to devote the time that is required in the building of a political organization without some promise that their efforts will be rewarded through advancement as candidates for public office or through appointment to political jobs. After all, political leadership is one of the best tests of ability to serve in public office. The leader who is able to keep his party operating without too much friction stands at least a fair chance of being able to get along with the public and with being able to organize his unit of government so that it will function with some degree of smoothness. Not many men are available who are willing to devote the major portion of their time and ability to public affairs without compensation. But even when they are in a position to render a public service, they frequently find themselves the target of attacks from those of opposite political faiths, or from within the ranks of their own party. That is the way of politics, and there appears to be no way to change it.

Nuclear Weapons Tests

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two articles, one by Arthur Krock appearing in the New York Times, the other by David Lawrence, appearing in the Washington Star.

[From the New York Times]

WHERE PERFORMANCE IS A TOTAL STRANGER TO PROMISE

(By Arthur Krock)

WASHINGTON, March 31.—The Soviet Union has given its word that, on some unspecified date and for an unspecified period, it will make no further tests of nuclear weapons. So prominent among the issues this pronouncement raises is, How good is the word of the Soviet Union?

If it were absolutely established among scientists who devised the detector systems that these infallibly will register any such test, or if the Soviet Union has also agreed to an effective check on its compliance, the integrity of the Kremlin's pledge would not be high among the issues it evokes. But, in the absence of both circumstances and in the presence of others, it inevitably is.

The very announcement made by Foreign Minister Gromyko to the Supreme Soviet in Moscow today ignores for the *n*th time a solemn contract of the U. S. S. R. This is its signature on the Charter of the United Nations, which includes these 2 articles, 26 and 47:

"26. In order to promote the establishment and maintenance of international peace and security, with the least diversion for armaments of the world's human and economic resources, the Security Council shall be responsible for formulating, with the assitance of the Military Staff Committee * * * plans to be submitted to the members of the United Nations for the establishment of a system for the regulation of armaments.

"47 [in part]. The Military Staff Committee [shall] assist the Security Council on all questions relating to the * * * Council's military requirements for the maintenance of international peace and security, the employment and command of forces placed at its disposal, the regulation of armaments, and possible disarmament."

The other nuclear powers resorted to this medium in conformity with their contract, and the General Assembly also set up a commission. Soviet Russia boycotted the commission after rejecting every disarmament pattern other nations have drawn (including nuclear) in the United Nations, beginning with the Baruch plan.

UNVARYING REPUDIATION

This conduct is wholly consistent with a long series of other contractual repudiations by Soviet Russia. In a staff study made for a Senate subcommittee in 1956 of nearly a thousand treaties * * *, both bilateral and multilateral, which the Soviets have entered into it was documented that in the 38 years of its existence the Soviet Union had broken its word to virtually every country to which it gave a signed promise. For example, it was violating the first agreement it ever signed with the United States at the very moment the Soviet envoy, Litvinov, was putting his signature to that agreement. And the burden of proof is crushing on anyone who contends that the word of the Kremlin Government under Khrushchev is any more to be relied on than that of the Government under Stalin.

But even if Khrushchev should find it compatible with the maintenance of the Soviet's military strength to suspend nuclear tests for a considerable period, that would merely establish the phony nature of the pledge. The Russians have just completed a long round of experiments with nuclear weapons that they have proclaimed as successful, and, according to our experts, they will require from 8 months to a year to get ready for the next round. The British are still on the way to their comparable objective. And, if the United States is to attain its present goal of reducing to a minimum the perilous fallout of atomic weapons, it must finish that program by the tests it has scheduled. For both nations now to suspend their programs, without a check system on Soviet activities in the field of nuclear weapons, would be to leave half done what the Russians, to their obvious satisfaction, have completed.

The only basis for the suspension would be the concept that thereby the international propaganda effects of the Gromyko announcement would in some measure be countered. And in view of the stakes involved, this not only would be the flimsiest and most perilous basis conceivable for major military policy, it would greatly help to confirm the estimate, among peoples gullible enough to believe this, that a Soviet Union dedicated to peace has forced a way to that peace on a Great Britain and United States whose objective is war.

Nevertheless, from comments made by influential and sincere persons in the United States and abroad, it already is obvious that as a propaganda stroke the Soviet move was effective. These citizens argue it could have been averted by a prior announcement of the same kind by the United States. We had the time and the occasion to do that. Yet implicit in the action would have been a blind or reckless disregard of these factors:

The signed adherence of the United States to the United Nations Charter. A major policy split with the British Government, which made clear it would not suspend its scheduled tests. The certainty of some of the greatest experts in the field that detection can be evaded in the vast spaces of the Soviet Union. The United States progress toward perfecting a "clean bomb." And above all the historic proof that the Kremlin makes promises, even specious ones like this, only to break them.

[From the Washington Evening Star]

SOVIET DECEIT ON BANNING A TESTS—REDS VIEWED AS USING FALLOUT HYSTERIA AS PROPAGANDA TOOL TO EMBARRASS UNITED STATES

(By David Lawrence)

The biggest hoax of our time is the Soviet-inspired drive to stop the testing of nuclear weapons.

Many well-meaning loyal citizens have been misled by the propaganda, and many people throughout the world have been scared about the supposed ill effects of fallout from the tests.

Authoritative evidence has been produced again and again by reputable scientists that fallout from nuclear weapons tests has not added any real danger. But somehow this evidence is constantly ignored, and the Soviet propaganda campaign moves on because the truth is not conspicuously displayed.

Over the weekend came a joint statement from 160 scientists gathered as Lausanne, Switzerland, where, under the auspices of the Swiss Academy of Medicine, a 3-day symposium was held "to determine all the long-range consequences of radioactivity." There were representatives present from the United States, France, Italy, West Germany, The Netherlands, Belgium, Norway and Switzerland. An invitation to attend was declined by Soviet scientists.

This is what the imposing group of scientists assembled in Switzerland had to say in their formal communique:

"Thanks mainly to the extensive and painstaking research conducted in the Anglo-Saxon countries, it appears well established that the increase in atmospheric radioactivity and in radioactive fallout does not play any essential part and does not have any practical importance when compared to natural radiation.

"The values which have been recorded do not, in any case, constitute a danger to the health of mankind."

Nothing could be more explicit and reassuring. Yet this very point has been made again and again, as, for instance, by the National Academy of Sciences in America. But within a short time after such pronouncements are issued, there are always a few scientists who come out with rebuttals or with arguments that the layman cannot understand, but which keep the scare going. Nothing pleases Moscow more.

It may or may not be significant that some of the persons in the scientific field here and abroad who hold ideological attitudes similar to the Communists are among the most ardent of the advocates of the theory that nuclear-weapons tests are highly dangerous. One of the scientists in the forefront of the agitation is a man who was refused security clearance by our Government in certain research work. He may have been unjustly accused, and it may, of course, be sheer coincidence that he is arguing so vehemently against the determination made by the Atomic Energy Commission to continue testing.

The agitation is not confined to this country. West Germany is in the midst of demonstrations fomented by Communist sympathizers who want no atomic weapons supplied to NATO forces there.

As for our tests, it is worth noting that Dr. Willard F. Libby, famed scientist who is a member of the United States Atomic Energy Commission, said in a speech at the Switzerland meeting last week that a bomb had been fired underground in recent tests in Nevada and that essentially no radioactivity, even that belonging to such a volatile material as radioactive krypton, escaped to any considerable degree.

Dr. Libby says this means "it is possible at least in certain types of weapons tests to contain and eliminate radioactive fallouts." He points out, too, that "persons living at

high altitudes on granitic rocks always have received extra radiation many times greater than is contained in the radioactive fallout from the testing of nuclear weapons, and even those living on certain sedimentary rocks at sea level always have received about 10 to 20 times the present fallout dose."

Despite the existence of biological hazards of one kind or another constantly affecting a small percentage of the world's population due to medical X-rays, the sun's rays and other natural causes, life has to go on. Exploratory tests are needed to advance peaceful as well as military uses of atomic energy. Testing is important, moreover, because deterrent weapons have to be developed by the United States so as to keep some one-man government from suddenly plunging the world into a war that could wipe out millions of lives. If Soviet Russia could prevent the use of nuclear bombs, her conventional forces are big enough today to conquer Western Europe. So the Soviet game is to get the West to give up nuclear weapons while the Communist armies of Russia and Red China dominate Europe and Asia.

Red Ink Spending Fails

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following editorial which was published in the March 28 issue of the Idaho Daily Statesman at Boise, Idaho. This article is of such significance and is so appropriate at this time that I would commend its reading to every Member of Congress:

RED INK SPENDING FAILS

Except notably for Virginia's redoubtable Senator BYRD, nobody seems to have been very much disturbed when the Congress approved, and the President signed, recently a bill to hike the national debt limit from $275 billion to a new alltime record high at $280 billion.

Yet it's a matter of direct concern to every American—to say nothing of aliens abroad who seem to regard American assistance as something they have a right to demand, and to depend upon.

An indication of its importance is to be found in current estimates showing that the national debt, when lately calibrated, represents a debt of somewhat more than $1,700 for each man, woman, and child in this country.

The bill for interest on this debt last year was $7.4 billion, which was money paid out for nothing more than the hire of money that the Government had already spent or hypothecated. Significance of this figure is pointed up in Senator DWORSHAK'S recent statement that it represents a take of $14 a month from the income of each family in Idaho.

Contemplation of this huge debt burden must be disturbing. But it becomes alarming when it is considered that the national debt, with brief intervals of minor retrenchments in 1947 and 1950 and 1953, has been growing steadily larger, and if we keep on adding to it, as Idaho's senior Senator warns, we will be "giving our children and grandchildren an inheritance of crushing debt."

The red-ink spending policy, started out on a grand scale amid pretty general acclaim some 25 years ago when we were assured that "we owe it to ourselves," was supposed to have some mystic properties as a panacea for economic ills. It was supposed to provide for spending more of public funds for pump priming when times were bad, and then, when conditions improved, to cut back public spending and apply the saving to reduction of the public debt. Thus the national economy was to have been kept on a plane of equilibrium.

But it hasn't worked out quite that way.

Every time there's been a prospect that taxes would provide a surplus over current requirements that might be applied on debt reduction, it's been seized upon by eager spenders as an invitation for financing new schemes for putting the Government more and more into the field of directing everybody's affairs. And so beguiling have been so many of these welfare schemes that most of us haven't resisted, but have more or less complacently gone along with them.

Invariably, every time one of these schemes gains a roothold, it has flourished and spread like the banyan tree whose branches send out aerial roots that go down to the soil and form additional trunks.

Thus whatever chance there may have been for accumulating any substantial debt-paying surplus of revenues has been obliterated. Tax levies continue on a high-altitude range, and the process of turning the social order into strange channels goes on almost without interruption.

Then when there's an economic readjustment, or a recession or whatever it is that we're now experiencing to provide the makings for a political carnival, the Government, on which we've come to depend so much, may be hard put to come through with the succor that we seem so generally to expect.

There is currently raging a furious controversy over the question of how much further Government can, or should, go along the way of stepped-up spending—curiously mixed up with proposals for coincident reduction of Government revenues—in order to provide the economy to which almost everybody has been accustomed.

How to accomplish this, if it's possible, without getting ensnared in unwise policy that could hurt us badly in the future, is the big question.

And the outcome of this great debate is still in doubt.

Meanwhile it should be evident that it's a proper time for review of the lesson that a great many Americans learned the hard way back in the depression days of the early thirties, which is that the time to save money and pay debts is when one's making money.

And even now it must be apparent that some signs of real economy could be most reassuring.

In Defense of Mr. Benson

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 13, 1958

Mr. RAY. Mr. Speaker, the following letter which I place in the Appendix under leave heretofore granted, was printed in the Wall Street Journal, March 24. It needs no introduction.

IN DEFENSE OF MR. BENSON

EDITOR, THE WALL STREET JOURNAL:

The editorial page of your paper is on my regular diet of reading matter and most of the time I enjoy it very much, but there are times when the implications that appear on that page irk me, to say the least. The last one that made me feel that way was entitled "Immovable Mr. Benson" by Albert Clark (March 3). I refer especially to Mr. Clark's introduction wherein he states that the simple answer to Mr. Benson's survival as the Secretary of Agriculture is that his main surviving friend happens to be a man named "Ike." The implication here is that Mr. Benson is almost friendless.

The facts are that Mr. Benson has many more friends than is generally realized and more and more of them are getting more enthusiastic about supporting him. We hear it every day on the streets of this and neighboring towns, when we meet at conventions, and other circles, that he is admired as a man of courage and integrity and these people are yearning to see more of his caliber in the Nation's Capital.

Farmers who have been more or less aloof to him in the past are beginning to sit up and take notice of the fight that is going on between Mr. Benson and the weak-kneed politicians that hope to ride into office on his lack of acceptance by a noisy segment of the farming population. This segment is continually losing ground both in respect and in numbers.

N. O. FOLLAND,
KARLSTAD, MINN.

Agricultural Policies Desired by Our Farmers of Tomorrow

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 20, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Alfred D. Stedman, of the St. Paul (Minn.) Pioneer Press of March 16, 1958:

CALL TO BE FREE

A letter came the other day from the farmers of tomorrow. It was signed by 19 members of the veterans' agricultural classes of Mankato.

How this amazing document found a way past all of the laments of the oncoming doom of the family farm, demands for Soil Bank payments and for fixed dairy and wheat price supports, we don't know.

Anyhow, here it is, true as life, with each name in the signer's handwriting. If anyone imagines that these farmers of the future are beaten by adversity, or believe all they hear, or have stopped doing their own thinking, he should study this letter.

For these are all young men, mostly 24 to 30 years old, married, veterans largely of the Korean war, who are starting farming. They are beginning at a time of high costs of land and equipment. They are exposed to the small farm, dairying, price and cost handicaps that other farmers face. Uncle Sam provides their on-farm training, but it's up to them to acquire land to farm.

If any farmers anywhere have a stake in the future, these veterans have. If anybody knows about the squeeze on the family farm, or the troubles of dairymen, or the effects of price pegging, they should know it. Their letter:

"The veterans agricultural classes of Mankato," it begins, "after having discussed the farm problem in their classes, would like to make the following suggestions:

"1. Cancel dairy support prices in exchange for a free market for grade A milk throughout the entire United States.

"2. Cancel crop supports in exchange for the Department of Agriculture handing over all of the surplus commodities it holds to the State Department who would use it to fight communism. These commodities would be held off national and world markets. Commodities going out of condition could be sold on the national market and replaced with fresh stock from the national market.

"We believe that without the load of all the Government-held surpluses, we can adjust production to the present demand.

"3. We do not believe that the family farm is in danger of dying. It is just becoming larger.

"4. We would like to see some program developed to help rehabilitate those farmers who are squeezed out as family farms grow in size.

"5. We endorse Public Law 480 (providing for sales of farm exports for foreign currencies) and would like to have more research in developing new crops and more uses for old crops.

"6. The Government program of renting land from farmers is dangerous if it returns the farmer over 5 percent on his investment as it may attact outside investors. However, it could be a good safety factor in case of a depression if it paid enough to cover taxes and bare cost of living."

Of the 19 signers, Robert Carleton and Ed Tapio are instructors. The other signers are Luverne J. Carey, Jerome Peters, Marvin Rosin, Alvis More, Eugene Hager, George Scholtz, John H. Gehms, Martin Ulmen, Donald Thompson, Marlyn Doss, Robert Vogel, Gordon Holmgren, Robert J. Fasnacht, Russell Christensen, Erwin Tischer, Maurice Jongbloedt, and Ronald Kozitza.

So there's food for your farm thinging. Agree with them or not, you must admit that these young veterans brought home from Korea a lot of courage and readiness to ask a fair field and fewer favors for tomorrow.

Compton, Calif., Junior High School Orchestra Wins National Recognition—The Only Elementary School Orchestra To Be Thus Recognized

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I have pleasure and natural pride in presenting to your attention the following article which appeared in the Compton Herald-American, Compton, Los Angeles County, Calif., a valued newspaper issued daily in the great 23d District which I represent this my 12th year in this great legislative today.

You will note therefore that this channel of important news in that important city headlined its issue for Thursday, March 27, 1958, emphasizing that the Compton City Schools Festival Orchestra had received worthy national recognition.

I know you and all the other Members of this Congress join with me in congratulating all those connected with the Compton City Schools Festival Orchestra.

The newspaper article follows:

SCHOOL ORCHESTRA WINS NATIONAL RECOGNITION—RALPH MATESKY IN SPOTLIGHT WITH 102 LOCAL PUPILS FETED

The Compton City Schools Festival Orcherstra, under the direction of Ralph Matesky, has received the distinctive honor of being the only elementary school orchestra in the United States to be officially invited to perform at the National Music Educators' conference being held in Los Angeles this week. The orchestra consists of 102 pupils from the Compton city schools. Although there are 130 children in the regular festival orchestra, the conference officials requested that only 100 pupils participate because of the limited accommodations at the Biltmore ballroom where the orchestra performed on Tuesday of this week. The children who took part were chosen on the basis of musicianship, scholarship, amount and quality of practice, and the kind of instrument played.

YEAR AND ONE-HALF TIME

The average length of time that these youngsters have studied is a little over a year and a half. The orchestra consists of fourth-, fifth-, and sixth-grade pupils, and one third-grade child. Not more than 40 percent of the children take private lessons. About one-half are fifth-grade children who have had only 1 year of beginning training in the Compton City schools, and no orchestra training before October of the current school year. The orchestra has established a nationwide reputation from its previous appearances, and has received many superior ratings in group competition.

The music played at the performances, much of which was written or arranged by the conductor, Ralph Matesky, is of junior high difficulty and most of it has been learned since the first of the year. The selections played at the concert were Holy, Holy, Holy, Dykes-Matesky; Hymn of Brotherhood, Beethoven-Matesky; Andante from Surprise Symphony, Haydn-Isaac; Cowboy Rhapsody, Ralph Matesky; Allegretta Grazioso, Shubert-Gordon; Train Ride, Ralph Matesky; When Johnny Comes Marching Home, Lambert-Matesky.

The members of the Festival Orchestra who participated in the performance are:

First violins: Cindy Richter, Julie Tupy, Jeanne Goodhue, Lynda Adkins, Sherry Boatwright, Patty Pursley, Carl Bell, Janice Budd, Elizabeth Chase, Judy Kennedy, Melody Newman, Evelyn Gonzales, Kathleen Joseph, Ronnie Franklin, Cathy O'Neal, Robin Berson, Celestine Ash, Susan Swift, Carolyn Joseph, Christine Ford, Pamela Fountain.

Second violins: Candace Halverson, Carole Weekes, Joyce Wynn, Cathy Oswald, Pamela Thompson, John Kendrick, Rita Winters, Julie Sprague, Roberta Sims, Diane Gardner, Karen Risvold, Doris Wilberg, Roberta Haft, Cheryl Bak, Brenda Watts, Shirley Shields.

Cellos: Barbara Morrison, Denise Mills, Shannon McWhorter, Mary Lou Taylor, Mary Sue Kennedy, Margaret Kuehl, Sharon Tahue, Brenda Hudspeth, Jodine Causey, Carolyn Reed, Andrea Flemons, Stephenie Moore, Marilyn Reed, Susan Hust, Debra Haslitt.

String basses: Mary McVay, Carolyn Lee, Jerry Scott.

First flutes: Marilyn Thornton, Jeanette Moon, Lenore Schwankovsky, Nancy DeFoer, Ryba Tregilgas.

Second flutes: James Foreman, Mary Alice Snapp, Sharon Jones, John Fitzgerald, Penny Hayward.

First clarinets: Jerry Criner, Bill Holt, Keith Pernworth, David Blosover, John Grady.

Second clarinets: Bruce Emarine, Ronnie Eddings, Tommy Bruster, Gary Lefman, John Belmer.

Saxophones: John Lerwick, Don Myers, Tommy Corbett, Bill Lahr.

Bassoon: Joan Caldwell.

First trumpets: Fred DeLeon, Wayne Wartian, Davis Sweet, Mike Pringle, Mike Gordon.

Second trumpets: Steven Smith, Danny Bent, Irvin Dixon, James Church, Robert Tropez.

Trombones: Mike Melvin, Marc Berger, Danny Fry, Mike Preston, Paul Rogers, Bobby Baker.

Percussion: Danny Miller, Fred Lenk, Mike Buller, Richard Elsmore, Paul Hale.

Piano: Margaret Mueller, Janice Waller, Beverly Wood.

Secretary Benson Still Has Friends

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2, 1958

Mr. GOLDWATER. Mr. President, in these days, when most of the country seems to take delight in attacking Secretary of Agriculture Ezra Taft Benson, it is heartening to me to find that two of Arizona's outstanding newspapers back Ezra Taft Benson.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Secretary Benson Still Looks Good," published in the Arizona Daily Star of March 5, 1958, and an editorial entitled, "Benson's Farm Goals Worth Backing," published in the Phoenix Gazette of March 10, 1958.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

SECRETARY BENSON STILL LOOKS GOOD

The stanch defense of Secretary of Agriculture Ezra Taft Benson by President Eisenhower is a credit, not only to the Secretary, but to the President who refuses to sacrifice sound service for expediency.

Secretary Benson has advocated flexible price supports for agriculture, which would only aid commodities when they needed aid and which would eliminate a portion of the ever-mounting surplus. A surplus which, despite the advocates of rigid price supports, increased steadily under that system.

The political critics of Secretary Benson, or at least most of them, are in position to know that he has been telling the truth about agricultural price supports and surpluses. But the truth is not politically palatable, so they attack the Secretary and demand his resignation. This demand has been bluntly rejected by the President.

It is to be hoped, for the benefit of real agriculture, that Secretary Benson stays on. For it will be only through the acceptance of several hard truths that agriculture will be able to come near standing on its own feet and begin producing for use rather than for waste in storehouses and for price supports.

It is true that in some instances the land-bank experiment did not work out as satisfactorily as Secretary Benson had hoped. It is true that it was exploited in some instances by agriculturists, but that exploitation was made possible by the technicalities of the law, as passed by Congress, and not by the administration of it.

Most certainly the record of the high, rigid price supports is one which no true farmer

wishes to continue. In cotton, for example, they brought into the business a group of opportunists who put marginal land into production purely for the Government subsidy attached. The rigid price supports boosted the cotton price beyond its true value in the markets of the world and brought into being numerous substitutes for cotton, substitutes which took over jobs cotton had been doing very well. The better cotton farmers have bluntly repudiated this program.

One of the most unpalatable truths Mr. Benson has told his political critics is that the marginal farmer with the too-small unit, who cannot survive without Government aid, and whose farm provides an extremely small portion of the Nation's produce, cannot be justified economically.

Within the past week some of those Republican Congressmen who have been calling for Benson's scalp have changed their tune. They have finally come to admit that the true farmers believe Benson, even when he tells them that he cannot cure all their ills at once, and that the political farmers should not be the deciding voice in the matter.

It appears that the President's hope for a sound agriculture is gaining ground and mostly so because of his stanch support of a man who has placed his bets on the common sense of the common people.

BENSON'S FARM GOALS WORTH BACKING

President Eisenhower should be sustained by the people for putting principle above politics in refusing to dismiss Secretary of Agriculture Benson. In all cases of expediency, versus the broad national interest the latter should be paramount. Both Mr. Benson and Mr. Eisenhower are to be congratulated for adhering to that fundamental in the face of carping criticism coming from temporary interest.

Mr. Benson has been fighting the farmers' battle. Even most of the politicians acknowledge privately that high rigid price supports have aggravated the difficulties of the farmers and have caused, not reduced, the massive surpluses which have plagued both farmers and taxpayers.

The Secretary of Agriculture has won the respect and confidence of large segments of voters because he is courageous and honest, because he is pursuing constructive policies.

His policies are helping most farmers. Farm prices in January were 4 percent above a year ago and 10 percent above 2 years ago. Income per person on farms last year was the highest on record. Farm exports last year were 68 percent higher than in 1953. The buildup of surpluses has been reversed, and higher prices have resulted.

The real problem the farmers face today is the excessive cost of the things they have to buy. Congressmen who really want to help the farmers should turn their attention to that end of the stick.

Meanwhile, they should realize that the best politics is what is right. In this case, that means helping, not hindering, Ezra Taft Benson in his efforts toward gradually freeing American agriculture from the government meddling.

Capitol Prayer Room

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 6, 1958

Mr. HOSMER. Mr. Speaker, Poet Albert Brighton, recently paused to comment on the Prayer Room set aside in the Nation's Capitol. I thought it appropriate during this Easter season to share with you Brighton's words written under the title "Lawmaker's Refuge":

A place of prayer where Congressmen,
Great Senators, and men
Representing God, and people
Of our country enter when
There is cause for meditation,
A grave decision to be made.
Men of wisdom, from our sod
Seek greater wisdom from our God.
Men who link their destinies
With Him who knows before
How distant is our harbor,
How peaceful is our shore.
How pure the hearts professing
Their faith in Him to know,
The things that we have need of,
The course our step should go.

Shopping By Mail

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2, 1958

Mr. SPARKMAN. Mr. President, it seems that those with things to sell are slow to realize that the buying public is waiting for price cuts.

There have been examples around over the country which amply illustrate that people will buy if they feel the prices are right. The greatest stimulus we can have toward ending this recession would be to have price adjustments to get the people who have the money saved up back into the habit of buying.

There appeared in the Wall Street Journal a couple of days ago a front-page article entitled "Shopping By Mail."

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHOPPING BY MAIL

(By Kenneth G. Slocum)

CHICAGO.—"We priced a cotton sheet blanket at 99 cents, just about cost, in a recent catalog sale circular and figured we should sell about 7,000 of them. Instead we sold 37,737."

Speaking is Harold F. Dysart, veteran mail order executive of Montgomery Ward & Co. Other mail order officials have noted similar evidence that people are looking harder for bargains.

"People are shopping a lot more carefully than they did a few months ago," says Modie J. Spiegel, chairman of Spiegel, Inc., another large Chicago-based mail-order firm. "The lower prices featured in the catalogs are luring people away from retail stores. We have noticed a marked pickup in new mail-order customers in recent months."

PRICE FACTORS

Lower prices are one of the key reasons why catalog sales are running counter to the downtrend in business experienced by many types of retailers. Catalog prices, exclusive of delivery charges, average about 5 percent lower than the charges for the same items in the retail stores of Ward and Sears, Roebuck & Co., officials of these two firms say.

But there are other important factors behind the mail order sales surge. For one thing, the catalog business is particularly strong in nonindustrial sections of the country, many of which have been relatively unaffected by the recession. Even in urban areas, mail-order men reason, a growing number of consumers are turning to catalogs rather than buck traffic jams and parking problems.

In any case, mail-order firms are striving mightly to take full advantage of their upturn. They're stepping up catalog promotion efforts and are offering a wider selection of more stylish, colorfully displayed goods.

Upshot: "In the first half of 1957, catalog sales were up a bit over the first half of the prior year," says Montgomery Ward's Mr. Dysart. "But in the second half, they climbed even more. In January and February they were strong as horseradish."

GREATER STRENGTH

Comments John A. Barr, the company's chairman: "In this period of depressed business, it's interesting to note that overall catalog sales are showing greater strength than are our retail stores."

Ward's catalogs, which contribute about one-third of the company's total sales, were the major factor in the 14.9 percent increase in sales in January, compared with the like month a year earlier, the company says. Catalog sales also increased in February, although total Ward volume, which included 553 department stores, declined very slightly. Catalog sales are running well ahead of a year ago in March while overall sales are on the soft side, the company says.

"Sales in January and February were more than 8 percent over the like months of 1957," comments Mr. Spiegel of Spiegel, Inc., which does some 99 percent of its volume through catalogs. This rise in sales followed a fourth quarter in which the company's catalog sales reached a record high.

"Catalog sales since January fared relatively better than did retail," reports a Sears spokesman. A similar report comes from Robert W. Jackson, president of Aldens, another big mail order house.

MARKED CONTRAST

The catalog sales climb contrasts not only with these companies own stores' business, but also with the experience of nonfood retailers generally. Department store sales, as indicated by Federal Reserve Board figures, slipped below year-earlier levels last fall. They have lagged about 2 percent behind 1957 thus far this year.

Ireland and the Irish

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. FEIGHAN. Mr. Speaker, under leave previously granted, I insert in the RECORD the address I delivered on March 17, over radio station WERE in Cleveland, titled "Ireland and the Irish":

IRELAND AND THE IRISH

The virtues of St. Patrick have been extolled by enlightened speakers for many centuries, particularly on the historic occasion which we celebrate today. It is on this day that the Irish the world over claim all of the great virtues of St. Patrick as a birthright

and laud the great benefits he brought to all mankind.

The world of our times is gripped by tensions, the intensity and scope of which have never before been known. These tensions result from issues which go to the very root of civilization and challenge every essential of the existing order. The world is cruelly divided. This division is represented on the one side by the many nations and millions upon millions of people who are subjected against their will, to the humiliations of life under atheistic communism. On the other side are the still free nations of the world who are struggling to maintain those great human values which St. Patrick inculcated in the Irish race and which formed the foundation of the civilization of which we, as Americans, are a part. Never before has the world been so divided into two opposing camps in which there appears to be no room for compromise without abandoning our principles and in which there is so much at stake.

This cruel division of humanity did not occur by accident or overnight. It has been long in the making and traces itself to the rise of materialism as a philosophy of life, when men began to take the position that there was no place for God or the laws of God in the affairs of men. With the advancement of these concepts, the struggle in which we are now engaged began. Long before Karl Marx and his perverted concept of life was enunciated in the Communist manifesto, others had advanced the notion that man was nothing more than an animal who was born to die without responsibility to a Creator and without the necessity of accounting to that Creator when the toils of this life are done. It was Karl Marx, however, who formulated all these ill-conceived concepts into a doctrine and added to it unworkable economic theories which spring from the belief that man is no more than a pawn in the industrial age.

The roots of the present crisis began when Karl Marx and his handful of associates issued the Communist Manifesto in 1848. This Manifesto was the rule book of gross materialism and the guidebook for the militant atheists of all hues and colors. Historically, it is important to note that it was at this time that the great human values epitomized by the life and times of St. Patrick were brought into sharp and open conflict with the new dogma of atheistic materialism.

The greatest gift St. Patrick brought to the people of Ireland, and thus to the world, was an appreciation of the individual dignity of man. St. Patrick taught that man as a creature of God, held a sacred place, and therefore, demanded respect and reverence from his fellow man. Man, as St. Patrick taught, was the highest creature of God, being imbued with an immortal soul and being on earth for a few fleeting years during which he is given the free will to perform good acts or evil acts in relation to himself and to his fellow man. It was thus that the Irish people learned of the special dignity of man and the great responsibility that accompanies that dignity. The responsibility being that each of us would be required to give an accounting to our Maker for our stewardship.

From these teachings of St. Patrick the Irish race became imbued with the belief in the dignity of man. This belief, in times of great trial and tribulation, is supported by their belief in the fatherhood of God. Both by teaching and by hard experience they learned that they could not fail in the great mission which had been assigned to them by St. Patrick. That is, the Irish could not fail in their mission on earth, so long as they remained steadfastly attached to the teachings of St. Patrick.

This explains the happy fact that everywhere the Irish went in the world—and there is scarcely a place on earth untouched by the influence of the Irish—they brought with them this great and inspiring message of the dignity of man. It is understandable therefore, how the Irish quickly became a part of their newly adopted lands, rising to offices of the highest public trust in practically every new country. Possessed of great physical and mental vigor they were endowed with many other human characteristics which make them lovable to their fellowman. By nature they were always prepared to make whatever sacrifice was necessary for the good and betterment of their fellowman, but above all else, the Irish brought the message of the dignity of man to their daily work, in the discharge of their responsibilities, and indeed even in their humiliation in the face of intolerance and persecution. It is dedication to that belief which made the Irish revolutionaries and fighters for those inspiring ideals which cause men to rise above the ordinary.

Teh Declaration of Independence reflects the desire of the Founding Fathers to build a nation under law based upon a recognition of the dignity of man while seeking protection of Divine Providence in the pursuit of a better and happier life for all. The challenging words of the American Declaration of Independence struck the hearts and minds of men all over the world—so strong was its appeal for justice, individual liberty and human freedom. It was natural that millions of Irish would flock to the shores of America and would seek to play their part in the fulfilment of the great dream expressed in that Declaration by our Founding Fathers.

It has always been the mission of the Irish in the United States, no matter how many generations removed from the old sod, to give life and meaning to the inspiring promises of the American Declaration of Independence. With each passing generation this opportunity brought new challenges and sacrifices, together with epics of heroism and sadness which grow out of periods of severe trials and national crises. In these circumstances, the Irish have made their indelible mark in the annals of American history.

Today our Nation faces its greatest test as we seek the path of justice and freedom for ourselves and all our fellow men. The cruel division of humanity caused by the application of atheistic materialism by the Russian Communists to almost one-third of the population of the world is forcing decisions upon us which could well spell the difference between peace and another war in our times. It is this unnatural division of humanity which is responsible for the dangerous political tensions which grip the world. The sad experiences of our own lifetime teach us that such political tensions, unless checked, lead to war.

The Russian leaders have been clamoring for another conference at the summit with leaders of the free world. They claim that such a conference is necessary to remove political tensions. In their vast public propaganda drive to force such a summit conference, they hold out both the threat of atomic warfare and a skillfully disguised illusion of disarmament. The technique of threat and escape, for which the Russians are historically notorious, is offered to the people of the world who hunger for a just and lasting peace. The threat is that unless the Russian terms for peace are accepted, all mankind will be doomed to the spectre of atomic warfare, delivered by intercontinental missiles. The escape offered is that by accepting the Russian terms we in America and other free people will be spared the horrors of atomic missiles only to be taken over and ruled by the Russian Communists through more peaceful methods. This is precisely what the Russians mean by their offers of peaceful coexistence, the technique through which they would cause us and other free nations to abandon our national defenses and after a few humiliating years be forced to surrender our individual liberties and meekly submit to the tyrannical rule of atheistic materialism.

The Russian package deal is as follows:

1. That the United States give formal recognition to the status quo as it now exists in the world. In other words, we are being asked to recognize the right of the Russians to occupy, exploit, and destroy all the many nations now under occupation by the Red army or controlled by the Communist puppet regimes set up by the Russians. We are thus being asked to sanction the cruel division of humanity which is responsible for world tensions. This would mean turning our backs upon our proven allies, the oppressed people behind the Iron Curtain, and deserting all the moral and political principles which rest at the very foundation of our civilization. In a very special sense this would mean condemning our brethren now suffering under the heel of atheistic communism to a perpetual hell on earth.

2. That a general disarmament agreement be entered into, which hard experience tells us would not be worth the paper it was written on, whereby the free world would denounce the use of the weapons of defense which alone have stood in the way of further Russian armed aggression against the nations on the periphery of the vastly expanded Russian empire. We are being asked to trust the Russian Communists, to believe that they will abide by such an agreement. The record shows that any agreement entered into by the Russians is good only so long as it serves their objective of world conquest, and no longer.

This is the package deal the Russians are presenting as their price for peace. They have it well disguised but only the most naive fail to see this pattern.

If, in a moment of weakness, we acceded to such package deal, we would set our country and the entire world upon an unavoidable course of war. Freemen will never surrender peacefully to the tyrant, and war would thereby result at a time selected by the Russian leaders and in circumstances which they believed promised swift and certain victory.

Nevertheless, there are strange voices in our midst calling for a try at peaceful coexistence with the Russian Communists. Others support recognition of the status quo on the basis that by so doing we would in some mystic manner wipe the slate clean and cleanse the world of all tensions and strife. But these strange voices seem unmindful of and have no concern for the dignity of the individual and the inherent right of all people and nations to liberty, freedom, and self-government.

The road to a just and lasting peace, at best, is not an easy one. It demands patience, courage, sacrifice, and unwavering support of those basic ideals and principles which grow out of a recognition of the essential dignity of man. It permits no room for compromise of those ideals and principles and rejects secret agreements arrived at in the tempting atmosphere behind closed doors.

It is dedication to this spirit which causes the Irish Government to be denied membership in the North Atlantic Treaty Organization, because to gain membership she would be required to sign an agreement to recognize the status quo in Ireland for a period of 20 years. Ireland by right belongs in NATO but the price of admission would have required her to desert her ideals and principles. She could not more recognize the right of the British Government to maintain the unnatural division of Ireland than we Americans would wish NATO to recognize the unnatural division of Europe caused by the Russian Communists.

It is paradoxical that NATO, by proclamation has adopted the principle of the right of all people and nations to self-determination and self-government, yet the British as members of NATO refuse this right to Ireland and thus exclude her from membership in NATO.

Third Annual Compton, Calif., AMVETS Has Community Importance and Great Benefit

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 26, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of a newspaper article appearing in the Compton Herald-American for Thursday, March 27, 1958, showing that the national patriotic group designated as AMVETS in the important city of Compton, Calif., has for this third year sponsored an important community-wide annual spelling bee therein between the several junior high schools located in that important city in the great 23d District which I represent this my 12th year in this great legislative body.

I know you and all the other Members of this Congress will join with me in congratulating this great patriotic order on continuing this sponsorship, and the winners thereof, and also congratulating the adult members of the faculty of the respective schools which entered same:

TOP SPELLERS GET HONORS IN COMPTON

The AMVETS-sponsored third annual spelling bee found 2 pupils of Franklin D. Roosevelt Junior High School taking first and second place out of the first 3 awards. This competition, held at the Roosevelt school's auditorium Thursday evening, March 20, was between the top 5 ninth-grade spellers in each of the 6 junior high schools of the Compton Union High School District. Roosevelt won the beautiful AMVETS trophy last year, also, when Roosevelt pupils took the first four places in the 1957 contest

Miss Carolyn Miller, daughter of Mr. and Mrs. Lawrence A. Miller, of 1010 North Soan Avenue, Compton, as first-place winner, will have her name engraved on the AMVET trophy. Miss Leanna Grimm, daughter of Mr. and Mrs. Gordon Grimm, of 607 South Pannes, Compton, was the winner of the second place award.

THIRTY TOP SPELLERS

This AMVETS spelling bee not only brought honor to the 30 top spellers of the 6 district schools, but to teachers and community leaders alike. Teachers spent many hours a week for several weeks coaching the contestants, working with the pupils before and after school hours. It is significant that the pupils did not miss other classes to drill on spelling, but gave of their own free time, as did their teachers; those at Roosevelt being Mrs. Virginia Adams and Mr. Edwin Burk, English teachers, as well as Mrs. Lenna Hawks and Mr. John Comrie.

The public-spirited community leaders taking part in the contest may have a better idea of the impact they made on the youth of our schools through the words of Paulette Runyon, one of the Roosevelt participants, who said:

"The AMVETS spelling bee brought high honors to Roosevelt pupils, but the spelling participants weren't the entire program. Of course, the part I'm speaking of are the judges. They gave each contestant the benefit of a doubt, and made certain that the speller had made an error before saying so."

NAME JUDGES

The judges were Joseph L. Causey, member of the board of education; Lloyd Bulloch, Compton city attorney; and Mrs. Mary Holmes, teacher of English at Enterprise Junior High School.

Praise was also given to Miss Blanche Goodrich, district curriculum coordinator, for the patience and clarity which she pronounced the words.

AMVETS Comdr. William C. White, and Contest Chairman Joseph L. Causey have the thanks of the entire district for making the spelling bee possible.

Thanks go also to the following assistants for their part in making the whole affair go so smoothly: Mrs. Frances Alexander, Willowbrook; Mrs. Louise Harrison, Whaley; Mrs. Estelle Schultz, Walton; Mrs. Helen Tibby, Roosevelt; and Mr. Ed Moore, Roosevelt principal, chairman.

Honorable mention and special recognition go also to all the contestants, who by their consistent and untiring efforts won the right to represent their schools in the contest. These are the 1958 contestants: Bunche Junior High School, Clarence Broussard, Janet Dening, Yvonne Hicks, Nancy Ramirez, Linda Valdivia, Louise Amos, alternate; Enterprise Junior High School, Robert Dixon, Juanita Dunn, James Hammond, Roy Jefferson, Jo Ann McCauley; Roosevelt Junior High School, Leanna Grimm, Janice Lindsay, Carolyn Miller, Jane Nelson, Paulette Runyon; Walton Junior High School, Irene Cooper, Hideko Kawahara, Bonnie Marnach, Ken Perkins, Margaret Shaw, Carol McCrellias, alternate; Whaley Junior High School, Marsha Greenwood, Ken Hauck, Valera Hilliard, Janet Jones, Luke Swartz, Arthur Jarman, alternate; Willowbrook Junior High School, Elaine Coleman, Lynn Harris, Katherine Owens, Helen Reynolds, Mamie Scott, Bonnie Downey, alternate.

Some Thoughts on the Winning of the First 8-Hour Day

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the United Mine Workers Journal of April 1, 1958:

SOME THOUGHTS ON THE WINNING OF THE FIRST 8-HOUR DAY

April 1, 1958, is the 60th anniversary of the winning of the first 8-hour day agreement between coal operators and the then infant United Mine Workers of America. It was on the 1st day of April in 1898 that the UMWA realized the No. 1 objective it had been struggling for since its establishment on January 25, 1890, in Columbus, Ohio.

First efforts to win a shorter work day from the coal operators in 1890 had been unsuccessful, and the union called a strike in 1891. But the shutdown failed except in a very few areas. Seven years later the shock troops of American labor succeeded as they have succeeded time and time again down through their history.

They succeeded, as President John L. Lewis has said, because "a man who works in a coal mine is not afraid of anything except his God; * * * he is not afraid of injunctions, or politicians, or threats or denunciations, or verbal castigation, or slander. * * * He does not fear death."

It would be well for the younger men in the UMWA to reflect on the struggles that their brothers of the 1890's and early 1900's went through to win the benefits that are enjoyed by America's mine workers today.

It would be well to pay honor to the memory of the UMWA's fourth international president, Michael D. Ratchford, who, with his fellow negotiators, wrested the first effective 8-hour day victory from the central competitive field operators (western Pennsylvania, Ohio, Indiana, and Illinois).

There is no final victory in the struggle of freemen to better their lot. The benefits of today probably would be incomprehensible to the men of 1898.

But all the goals have not been reached, and all the victories have not been won.

The men of the United Mine Workers of America must bear this always in mind.

Meany Amends Gompers

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. MACDONALD. Mr. Speaker, as you know, the Senate Labor Subcommittee, which Senator JOHN F. KENNEDY, of Massachusetts, is chairman, has recently held hearings on labor legislation.

Yesterday the syndicated column of John Herling had a very thoughtful analysis of the labor problem confronting not only the Senate Labor Subcommittee but the entire Congress.

I am sure my colleagues will enjoy reading this interesting article, Meany Amends Gompers, which was published in yesterday's Washington Daily News.

The article follows:

MEANY AMENDS GOMPERS

(By John Herling)

AFL–CIO President George Meany apparently has decided to modernize the basic political philosophy of the late great Samuel Gompers, founder of the American labor movement. Mr. Gompers said, "Labor must reward its friends and punish its enemies." Last week Mr. Meany told Chairman JOHN F. KENNEDY (Democrat, of Massachusetts), of the Senate Labor Subcommittee, "God protect us from our friends." Senator KENNEDY, eyeing Mr. Meany intently, said, "I think so, too."

This open clash between the AFL–CIO president and the senatorial sponsor of many legislative bills regarded indispensable by organized labor surprised and shocked the packed old Supreme Court chambers where this exchange took place.

Senator KENNEDY has taken the lead as an advocate of bills to raise and strengthen unemployment compensation through the use of Federal standards, to widen the minimum-wage coverage to embrace 6 million more workers, and to protect communities which may be hit by imports.

Mr. Meany, with the barest film of civility, hit out at a bill introduced by the Massachusetts Senator on the disclosure of union finances and the regulation of union trusteeships.

Although Mr. Meany was also testifying on the administration bills, which are far more restrictive, his clear and present target seemed to be Mr. KENNEDY.

When the Massachusetts Senator explained that his bill was in fact a mild measure and was the product of consultation with a group of leading teachers and professors at Harvard, MIT, Yale, Brown, and Princeton, friendly to the labor movement, Mr. Meany exploded with his wrathy remarks about friendship and the labor movement.

Why did Mr. Meany lash out as he did? First, he was mad at Senator KENNEDY for signing the majority report of the McClellan committee which he insists was a smear on the whole labor movement. Second, Mr. Meany has been under considerable pressure from many of the building trades unions who have been under investigative fire—with more of such probes to come. Mr. Meany had resisted such pressure for more than a year. Building trades spokesmen have been especially mad at AFL–CIO support of the McClellan committee. Third, Mr. Meany fears that consideration of any labor bills—however mild—might open up a whole series of antilabor proposals which could not be controlled.

Senator KENNEDY reminded Mr. Meany that organized labor's failure to offer alternatives to the Taft-Hartley law resulted in the passage of that law in 1947. He urged AFL-CIO leaders to make their own suggestions, not just rely on blanket opposition to everything in this field.

Prof. Archibald Cox of Harvard Law School, head of the advisory group on the Kennedy bills, said: "We deeply believe in a strong and independent labor movement. Senator KENNEDY's bill offers mild measures aimed at serious abuses. It contains nothing which could impair the strength or activity of any union; otherwise none of us would support the measure. The labor movement would be stronger and more effective if the bill were enacted and the abuses were stamped out."

Col. William T. Roy

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. GROSS. Mr. Speaker, I regret that I was ill with an influenza virus and unable to be present on the floor when many Members joined in felicitating Bill Roy on the occasion of his birthday and expressed their sincere regrets that he was retiring as assistant parliamentarian of the House of Representatives.

It was my good fortune to meet this fine gentleman when I came to Washington a few days after my first election. No one was more helpful to me at that time, and through the years that have followed he was never too busy to give me of his time and wealth of knowledge of the rules and procedures of the House. It was therefore a shock to me to learn earlier this year that he contemplated retirement.

Bill Roy is not only a parliamentarian of unquestioned knowledge and repute; he is an oustanding American citizen. A zealous defender of the prerogatives of the House of Representatives, he also knew full well the meaning of the Constitution in its relation to orderly government and the preservation of this republic.

This public servant has made a valuable contribution to his country and I wish both he and his wife all the good things of life in their retirement.

Taxes, Tariffs, the Taft-Hartley Act, and Socialized Hospitalization and Medicine

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1958

Mr. CANFIELD. Mr. Speaker, Mr. Alfred F. Metz, chairman of the board and chief executive officer of the Okonite Co., of Passaic, N. J., has sent recently to the Members of the New Jersey congressional delegation a statement giving his views on taxes, tariffs, the Taft-Hartley Act, and socialized hospitalization and medicine. The statement follows:

THE OKONITE CO.,
Passaic, N. J., March 12, 1958.

TAXES

For many years industrial job growth has been retarded for the lack of risk capital. As it takes considerable risk capital to provide a productive job, we have for the last 25 years prevented several million jobs from ever coming into being simply because of the thoughtless high progressive rates in individual income taxes. As a matter of fact, these high rates have undoubtedly restricted revenue rather than promoted it. The Sadlak-Herlong bills provide a sane approach to ultimate higher revenue and more productive jobs. I strongly urge your support of this legislation.

TARIFFS

Why the frenzy on the part of our administration should continue to destroy the substance of our skilled crafts and large investment in industries which should be protected not only from an employment standpoint but from a defense standpoint, is beyond my comprehension. There is no one qualified legally or morally to say who should stay in business or who should lose jobs and investment. We have for years been trying to assist all countries in making themselves completely independent industrially and yet our administration apparently now would sacrifice any domestic industry at the drop of a hat. I submit that every industrial craft and industrial investment for jobs in this country deserves the loyal support of our Government. Without all of them, the present attractive markets in the United States would disappear. It is true that we should welcome foreign competition but it is wishful thinking to expect that we could possibly compete without tariff corrections to take care of disparities in wage levels and standards of living. We have always contributed a large volume to international trade and at the same time have protected our industries until recently. Unless sanity in this respect prevails, we will lose many industries and many jobs. There are altogether too many irresponsible statements made as to the offsetting jobs created by either exports or imports. We need all of our industries and all of our jobs and foreign competition on an equitable basis can be had. Peril point and escape clauses are not even palliative as one must face bankruptcy before relief is available. I strongly urge that any reciprocal-trade program be carefully drawn to give all of our industries a reasonable opportunity to compete domestically.

TAFT-HARTLEY

It should now be evident that labor leadership cannot be allowed to run rampant if our workers are to be reasonably protected and reasonably free from dictatorship controls. Certainly, the union member is entitled to know exactly what has been done with his contributions to unions. He is entitled to vote secretly for strikes, he is surely entitled to vote secretly for union officers and to require majorities of entire memberships when voting for union officials. He is entitled to the right to join or not to join a union. He is also entitled to protection from secondary boycotts under any circumstances. I strongly urge your support of the individual workman who has a right to expect your recognition of his freedom from domination by either employer or union leadership. S. 76 and H. R. 9307 embrace necessary boycott curbs for the protection of the livelihood of the individual union member.

SOCIALIZED HOSPITALIZATION AND MEDICINE

The degree of advance in the care of the sick and disabled is unlimited in the hands of voluntary organizations. We have come a long way in providing insurance for these hazards, we will continue to improve and extend such insurance under voluntary auspices. Such measures as the so-called Forand bill (H. R. 9467) will unquestionably lead to socialized hospitalization and medicine and additional social security taxes. This bill is essentially the same as the Wagner-Murray-Dingell bills of 1941–51 except that for the time being it would only apply to a smaller segment of the population. I am a governor of the Passaic-General Hospital and find that every voluntary hospital to whom I have spoken is strongly opposed to the Forand bill. I strongly believe that it would create objectionable controls on the part of the Federal Government, it would become much too expensive, would open the door to political expediency and excessive cost and would ultimately destroy the roots of the individual efforts which are solely responsible for our advance in the case of the sick and disabled. The needy are getting reasonable attention from both doctors and hospitals. Improved care is noticeable. I strongly urge your opposition to H. R. 9467.

For Benson Support

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1958

Mr. CURTIS of Missouri. Mr. Speaker, I submit the following which appeared in the Tuesday, February 25, issue of the Kansas City Times. It is an excellent appraisal of Mr. Benson. I am sure it will be read with interest by my colleagues.

FOR BENSON SUPPORT

(By Roscoe Drummond)

WASHINGTON.—It's politics—and some consider it the politics necessary to survive—which is causing a group of Midwestern Republican Congressmen to try to force President Eisenhower to fire his Secretary of Agriculture, Ezra Taft Benson.

Have no doubt about it, Mr. Benson is not going to cave in. He is not going to resign unless the President tells him to resign. And every bit of evidence to date is that Mr. Benson has the President's full confidence, that his farm policies are carrying forward exactly what Mr. Eisenhower favors and that the White House believes that to offer up the Secretary of Agriculture as a symbolic sacrifice for the short-term gain of a few votes would damage the Republican party far more than it would help.

My own conviction is that Secretary Benson is a source of strength to the administration and that his political execution would hurt the Republican party. True, his efforts in behalf of agriculture have offended some farmers and some farm politicians. But Mr. Benson has prestige and respect and popularity throughout the Nation and with all segments of voters because he is honest and courageous and because he is pursuing a constructive, even if partly unpopular, set of policies.

Most of the politicans, both Republican and Democratic, know that high, rigid price supports have aggravated the difficulties of the American farmer and have caused, not solved, the massive surpluses. Mr. Benson has had the guts to say so and to act upon his convictions in the interest of dealing with the causes, not just with symptoms, of the farm problem.

The real problem the farmer faces today is not a declining income from what he sells, but the rising prices he has to pay for what he buys. The post-Korean downtrend in farm prices, which started in 1951, has been stopped. Income per person on farms last year, including income from all sources, was the highest on record. Farm exports last year were 68 percent higher than in 1953. The buildup of surpluses has been reversed.

Right now Mr. Benson looks exceedingly secure. There are not too many public officials of his transcendent integrity and moral stamina available to any administration. I incline to the view that the President can't afford to lose him.

Rehabilitation and Restoration of the East Front of the Capitol Building

EXTENSION OF REMARKS

OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. BROWNSON. Mr. Speaker, interest grows throughout the Nation in favor of an understanding rehabilitation and restoration of the east front of the Capitol Building rather than its destruction and the substitution of a 20th century imitation of modern marble.

I have received mail from many different areas of the United States, as well as from my own district in Indiana, urging the preservation of the Capitol by passing legislation such as H. R. 11113, which I introduced to prevent the razing of this historic east front. These are letters from historians, architects, teachers, club women, and other informed citizens sensitive to the mood of history. They cannot understand how legislation to destroy this front and move it 32 feet further to the east was ever acted on favorably by Congress.

Their criticisms fall into different categories:

First are those who believe the destruction of this historic facade demonstrates unnecessary irreverence for a historic shrine. Fifty-eight years after President Washington laid the first cornerstone on September 18, 1793, a manuscript by Daniel Webster was deposited in another stone. This message in his own handwriting, concluded:

All here assembled, whether belonging to public life or to private life, with hearts devotedly thankful to Almighty God for the preservation of the liberty and happiness of the country, unite in sincere and fervent prayers that this deposit, and the walls and arches, the domes and towers, the columns and entablatures, now to be erected over it, may endure forever.

Others question the wisdom of spending from 10 to 17 million dollars to gain so little floor space. One constituent writes:

There have been 96 Members of the Senate and 435 Members of the House of Representatives for many years now. What makes you fellows think you need to spend well over a hundred million dollars for new buildings and destroy the front of our Capitol? What are you doing with the square footage already available in the Captitol building * * * using it or hoarding it?

An effective interest in the remodelling of the Capitol without defacing the east front has been evidenced by the widely known editor of the Indianapolis News, C. Walter McCarty who has devoted four of his recent columns to a discussion of this issue. When Mickey McCarty says, Indiana listens, for his reputation as a toastmaster, friendly seer and Hoosier citizen is second to none.

Mr. Speaker, under unanimous consent, I include in the RECORD his columns from the March 12, March 13, March 17, and March 19 issues of the Indianapolis News. I am only sorry the format of the RECORD does not let us print the familiar picture of the smiling Irish editor who writes such good sense under the caption "Mickey McCarty Says":

[From the Indianapolis News of March 12, 1958]

MICKEY MCCARTY SAYS

Fellow taxpayers, a mounting tide of opposition appears to be developing throughout the 48 States to plans of a congressional commission headed by Speaker SAM RAYBURN, of Texas, to alter the historic east front of the United States Capitol, the cornerstone of which was laid by George Washington 165 years ago.

The opposition has been rising rapidly, not only in Congress but outside as well. Such organizations as the National Trust for Historic Preservation, the American Institute of Architects, the Society of Architectural Historians, the Daughters of the American Revolution and other patriotic and professional groups have protested what they term the "proposed desecration of this national shrine."

FEASIBILITY

However, Marion County's Congressman CHARLES (CHUCK) BROWNSON has thrown a monkey wrench into the plans of the Commission by introducing a bill in the House to block the project. At the same time Senator A. WILLIS ROBERTSON, of Virginia, has introduced a measure in the Senate calling for a delay on the proposed Capitol changes until there is a more thorough investigation of the feasibility of the move.

The east front of the Capitol is the side facing the plaza, where tourists try to find parking places, and where every United States President since John Quincy Adams has been inaugurated. It is estimated the changes will cost—as a starter—$10,100,000. They would add enough space to the central part of the Capitol for 62 new offices, 2 large restaurants, 9 storage rooms, and a private corridor through which Congressmen could walk without bumping into constituents or sightseers.

ARGUMENT

The new east front of the Capitol would be a duplicate of the present one, except that it would be built of marble rather than sandstone. However, the appearance of the entire building would be different because of the change in its profile. Capitol Architect J. George Stewart says it would improve the looks of the Capitol by getting the dome more nearly in the center. Opponents think otherwise.

The storm of criticism has so far had no detectable impact on the special Commission which Congress created in 1955, and armed with blank-check authority to do the remodeling. In addition to Speaker RAYBURN, the Commission is composed of Vice President Richard M. Nixon, Senate Republican Leader William F. Knowland, House Republican Leader Joseph W. Martin, Jr., and Stewart.

INSPIRATION

Speaking on behalf of his bill to block the project, Congressman BROWNSON said: "Many Americans make a pilgrimage to Washington and their Capitol but once in a lifetime. For many of them that happy visit of inspiration comes while they are in high school. If this plan is carried out they will be denied the historic view of their Capitol for 3½ years while construction is underway. They never again will see the work of three of the Nation's early and most gifted architects, Dr. William Thornton, Benjamin Latrobe, and Charles Bulfinch."

BROWNSON said that at a time when there is so much concern about money for defense and money for sparking the economy, the sum of $10 million seems a pretty high price to pay for a noontime restaurant, a few more committee rooms, and a private passageway to keep legislators away from their constituents.

"Perhaps, instead of providing a new east front to the Capitol," he added, "the taxpayers may decide to provide the historic Capitol with "a new group of less-expensive Congressmen if this spending spree isn't stopped."

[From the Indianapolis News of March 13, 1958]

MICKEY MCCARTY SAYS

Fellow taxpayers, Indiana architects, historians, and other interested groups are mobilizing their forces to oppose the proposal of a congressional commission to remodel the front of the United States Capitol at a cost to the taxpayers variously estimated from $10 million to $25 million.

Edward D. James, Indianapolis architect, who for several years has been serving as a member of the Committee on Preservation of Historic Buildings for the American Institute of Architects, and who also is a member of the American Society of Architectural Historians, is devoting his time and effort these days to rallying opposition to the move to alter the Capitol.

OUTLINED

In a letter to Congressman CHARLES (CHUCK) BROWNSON, who has a bill pending in the House to block the project, James out-

lined the view of the groups he represents in opposition to the alterations. He feels that in the proposed changes, Americans "will lose a most treasured piece of our heritage we never will be able to regain."

His letter to BROWNSON, in part, reads as follows:

"In the years I have been in the practice of architecture, I have been vitally interested in the restoration, and in the preservation of existing architecture which has significance in our American way of life. Most of my activity has been centered around Indiana and I have left the rest of the country up to other people. However, I find that the east facade of the Capitol is about to be destroyed and the fine architecture of Dr. William Thornton, which was approved by George Washington, will disappear with that destruction."

HOT ARGUMENT

Continuing, the James letter said:

"I feel the urgency to advise you that the architects of America, and I am sure many hundreds of thousands of other people, are interested in blocking this expansion program and in solving the necessity for expansion in a different manner. I understand the plans have been completed and contracts have been awarded. I hope you believe as much in the preservation of this Capitol Building as I do, and I hope you will join this fight for a different solution for this necessary construction."

The proposal to remodel the Capitol has set off about the hottest architectural argument since President Truman built a back porch on the White House. Opponents use such terms as "vandalism" and "desecration" to describe their feelings about substituting a modern replica for the actual walls that have served as a backdrop for so many historic events, particularly the inauguration of our Presidents.

BRITISH TRIED

One frequently voiced complaint has been that the congressional commission, headed by Speaker SAM RAYBURN, of Texas, is about to do what the British where unable to do when they tried to destroy the Capitol by fire in the war of 1812.

Critics say the extra office space added to the Capitol would be the most expensive ever built—an average cost of $200 per square foot. They point out this is about 10 times the going rate for public buildings. They also note that Congress will get huge amounts of additional floor space soon from two buildings already under construction. These are a $64 million third House Office Building and a $23,400,000 second Senate Office Building.

If its extra room that's needed these two new structures should be more than ample to satisfy money-spending Representatives and Senators.

[From the Indianapolis News of March 17, 1958]

MICKEY MCCARTY SAYS

Fellow taxpayers, for the past week or so, news reports out of Washington have contained various suggested panaceas by administration leaders for perking up our sagging economy. Included among them have been tax cuts, public-works programs and others, but not one word has been heard so far about a reduction in Government spending.

Tax cuts and huge public-works projects won't mean a thing unless they are accompanied by a parallel reduction in spending. Otherwise there's likely to be more runaway inflation. A review of the proposed military and foreign-aid budgets should find a fertile field in which to begin trimming. And, of course, there are many other spots where millions in taxpayers' money could be saved.

TWENTY-FIVE MILLION DOLLARS

One of the latter, in the belief of many, would be to put a stop to the proposed expenditure by a congressional commission of a sum variously estimated from $10 to $25 million to rebuild the historic east front of the Capitol Building to provide more offices and restaurants. A bill to halt this project has been sent to the Senate floor with the unanimous endorsement of the Senate Public Works Committee, and soon will be ready for floor action.

A somewhat similar bill has been introduced in the House by Congressman CHARLES (CHUCK) BROWNSON, of Indianapolis. It apparently is still resting in a committee in the House, the speaker of which is SAM RAYBURN, of Texas, who is chairman of the 5-man Commission which had slipped through an appropriation for the Capitol changes without a hearing.

REJECTED

The Senate bill would remove the requirement that expansion of the Capitol plant for offices and restaurants be according to a 1905 plan of pushing the east front of the Capitol about 32½ feet out into the plaza. This plan had been rejected 3 times because of public demand before it was authorized by Congress in 1955 in the unusual legislation practice of inserting it in an appropriations bill. No hearings on it were held.

Among those who have voiced objections to the proposed changes in the Capitol is Senator HARRY F. BYRD (Democrat, Virginia). He said that after studying the report of J. George Stewart, architect of the Capitol, he could find nothing "which justifies the proposal to destroy one of the most historic facades in the world." He said the Capitol should be maintained in a safe state of repair and in condition befitting the majesty of the Nation. Changing the appearance, he added, "would be both undesirable and nonessential."

COSTLIEST

The American Institute of Architects, the National Trust for Historic Preservation, the Daughters of the American Revolution and other historic and patriotic groups across the country are waging a vigorous fight to stop the Capitol project. The Architectural Forum has estimated, if the present plans are carried out, the cost will be $200 a square foot, which is close to four times the costliest working space ever erected. Some one likened it to the time they paved the lobby of the old Teller Hotel in Central City, Colo., in gold.

The idea of changing this architectural masterpiece just to give Congressmen more elbowroom at lunch and a more convenient place to park, appears to many as utterly ridiculous. As a Baltimore newspaper said: "It makes about as much sense as modernizing the Washington Monument by plastering it with pastel-colored porcelain, or putting aluminum trim on the White House to bring it up to date."

[From the Indianapolis News of March 19, 1958]

MICKEY MCCARTY SAYS

Fellow taxpayers, maybe we are in such a big hurry to get into outer space and to the moon that we cannot afford to waste any time on symbols of the past. At least that is the way it looks as a congressional commission keeps moving ahead in its efforts to change the east front of the United States Capitol.

Though opposition to the change has been mounting daily from the American Society of Architects, the National Trust for Historic Preservation, the Society of Architectural Historians, Daughters of the American Revolution and various State and local historical societies, the congressional commission, headed by Speaker SAM RAYBURN of Texas, continues to ride roughshod over the opposing groups.

HEARING

However, the Senator Public Works Committee last week unanimously voted a favorable report on a bill to block the project and the measure is due to come up for action on the Senate floor at any time. Earlier, the subcommittee, under the chairmanship of Senator PATRICK MCNAMARA, Democrat, of Michigan, conducted a 1-day public hearing when, for the first time, architects, historians and others presented arguments against the changes. A bill similar to the one in the Senate has been introduced in the House by Congressman CHARLES (CHUCK) BROWNSON, of Indianapolis.

Under the proposed plans, that section of the historic Capitol, for which George Washington laid the cornerstone in 1793, will vanish and will be supplanted by a new and shiny marble front. Down also will come the portico where every president since John Quincy Adams has taken the oath of office. The walls which the British were unable to destroy when they fired the Capitol in 1814 also will disappear.

REMINDER

The Commission, which is ready to let contracts for the changes in the Capitol apparently is operating on the theory that "it's none of the people's business." However, in the past, men in public office have been made aware in no uncertain terms that the buildings in which they work don't belong to them, but to the people.

This was the case when President Truman tried to revamp the executive offices at the White House in 1946. Public demand stopped the project. There are many parallels in the White House proposal and the one now being pushed to redo the east front of the Capitol. Both plans were conceived and put into motion without public hearings. No authorized legislation went through Congress. Funds for the projects were tacked on at the last minute to appropriation bills.

WRECKERS

President Truman had wanted additional office space, a cafeteria, and a 2-story auditorium added to the west wing of the White House. Historical and architectural organizations led a last-ditch fight against the changes. When the project finally was halted by Congress, a section of fence had been torn down and wreckers were at work in the basement of the building.

Later, when the main section of the White House was found to be in need of repair, the interior was rebuilt from cellar to roof without damage to the exterior walls and without destroying the architectural beauty of the building. Walls just as historic as those of the White House will disappear if the east front of the Capitol is reconstructed in accordance with proposed plans. If you want to stop this you better write your Senators and Congressmen right away.

Weather Control

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. GROSS. Mr. Speaker, recently I began the reading of the final report of the Advisory Committee on Weather

Control and soon noted what appeared to be inconsistencies, if not contradictions.

Unable to resolve these conflicts in the reports and findings of the advisory committee, I wrote to Mr. H. C. S. Thom, Chief Climatologist of the United States Weather Bureau, a veteran of that service and a participant in the studies that were made.

For the information of my colleagues I present herewith the reply from Mr. Thom:

UNITED STATES
DEPARTMENT OF COMMERCE,
WEATHER BUREAU,
Washington, D. C., March 28, 1958.

Hon. H. R. GROSS,
House of Representatives,
Washington, D. C.

DEAR MR. GROSS: I can readily appreciate the concern expressed in your letter over the apparent inconsistency in the final report of the Advisory Committee on Weather Control. In one place that report states that no increase was detected from seeding in flatland areas while in another place it implies that an effect was detected in the flatlands. The flatlands, of course, include the State of Iowa and all of the area east of the Rocky Mountains. I am glad, therefore, to aid in whatever way I can to clear up this conflict and to help explain the results of the report for those who may wish to use these results in forming their own judgments.

The evaluation of seeding operations in the flatlands for winter operations (October through May) were under my immediate direction. The results we obtained for the flatlands and other areas were clearly stated in volume II, Technical Report No. 2, page 44, lower right column. The so-called physical type methods of evaluation (vol. II, p. 257) which produced the confusion had already been reviewed in Technical Report I, page 7, first paragraph, and rejected on the basis of our experience and the considerable experience of others as being totally lacking in adequate sensitivity for objectively detecting increases from cloud seeding. Most commercial operators who had originally invented these methods had long since discarded them as unsatisfactory for demonstrating effects.

Although these methods are alleged to be physical they are, if anything, more dependent on statistical methods than the statistical evaluations prepared by the committee. This arises from the fact that the results produced by the method are of a highly subjective nature and therefore subject to widely varied conclusions by different meteorologists. This being the case a statistical method of summarizing such impressions is imperative in order to reach a single conclusion in the scientific sense. However, the results furnished by the method are in terms of ratios or percentages of rainfall which are really statistics with the unfortunate property of being highly variable and very difficult to analyze. This makes it very difficult to compare and give meaning to such ratios or percentages in respect to cloud seeding effects.

Notwithstanding the critical role of statistical methods in the interpretation of the results from such physical evaluation, neither the methods nor the results were referred to the committee's panel of outside statistical experts for review and recommendation. This panel is now repudiating these results as giving no evidence either for or against of the effectiveness of cloud seeding in the flatland areas. The committe itself, long before this matter came to the attention of the statistical panel, had ordered an erratum note to be inserted in volume I. This in effect removed the Atlanta Project for Study of Flatland Cloud Seeding, pages 22–23, from volume I placing it in volume II, outside the scope of findings by the committee itself. This action was based on the fact as stated by the committee that the Atlanta project report "has not been reviewed by the committee and consequently is no part of the committee findings." It is unfortunate that the Committee Final Report, volumes I and II, had already been printed before this erratum was prepared since there is the possibility that the erratum may not come to the attention of all readers.

The following summary is given with a full realization of the critical economic importance of water to the farmer and others not only in Iowa but in much drier areas of our country. Having experienced the critical drought of 1947 in Iowa and having studied the general drought problem in other more critical circumstances, I could be under no illusions about the importance of the water shortage problem. This problem, however, must be faced realistically, for it will lead to nothing but bitter discouragement to promise results from methods which have little possibility of bearing fruit. Rainfall cannot be created from clear air where there are no clouds or by false methods, any more than 0.1 inch of water will break a drought.

The results of the committee's evaluations of the effect of cloud seeding in the augmentation of rainfall may be summarized simply as follows:

1. No increases from cloud seeding were detected under either winter- or summertime conditions in the flatland area, which includes Iowa and the area east of the Rocky Mountains.

2. Increases averaging about 15 percent were detected in wintertime seeding over mountainous areas along our west coast and in a similar mountainous climatic area of France.

These latter results are not essentially different from those reported by the United States Weather Bureau as early as 1953. They are interesting for several reasons: (a) they are based on by far the largest amount of actual operating data ever assembled. (b) The same methods showed both increases and no increases, indicating that the methods were capable of recognizing either situation. (c) The results agreed exactly with a set of physical hypotheses concerning cloud seeding effects stated 9 years ago by the highly regarded Scandinavian meteorologist, Prof. Tor Bergeron.

Professor Bergeron summarizes his views in the Swedish journal Tellus, January 1949 as follows: "The discussion * * * can be summarized by stating that any seeding, natural or artificial, mostly will be of little direct use for supplying water to the earth's surface, especially at low levels if there is no condensation by systematic lifting going on within the clouds, even when they are releasable but not released. Having shown on the other hand, that the convective (flatland summer) and frontal clouds (flatland winter), on an average, cancel from the list of such clouds, the main remaining possibility for systematically causing abundant artificial rain must consist in seeding cloud masses produced by a stationary and slanting upward motion. * * * These conditions are, as a rule, only realized within very special orographic cloud systems." (Like those occurring on our mountainous west coast.)

Several other important facts are now clear from Bergeron's work, the work of others, and our own work. Cloud and rain-producing processes must be already present if known methods of seeding are to have a chance of being effective. Thus, cloud seeding is definitely not at present a means for combating or overcoming drought. Furthermore, the processes which Bergeron and the work of others have indicated as effective can only produce very small rates of rainfall, on the order of less than 0.1 inch per hour. This requires that rainfall must persist for several or many hours before appreciable amounts could accumulate. In summer in Iowa such rates of precipitation even if possible, would hardly wet the surface of the soil if they only lasted the duration of a typical afternoon thunderstorm. There is no physical basis or convincing experimental evidence that one can seed a summer cloud from the ground or from an airplane by known seeding methods and produce a shower of rain which does not evaporate before reaching the ground.

The effect on thunderstorms during the summer months over the flatland area is so doubtful that it is not even certain that seeding might not decrease rainfall instead of increasing it. For example, there are some vague indications (see Technical Report 4, p. 55, vol. II) that cloud seeding might suppress hail formation when used properly. If this is possible, then it would follow that such suppression might also be accompanied by a reduction in rainfall. This, however, does not seem to be a point of very much importance, for the number of silver iodide generators generally used in present commercial seeding practice is so small that there is great doubt whether the output of the ordinary generator network ever effectively reaches a thunderstorm except under unusual circumstances. For hail-suppression experiments I have recommended a generator for at least each 10 square miles of area to insure that a thunderstorm sucks up the output of at least 1 generator. This far exceeds the present density in most commercial operations.

Following the preliminary issuance of our evaluation reports and following much other development by a large number of scientists working in the field of weather modification, the American Meteorological Society saw fit to issue the following statement on weather modification in the bulletin of that society for June 1957:

Although this statement covers a broader field and is aimed more at the scientific than the practical aspects it is not in disagreement with our findings or the discussion given above.

"STATEMENT ON WEATHER MODIFICATION

"The Council of the American Meteorological Society has assumed the responsibility for issuing periodic statements on the scientific aspects of weather modification and control. Two previous statements were issued in 1951 and 1953. In view of the additional information on this subject that has become available in the interim the council deems it desirable to issue a revised statement of its opinion at this time. The statement on weather modification approved by the society's council at a meeting in Washington, D. C., on April 29, 1957 is as follows:

"1. The seeding of a supercooled cloud with dry ice will usually convert at least a portion of the cloud to ice crystals. Under appropriate conditions such seeding may release variable amounts of precipitation from fairly deep and active cumulus clouds in which the natural release of precipitation has not already started. Small, inactive cumulus clouds are usually dissipated when they are seeded with dry ice. Holes or valleys may be produced in supercooled layer clouds or supercooled fogs by seeding them with dry ice.

"2. The injection of water drops or hygroscopic salt particles into active, warm (non-supercooled) cumulus clouds may release some rain. Small, inactive, warm cumulus may often be partially or completely dissipated by seeding them from above with water drops or other particles; such dissipation may occasionally be accompanied by the release of very light rain.

"3. In some cases warm fog and stratus may be dissipated in restricted regions by the use of certain hygroscopic materials.

"4 At temperatures below about −5° C. silver iodide crystals are known to affect supercooled clouds in much the same way as dry ice. The frequent absence of clear-

cut results following the operation of ground-based silver iodide generators is believed to be due to one or more of the following causes: (a) the failure of the seeding material to reach the supercooled clouds, (b) the absence of clouds that could be affected by seeding, (c) the decay of the silver iodide, (d) the presence of an ample supply of natural ice crystals, (e) topographical influences which defy quantitative measurement.

"5. Cloud seeding acts only to trigger the release of precipitation from existing clouds. The release of substantial amounts of precipitation by either natural or artificial means requires the preexistence of an extensive moisture supply in the form of moist air currents and of active cloud-forming processes. For this reason the meteorological conditions most favorable for the artificial release of precipitation are very much the same as those which usually lead to the natural release of precipitation. This factor plus the extreme natural variability of precipitation makes the evaluation of the effects of seeding difficult and often inconclusive.

"6. Evaluations performed by independent agencies have yielded reasonably convincing evidence of increases of precipitation due to the operation of ground-based silver iodide generators only for operations conducted in cold weather in regions where forced lifting of the air over a mountain range is an important factor. No convincing evidence has been presented which indicates that ground-based silver iodide seeding affects the amount or character of the precipitation over flat country. This does not prove that there are no such effects but suggests that if present they are too small to be detected by statistical analyses of data available to this date.

"7. In the absence of a truly quantitative theory of precipitation the best present means for obtaining a quantitative estimate of the effect of seeding on precipitation is through the statistical evaluation of randomized cloud seeding experiments. The randomization is necessary to insure valid interpretation of the results and a long series of such experiments may be necessary to detect small effects.

"8. Present knowledge of atmospheric processes offers no real basis for the belief that the weather or climate of a large portion of the country can be significantly modified by cloud seeding. It is not intended to rule out the possibility of large-scale modifications of the weather at some future time, but it is believed that, if possible at all, this will require methods that alter the large-scale atmospheric circulations, possibly through changes in the radiation balance.

"9. All cloud seeding operations should be considered as experiments since the techniques are still under development and there is no sound basis for the quantitative estimation of the results in advance of the operation. As experiments they should be designed primarily to yield optimum scientific results. There is good reason to believe that improved returns from cloud seeding will result from a sound experimental approach and this should be fostered by all concerned."

It would be farthest from my desires to leave the impression that I do not favor research in this field. I am firmly convinced that it is in the national interest to move ahead by further systematic research and sound experimentation, as my previous statements and published work will show. However, research is in the future, and the farmer and businessman deserve to know the present status of our efforts which is what I have tried to give above.

Sincerely,

H. C. S. THOM,
Chief Climatologist, Office of Climatology.

Mental-Retardation Legislation

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 18, 1958

Mr. MAY. Mr. Speaker, in a pamphlet entitled "The Educator's Viewpoint on the Retarded Child," the authors begin their presentation with the following statement:

One after another of our major health and welfare problems is responding to scientific and social advances—furthered by vigorous public action. Now, one of the most heartbreaking of all handicaps * * * mental retardation—stands at the gateway of public enlightenment.

I have long felt that it is not only important that we see this tragic problem which faces so many in its proper perspective, but that every possible action be taken to alleviate the suffering of both parent and child.

Connecticut's Senator WILLIAM A. PURTELL has played a leading role in developing legislative and community approaches which will have a great and positive effect. I know that the parents of retarded youngsters and the people interested in their education are indeed grateful to Senator PURTELL. Today, I would like to join the distinguished Senator from Connecticut in his efforts to broaden the program for the education of the mentally retarded.

Statistics are indeed cold, but they can be used to clearly demonstrate the necessity for understanding and action. Every day there are born in the United States 300 children who are destined to be mentally retarded. On the basis of every 100,000 of population, 3,000 children suffer from mental retardation; 700 from rheumatic heart; 350 from cerebral palsy; 300 from polio of the permanent variety; and 200 from congenital blindness. Rheumatic heart, cerebral palsy, and blindness have received considerable attention from the general public and are today reasonably well understood. Much work remains to be done in these fields, but a strong start has been made. Unfortunately, this is not the case with mental retardation. Research in this field has been, until very recently, limited to a few brilliant and dedicated men. Action to raise required funds and educating the public has been solely in the hands of the retarded children's associations throughout the Nation. These are small groups of parents of retarded youngsters who have voluntarily banded together to solve their own particular problems.

The National Association for Retarded Children has done yeoman work and is to be highly commended. Perhaps it would be well at this time, Mr. Speaker, to define mental retardation. It is a condition of impaired or incomplete mental development dating from birth or an early age—usually associated with slowness to develop and limited ability to learn, reduction of social aptitudes, and limited vocational capacity. This is a definition provided by the national association.

For too many years, the general public and, yes, even medical science have felt that institutionalization was the most intelligent course to follow. They are beginning to think in other terms, particularly along the lines of education. Small cooperative schools have sprung up all over the country. They are performing well a considerable task. The objectives of education for the retarded are divided into roughly three categories.

First. The educable or marginally independent—these individuals have an I. Q. ranging from 50 to 75. They can be trained to become useful members of society, performing many manual tasks that are necessary to our economy and society.

The second group are known as trainable or semi-independent—their I. Q.'s may range from 25 to 50. Here the objective is to train them in adequate habits of personal behavior and self-care.

In the third category, we have those referred to as dependent. Their I. Q.'s are under 30. These youngsters can be helped with proper training to indulge in many interesting activities and their personalities made more compatible. At present, only about one-sixth of the estimated three-fourths millions educable retarded are receiving schooling. Many things are required to correct this situation, but in my mind, the most important thing is to make provisions for the training of teachers especially qualified to instruct and aid the retarded.

Today, I am introducing a companion bill to that sponsored by Senator PURTELL, S. 395. It is designed to encourage expansion of teaching and research in the education of mentally retarded children by grants to institutions of higher learning and to State educational agencies. In the first instance, the bill would grant the Commissioner of Education authority to make grants to public or other nonprofit institutions of higher learning to assist them in providing training of professional personnel to conduct training of teachers in fields related to education of mentally retarded children.

In the second place, the Commissioner of Education would be authorized to make grants to State educational agencies to assist them in establishing and maintaining directly or through grants to public or other nonprofit institutions of higher learning, fellowships, or traineeships for training personnel engaged or preparing to engage in employment as teachers of mentally retarded children or as supervisors of such teachers.

Mr. Speaker, this bill represents, I believe, a sound approach vitally needed, which will be a major stride forward in solving the problem of educating and training the thousands of mentally retarded youngsters born every year. They can and must become useful members of society. I strongly urge action by the Congress in this session.

Charles Evans Hughes

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. JENSEN. Mr. Speaker, 96 years ago, on April 11, 1862, Charles Evans Hughes was born in Glens Falls, N. Y. From the day he received his law degree from Columbia University until his death on August 27, 1948, his was a career of dedicated accomplishment.

Mr. Hughes could be long remembered for his judicial wisdom and honesty. He was appointed Associate Justice of the Supreme Court by President Taft in 1910. He served 6 years in that capacity, resigning from the Court on the same day he received the Republican nomination for President. President Hoover appointed him Chief Justice in 1930, in which office he served until his retirement in 1941.

Mr. Hughes has gone down in history as a brilliant administrator. He ably served the State of New York as its Governor from 1906 to 1910. He devoted his talents to keeping the troubled peace as Secretary of State under both President Harding and President Coolidge.

Mr. Hughes was a courageous fighter in the political arena. As Republican candidate for President, he lost to President Wilson by the slim majority of 254 electoral votes to 277.

But, in my opinion, the highest claim to fame of Charles Evans Hughes was as an American patriot. Never have I heard words which moved me as much as what Mr. Hughes said on the 150th anniversary meeting of the First Congress of the United States, March 4, 1939. His speech will live in our hearts, as has Lincoln's Gettysburg speech. I inserted this speech in the CONGRESSIONAL RECORD of November 2, 1942. I am honored to have the privilege of inserting it once more, so that another generation of Americans may know the glory of their heritage.

Mr. President, Mr. Vice President, Mr. Speaker, Members of the Senate and House of Representatives, members of the diplomatic corps, ladies and gentlemen: I thank Senator Barkley from the depths of my heart for his very generous words.

Gentlemen of the Senate and House of Representatives, the most significant fact in connection with this anniversary is that after 150 years, notwithstanding expansion of territory, enormous increase in population, and profound economic changes, despite direct attack and subversive influences, there is every indication that the vastly preponderant sentiment of the American people is that our form of government shall be preserved.

We come from our distinct departments of governmental activity to testify to our unity of aim in maintaining that form of government in accordance with our common pledge. We are here not as masters but as servants, not to glory in power but to attest our loyalty to the commands and restrictions laid down by our sovereign, the people of the United States, in whose name and by whose will we exercise our brief authority. If as such representatives we have, as Benjamin Franklin said, "no more durable preeminence than the different grains in an hourglass," we serve our hour by unremitting devotion to the principles which have given our Government both stability and capacity for orderly progress in a world of turmoil and revolutionary upheavals. Gratifying as is the record of achievement, it would be extreme folly to engage in mere laudation or to surrender to the enticing delusions of a thoughtless optimism. Forms of government, however well contrived, cannot assure their own permanence. If we owe to the wisdom and restraint of the fathers a system of government which has thus far stood the test, we all recognize that it is only by wisdom and restraint in our own day that we can make that system last. If today we find ground for confidence that our institutions which have made for liberty and strength will be maintained, it will not be due to abundance of physical resources or to productive capacity, but because these are at the command of a people who still cherish the principles which underlie our system and because of the general appreciation of what is essentially sound in our governmental structure.

With respect to the influences which shape public opinion, we live in a new world. Never have these influences operated more directly, or with such variety of facile instruments, or with such overwhelming force. We have mass production in opinion as well as in goods. The grasp of tradition and of sectional prejudgment is loosened. Postulates of the past must show cause. Our institutions will not be preserved by veneration of what is old, if that is simply expressed in the formal ritual of a shrine. The American people are eager and responsive. They listen attentively to a vast multitude of appeals and, with this receptivity, it is only upon their sound judgment that we can base our hope for a wise conservatism with continued progress and appropriate adaptation to new needs.

We shall do well on this anniversary if the thought of the people is directed to the essentials of our democracy. Here in this body we find the living exponents of the principle of representative government—not government by direct mass action but by representation which means leadership as well as responsiveness and accountability.

Here the ground swells of autocracy, destructive of parliamentary independence, have not yet upset or even disturbed the authority and responsibility of the essential legislative branch of democratic institutions. We have a National Government equipped with vast powers which have proved to be adequate to the development of a great nation, and at the same time maintaining the balance between centralized authority and local autonomy. It has been said that to preserve that balance, if we did not have States we should have to create them. In our 48 States we have the separate sources of power necessary to protect local interests and thus also to preserve the central authority, in the vast variety of our concerns, from breaking down under its own weight. Our States, each with her historic background and supported by the loyal sentiment of her citizens, afford opportunity for the essential activity of political units, the advantages of which no artificial territorial arrangement could secure. If our checks and balances sometimes prevent the speedy action which is thought desirable, they also assure in the long run a more deliberate judgment. And what the people really want, they generally get. With the ultimate power of change through amendment in their hands they are always able to obtain whatever a preponderant and abiding sentiment demands.

We not only praise individual liberty but our constitutional system has the unique distinction of insuring it. Our guaranties of fair trials, of due process in the protection of life, liberty and property—which stands between the citizenry and arbitrary power—of religious freedom, of free speech, free press and free assembly, are the safeguards which have been erected against the abuses threatened by gusts of passion and prejudice which in misguided zeal would destroy the basic interests of democracy. We protect the fundamental right of minorities, in order to save democratic government from destroying itself by the excesses of its own power. The firmest ground for confidence in the future is that more than ever we realize that, while democracy must have its organization and controls, its vital breath is individual liberty.

I am happy to be here as the representative of the tribunal which is charged with the duty of maintaining, through the decision of controversies, these constitutional guaranties. We are a separate but not an independent arm of government. You, not we, have the purse and the sword. You, not we, determine the establishment and the jurisdiction of the lower Federal courts and the bounds of the appellate jurisdiction of the Supreme Court. The Congress first assembled on March 4, 1789, and on September 24, 1789, as its 20th enactment, passed the Judiciary Act—to establish the judicial courts of the United States—a statute which is a monument of wisdom, one of the most satisfactory acts in the long history of notable congressional legislation. It may be said to take rank in our annals as next in importance to the Constitution itself.

In thus providing the judicial establishment, and in equipping and sustaining it, you have made possible the effective functioning of the department of government which is designed to safeguard with judicial impartiality and independence the interests of liberty. But in the great enterprise of making democracy workable we are all partners. One member of our body politic cannot say to another: "I have no need of thee." We work in successful cooperation by being true, each department to its own functions, and all to the spirit which pervades our institutions, exalting the processes of reason, seeking through the very limitations of power the promotion of the wise use of power, and finding the ultimate security of life, liberty, and the pursuit of happiness, and the promise of continued stability and a rational progress in the good sense of the American people.

Billboards Mar Scenery Along New Interstate Highway

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. HALE. Mr. Speaker, throughout the 85th Congress I have been fighting for legislation to control billboards on our 41,000-mile Interstate Highway System. I have repeatedly pointed out that unless appropriate action was taken, this multi-billion-dollar public investment would soon be defaced by the billboard blight.

My predictions about the billboard menace are coming true right in my own State of Maine, as well as elsewhere. Maine opened its first section of the Interstate Highway last fall from Freeport to Brunswick. This highway passes

through some of the beautiful countryside so typical of our State.

But as the Portland Press Herald points out in an editorial, this stretch of highway "is beginning to go to pot." The scenic roadside areas are being camouflaged by ugly billboards. The Press Herald says:

The tourist who comes to Maine for a change of scene might just as well be driving through the Jersey marshes.

Thus Maine is one of many States vitally interested in the passage of legislation to help control billboards. My State has a $200 million tourist industry which, as it begins to thrive with the approach of summer, will help considerably to revive the Maine economy.

But the thousands of tourists who ordinarily flock to our scenic State certainly will not be inclined to return if they are fenced in by unsightly billboards.

I appeal to the House, on behalf of Maine and the entire American public, to vote tomorrow to accept the conference report on our highway bill. This report does make some provision for the protection of our new highways from the vilification and vulgarization of billboards.

Under leave to extend my remarks, I include the following editorial from the Portland Press Herald of March 24, 1958:

BILLBOARDS MAR SCENERY ALONG NEW INTERSTATE HIGHWAY

Last fall Maine opened its first section of the Interstate Highway from Freeport to Brunswick.

The road is a pleasure to drive, not only because it is a smooth, limited-access highway, but because it passes through some beautiful Maine countryside, with evergreen woods and fields on either side.

But because the legislature and Congress have failed to provide safeguards, already Maine's new highway is beginning to go to pot. The concrete surface is still smooth enough. But the landscape is disappearing behind ugly billboards.

The tourist who comes to Maine for a change of scene might just as well be driving through the Jersey marshes.

Interstate Route 95 through Freeport is fast becoming a potent argument for Congressman HALE'S continuing efforts to write billboard restrictions into interstate highway legislation.

Nixon Helps Mutual Security

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. HOSMER. Mr. Speaker, Vice President NIXON has been carrying the ball effectively regarding the mutual-security program. Long Beach Press-Telegram columnist Virginia Kelly has taken occasion to comment on the effectiveness of his work amongst Members from both sides of the aisle in the following column:

NIXON MADE BIG HIT WITH DEMOCRATS

"Come now and let us reason together" is a quotation from Isaiah which might serve as a text for Vice President NIXON. The Vice President would be astonished to know that he reasoned successfully a few days ago with a number of Truman Democrats.

The occasion was the bipartisan Conference on Foreign Aspects of United States National Security called by Eric Johnston at the request of the President. Mr. NIXON spoke and conducted a question-and-answer period at the conference.

In private conversations this week several Democrats have said that they found Mr. NIXON tremendously appealing because he spoke frankly and knew what he was talking about. They liked his modest and reasonable manner—"the soft sell" approach which did not attempt to ram his opinions down the throats of others.

One of the canniest Democrats who served in the Truman administration said: "Democrats are all crowing about the expected victory in 1958 and 1960. I believe we will win the Congress in 1958—but in 1960 NIXON will be a hard man to beat. I don't see anyone on our side as persuasive and attractive."

At his March 5 press conference the President commented on the Johnston conference and said that he plans to set up similar conferences on the State and local levels—which he hopes will win general support for his foreign-aid program.

To many Washingtonians it seems that Vice President NIXON could greatly benefit the President's program—and the GOP chances in 1958 and 1960 if Mr. NIXON were to speak at some of these key conferences.

The President said he did not know if any Congressmen were persuaded to change their votes on foreign aid by the conference. If the poeple are persuaded by State and city conferences—the Congress must abide by the decision of the people.

Ohio Bishops Oppose Right-To-Work Laws

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks I include the text of a statement of the Ohio Catholic Welfare Conference in opposition to the right-to-work proposal. The statement appeared in the Denver Register and was edited by Mr. John Wilfred.

OHIO BISHOPS' STATEMENT ON RIGHT-TO-WORK MOVE

Following is the text of a statement released by the Ohio Catholic Welfare Conference and signed by the bishops of the six sees in the State, expressing opposition to a proposal for a right-to-work laws amendment to the Ohio constitution. The movement is really a national one:

"On previous occasions attention has been called to the necessary distinction which must be made between the wisdom of enacting a law and the moral right to do so. Laws at times have been morally valid in themselves but inept and mischievous in their results.

"Right-to-work laws seem to fall into this category where a distinction is necessary. Man has a right and duty to work for his livelihood.

"This right cannot be circumscribed to the extent that a man loses his liberty of choice of a vocation, nor to the extent that he is deprived of an opportunity to support himself and his family. It does not follow that a man has the unconditional right to work in any and every industry or business at will."

RIGHT-TO-WORK LIMITS SHOWN

"For reasons of social justice it may be desirable and often advantageous to the common good that man's right be restricted by certain specified conditions.

"One of these imposed conditions may require that he belong to a labor union or at least be obliged to join the union subsequently, so as to share responsibility with his fellow workmen in support of the union.

"Just as a citizen of the United States is free to live in Ohio, Kentucky, or Pennsylvania, yet is obliged to observe the laws of the particular State as a condition of citizenship, so also in respect to his right to work; he is free to work in any industry of his choice, but only on condition that he abides by the rules adopted by that particular industry as a condition of employment.

"In other words, the right to work is a general right and cannot be denied to men in the aggregate; but the right to work in a specified industrial plant or business can be subject to special conditions."

INTERVENTION NOT ADVISABLE

"If State statutes were to make such a condition of union maintenance mandatory, we would oppose them as unwise, if not unjust.

"If State statutes, however, were to forbid the enforcement of such a condition, when mutually accepted by management and labor through collective bargaining, then we would be equally opposed. We believe it is unwise to encourage State intervention in this matter, whether it be in favor of right-to-work laws or against them.

"There are certain abuses which sometimes creep into the labor movement, but we are convinced that right-to-work laws are not the proper means to correct them. Corruption of certain labor leaders has been one of these current abuses.

"The denial of the democratic processes and the denial thereby of responsibility to the rank and file of union membership, whether in election to office or in the determination of union policy, are prolific causes of these abuses.

"The right to strike, for instance, cannot be denied under certain definite conditions; but it is a right which must be carefully circumscribed and limited by ethical or moral considerations.

"It cannot be exercised willfully, that is, without just and adequate cause, and even then only in matters of grave importance; with a favorable issue reasonably secure; and, lastly but most importantly, after all other peaceful means have failed.

"The right to picket is a concomitant right if a justified strike is called, but violence against persons and property is absolutely wrong and indefensible in conscience.

"Even the right of mass picketing is a very questionable procedure because of the physical intimidation involved and the proximate danger of overt acts of violence ensuing.

"There have been other issues which cause public concern, such as jurisdictional disputes where innocent third parties are made the victims. There are questions also of secondary boycott, which involve serious moral questions.

"All of these should be solved by an increased sense of social responsibility on the part of labor; and if that procedure fails to correct the evils then recourse would be had to regulatory legislation.

"If we have pointed out certain abuses in the labor movement, we do so not because we think their leaders alone are at fault. There have been serious abuses also on the part of management, such as unreasonable and unjust opposition to the right of union

organization, monopoly prices and profits, misrepresentation of products, and bribery and corruption not infrequently. Two wrongs, however, do not make a right, and the two evils do not cancel each other, but intensify the damage done to the common good.

"Much progress has been made in creating mutually satisfactory conditions in recent years in our labor-management relations. It would be socially undesirable to jeopardize the gains achieved by precipitating new causes of strife and ill will."

ETHICAL STANDARDS FOR OUR ECONOMY

"We think it is high time to introduce sound ethical standards into all phases of our economy. The present preoccupation with right-to-work laws may be a good occasion for all our leaders in the field of labor and in the field of management to examine their consciences as to their honest motivation, their ideals, and their practices.

"As to the present issue before the electorate in Ohio, we are convinced that a right-to-work amendment would not solve our problems, but might lead to a more intensified struggle for domination and thus postpone an era of peaceful cooperation.

Earmarks of Another Red Phony

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. CURTIS of Missouri. Mr. Speaker, consonant with the remarks I made on the floor of the House today, I enclose the following editorial published in Tuesday, April 1, issue of the St. Louis Globe Democrat, which points up with clarity Russia's most recent propaganda coup. As I mentioned today it is absolutely essential that we be realistic about the Russian overtures for the cessation of atomic-bomb testings. This fine editorial merits the reading of my colleagues.

EARMARKS OF ANOTHER RED PHONY

The Soviet announcement yesterday of a unilateral halt in nuclear weapons tests has all the significance of a unilateral venture in flapping propaganda. It promises little or nothing else.

Foreign Secretary Gromyko in a grandiloquent gesture proposed that Russia abandon future explosions of nuclear arms in furtherance of world peace. The idea is to prove to the whole globe, anyhow the most fearful and ill-informed areas, that Communist Moscow is the outstanding champion of international amity, the courageous foe of nuclear peril.

The Kremlin did not say when it would stop tests. It did not say for how long. It gave no guarantee it would fulfill its glittering pledge, save its own facile word.

The Communist Soviet's word has meant nothing during the history of the last decade. In more than 40 instances of solemn Russian treaties, formal pacts, top-level conventions, and promises, it has wantonly violated all but 5.

Mr. Gromyko did assert that if the United States, Britain, and other powers did not follow suit and bar atom and hydrogen tests, Russia naturally would have to reconsider its decision against such testing.

Obviously what the Kremlin seeks to accomplish is to pressure America, England, Canada, and all states into forsaking trial atomic explosions. The western nations would keep their word if they made such agreement. Moscow knows that. On its record there is little confidence, or none at all, that the Soviet would.

So the Kremlin postured before a nuclear-scared world as the great red father of peace. This is supposed to be a triumph of propaganda diplomacy, and doubtless will be greeted as such in many quarters.

We deeply doubt the sincerity of Nikita Khrushchev's Soviet. Unless the world is more naive than seems possible to conceive, the value of the propaganda rabbit whisked from the Red hat may be heavily discounted.

Russia has just completed a nextensive series of nuclear tests. It does not need to conduct any more for quite a while, nor does it want to. The United States long ago announced it planned tests in the Pacific during the summer. The Soviet would like to prevent these tests.

If Moscow were in earnest about curbing or junking nuclear weapons, it has the obvious and realistic opportunity—by negotiating through the United Nations Disarmament Commission. The Kremlin has boycotted this forum, which it contends is prejudiced.

What could be prejudiced about a pact to outlaw atomic warfare, for all nations under universal guarantees of inspection applicable to all on the same precise basis?

Let us not forget that the United States offered, voluntarily, to turn all its nuclear secrets and weapons over to an international agency after World War II. We then had all atom weapons in existence.

Russia refused. It wanted to develop its own nuclear arsenal. It still refuses to stop making nuclear weapons. It still refuses safeguards that would banish atomic war from the face of the globe.

Under these conditions America has no alternative but to continue testing, in our own manifest defense interests, until a realistic agreement can be made to end the nuclear hazard. The present Russian gesture has all the earmarks of a propaganda phony.

Ike Blows Whistle on Gravy Train

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. MUMMA. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include the following article from the Sunday, March 23, Patriot-News, Harrisburg, Pa.

I thought this was a very timely editorial and want to have it made a part of the RECORD in order that a lot of people may have the benefit of reading it and, too, because it refers to our good friend and most popular Congressman STEVE DEROUNIAN, of New York.

IKE BLOWS WHISTLE ON GRAVY TRAIN

A New York Republican Congressman belted the political farm legislation just passed by the politically-minded Congress as a gravy train for the giant farmer.

Representative STEVEN B. DEROUNIAN really has something there. The hastily enacted farm bill, freezing subsidies and acreage allotments and throwing the Eisenhower administration's flexible farm program into the wastebasket, is one of those gravy deals under which a big Mississippi cotton corporation farm gratefully accepted just short of $1.8 million from Uncle Sam for its 1954 crop and then came along 2 years later and unloaded its cotton on the Federal Government for nearly $1.5 million. A big Texas rice corporation farm cashed a Government check for $830,000 last year in return for pouring its rice into the surplus storage bins. And even the State of Mississippi just this past year collected $71,000 for not planting cotton on acreage of the Mississippi Penitentiary farm. These are only a few of the dollar-studded examples in a program of handouts so many argue is the salvation of our family farms.

Who fuels this long gravy train which has distributed some $14 billion in subsidies in the postwar years?

Just stop reading here for a moment and go look in a mirror. You'll see the answer.

You have a lot of company, American taxpayer and consumer.

You pay the tab twice, not only in taxes but in artificial higher prices.

That goes especially for the city slickers, the millions of them in this land. But it doesn't just break on city-country lines. The small farmer, who has to buy feed grain for his cattle, pays it, too, in this two-way stretch. And just look on in the supermarkets when farm families come to town. The weekly grocery bill is a family budget problem for them on a par with that of the factory hand whose only soil adventuring is a small patch of ground usually given over to a crop of crabgrass.

Talk to the Pennsylvanians who operate family farms. They don't have the rolling acreage, stretching out farther than a man can possibly walk in a couple of days, so wide an expanse that corporation-hired managers keep track of their farm activities by traveling around in an airplane. And then there is the bigtime individual farm operator, who isn't incorporated but who really knows how to cry the economy blues. His farm income is down so much that he's still driving last year's Cadillac.

Now there are many farmers in the South, Southwest, Midwest, and West who don't live on this lush plain of private airplanes and limousines. They aren't starving to death, but Uncle Sam's subsidies have kept them going. And they take as dim a view as any city slicker of these bigtime operators whose major crop isa million-dollar annual check from Uncle Sam or the not-quite-so-big-time farmers who are only in the hundred-thousand-dollar class.

This is a big part and parcel of the emergency program our political farmers in Congress now are claiming is needed to pull the little farmer out of the recession. The little farmer benefits the least from these discredited high and fixed subsidies, acreage allotments and mountainous surpluses.

If the surplus-producing farm program embodied in this Congress-passed bill had worked in the past, its advocates would be in a position from which the antirecession argument could be advanced. But that isn't true.

This is a program which promises no great benefits to the American farmer and no hope of making a gradual transition from governmental handouts and control to a position where he would stand on his own economic feet. And it would serve only as a dollar-

consuming drain on the pocketbook of the American consumer and taxpayer.

No wonder President Eisenhower has promised to veto this bill.

Four Million Five Hundred Thousand Americans Engaged in Import and Export Trade

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 20, 1958

Mrs. BOLTON. Mr. Speaker, in the near future the House will again consider an extension of the Reciprocal Trade Agreements Act. Believing it will be of interest to all of my colleagues, I ask unanimous consent to insert in the Appendix of the RECORD an editorial from the Cleveland Plain Dealer entitled, "The Education of Mr. Weeks." The editorial follows:

THE EDUCATION OF MR. WEEKS

To single out any one man as cleanup hitter from the long lineup of talent which went to bat this past week for reciprocal trade might appear presumptuous—the more so since we intend to pass over President Eisenhower, Adlai Stevenson, and other luminaries.

Our hero is Commerce Secretary Sinclair Weeks.

Three years ago, when the question of extending the Reciprocal Trade Agreements Act last was under consideration, the Department of Commerce played strictly handsoff. The real reason why has been disclosed by Mr. Weeks himself:

"I once was president of the Home Market Club—a protectionist organization—which later drifted into the American Tariff League," he admitted to a congressional hearing.

This we've known for years about Sinny Weeks, that he formerly was an ardent protectionist. His interests in a large New England silver company well may have influenced this position.

A man can grow, however. Time changes many things. Again, by his own recent admission to Congress, Mr. Weeks said:

"Don't infer from this that I've become a freetrader; I'm no more a freetrader than I am a hardshell protectionist. Basically, I consider myself a moderate."

Essentially, Weeks added, we need legislation to "make jobs and to protect jobs"—those 4,500,000 Americans engaged in import and export trade.

"It's either more trade or more trouble," he emphasized.

The metamorphosis of Sinclair Weeks has not been confined solely to speeches. He set the Commerce Department to work studying how exports and imports affected business within certain congressional districts, whenever and wherever Members of Congress sought this information.

Five studies were made on request—1 in Alabama, 2 in Michigan, and 2 in Connecticut. Four found that foreign trade contributed greatly to the welfare of residents of those districts. The last deemed it essential.

There was honest admission that foreign competition creates a certain small amount of dislocation in some industries. But this was not felt enough to merit torpedoing the greater benefits to the greater number.

Mr. Weeks recognizes these facts. He's changed. He knows the world has changed. And he's sold on reciprocal trade as the soundest method in the world of 1958.

If a charter member of the high-button-shoes protection society can be convinced, others should be too. Sinclair Weeks puts the Nation first.

Reflection During Holy Week Holds the Answer to Our Confusion and Uncertainty

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. PRICE. Mr. Speaker, in the midst of Holy Week, it is appropriate that we free our thoughts from the burden of concern with material problems and reflect on the ills of the spirit that are a heavier weight on man.

So often do we hear it said "we live in a time of crisis when the very future of humanity is at stake." Surely this is true. But man has always lived in peril. The pages of history run full with the story of the decline of civilizations. Vast populations have been decimated by plague. Kingdoms have toppled before the onslaught of new philosophies.

So our crisis is not man's first confrontation by an uncertain destiny. Our crisis is only of larger magnitude.

The following editorial from the St. Louis Globe-Democrat of March 30, written by the Most Reverend Albert R. Zuroweste, bishop of the Catholic diocese of Belleville, Ill., is an eloquent commentary on the meaning of Holy Week:

HOLY WEEK HOLDS THE ANSWER

(By the Most Reverend Albert R. Zuroweste, bishop of Belleville)

Since the end of World War II, the United States has experienced an unprecedented era of prosperity. Abundance of jobs and higher wages enabled Americans to reach a standard of living higher than ever achieved by any nation. In all material affairs we have surpassed anything that history had known before. Small deposits, time-payment plans adjusted to income, sent everyone on a buying binge. As our material prosperity surged to dizzy heights, our spiritual status failed to keep apace. Men forgot the fundamental truth: "For here we have no permanent city but we seek for the city that is to come" (Hebrews 13: 14).

Recent unemployment reports have caused some to consider seriously and to take inventory of both material and spiritual resources. What they have found has been disconcerting. It is evident that economic security is dependent on many factors and not the least of these is recognition of God as Supreme Lord and Master of the Universe and our dependence upon Him. Every child of God must be aware that God and His Divine Son have been forgotten and completely neglected by many while we enjoyed the blessings and benefits of material prosperity.

We are at the threshold of the sacred season when Christians should become aware of Christ's infinite love. Today begins the most sacred week in the Christian calendar. It is known as Holy Week, a week of special spiritual significance. It begins with the blessing of the palms and reaches a climax on Good Friday afternoon.

Palm Sunday commemorates our Lord's triumphal entry into Jerusalem; Spy Wednesday recalls Judas' secret session with the leaders of those who hated Christ, bargaining for Christ's betrayal; Holy Thursday records the last supper of the Master with His disciples and the institution of the sacrament of the Holy Eucharist; Good Friday tells the sorrowful story of our Savior's journey to Calvary, His crucifixion and death upon the cross. These are the great days of great sorrow. They begin with the crowds shouting joyous hosannas to the triumphant Christ and end with the same crowds becoming unruly mobs yelling: "He saved others, himself he cannot save. Let the Christ, the King of Israel, come down now from the cross, that we may see and believe him" (Mark 15: 32).

During Holy Week every Christian should follow in prayerful spirit the Saviour along the Way of Calvary. He should try to understand and appreciate the suffering, humiliation, and death of Christ, who died that "we may have life, and have it more abundantly." Particularly, should we recall that Christ died for us. His infinate love for mankind was a personal affair, and I was included in that love. This love for me He proved by making the supreme sacrifice on Calvary, and with His dying breath pleaded with His Heavenly Father: "Father, forgive them." This is the week of the year when we should thank God for His infinite love that saved us from sin and from hell. It is the week of the year when we beg for the grace to accept our crosses, sorrows, ills of life in reparation for our sins.

In this hour of confusion and uncertainty, Holy Week holds the answer to our problem. It is recognition of Christ, restoration of Him to His proper place in society, and a daily life of gratitude toward the loving, suffering, and dying of Christ of Calvary. "For without me you can do nothing." He says, and unless we restore Him to His rightful place in society, we will not solve our present economic difficulties. There can be no justice, no charity, no peace, no lasting joy without Christ. We have sung our Palm Sunday Hosannas, and now we must take our place at the foot of the cross, not with the howling mob who demanded Christ's death, but with the Sorrowful Mother of God and her holy companions.

Only a Real Reciprocal Trade Bill Can Save Our Markets

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 17, 1958

Mr. DORN of South Carolina. Mr. Speaker, unemployment and small business failures are on the increase. Farm surpluses are piling up. It is imperative that Congress enact a reciprocal trade bill that will gain us new foreign markets and increase exports to our present markets. Such a bill, H. R. 11250, based upon the reciprocal trade concepts of the late Cordell Hull, is presently before this Congress. I strongly commend to the attention of this House the following letter written by Mr. Donald Comer of Bonita Springs, Fla.

BONITA SPRINGS, FLA.,
March 28, 1958.

EDITOR,
Miami News,
Miami, Fla.

DEAR SIR: Because of the cartoon in your paper of March 10 defending free trade, I

wrote you in defense of tariff and quota protection for our textile industry and although there has been no acknowledgement, I am tempted to write you again because of Ralph Magill's column in your paper of March 25 and of Hal Hendrix's article in your issue of March 26.

President Eisenhower in the beginning promised that this legislation would be administered so as to injure no American industry. Congressman DORN's bill provides additional protective clauses that will safeguard the President's promise.

Mr. Hal Hendrix would have us think that we, together with other threatened industries, are jeopardizing our trade with Latin America. So far as I know, the objections to the President's bill apply principally to the imports from Europe and Asia, of which we already have an overabundance and manufactured competitively.

The imports from Latin America, iron ore, tin, nitrates, bananas, coffee, etc., are all needed and wanted in this country. These things displace no American product and shut down no America mill. If every American ate as many bananas and Brazil nuts and drank as much coffee as I do, they couldn't supply the demand.

Secretary Hull, the father of the reciprocal-trade program, meant it to be reciprocal and is quoted as interpreting it to mean: "Shipping what we have in overabundance that another country needs, and taking in payment what they have in overabundance that we need with some three-way trading." Such a program does not hurt our Latin American trade. I have recently heard some complaint from South America because of the slowing down of their iron-ore shipments to us. They surely know that this is because of the slowing down of our steel industry, because of the slowing down of our auto industry, because of the increasing imports of autos from Europe, particularly Germany. So what? Our immediate concern is Japanese and Hong Kong imports which are coming into this country only because they are cheap, and cheap only because they are made with wages only one-tenth of ours (highest in the world) and which are regulated by our Federal Government.

Sincerely yours,

DONALD COMER,
Chairman of the Executive Committee, Avondale Mills, Birmingham, Ala.

P. S.—Since writing the above, President Eisenhower spoke on the radio last night in defense of his misnamed reciprocal trade program. The morning paper headline reads: "Warns of Losses of Jobs at Home if Program Fails." Our concern (and his promised concern) is for the jobs already lost. We feel we are entitled to his first concern for these jobs and for their restoration in the plywood, California and New England fisheries, chinaware, silk scarfs, velveteens, textile fabric and garments, etc., with a growing threat of many more, all from Japan and, of course, I could mention many other things from Europe including wire and automobiles. The President in speaking of the things that we need from other countries in support of his reciprocal trade program listed such items as tin, nickel, rubber, iron ore. I could add to that list, of course, coffee, cocoa, bananas, nitrates, bauxite, etc.

The President knows and I think should have told his audience last evening that there is no lobby in Washington opposing the imports of such products and we already are paying for them with many things that we have in overabundance that these countries need, operating well within Mr. Hull's interpretation of his reciprocal trade policy: "Swapping what we have in overabundance that other countries need and taking in pay what the other countries have in overabundance that we need with some three-way trading."

The President mentioned the need of some countries for our surplus farm products. He could have reminded his audience that our farm surpluses were largely the result of Government subsidies and are sold at a loss at world prices. Would it not be better to give them away outright than to take partial pay in imports that shut down American industry. Give Japan some cotton, pay them to weave it and give it to the naked people of New Guinea and Borneo and Africa. They may like shirts and become new customers and may be new friends. We missed out in Russia and China.

The President in listing last night the imports we need over which there is no controversy unfortunately failed to mention those items I listed above, which yesterday and today are hurting American industry. This is why there is opposition to his reciprocal program, and why American industry must have the additional safeguards that are embodied in Congressman DORN's bill. Did the President see the picture of the breadline in the textile town of Biddeford, Maine. We want world trade and are supporting the Dorn bill, but the President forgets that the American wage is the highest in the world, undergirded by the Government itself, and what we make has to be protected from things made under such different conditions and different wage standards. We are not greedy nor whining, we refuse to be expended, and we are sorry that we can't get our story told under the same sponsorship the President furnished last night, he is the President of all the people, and our side is our honest opinion.

Alaska Treatment Shameful

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mr. ULLMAN. Mr. Speaker, statehood for Alaska is long overdue. For nearly a century we have continued to hold Alaska in semicolonial status, granting to Alaskans only the benefits of second-class citizenship. That such a situation cannot be allowed to continue seems to me elementary and I trust that Congress will act promptly to remedy it.

A recent letter by Mr. C. Girard Davidson, Democratic national committeeman for Oregon, appearing in the March 30 issue of the Portland Oregonian, points up the need for immediate statehood for Alaska. I think Mr. Davidson presents cogent arguments which dictate action at this time. Under leave to extend my remarks in the RECORD, I wish to include Mr. Davidson's letter:

ALASKA TREATMENT SHAMEFUL

To the EDITOR:

Ninety-one years ago today, William H. Seward, Secretary of State under President Johnson, bought Alaska from Russia for $7,200,000.

In the Treaty of Cession, signed March 30, 1867, the United States guaranteed Alaska citizens that "The inhabitants of the ceded Territory * * * shall be admitted to all the rights, advantages, and immunities of citizens of the United States."

That was the pledge, made 91 years ago. The United States has not kept that pledge. Yet a treaty is the highest law of the land. And it is made in the clear view of all mankind.

For 91 years we have maintained Alaska, for all intents and purposes, as a colony. The world is in revolt against colonialism. The United States—in international affairs—claims leadership for the cause of democracy and against the evils of colonialism. Twelve years ago, the United States signed the United Nations Charter, agreeing in section 73 (which deals with territories) to take due account of the political aspirations of the peoples and to assist them in the progressive development of their free political institutions."

Only 3 years ago, through the Pacific Charter, the United States again pledged itself to uphold the principle of equal rights and self-determination of all peoples.

In spite of these noble statements, ignoring our promises and guaranties set forth in our Treaty of Cessions, disregarding our position of leadership in the cause of democracy, we have held Alaska in colonial status for 91 neglectful years.

For 91 years, Alaskans have been taxed but denied representation; have observed the laws and regulations promulgated by both Democratic and Republican administrations; but have never been allowed to vote for a President or Vice President of the United States. Alaskans have been forced to develop their own trade and industries, but have not been given possession of their own land—98 percent of which is still held as Federal (untaxable) domain.

Alaskan sons have been conscripted to serve in the Armed Forces, but Alaskans have not been allowed the representation in the Congress through which they could voice opinions and cast votes as to the wars in which their sons were to serve.

Frequently, working under overwhelming, antiquated Federal laws and regulations, Alaskans have been compelled to develop their natural resources with little or no assistance from the United States; and, in the case of their rapidly dwindling fish resources, the Federal Government has actually prevented Alaskans from conserving their own natural wealth.

Our record in regard to Alaska is shameful. In spite of United States oppression, Alaska has moved steadily and resolutely forward and is today, with a population already 30 percent greater than that of Nevada, the fastest growing land under the American flag.

Similar to the resolute pioneers who settled Oregon 100 years ago, Alaskans are strong-willed, indomitable individualists, equal to the rugged terrain and harsh elements of the Territory. They have spoken out loudly and clearly in their desire for statehood. In three elections, the cause has carried overwhelmingly and in a recent preference poll, Alaskans voted 12 to 1 for statehood. Yet, our Government, for stingy and selfish political reasons, refuses their plea.

Oregon can benefit mightily from this vast and rapidly developing land. Oregonians in speaking out for statehood have done much to develop lasting friendship with Alaskans. The Oregonian's strong editorial support and leadership is recognized and appreciated by Alaskans. Oregon badly needs the markets provided by an industrialized Alaska; Oregon's delegation will benefit from the like-minded assistance of two Senators and one Representative serving in the United States Congress.

Forgetting political partisanship and allegiances, all Americans need now to move forward to assure justice and democracy to Alaskans. We need now to fulfill our 91-year-old treaty guaranty. We must not allow another Alaska day to pass and mark another year of broken promises. Alaska must be given statehood now.

C. GIRARD DAVIDSON,
Democratic, National Committeeman for Oregon.

Petition Relative to Reciprocal Trade Legislation

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 28, 1958

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition signed by several hundred of my constituents and also residents of the First District of West Virginia relative to the reciprocal trade legislation:

MARCH 4, 1958.

TO OUR CONGRESSMAN:

We, the undersigned, are employees of the Taylor, Smith & Taylor Co., Chester, W. Va., manufacturers of semivitreous dinnerware.

Many plants in our industry have been forced to close their doors, and certainly many more plants will be forced to follow suit if the Trade Agreements Act is extended again. Under present conditions, we have nothing to look forward to except less and less hours of work and insecurity for our homes and families.

We urge you to oppose the administration's trade agreements bill H. R. 10368, and return to congressional authority to regulate foreign commerce as provided in the Davis bill, H. R. 10818:

E. S. Morse, East Liverpool, Ohio; Juanita Cline, Chester, W. Va.; P. J. Frantone, Wellsville, Ohio; Suzanne Simcox, Chester, W. Va.; Betty Miller, Mary Ellis Rayne, Ruth M. Kind, H. F. Schneidmiller, East Liverpool, Ohio; S. J. Reber, Chester, W. Va.; Joanne Hall, June Dailey, C. C. Davidson, East Liverpool, Ohio; Elaine Smith, Chester, W. Va.; Ruth M. Russell, East Liverpool, Ohio; Eva Mae Staats, Lisbon, Ohio; W. L. Smith III, Eileen West, Barbara Rushton, East Liverpool, Ohio; Ruby Pugh, Beverly Bickerstaff, Chester, W. Va.; Joyce Ridge, East Liverpool, Ohio; Wilma Elliott, Bonnie Shaw, Chester, W. Va.; Wilma Eardley, East Liverpool, Ohio; Sara Sturme, Virginia L. Rigby, Chester, W. Va.; Margaret Castello, East Liverpool, Ohio.

Lucille Carter, Mrs. Warren Dreussi, Noah Show, Harriet McElhaney, Ward A. Wheeler, Maxine Maley, Olive Burson, Melvina Dorrell, Victor Dorrel, East Liverpool, Ohio; Jack Mumaw, J. C. Barriss, Dominic Ruggire, Noah Wood, Chester, W. Va.; Arthur Cunningham, East Liverpool, Ohio; James B. Yoho, Chester, W. Va.; Willie Sturgeon, Negley, Ohio; Donald Humphreys, Carl Ward, East Liverpool, Ohio; Paul D. Conkle, Chester, W. Va.; Elizabeth Stoppe, East Liverpool, Ohio; Miriam Reed, Joe Meymone, Artie E. Bates, Belra Morris, Chester, W. Va.; Gladys Calhoun, Newell, W. Va.; Glennis Ryland, East Liverpool, Ohio.; Mary Ambrose, Chester, W. Va.; Rickard Jackson, Eugene Mathes, East Liverpool, Ohio; Ida Allison, Chester, W. Va.; Marie Roberts, East Liverpool, Ohio; Carrie Brannon, Sistersville, W. Va.; Bessie Nelson, East Liverpool, Ohio; Wilmer Pugh, Jr., Chester, W. Va.; Lawrence Dickey, Jerry McCune, Dale McElhaney, Harry Brown, East Liverpool, Ohio; James Goppurt, Chester, W. Va.; Charles Elliott, East Liverpool, Ohio; Clyde Reed, Chester, W. Va.; P. R. Woods, William W. Price, East Liverpool, Ohio; Robert Severs, Chester, W. Va.; James L. Allison, East Liverpool, Ohio; William Hulme, Audrey Wright, Chester, W. Va.; Paul D. Hardy, Vida M. Allison, East Liverpool, Ohio; Madge Milan, Chester, W. Va.; Lula Brooks, Newell, W. Va.; Leonard Richard, East Liverpool, Ohio; Robert D. Fraser, Wellsville, Ohio; Paul Franklin, East Liverpool, Ohio.

Minnie Sauers, Chester, W. Va.; Janet Brand, Patricia Blankenship, Hazel Russell, Hayward L. Goldsmith, East Liverpool, Ohio; Robert G. Reed, Zella G. Ash, Chester, W. Va.; Tessie Henrich, East Liverpool, Ohio; Dorothea Garrett, Hannah Lyons, Florence Powell, Chester, W. Va.; Joseph Martin, East Liverpool, Ohio; Floyd Van Nuy, Wellsville, Ohio; Esther Morgan, Toronto, Ohio; Robina Deeta, East Liverpool, Ohio; Lea Wagner, Clinton, Pa.; Thelma Vincent, East Liverpool, Ohio; Dorothy Thompson, Violet Huffman, Chester, W. Va.; George Wilcox, Wellsville, Ohio; Charles L. Dugan, Roy Buzzard, East Liverpool, Ohio; R. L. Stewart, Chester, W. Va.; William Bryan, East Liverpool, Ohio; Charles Barmer, Chester, W. Va.; Freda Phillips, Harry Shaw, East Liverpool, Ohio; Charles Mushgrove, Chester, W. Va.; Gerald Faulk, Harry Drane, East Liverpool, Ohio; John Pillo, Sr., Chester, W. Va.; Henry M. Vorndran, William Rinestine, East Liverpool, Ohio; Thelma Gregory, Richard Cerndiff, Lawrence Haun, Mary Helen Michaels, Margie McConnell, Phyllis McCullough, Ernest W. Judy, Richard K. Judy, Chester, W. Va.; Nina Moore, Georgetown, Pa.; Evelyn Dowling, Wellsville, Ohio; John C. Hayes, Chester, W. Va.; Evelyn Rinestine, East Liverpool, Ohio; Alma Marshall, Hazel Shroades, Gladys McConnell, Chester, W. Va.; Betty Heath, Newell, W. Va.; Ethel Robinson, Chester, W. Va.; Ray Gwin, Paul H. Adams, Wellsville, Ohio, William T. Grimm, East Liverpool, Ohio.

Alma Boston, Ellen Lomax, Lucille Cunningham, Leona Brown, Mae Studa, East Liverpool, Ohio; James Hubbard, Jo Ann Saraliza, Erla Beckman, Chester, W. Va.; Margaret Monroe, Marcella Bancroft, Florence Curran, East Liverpool, Ohio; Hazel Chaney, Marie Neff, Bessie Laudrille, Chester, W. Va.; Foster Crous, Helen Hancock, Agnes Cermak, East Liverpool, Ohio; Ryda Brown, Chester, W. Va.; Helen Morgan, Wellsville, Ohio; Elsie Darrah, Gertrude Rhodes, Chester, W. Va.; Mary Kennedy, East Liverpool, Ohio; Dean Golden, Wellsville, Ohio; Sophia Myers, Adeline Price, East Liverpool, Ohio; Ethel Carraher, Wellsville, Ohio; Clara Buxton, Blaine Allison, Chester, W. Va.; Lawrence E. Jones, James Massey, Leland McNutt, William K. Myers, Gladys Buzzard, Helen Brennen, Margaret Baker, Chiouris Wright, Lillie Franklin, Charles Clark, East Liverpool, Ohio; Edith Hart, Chester, W. Va.; Goldie Fowler, East Liverpool, Ohio; Martha Rice, Lucille Woods, Chester, W. Va.; Alice Scott, East Liverpool, Ohio; Clarence Angle, Vira Beebout, Chester, W. Va.; Lottie McCoy, East Liverpool, Ohio; Susie Haught, Betty Reed, Olive Martin, Chester, W. Va.; Lawrence E. Quartanow, Myrtle Boston, Floyd McKnight, Zelma Holman, East Liverpool, Ohio; Marie Shrvades, Chester, W. Va.

Pearl Cain, John Rice, Howard Robinson, East Liverpool, Ohio; Rufus Robuson, Chester, W. Va.; Betty Williams, Harold Quarterman, Earl Applegate, East Liverpool, Ohio; Paul Eugene Reed, Chester, W. Va.; Charles E. Howell, Samuel T. Wright, Eugene J. Mitchell, Ray Stull, East Liverpool, Ohio; Harold Sheely, East Palestine, Ohio; John J. Leach, Pittsburgh, Pa.; Martha Pugh, Julia Davis, Chester, W. Va.; William T. Ferguson, Jr., Don Stewart, Samuel G. Wright, Paul Dawson, East Liverpool, Ohio; Frank Simcox, Chester, W. Frederick, East Liverpool, Ohio.

Our Forgotten People

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 1, 1958

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the Newark Star Ledger on March 28, 1958:

OUR FORGOTTEN PEOPLE

While the plight of the elderly is deplorable in New Jersey, the problem is not one that is unique with this State. The old folks in many other sections of the country are no better off.

Representative PETER RODINO recognizes this in his call for a White House conference for the study of the aged. A conference of this sort, under the auspices of the President, would focus attention on a problem sorely in need of attention.

But dramatizing the plight of the aged is only part of the job. We must first recognize the job that has to be done. The next step is to get to work on it.

This is a fertile field for congressional action—so little has been done, and there is so much to do. But the most important thing now is to bring the problem into the national spotlight * * * and a White House conference would be a fine way to do that.

Help for the aged must come from many sources; some of them are local, but there is much that can be accomplished on a national scale. A White House conference, as RODINO points out, probably would lead to recommendations to Congress and legislative action.

RODINO's suggestion already has won the support of Representative JOHN FOGARTY, of Rhode Island, chairman of the House Appropriations Subcommittee. We think it is an idea which should take hold in Congress, since it could make an important contribution toward the formulation of a program for the Nation's senior citizens.

They are badly in need of help. We hope they will not be forgotten by Congress.

Bataan Day

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 31, 1958

Mr. O'HARA of Illinois. Mr. Speaker, as the House will not be in session next week, I am taking this occasion to mention that on Wednesday next in the United States and in the Republic of the Philippines the peoples of these two great lands will be joined in observance of Bataan Day.

On April 9, 16 years ago, the tattered remnants of a joint Philippine-American force wearily surrendered to the overwhelming attack force of the Japanese Army. Bataan, April 9, 1942, was a dark moment for two countries. Men of both the Philippines and the United States had fought and fallen together; now they were to suffer defeat and captivity together. Whatever else Bataan may have cost our two nations, it is symbolic of this historic tie, this working together for the benefit of both.

Today this bond has become an important link in the chain of defense for the free world. The Pacific area is once again a focal point of the continuing international crisis, and still standing together are the Governments and the peoples of the United States and the Republic of the Philippines.

The nations of the southeast Asia area have realized, as have the member states of NATO before them, that collective security is the only defense against the armed might of forces that would destroy them. SEATO is the result. In this as in other joint defense moves the Philippines speak of mutual defense from the experience gained in World War II. The Philippines have also joined with the United States in bilateral agreements to supplement the defense of their own country, as well as our country and the rest of the free world.

While Moscow has raised the issue of colonialism in Asia and Africa, the Philippine Republic is the living answer to their propaganda. July 4 is Independence Day in the United States and in the Philippines. Their constitution is modeled on our own. The ideals of their people are the ideals of our people.

Bataan Day stands as a monument to the bonds that unite us, and on each anniversary of April 9, 1942, we renew our pledge that never, never shall those bonds be severed.

The Philippines are a beacon of hope for democracy in the troubled Pacific. On April 9 our thoughts will be with the brave and dedicated people of the islands and the many Americans of Filipino birth or descent who by industrious effort and good deeds among us have enriched our own lands. And we shall be remembering with gratitude and affection the service and the sacrifice of that band of Americans, now enshrined in immortal fame, that fought to the last inch of ground, as comrades with the Filipinos, and 16 years ago faced the blackness of the night and the tortures of captivity. To the survivors of that band and their Filipino comrades, and to the families of those that have gone on, we give the assurance that never will they be forgotten, never will the story of Bataan lose interest or fail to give inspiration to every generation of Americans as time marches into the centuries ahead.

The Legislator Looks at the Physician's Place in Public Affairs—Congressman Judd Speaks to Medical Students

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Courier issue of March 1958, the magazine of the George Washington University Medical Center, Washington, D. C.:

EXCERPTS FROM AN ADDRESS BY CONGRESSMAN WALTER H. JUDD, REPUBLICAN FROM THE FIFTH DISTRICT OF MINNESOTA, BEFORE THE MEDICAL SCHOOL STUDENT BODY ON JANUARY 11, 1958—DR. JUDD IS A PHYSICIAN, A FORMER MEDICAL MISSIONARY IN CHINA, AND HAS BEEN IN THE UNITED STATES CONGRESS SINCE 1942

The day has come when it is not possible for the doctor to practice by himself, any more than it is for a businessman to work by himself. They have both got to work in terms of the whole picture.

Our profession is going through a transition, the same as various other professions, even politics to some extent. In the beginning the doctor treated symptoms. He didn't understand what caused them, but he was called in to relieve pain or difficulty. * * * He was skilful in relieving symptoms, much

more than we are today, in my opinion, because he concentrated his attention on these symptoms.

He knew how to write prescriptions that had such a bitter taste that it had at least some sort of psychological effect on the patient. He got better in order to be relieved of the necessity of taking more of the decoctions.

These men were not too bad in their field. In China I found the medical profession at this stage of development. They were experts at prognosis from their study of pulses. They have about 14 different kinds of pulses.

They will tell you how long the patient can live with these different kind of pulses. I learned not to stick out my neck and tell them I didn't see why the patient had to die because when it comes to predicting how long he was going to live, they were usually more accurate than I was because they concentrated on this one thing.

Now, there is a danger in this kind of medicine because when you treat the symptom, you don't get at the basic root of the disease. I learned that when I gave aspirin to malaria patients along with quinine, at about the time the fevor was about to break, anyway, they would break into a sweat and the fever would go down and the aches and pains and misery would be gone.

They would say, "That's wonderful," and they wouldn't take the bitter quinine; they just wanted the aspirin.

I would say, "But you'll be sick again in another few days if you don't take the quinine."

"Never mind," they'd say, "I'll come back and get another aspirin."

So, I had to quit giving aspirin in order to get them to take the quinine. Often I gave them medicine for the disease and hoped and prayed the symptoms wouldn't disappear too quickly, because then the patient wouldn't come back again * * *.

This was the stage of development in medicine a few years ago.

Then somebody discovered the tubercle bacillus, and someone else the diptheria bacillus. Someone began doing autopsies in numbers. It became clear that there were processes going on in organs that produced the symptoms. The doctor began to shift his attention from the results, the symptoms, to the causes of disease.

This was the period when I was trained in medicine, often called the period of therapeutic nihilism. We treated the disease, studied the disease, forgot about the patient. The ear was glued to the stethoscope, the eye to the microscope. It was a good period but it was not enough * * *.

Then we asked, "What can we do to prevent these processes?" The shift, the continuing metamorphosis was to preventive medicine. You had to be able to interpret the tuberculin patch, study sewage disposal, water and milk purity, pure food laws. The doctor had to use his immunizing needle as well as his stethoscope.

Then we went to a fourth stage, waking up to what the Chinese doctors had known all the time, the importance of the relationship of the emotions and the mind to the processes, and vice versa. We lost too many patients to those who treated people's emotions and created faith in them while we were just taking care of certain physiological processes.

There developed a good deal of attention to psychosomatic medicine.

The war came for us as it did for businessmen, and you went through medical school and were all ready to begin practice, but the Government said, "No, Uncle Sam has greetings." So you went out and tried to practice medicine around the world under conditions for which you were not prepared, and many a doctor woke up to the fact that it was not enough to be a skilled physician; he had to pay some attention to the political developments that had gotten us into all this dislocation * * *.

So, just to practice medicine, not to consider other things, we have got to pay more attention to public affairs than we have ever done in the past. We have to do it, really, for three reasons: first, we have to do it to insure the conditions which will enable us to practice good medicine with success and satisfaction for ourselves.

Second, we have to pay some attention to public affairs in order to influence and improve conditions which adversely affect our patients. This is part of our obligation; not just to make the diagnosis, "This man has hypertension," or "He has arthritis," because he's got something else wrong with him, too. He's got a business that's in trouble. Inflation is taking his life's savings. He doesn't see what is ahead; he is apprehensive about atomic weapons. What kind of a world is he going to live in?

These things bother him just as much as is ulcers or his insomnia or his gaseous indigestion. If you are really going to contribute to the man's needs, you have to understand the impact of his environment on him and be in a position to influence that environment to produce more favorable conditions.

There is a third reason, in addition to what you have to do, yourself, as a physician. That is to influence your future and that of your children as citizens, because before anyone is a doctor or a clergyman or a businessman, he is a citizen of this Republic. You are taxpayers and parents; you are trustees of a heritage, a way of life, a philosophy, that has made it possible for you to be here in this medical school.

That heritage is under attack: cold, calculating, determined, and increasingly successful attack, all around the world. If we are going to be good physicians for ourselves, our families and our patients, and our society as a whole, we must realize that nobody is needed more desperately than those with the kind of minds you have after the kind of training you have had in your medical school. Approach the political diseases just as you do physical and emotional diseases.

Doctors, almost to a man, are opposed to socialized medicine. By that I mean medical services supported and controlled by the Government.

The general public says, "You doctors are against socialized medicine because you have a union, a closed shop. You want to keep everybody out of it and you want to protect you own interests, jack up prices, and so on. You are against Government supported and controlled medicine because it will hurt you."

Now, this is not so. It isn't because it would hurt us that we are against it. The good doctor can always get ahead under any system. The poor doctor is better off under socialized medicine than he is under free competition. He does not have to worry. He gets out of medical school find the Government offers him six or seven thousand dollars a year right off the bat. He can continue with that the rest of his life and probably won't do much better than that. But, at least he is secure. Government will keep him on almost indefinitely.

The rank and file will be more secure under socialized medicine. Once in a while you find a doctor who is for it. The doctors as a group would not be worse off.

But, the patients would be worse off.

There are three essentials to good medical practice. First, the relationship between the physician and the patient must be wholly voluntary. If it isn't, something goes out of the interest and the confidence of the relationship. If the patient is just a number assigned to him by the Government, the doctor, in many cases, doesn't have the same interest he would if the patient chose him, in which case the doctor would want the patient to keep coming back to him.

Contrariwise, if the patient didn't choose the doctor, and was just assigned, that patient doesn't have quite the confidence in him and sits there, sort of on guard, holding back, not willing to come out and lay the whole story before him because he is not sure.

The combination of confidence and interest is necessary if there is to be good medical practice. Under Government it would not be voluntary on either side.

The second requirement for good medical practice is that there be no intermediary between the patient and the physician. Under socialized medicine there has to be an intermediary. Somebody has got to decide whether the doctor made the right diagnosis.

Who is that going to be? It is going to be the Government. Who is going to be in the Government? Doctors? Yes, at the top, but in general it is going to be the clerks who will go through the records to see if the doctor did all the things. Did he take all the X-rays, did he do all the routine tests? Furthermore, the clerk sits there and reads all the history.

Maybe men are willing to tell about all their escapades, but most women are not, and when she finds out that everything she tells the doctor is going to be checked on by some clerk, she isn't going to tell the doctor. She is deprived of the chance to have good medical treatment and the whole thing breaks down. It is a system that looks perfect on paper, but it doesn't give more and better care for less. It gives less and poorer medical care for more * * *.

The third essential for good medical practice is that you must have a system that gives maximum incentive for the doctor to improve himself, to study, to get ahead according to his ability.

What are the incentives? There are two. One is financial reward. There is in every profession the individual who has a "self-starter." No matter what the economic conditions, he will give everything he has. But the type is a minority in our profession as in every other. Most of us do better if we are going to get a reward, or think we are, in rough proportion to the effort and merit that we put into it.

The other incentive is professional recognition. Dollars are tangible and they are precious, but there is another thing which is more precious and that is recognition, professional advancement in accordance with your growth, your improvement and your merit.

I think the position you will come to covet more than any other is to be known as the doctor's doctor. I remember once while I was at the Mayo Clinic, a couple of boys from a certain eastern medical school came out to look around with their new medical knowledge and evaluate the various medical establishments there.

One of them, who knew me distantly, called me up and told me about the "temple of mediocrity," as he called the Mayo Clinic, with its mass-production methods.

Well, the Lord was with us on this particular occasion, because when we started next morning's clinic and the boys were up in the amphitheater to watch the temple of mediocrity, who was wheeled in as the first patient, but their own professor of surgery. He had come out to have his own gallbladder taken out at the Mayo Clinic.

You can fool the patients, but you can't fool the other doctors. * * *

Recognition is a tremendously rewarding thing, and if a society freezes you and you become like bureaus of the Government, something that's important, essential for good medical practice goes out. * * *

[We have to be aware of these things in public life] * * * not because we are doctors, but because of what we know as doctors

about the practice of medicine. We are concerned with the quality of the service. They [the reformers] concentrate on more equitable distribution of the services; they assume the quality, taking it for granted.

In getting more distribution they tend to cut the nerve of the thing that produced the good quality. Where you have socialized medicine, you have what you have in England; you have better distribution of a commodity that is increasingly unworthy of being distributed because of continued disintegration brought on by lack of interest, confidence, integrity, and incentive.

We need your type of mind, the kind of mind first trained at the autopsy table. Autopsy is seldom flattering. But you are trained not to recriminate and say, "Why did you make that mistake?" but to ask, "How did you make that mistake?"

You may have been perfectly sure the trouble was in the liver. You may have had expert consultants who all agreed it was in the liver. And you may have been able to convince all the relatives the trouble was in the liver. But when you opened him up the trouble was in the pancreas, and it was in the pancreas, period. It doesn't make any difference if the doctor is a Republican or a Democrat. It was in the pancreas.

The doctor is taught to study in terms of what is, not what he wishes.

Then he is taught the biopsy idea. He looks through a microscope and sees cells that have rejected the law-abiding processes of growth. He doesn't say, "It is cancer, all right, but it's only in the big toe."

As some said, "It's only what Hitler is doing to the Jews," or "It is only what the Chinese are doing in Manchuria. * * *"

"It's a long way off. Let's wait and see if it spreads."

It gets to the heart or the liver or the brain or the lungs. It is too late then.

The doctor is trained to say, "No, that's cancer. The thing that makes cancer bad is not what it is, but the way it grows. * * *"

Cattle Are Threatened by Foreign Imports

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. DORN of South Carolina. Mr. Speaker, the farmer will not be fooled. He is becoming aware of the danger of opening the gates to a flood of cheap labor foreign agricultural products. Every times it sems that the farmer might make a little money, something happens. Now with cattle prices higher than they have been in a number of years, the livestock producer is threatened with a flood of cheap foreign cattle.

We lost our cotton markets, tobacco exports are on the decline, all because foreign countries using American dollars and American experts have been taught and equipped to grow cotton and tobacco at less cost. Probably the last remaining segments of our agricultural economy not under Government domination are the cattle, timber, and truck industries. Now these are being jeopardized by the importation of cattle and timber products.

Some farm organizations, without the support of their dues-paying membership, are advocating a continuation of the present buy abroad program falsely known and falsely labeled as the Reciprocal Trade Agreements Act.

Mr. Speaker, there is no sip for the American farmer or the American labor in this administration program to import products we already have in surplus. We farmers should make our voices heard now—tomorrow may be too late. The following article should be a warning and I commend it to your attention:

[From the Lancaster Livestock Reporter of March 31, 1958]

IMPORTING NEW ZEALAND BEEF

According to the Western Livestock Journal, some sharp operators on the west coast are in the process of importing a lot of New Zealand cattle—big cattle, some of them grass fed—at a cost of around 9 cents a pound.

The story is that 1,700 head of these critters will arrive in California April 1, and plans are to bring in more as fast as boats can haul 'em.

Chances are this program will not draw enthusiastic cowboy yips of approval among cattle growers and feeders in California or anywhere else except New Zealand.

United States cattle prices are pretty good for a change. Consumers in metropolitan centers where unemployment has become something of a problem haven't been left ignorant of the fact that cattlemen are making a little money. But the beloved public wasn't impressed with the fact that for the last several years cowmen have been hard pressed to stay in business, while the price of beef over the retail counter was about as costly as ever in history.

Therefore, domestic ranchers' efforts to prevent importation of cattle into this country can be expected to run into some bitter opposition.

All that's sure is that this country's economy isn't strong enough to make the whole world rich.

United States cattlemen, while they have a pretty fair market right now, don't have any guarantee that it will remain that way. They aren't even sure of recouping bank-breaking losses they've sustained in recent years. Above all, their market is not good enough to absorb cattle shipments from all over the world.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Are We Moving to Nationalization of Grain Marketing?

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 20, 1958

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Are We Moving to Nationalization of Grain Marketing?" delivered by Robert C. Woodworth, director of the Feed and Grain Dealers National Association, before congressional guests of the Feed and Grain Dealers National Association, on March 18, 1958.

I am informed by the Public Printer that the manuscript is estimated to make approximately 3½ pages of the RECORD, at a cost of $270.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a very real honor to be asked to speak to you gentlemen today. Certainly no group could be found more illustrious or respected. One of my colleagues in Minneapolis, hearing that I was to address you, went so far as to exclaim, "My God. A captive audience of United States Congressmen." And he added, "If you have ever made yourself understood, make yourself understood now."

It is an honor to speak to you, but at the same time it is a difficult assignment, for most of you already are remarkably knowledgeable in the field of agriculture. Most of you represent States or districts that are largely agricultural; many of you have made the study of agriculture and its problems your main concern; some of you know the very industry for which I speak—the grain and feed industry—almost as well as we who are engaged in it daily.

I'm sure we can make you aware of some things you did not know before, so I think it will be worthwhile to describe our industry briefly, to elaborate on a few of its lesser-known aspects and to review some of the problems that beset us.

First of all, let me suggest the nationwide nature of our interests by telling you that the group for which I speak—the Grain and Feed Dealers National Association—has today a membership of 1,118 organizations from 42 States and is affiliated with 57 State and regional grain and feed associations. In all, its membership approximates 15,000 organizations engaged in similar or related business. And this number, as large as it is, is only part of the grand total of the industry itself.

TWO SEPARATE INDUSTRIES

As you know, our industry tends to divide itself into two more-or-less separate industries.

The grain trade is primarily concerned with the procurement of grain from the farmer, its movement, storage, conditioning, merchandising and eventual delivery to consumers and processors here and abroad.

The feed industry is chiefly a processing industry, concerned with research and development of high-nutrition animal feed formulas, the production of the feed itself and its sale and delivery to farmers and livestock raisers.

Last year the grain trade moved away from the farm and into consumption or storage some 4 billion bushels of grain of all kinds. It merchandised, during the same period, more than $5 billion worth of grain to provide the basis for roughly $20 to $25 billion worth of finished consumer products.

Last year the animal feed industry became the Nation's ninth largest industry in sales, with more than $3½ billion worth of product delivered to livestock raisers.

At the same time the United States Government, a "third force" of enormous dimension in the total grain and feed picture, owned some 1.6 million bushels of grain, including almost 1 full year's domestic production of wheat and 1½ times the quantity of corn that annually goes into domestic channels. This enormous holding made the Government—or, more particularly, the Commodity Credit Corporation of the Department of Agriculture—by far the most important factor in the industry's operation, a factor infinitely more powerful than any possible combination of private groups.

For the moment, however, let us consider the industry itself, only keeping in mind that this third force exerts its influence constantly on each of the many segments I describe. As we proceed, as you become aware that the industry is an extremely heterogeneous thing, and that its many parts are themselves, made up of smaller parts, you will appreciate the extent to which Government seems to loom over any particular company or group engaged in our business.

THE COUNTRY ELEVATORS

Our industry's most visible and recognizable parts are, of courses, its many hundreds of country elevators, located in every town and village, beside every highway and railroad, throughout the grain producing areas of the Nation.

These are small facilities, with an average capacity of 50 to 100 thousand bushels of grain, and they are privately, and for the most part singly, owned. Thus they are small businesses, each competing vigorously in its territory for the farmer's grain, and each endeavoring always to offer the extra cent or half-cent per bushel that will bring grain to it rather than to its competitor.

To the extent of their capacity the country elevators store grain during the off seasons of the year, but their main function, during the harvest rush, is to receive the farmer's produce and relay it as quickly as possible to central markets or to giant terminal elevators.

The terminal system, with installations of 5 million, 10 million, and even 20 million bushels capacity, are located at the junctions of rail and highway networks, on inland waterways, and in export position at the seacoasts. They represent large business, but business which is no less competitive. Like the country elevators, many of the terminal elevators are singly owned, while others are bound together in corporate or cooperative networks. It is in the terminals that the bulk of United States grain finds storage, where major drying, cleaning, mixing, and other functions are performed, and from where merchandising into domestic and export channels is accomplished.

These elevators contain not only grain obtained on the free market, but also provide storage, on a rental basis, for the larger part of CCC's publicly owned stocks. Without them, and without the enormous privately financed expansion they have undergone in the last 10 years, the Government's actual ownership of storage facilities would have to be many times greater than it is today.

FUNCTIONS OF THE EXCHANGES

Independent grain exchanges, strategically located throughout the producing areas, provide merchants and potential customers—processors, millers, exporters, and others—with a common meeting place to conduct their business.

Probably no other business activity is so democratically governed or so subject to self-enforced rules and regulations to promote fair and ethical conduct. Men engaged in the grain business, as well as those who deal with them, have every possible assurance that they will receive efficient, just, and honest service.

The three largest grain exchanges are those of Chicago, Minneapolis, and Kansas City. Because of the volume of business done, the representative character of daily activity, and the intense degree of competition involved, transactions on these three exchanges are accepted as the basis of values in the buying and selling of grain everywhere in the United States.

The exchanges provide a market place for dealings both in cash grain—that is, grain in the hands of merchants and available for immediate sale and delivery—and in sales of futures contracts. In Minneapolis, the Nation's largest cash grain market, the emphasis is on the physical grain itself, with sales made on the basis of samples taken from each grain car entering the market area. A sample is displayed on the exchange floor, where it is subject to examination by all prospective buyers, and is finally sold to the buyer making the highest bid. The price is then posted and communicated to grain exchanges, producers, and the public throughout the country, and the value of grain from day to day and from minute to minute is this determined.

The operation of the grain business is not, however, limited to this day-to-day handling.

It was early recognized that the farmer who produces the grain should not be limited to the demand that exists on the particular day his grain arrives in the market, and the ultimate consumer should not have the price of his daily bread based upon fluctuating daily supplies. Because the supply of grain cannot be made to fit nicely the daily demand and the need for grain cannot be made to correspond to its seasonal production, there has grown up the so-called futures market, where grain is bought and sold for delivery many months ahead.

The operation of this market brings the future demand into the present and levels out the inequalities of supply and demand over the entire year. It operates to give the farmer the benefit of all foreseeable demand from one harvest to another and assures the consumer a price based upon the total supply of grain.

WHAT FUTURES MARKET DOES

Two major services are provided by the futures market:

First. Because grain is harvested in a comparatively short period, but is consumed

throughout the year, its true value can only be determined by estimating the total supply that may be available and the total demand that may arise. Both of these estimates are constantly changing, the one effected by reports of rainfall and drought, frost and disease, and—in these days—Government support prices, and the other by general business conditions, changes in consumer requirements and export potentials. To a large extent activity in the futures markets is due to these constantly changing estimates, and their result provides the most accurate barometer of grain values.

Second. Because of the impossibility of accurately determining grain supplies and demand, the risk of changes in the market is always substantial. Whoever holds grain, or sells grain in advance of obtaining a supply, necessarily assumes this risk. But the futures market—and within it the technique known as hedging—provides a form of price insurance that enables the commercial operator to divest himself of much of this risk and perform his services at prices that do not fully reflect the risk. The hedging technique, in its simplest form, is that of balancing every purchase or sale made in the present with an equal and opposite transaction in the future. If a country warehouseman, for example, buys a quantity of wheat from a farmer, he protects himself until that wheat is resold by immediately selling on the futures market a contract to deliver that much wheat at a future date. Let us assume that on the day he decides to sell the actual wheat the market price has declined to a point which reflects a loss of 5 cents a bushel on his original purchase. Similarly the futures price has declined 5 cents a bushel. He sells his cash wheat at a loss, buys back his futures contract at 5 cents profit. The two transactions thus offset each other and he remains even, or hedged.

It is natural that purchases by hedgers on any one day will not exactly equal sales made by other hedgers on that same day. During the harvest movement, in fact, the sales of futures contracts by cash wheat buyers will far outrun their purchases by cash wheat sellers, and during nonharvest periods the purchases of such contracts will outrun the sales. It is here that the grain speculator, or professional risk-taker, performs his essential function by buying or selling as the occasion demands and balancing the total market. Without the speculator, willing to assume the risk of grain ownership that is unabsorbed by cash grain hedgers, the entire process of procuring, handling, and delivering grain would be far more costly, to the farmer and to the consumer, than it is.

I have mentioned the country elevators, terminal elevators, and grain exchanges with their cash and futures markets. These, along with large fleets of ocean and lake vessels, river barges, trucks and even railroad equipment, are physical, observable aspects of the grain trade. There are, in addition, certain other aspects that might best be called skills, or talents, and that deserve mention at this time.

SERVICE IN SKILLS

The most important such skill is that shared by the fraternity of grain merchants themselves. These men are employed both in domestic and export trading, and are highly treasured by the grain firms with which they work. They have devoted their professional lives to understanding the intricacies and inner-relationships of the various markets, the vagaries of farm marketing and the patterns of movement by which grain finds its way most economically to the consumer. Many of them are the sons, and even the sons of sons, of grain merchants. They are artists in their calling and are so regarded within the industry.

Of similar skill, and of similar value, are the transportation specialists, also employed within the various grain companies. Their first rule is this: That any quantity of grain, when it moves so much as 50 miles from its point of origin, increases in cost to the extent of the transportation involved, and denied to possible markets that lie behind it. Their effort, then, in conjunction with the grain merchants, is always to move grain by the least expensive means possible, and to move it not 1 mile further than necessary to find a market for it.

These men are parts of our industry, just as the physical plants and financial resources of the various companies are parts. But like a human being, who is much more than simply a collection of arms and legs and organs, the parts of the grain industry working together make up an economic organism with a unique function, performing a valuable service, and performing it with great efficiency and extraordinary balance.

It is worthwhile noting that the cost of moving grain from producer to consumer is lower than for any other agricultural commodity. It is also forth remarking that the stability of the grain industry, the care it takes to protect its stocks and the efficiency of its marketing system are such that private banks and financial institutions demand from it less collateral for loans than in any other field of endeavor.

A PRODUCT OF 100 YEARS

Thus our industry is in many ways remarkable. But it is, after all, the product of more than 100 years of slow and tested development. It has evolved out of an infinite number of economic needs, and it has persisted and flourished because it has filled these needs more perfectly than any system that has challenged it.

Throughout its history the grain trade has been intensely competitive, and has thereby remained lean and spare, quick to adopt new methods and techniques, flexible in the face of new demands. If it is replaced, it will only be replaced by fiat, or by slow strangulation at the hands of uncontrolled power. I am convinced that it will never be replaced by a better means of doing the job.

The power we fear, of course, is that of Government itself, that "third force" I spoke of earlier. It is in protecting us from that power and in keeping in mind our historic role relative to that power, that we ask your aid and assistance.

We do not mean that we urge a return to the good old days, whatever they may have been, or a reinstitution of pure laissez-faire.

We recognize that under present agricultural-support laws, Government, and especially Commodity Credit Corporation, must necessarily be given effective powers, and we also recognize that there are many requirements under present law—among them the administration of crop loans, the physical takeover of grain in default under loans, the offering of export subsidies, the conduct of foreign relief and loan programs—which private interests cannot possibly undertake.

We also recognize that changes in Federal law and changes in administrative procedure, even in so good a cause as ours, must necessarily come about only after thorough consideration.

DEFENDS EFFICIENCY OF TRADE

We do urge, however, and most vigorously, that neither CCC nor any other Government agency be allowed to take over functions of the grain economy that are rightfully ours. For in our rightful area—the procurement, distribution, and merchandising of grain—no agency can approach us in efficiency and effectiveness. And we further urge that in those areas where Government has already encroached, and there are many such areas, every effort be made to hasten its withdrawal.

In this we are greatly encouraged by the attitudes and expressions of you gentlemen, and of the great majority of Members of the United States Senate and House of Representatives. We note that care has been taken to include in every piece of Federal legislation dealing with grain the admonition that the President and his agencies "make fullest possible use of the facilities of the private grain trade." We are convinced that you are as concerned as we about the usurpation of private functions by Government, and that you are as opposed as we to the development of a nationalized or socialistic system of grain handling.

Such a system can develop, however, and in fact does tend to develop, through the day-to-day administration of government program.

For my own part I do not attribute this to any grand socialistic design, or to any malice or deliberate destructiveness by public administrators. I attribute it, instead, to the very fact that these administrators are conscientious and hard-working, and that, when faced with the natural uncertainties and vicissitudes of the grain industry, they are impelled to extend their authority even further in order to make their plans and projections come out right.

In so doing, however, they introduce arbitrary, uneconomic and, therefore, completely unpredictable elements into the already complex workings of grain; they make worthless the foresight, based on economic factors, of free-trading merchants and exporters; they twist and alter the proven patterns of grain production, movement and consumption; they "tilt" the economic pool table, at the expense of the entire country and the world.

In its dealing with government, and especially with Commodity Credit Corporations, the grain trade has recognized that the unhappy results of too much planning are not necessarily deliberate or intentional. We have taken the approach that Commodity is well-intentioned, and willing to profit by constructive suggestions by ourselves. Therefore, we have made it our practice first to define the source of the trouble, then to reach some degree of unanimity among ourselves as to how it can be corrected, then to present our proposals in personal meetings with CCC officials. The results have left much to be desired, but in the main I believe we have chosen the wisest course. I would like to describe some situations in which our methods have seemed to work in the past, and show promise of working in the future.

THE SUBSIDY-IN-KIND

About a year and a half ago, after strong urging by the trade and by legislators sympathetic to the trade's goals, CCC instituted the present subsidy-in-kind program for wheat export.

This program provided that the larger part of foreign wheat purchases be filled by the trade from the free market. It also provided that the difference between high domestic wheat prices and the lower price of wheat on the world market be made up by a subsidy paid in wheat and drawn from Government stocks.

This plan, though certainly a long way from truly free handling of exports, did return much of the responsibility for export to the private trade, and with extremely beneficial results for all concerned. Prior to its institution, during the 1954–55 and the 1955–56 crop years, approximately 80 percent of United States wheat exports came directly from CCC stocks.

After the plan went into effect the percentage of export wheat from Government stocks fell to about 45 percent in the last 10 months of the 1956–57 crop year and to 35 percent in the whole of the 1957–58 year. At the same time the percentage of the national wheat crop taken over by CCC

through loans and purchase agreements fell from about 35 percent before the plan was used to about 14 percent in the subsequent 1956–57 season.

Since its introduction the wheat subsidy-in-kind program has clearly had the effect of broadening the total market, increasing the price of producer-owned wheat, passing directly to the farmer the benefits of export demand, promoting overall efficiency of the export program, greatly reducing the amount of wheat take-over by CCC and, consequently, easing CCC's inventory management problems with respect to wheat. All in all the program has been a splendid example of the ability of CCC and the trade to work together, and an example of CCC administration that we heartily applaud.

COMPLICATION IN COASTAL PRACTICE

You may be familiar, however, with a complication in this program that developed about a year ago.

It arose, we of the trade are convinced, out of Commodity's policy of maintaining three separate and variable subsidy levels for wheat, one on the east coast, one on the Pacific coast and another on the gulf.

At the time to which I refer, and for a period of roughly 2 months, there took place from the Pacific coast a tremendous movement of wheat into export, a movement far in excess of reasonable expectations from that area. Foreign demand for the particular wheat involved was admittedly strong, but as the demand was felt, and as domestic prices rose, the subsidy level also rose, keeping the wheat constantly competitive in the world market. As the volume of export continued, markets on our east coast began to fall, and there the subsidy followed them down and made the possibility of export increasingly less likely.

Obviously the private trade suffered in this situation, for many of its export stocks, situated according to normal export demands, proved to be out of position, and it was forced to make long and uneconomic movements of other stocks to fill the demand. Finally, however, CCC called a halt to the flood by excluding west coast wheat from foreign purchase agreements, and the industry undertook the task of readjusting the badly distorted trade routes.

The trade, as I have mentioned, was convinced that CCC's unpredictable handling of the multisubsidy system was at fault. Many trade members felt that the institution of a single subsidy, the same for all coasts and all classes of wheat, would be the best solution, for it would allow the domestic price of wheat plus the cost of transportation to control its flow into export, and would tend to maintain raditional patterns of movement. We agreed, however, that CCC had special inventory problems with certain types of wheat, so we ultimately proposed a modified single subsidy tailored to meet the agency's main objections.

This proposal was presented and thoroughly discussed in a series of meetings in Washington. It was never rejected by Commodity, and yet it was never formally accepted. But since that time, we are pleased to note, the various subsidies have been altered until as a whole they closely resemble the single subsidy we asked for. CCC is apparently satisfied with this arrangement and we are not displeased. So here again our efforts have made themselves felt.

PROBLEM OF SOFT WHEAT

Of more recent vintage, and still unresolved, is the trade's agitation over CCC policies on Public Law 480 purchase authorizations. It began when Commodity, in a recent authorization with Yugoslavia to provide financing for almost 20 million bushels of wheat, excluded entirely the soft red wheat variety raised throughout the eastern half of the Nation.

This exclusion—unannounced, unpredicted, and completely out of keeping with previous purchase authorizations—came at a time when unsold supplies of soft red wheat were still in the hands of eastern farmers; when the domestic price was low and the domestic demand virtually nonexistent; when the grain trade had considerable stocks in export position awaiting foreign buyers; when, in short, every economic sign would indicate that the wheat was still very much in surplus.

I will not burden you with great detail on this matter for, as I mentioned, the problem is still being discussed with CCC. It is our hope that some way will be found to resume export of soft red wheat under the Yugoslav agreement or future agreements, at least until surpluses of the wheat are actually disposed of. Study is also being given to devising some yardstick—preferably a yardstick of price—that may be used to indicate when a particular grain is or is not in surplus. Given such a price guide the trade could make use of its knowledge of markets and marketing to estimate the end of a particular surplus and therefore the time when a grain might be no longer exportable.

Certainly some means must be found to correct the present situation, under which CCC decisions—so often arrived at without trade consultation or knowledge—can so deeply disrupt and disturb the activities of private firms.

You will notice that in discussing the Yugoslav case I said that too little attention was paid to price as an indicator of the existence or nonexistence of an actual surplus. Similarly, when referring to the excess of wheat exports, from the west coast last year, I said subsidy policies did not allow the price factor to operate as an economic brake.

SHOULD NOT IGNORE PRICE FACTOR

I believe it is fair to say that the price factor is ignored in many of Commodity's decisions, and that this is one of the trade's main objections to overall policy. We are convinced that price, because it reflects the total supply and demand situation at any particular time, is the best possible guide to efficient and fair operation.

In the case of wheat export, a rise in price for a particular kind of wheat should immediately signal an approaching shortage of that wheat, and under a properly conducted subsidy program demand would automatically begin to shift to another kind, whose cheaper prices indicated an existing surplus. In the same way price could provide regulation of export purchase authorizations, either by providing an agreed-upon yardstick for CCC and the trade, or by encouraging foreign buyers to contract for bargain varieties.

In either case, and in cases past and yet to come, a greater reliance on price can bring about desired changes in the flow of grain in an orderly, foreseeable manner, just as would happen in a normal, uncontrolled economy.

CHANGING USE HABITS

I would like to refer once more to the Yugoslav purchase authorization problem, for it points up another danger inherent in CCC planning, namely that of changing the dietary preference of foreign buyers to such an extent that particular grains are denied forever their historic markets.

Yugoslavia, for example, has shown an historic preference for soft red wheat, yet CCC's order excluded the variety, not only when drawn from present "old" stocks but also when offered from new crop supplies soon to be harvested. It is not at all unreasonable to imagine that Yugoslavia, is becoming accustomed to some other wheat type, may refuse to make purchases of the soft red variety in the future, and may thus work real hardship on eastern producers.

Exactly that has already happened in the case of India, where milo has long been a dietary preference and was purchased in great quantity from United States stocks. When milo was unavailable to India for a period of time that country turned to wheat, and its preference has now shifted to that grain. Today, with a large surplus of milo existing in the United States, the Indian market is greatly needed. But the Indian market, unfortunately, no longer exists.

In this connection I would point out that the CCC charter specifically directs that "the President shall take reasonable precautions to safeguard usual marketings of the United States." Certainly the altering of national preferences, if traceable to agency administration, is hardly consistent with this clear order.

You may be interested in hearing, today, of two further proposals by the trade to commodity, both of them aimed at lessening Government controls, returning trade responsibilities to the trade and increasing overall efficiency of grain handling.

We have asked, first of all, that sales of Government grain for domestic consumption be made competitively and for unrestricted use, at the marketing point nearest CCC's point of acquisition, and that such sales be made only through normal trade outlets and marketing methods. Grain that would be affected by this policy would be stocks in danger of going out of condition—of which large quantities are sold every year—and classes of grain that have climbed to the so-called formula price and so can be freely purchased from Government stocks.

The need for this policy has arisen from countless cases of CCC grain sales directly to processors, millers, and others who would ordinarily be trade customers. As you may know, CCC maintains active merchandising staffs in its nine regional offices across the country, and sales made by these staffs can and have directly competed with private merchandising. The trade feels that only a definite policy commitment by Commodity can adequately protect us against such merchandising in the future.

MOVEMENT BETWEEN STORAGE AREAS

Also involved in our request is the volume of grain movement by CCC from one storage area to another. Most of this movement is accomplished by rail or by lake boat, and a key to its size can be found in the fact that Commodity has now become the largest single shipper in the Great Lakes system and the main competitor with the private trade for grain-boat charters. We do not, of course, object to such movement when it is purely a matter of CCC inventory management. But we hope, through requiring Government sales at the point of acquisition, to halt movement of grain that is actually intended for sale rather than for storage. We strongly feel that if the grain is to be sold, if it is to enter the free market, it should reach and move through that market entirely in the hands of the grain trade.

By putting an end to so-called restricted sales—that is, sales that are tied to export or some other particular use—our proposal would insure the broadest possible market for Government grains and the highest possible return to the public pocketbook.

For it is self-evident that any restriction placed on marketing reduces the total possible market and at the same time reduces the market price. Our proposal would also assure that local merchants, who base their livelihood on the expectation of handling local grain, would not be bypassed, but would continue to perform their usual function.

SUGGESTS CASH SUBSIDY ALTERNATE

Our second recommendation to CCC is perhaps the more far-reaching. It would institute a subsidy-in-kind or a subsidy-in-

cash, whichever is best suited to their own requirements, in the export of all grains, not just wheat as at present. A cash subsidy is the simplest to administer and has the advantage of funneling 100 percent of export demand into domestic markets. This has the desirable effect of maximizing producer sales in the market place and minimizing producer dependence on Government loans. Thus the cash subsidy might be used for these reasons alone, or in those instances where Government stocks might be unusable as a subsidy due to insufficient quantity, unsuitable quality, or inconvenient position.

I have described the good results achieved by the subsidy-in-kind program for wheat. It is worth repeating that markets have been broadened, CCC takeovers have been reduced and more normal participation by the trade has been promoted. We are convinced that a similar program applied to the other grains, though it would vary with respect to each grain, will produce a similar and beneficial result.

At present the export demand for grains other than wheat is filled almost entirely from CCC stocks and the free market is almost completely bypassed. This means that farmers are being denied export markets for their current crops of corn, oats, barley, grain sorghums and rye; it means that the effect of this demand on free market prices is greatly delayed or blocked altogether; it means that CCC must inevitably take over and store a large portion of each year's crop that otherwise would move directly out of the country.

The result is lower market prices for these grains, excessive storage and transportation costs for CC and the taxpayer, an increasingly difficult inventory problem for the Government and restricted participation of the private trade in grain marketing. Certainly it must be obvious that CCC incurs nothing but trouble and expense by exporting a quantity of grain only to turn around and buy up the same quantity from the free market surplus.

We feel that a subsidy plan for all grains is especially desirable today in view of the poor keeping quality of the 1957 corn crop and—to some extent—of the 1957 sorghum crop.

CORN AND WEATHER

As you know, unusual weather conditions during the last crop year resulted in the failure of much of the corn crop to properly dry or mature. Much of this corn, to retain any value whatsoever, was artificially dried. Further, an unusually high percentage of moldy and damaged kernels and a high content of foreign material has been found in many areas. To store such corn for any considerable period will result in heavy losses. The only reasonable course is to channel it as quickly as possible toward consumption, and full advantage should be taken of export opportunities. This would leave CCC stocks made up largely of corn from earlier years, corn that is of higher quality and of better storeability than the present supply.

CCC has tended, in the past few months, to withhold its stocks of corn from the export market in order to encourage the flow of free stocks overseas at domestic price levels. Indeed, a limited quantity of corn has moved in this way. But it is apparent that the twin prospect of large amounts of United States new-crop corn being tied up under the loan program, and increased competition from the coming Argentine crop, will stop the flow of any large quantity of corn for export at domestic prices. A continuing subsidy program, however, would bridge the gap between domestic and world prices and would assure continuous availability of export corn on acompetitive basis.

PRICE CONTROLS VOLUME

The grain trade does not suggest that these present proposals, if adopted, will bring about major increases in total grain exports.

We recognize that the volume of export is determined mainly by the price at which grain is offered in the world market—a factor that CCC would control through the subsidies—and by the amount of credit or other financing offered by the United States to foreign governments.

We do hold, however, that a subsidy system for all grains would export every bit as much grain as the present system, and would export it more efficiently and in better keeping with the workings of a free economy.

It may be that I have erred in recounting so many of the problems, past and present, that exist between the grain trade and Government. In each case I have had to condense greatly both the problems themselves and the trades' justification of its position. To do otherwise—to explain fully the economic setting for each case and its full implications—would keep us here all day or all week.

I have tried to make clear that the free trade and its marketing methods are the most efficient ever devised for the handling of grain; that because of the excellence of this system it is of inestimable value to the entire national economy; that no Federal agency can hope to do the job at less cost or with better effect; that certainly, in the national interest, this intricate mechanism should be preserved and allowed to function.

In sketching some of our particular conflicts with CCC, I have hoped to make clear that each example arises out of too much Government regulation of an essentially self-regulating industry. Considered as a whole, they represent a constant pressure and a gradual trend toward the nationalization of the grain-marketing system. To be sure, we of the trade attempt to deal with each problem as it appears, in conference and discussion with CCC, and we do so with some success. But the nationalizing trend continues, and it gains ground day by day.

We must recognize that this trend arises ultimately out of farm and crop legislation. Despite congressional admonitions that the trade be fully used, such legislation has given so great a power and so much discretion to CCC that the trade can and has been bypassed. If more concern had been shown at the outset, if more attention had been given to possible misuse of the law, neither today's particular problems nor the long-range trend might ever have developed.

It is our hope that you, who are charged with our present lawmaking will exert every effort to halt and reverse this trend, and to forestall its development in the future. We urge that you incorporate the strongest possible strictures against nationalization in current legislation. We urge that you use your influence to prevent its growth through administrative agencies. We urge that you join us in furthering freedom for an industry America cannot afford to lose.

The American's Creed

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 3, 1958

Mr. MANSFIELD. Mr. President, today, April 3, marks the 40th anniversary of The American's Creed, written by the beloved William Tyler Page. On April 3, 1918, he was given a $1,000 award for his winning entry in a countrywide contest for the writing of a national creed.

Certainly, we would do well to consider that tenets of the creed today.

Tyler Page said of his concept of such a statement, "A creed it seemed to me, should contain those things to which its subscribers had believed all along, but which never had been brought together concretely." And this is what the American creed does.

How many could recite this creed? Do Americans have an understanding generally of the ideals and principles underlying American democracy? Americans should pause to reassess what being an American means. Those Americans going as tourists to foreign shores would do well to meditate on these principles, for as unofficial ambassadors they are expected to be knowledgeable, even articulate, about their country.

I urge Americans to take stock of what they believe in and to learn to explain it to others. I can think of no better starting point than the great statement, The American's Creed, conceived by William Tyler Page.

Mr. President, I ask unanimous consent that The American's Creed, written by William Tyler Page, who died October 20, 1942, after serving 61 years in the Capitol Building of the United States, whose last post was as minority clerk of the House of Representatives, be printed in the Appendix of the RECORD.

There being no objection, the creed was ordered to be printed in the RECORD, as follows:

THE AMERICAN'S CREED

I believe in the United States of America as a Government of the people, by the people, for the people, whose just powers are derived from the consent of the governed, a democracy in a republic; a sovereign nation of many sovereign States; a perfect union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity, for which American patriots sacrificed their lives and fortunes.

I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag, and to defend it against all enemies.

WM. TYLER PAGE.

Scientific Education—Letter From President Flowers, of Southwest Texas State Teachers' College

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 3, 1958

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received from President J. G. Flowers, of the Southwest Texas State Teachers' College, at San

Marcos, Tex., in support of Senate bill 3187, a bill to provide for supplementary financial aid to students interested in science.

Dr. Flowers states that after careful examination of the bill he believes that, if enacted, it will lend much support to science and mathematics education in this country on both the secondary and collegiate levels, and that it will also give impetus to advance graduate study in the sciences and in mathematics, which is one of the great needs in the present crisis.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SOUTHWEST TEXAS STATE TEACHERS COLLEGE,
San Marcos, Tex.

Senator RALPH YARBOROUGH,
The United States Senate,
Washington, D. C.

DEAR SENATOR YARBOROUGH: I appreciate your kindness in mailing me a copy of the proposed bill S. 3187, which provides for supplementary financial aid to students interested in science.

After a careful examination of the proposal, I have the following comments:

1. This bill, if enacted, will lend much support to science and mathematics education in this country on both the secondary and collegiate levels. Moreover, it will have competent effects on other areas of study.

2. It seems to me that it is entirely fair since the implementation and administration of it will be left to a large degree to local administration by our State agencies of education. It strikes me that this provides the local control that it needs.

3. Though the aid of $40 million a year would provide only 200,000 students aid over a 5-year period, it seems to me that this is at least a good beginning. The fact that the Government itself is interested in this problem may encourage private enterprise to match the funds, or at least provide something by way of encouragement.

4. Providing these grants will also give impetus to advance graduate study in the sciences and in mathematics which, after all, is one of the great needs in the present crisis. It is our feeling that something needs to be done to promote advanced study on the graduate level in these areas. The passage of this bill, I think, will give impetus in this area.

I wish you to know that we are strongly in favor of this proposal.

Sincerely yours,
J. G. FLOWERS, *President.*

Business Is Good

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 1, 1958

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following editorial published in the St. Louis County Observer on Wednesday, March 26, 1958. It is a followup to the editorial I placed in the RECORD on March 24.

It points up the positive reaction and appreciation of many of the readers of this fine publication. They, too, have reaffirmed their disappointment in the local press for their gross portrayal of the gloom-and-doom thesis.

I would only reaffirm this editor's conclusion by repeating that this is indeed time for positive thinking.

BUSINESS, CIVIC LEADERS AGREE: BUSINESS IS GOOD

Last week's page 1 editorial about business conditions in the area served by this newspaper has evoked much favorable comment. Likewise there were two complaints that it 'taint so. These protests were from unemployed persons and we can sympathize with their plight. However, we do not back down from our original evaluation of the situation.

Conditions have been grossly exaggerated by the daily press to the detriment of business and constant repetition could have a disastrous effect on our economy. Which is why we urge the buying public to be realistic. In addition to many calls, we have received letters from business and civic leaders complimenting us for our constructive thinking. We say that the conditions in Observerland are good. The Freezall Food Service in Maplewood tells us they are doing twice the business they did a year ago and have added more help. The volume of the Glaser Drug Co. is running ahead of last year. Sales at the Brinson Appliance Co. are ahead of last year.

Jim O'Hara of O'Hara's Loop Market writes: "Your editorial on the slanted view being given on unemployment echoes my feelings. Congratulations on a fine article." Mr. W. E. Darr of 7222 Nottingham phoned to say: "My compliments to you on 'Let's be realistic.' We need sound thinking such as yours."

The executive director of the Sales Executives Associations of St. Louis in his complimentary letter says, "America needs more of this kind of reporting to act as a counterbalance to the gloom and doom prophets. The purchasing power of this country must be kept in motion. Keep up the good work." We appreciate these words from Jack R. Dauner and will print his letter in its entirety.

A letter from Irene Eberle Leibmann says, "just a word of thank you for the article printed in your latest copy of the County Observer, 'Let's Be Honest and Realistic' * * * I read in the Monitor where storeowners got busy and spread good news instead of gloom. This is being done in Texas. We can do the same."

And so as we have said and others seem to agree, we must have confidence in the future. The time to spend is now in order to keep our economy sound. This does not mean foolish spending but purchasing the things you need. Values were never better in Observerland.

We are sorry that space limits our mentioning all of the comments on last week's editorial and the sentiments expressed are really repetitious. To those who contacted us to express their thanks we are grateful and glad you agree. This is the time for positive thinking.

Reorganization of the Defense Department

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. KILDAY. Mr. Speaker, in connection with the message from the President on the reorganization of the Department of Defense, I have issued the following statement:

Of course, my subcommittee will give careful and thorough consideration to all of the proposals submitted by the President. The subcommittee will also give careful consideration to proposals not submitted by the President, including those contained in the Vinson-Arends-Kilday bills now pending in the House.

We will inquire with care into the proposed repeal of the existing provision of the National Security Act that the military departments shall be separately administered. The purpose of the repeal of this language is that in the future all funds for all military purposes will be appropriated to the Secretary of Defense instead of to the three service Secretaries as is now in the case. The appropriation of almost two-thirds of the total national budget to one official of Government will require the strongest possible justification to sustain it. It is probably greater economic power than should be possessed by one individual.

As revealed before the Senate and House committees, the principal difficulty in the Defense Department is the impossibility of securing prompt decisions. All witnesses agreed this is true because of the administrative jungle created by layers of secretaries, assistant secretaries, and deputy assistant secretaries. This plan does nothing to cure that situation.

Showdown on the Farm

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. MOORE. Mr. Speaker, on Tuesday morning, I had the priivlege of having the Secretary of Agriculture, Mr. Ezra Taft Benson, as my guest on the weekly radio program which is taped in Washington and sent to some 11 radio stations in the First Congressional District of West Virginia. This broadcast was made on the morning following President Eisenhower's veto of the farm bill, and the Secretary was in very high spirits because of the victory for his farm policies.

It is my opinion that the Secretary of Agriculture is a man of firm and unfailing convictions, and in our Nation's Capital, this is a quality which is often lacking or sacrificed on the altar of political expediency. I informed the Secretary that as a Congressman and as a citizen of this country, I greatly appreciated his untiring devotion to duty and his unswerving allegiance to the goals and principles to which he is dedicated. In spite of the abuse to which Mr. Benson has been subjected by misguided or uninformed persons, he has come through the brimstone of political oratory unscathed and undaunted.

I enjoyed a most pleasant conversation with the Secretary, and feel certain that the people of West Virginia will profit greatly by listening to the Secretary's comments on my radio show which will be broadcast this weekend.

Along this same vein, I would like to call attention of the House to an outstanding editorial appearing on April 2, 1958, in the Wheeling Intelligencer, a leading newspaper in my district. This editorial salutes President Eisenhower for his moral courage in vetoing the farm bill, and suggests that this action might bring to the attention of Congress and the Nation the folly of continuing to follow a farm program which is both politically and morally wrong. The editorial follows:

[From the Wheeling Intelligencer of April 2, 1958]

SHOWDOWN ON THE FARM

The impending attempt to override President Eisenhower's veto of the farm freeze bill may serve the useful purpose of bringing the controversy over agricultural policy to a showdown.

Heretofore the issue has lacked the clear-cut lines of division now drawn. It is no longer a question of whether rigid or flexible farm supports are preferable as standard policy, but of whether we cut or strengthen supports right now, with all the arguments of recession necessity thrown in to add emphasis.

Secretary Benson had ordered a reduction in support prices for April 1 as permitted under existing law. A storm of protest went up from certain farm belt Senators and Congressmen of both parties who traditionally have backed high farm subsidies in spite of their cost to the taxpayers, the smothering surpluses they have piled up in Government warehouses and the obvious fact that they have not brought the desired stability and prosperity to the farm.

Demands were made on Benson to resign and then on the President to fire him. Both stood pat, so Congress passed a bill—by not too healthy margins in either branch—freezing both price supports and acreage allotments at their existing levels.

It is this bill Mr. Eisenhower has vetoed, and it is not only on the question of overriding the veto but on adoption of the President's counterproposals that the issue will be fought out. Mr. Eisenhower left no doubt in his veto message as to where he stands. Asserting that the farm economy needs a thaw instead of a freeze, he advanced a five-point program resting squarely on the theory that support prices should be lowered rather than raised. His plan would authorize the Secretary of Agriculture to cut the support level to 60 percent of parity as compared with the present 75 percent floor, and permit a 50 percent increase in acreage allotments.

The basis of the Benson-Eisenhower doctrine is that farmers should be encouraged to produce for the market rather than for Government storage and that the best way to accomplish this is to reduce artificial supports and gradually get the Government as completely out of the farm regulating business as the realities will permit.

That this, in reality, represents the view of a majority of ordinary farmers as opposed to the relatively few giant commercial operations which constitute the backbone of the high subsidy element, is suggested by the fact that the American Farm Bureau, numerically largest of all the farm organizations and the one representing most of the family farms of the Nation, backs the President and Secretary of Agriculture in their stand.

Maybe the congressional farm bloc will be revealed in its true light in the days ahead and what was represented as a political liability will turn into a Republican asset as well as a boon to the American people.

Program of People to People

EXTENSION OF REMARKS
OF
HON. JOHN M. ROBSION, JR.
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. ROBSION of Kentucky. Mr. Speaker, I would like to introduce into the RECORD a very significant editorial which appeared in one of the world's great newspapers, La Prensa of Buenos Aires. The editors of La Prensa were moved to comment on the need for understanding between peoples of varying countries as a result of a thoughtful statement in Buenos Aires by a Washington attorney, Ralph E. Becker. Mr. Becker was in Buenos Aires attending the Inter-American Bar Conference and made a particular point of stressing the need for people-to-people contact.

From my participation in the Parliamentary Union, I have witnessed the great benefits to be gained from the people-to-people program. It is significant and encouraging to learn that distinguished private citizens such as Mr. Becker are making an effort to achieve the objectives of this commendable program. It is a tribute to Mr. Becker and to all thoughtful Americans who make similar contributions that this great newspaper should comment on the potential benefits to be derived from their work.

Materialistic aid will never replace the personal contact from which is achieved true understanding of the hearts and minds of peoples in other countries. I hope that all Americans abroad—Government officials and private citizens—will make an extra effort to encourage personal exchange of ideas among peoples.

The editorial follows:

[Translation of editorial in La Prensa, December 12, 1957, of the program of people to people]

The prominent North American Republican, Dr. Ralph E. Becker, in a dissertation given a few weeks ago at the Argentine chamber of commerce, outlined an idea which came from a meeting of President Eisenhower with a group of prominent citizens of his country, gathered together to consider ideas about the development of new avenues for international understanding. From this conversation developed the program of people to people, whose principal object consists of the wide support (guarantee) of communication between North Americans and people of other countries. "As an addition to the normal diplomatic relations from government to government, this program has summed up the advanced concept of a focus from people to people. Thus would be developed that nationals, in their private character as individuals, or as private organizations, would seek contact with their counterparts in other countries of the world," said the orator.

It seems to us that this idea is capable of giving good results. The aid which the United States would be able to lend to other countries, for the mutual benefit of the giver and the receiver, has concentrated up to this time in direct concessions from government to government. The Marshall plan completed its mission, but the world has shown some dissatisfaction with the aid as given in this manner, which presented evident limitations in the benefits derived from the aid. Why not offer the opportunity for North American industry in collaboration with private enterprise on the outside, to interest itself in projects which directly benefit the average citizen in his daily life?

This is the object of the program of people to people, to intensify mutual knowledge of the North American citizens and those of other countries, their commercial customs, their necessities and conveniences, their possibilities and the obstacles against the best development of the sources of wealth; in résumé, to know what to give some that the others need and if it is possible to pool the resources, ideas and the capital without intervention of the respective governments.

From this grew the idea of the association of enterprises of the two countries, which would be a new form of investment of capital and which would present the great advantage of dissipating the suspicions which an ill-understood nationalism offered for the importation of foreign capital in enterprises of primary national interest, rather than national capital associated with foreign which would be good security against so much fear and ill-defined imperialism.

It is understood that in this transfusion of capital, up to this time there would be needed the support of the governments, because of the ignorance of the private investors about the conditions in which their savings would be used and the securities offered. But if this ignorance is overcome by abundant information and in understanding between the citizens of various countries, the association of enterprises would be spontaneous for the mutual benefits which could be obtained. Such we believe is the feeling of the program of people to people and we consider it a subject worthy of study.

Initiative, on the other hand, is comprehended in a plan much more vast that has developed in the United States, inspiring in its elemental idea: to know by comprehending, to comprehend by understanding. We concerned ourselves with this in our edition of the 20th of August last and we gave information that in this country there has been formed through the initiative of President Eisenhower, 41 committees, constituted by professions or activities, from selected experts, industrialists, workers, sportsmen, hotelmen, collectors of stamps, etc., each one of which, in its sphere of action, sought opportunities and means to know other people and to learn about them in their natural daily life, their incentives and in their aspirations. Nothing more definite is offered than a plan to create a spirit of good will, in time to seek official support, they seek to avoid it, in order to give to the movement all the resulting spontaneity of the high propositions held in view.

In this same mentioned edition we published an invitation formulated for this paper by the President of one of these committees—the People to People Book Committee, Inc.—for divulging in our country the work of rapprochement which realizes the great value of the book as a vehicle. In effect, it has solicited from the people of the Argentine that they should furnish this committee with the names of our books which are considered most suitable to give us knowledge, and suggest the titles of North American works which are most appropriate for better informing us about the character, customs, aspirations, culture, etc., of that country.

Regarding this plan in the field of commercial and economic areas, there is no doubt that it would be able to produce the highest results.

Peculiarities of the Election of 1867

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 3, 1958

Mr. MANSFIELD. Mr. President, I ask unanimous consent that an article from the Montana Parade section of the Great Falls Tribune of March 23, 1958, entitled "Many Peculiarities Marked 1867 Election," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MANY PECULIARITIES MARKED 1867 ELECTION
(By Herbert M. Peet)

Montana has had many interesting political campaigns in its 94 years of existence but the one held in August 1867, is best remembered for its peculiarities as well as for its bitterness.

That campaign, which was Montana's third, saw the territorial governor, Green Clay Smith, a Republican appointee of a Republican President, on the stump for the Democratic candidate for Congress.

It also saw for the first time in Montana's history the use of a campaigner from the outside in an effort to swing voters to the Republican side. The outsider was Col. Alexander Kelly McClure, Philadelphia newspaper publisher.

It also was the first and probably the only time that Col. Wilbur F. Sanders had as an opponent in his several unsuccessful races for Congress a man who was as adept in the use of billingsgate and sarcasm as Sanders himself.

Colonel Sanders' opponent in 1867 was James M. Cavanaugh, an Irishman who had lived in the territory scarcely a year. As Cavanaugh had wrested the Democratic nomination from the Missourians, the dominant element in the party, through a bitter and long contest in the territorial convention. Colonel Sanders and other Republicans thought the Irishman would be easy to defeat.

But this was only wishful thinking. It overlooked completely two realities in Montana politics of that day. The first was the implacable animosity a majority of Montana voters had for Colonel Sanders' persistent reference to Democrats as "rebels and traitors." They would vote for the devil himself rather than for Sanders. The other reality which the Republicans discounted too heavily was Cavanaugh's ability on the platform.

Cavanaugh, just turned 44 when the campaign opened, was 11 years older than Sanders and already had served a term in Congress from Minnesota (1858–59), after which he had migrated to Colorado. There, in a period of 6 years, he made his mark both as a criminal lawyer and as a politician before moving on to Montana in 1866. He had a keen sense of humor and a comprehensive understanding of the issues of his day.

On the platform he could be as funny as a clown 1 minute and rise to the heights of oratorical eloquence the next. But he also was a master of ridicule, satire, and derision and it was in these qualities that he met and matched Colonel Sanders in the 1867 campaign.

Sanders was seeking vindication for having induced Congress, in the spring of 1867, to nullify all the laws passed by the 2d and 3d Montana territorial legislatures, both of which had met in 1866. These two legislative sessions had been feuding with Chief Justice Hosmer and Associate Justice Munson of the territorial supreme court because the latter had declared certain legislation illegal. In retaliation, the legislators had materially reduced the judges' salaries and assigned them to newly created judicial districts in eastern Montana—the badlands—inhabited chiefly by Indians.

Never before and never since has Congress nullified the acts of a legislative assembly duly elected by the people. If such acts have needed correction it has been left to the courts to straighten out. But the unprecedented action of nullifying two Montana legislative sessions was taken by a Congress hellbent on punishing the Southern States for secession and the Civil War. The action against Montana was based on Colonel Sanders' report to congressional leaders that the men who made up the Montana Legislature were reeking with treason and were irresponsible, disloyal, ex-Confederate Democrats.

The Montana legislators, of course, were not the irresponsible traitors that Colonel Sanders said they were, and a majority of Montana people of that day knew it.

Green Clay Smith, a Republican, came to Montana to be its Governor in the fall of 1866 when the feud between the legislature and the supreme court of the Territory was at its height. Though it was a situation which called for no action on his part, he nevertheless had looked into it and decided that, while the Democratic legislators undoubtedly has acted intemperately, they had been driven to it by the bitter partisanship and arbitrary decisions of the judges.

By the time the campaign of 1867 opened, Governor Smith had decided to support Cavanaugh for Congress rather than Sanders. Smith had been a general of the Union Army in the Civil War and a friend and supporter of President Lincoln. In fact, in 1864, he had been considered for nomination as Lincoln's running mate instead of Andrew Johnson. But now, in 1867, Smith felt that President Johnson, who had succeeded the martyred President, was more nearly carrying out Lincoln's polices for reconstruction of the South than the radical Republican congressional leaders.

Montana Democrats seized this opportunity to induce Governor Smith to take the stump in their behalf and follow Colonel McClure throughout the territory. McClure had been drafted by the Republicans to campaign in Sanders' behalf. Like Smith, McClure had been one of President Lincoln's friends but he did not agree with Smith that President Johnson's reconstruction policies were those that Lincoln would have pursued if he had lived.

It was apparent from the start that Sanders and Cavanaugh would engage in a verbal slugging match such as Montana never before had witnessed. While this would be an enjoyable sport for many, managers on both sides felt that Governor Smith and Colonel McClure should and would give the campaign a tone of dignified and dispassionate discussion of issues.

Unfortunately, when Governor Smith reached Helena from Virginia City, he was entertained a little too generously by Cavanaugh's friends and was visibly drunk by the time he started his speech. This naturally disgusted many Republicans. While it may have embarrassed some Democrats, it had no ill effects on the election's outcome. It was the only time the governor slipped during the campaign. When he left Montana a couple of years later he became a Baptist minister and in 1876 was the Prohibition party's candidate for president of the United States.

Through it is doubtful whether Colonel McClure won many votes for Sanders, he made an excellent campaign. He delivered a speech a day for 2 weeks (Sunday excepted) and had to travel 40 to 60 miles between speaking engagements in a platform wagon over roads that were seldom more than a couple of ruts.

He soon discovered that the majority of his audience at each point was made up of Democrats and that he had to speak with reasonable prudence. In 1 town, where a crowd of 40 had assembled to hear him, only 1 of the number was a Republican. A Democrat was asked to call the meeting to order so this Republican could introduce the colonel.

Writing about his experiences for the New York Tribune, McClure said: "If any ambitious eastern orator supposes that it is an easy task to declaim to the people of the mountains, and that any sort of speechmaking will be accepted as a treat, he would do well not to attempt to carry the theory into practice.

"I have never been before audiences in the East where political questions were better understood than by the people who compose public meetings in Montana, and I can conceive of no worse place for pretentious stumpers than just here. They not only detect the want of fitness for the task of enlightening them, but they are merciless in exposing it on the spot."

Colonel McClure found it was no breach of propriety in Montana for a Democrat to get up at a Republican meeting, after the regular speakers were through, and reply to the speeches. This was done at one of McClure's meetings and he said he "never listen to a more chaste, eloquent, and logical speech than was this reply by the Democrat."

Their difference of opinion over President Johnson's reconstruction policies did not keep Colonel McClure and Governor Smith from becoming good friends during the 6 months McClure was in the territory. He found the Governor to be a typical Kentucky gentleman, courteous, kind, and tolerant.

In one of the towns where they campaigned, a terrier belonging to the colonel, a pet of which he was particularly fond, was stolen. When the governor heard about it on his arrival the following day, after McClure had gone on, he made a search for it, found it and delivered it later.

In the fall of 1867, before Colonel McClure returned to their home in Pennsylvania, he and Mrs. McClure derived much pleasure in attending the weekly receptions—or levees as they were called—which the governor and his lady gave in Virginia City, the territorial capital.

Montana voters left no doubt that year as to how they stood on Congress' nullification of their laws. Sanders was defeated by a substantial margin. At the same time the voters elected a new legislature, one of whose first acts was the passage of a joint resolution demanding the resignation of Chief Justice Hosmer and Associate Justice Munson so that competent and able judges could be appointed in their places. Munson resigned, but Hosmer held on until his term expired. He was not reappointed.

To Build Peace: Ask Khrushchev to Talks in United States

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following editorial from the Philadelphia Inquirer:

TO BUILD PEACE: ASK KHRUSHCHEV TO TALKS IN UNITED STATES

For direct, positive results on behalf of world peace and security, this newspaper respectfully urges upon President Eisenhower a direct, positive step: an invitation to Premier Khrushchev to face-to-face talks with the President in Washington on the crucial problems facing mankind today.

Such a meeting between the heads of state of the world's most powerful nations could conceivably accomplish what no amount of long-distance notes could ever hope to achieve.

Just the fact of an invitation to Khrushchev would have immediate and much-needed effect in reversing the propaganda current set in motion by the latest Soviet Union effort to label itself as the champion of peace and disarmament: the deceptive offer to suspend nuclear weapon tests.

But countering Soviet propaganda would be a minor factor in the promotion of an Eisenhower-Khrushchev meeting. What is important is the possible results in a concrete approach to peace and understanding in a world now fearful and divided.

In identical notes handed the Soviet Government on Monday by the United States, Britain and France, it was stated that the present international situation requires that a serious attempt be made to reach agreement on the main problems affecting attainment of peace and stability in the world.

What more serious attempt along these lines could be made at this time than a bid by the President of the United States for a personal conference with the headman of the Soviet state?

What the three nations were proposing yesterday, even as the Russians' nuclear suspension announcement was making its dynamic impression upon the world, was a summit meeting so hedged in by redtape preliminaries and conditions that no one could tell when or whether it could be held.

A direct get-together with Khrushchev as soon as feasible would get to the heart of the summit proposition, without delays and confusion. Khrushchev is now the unquestioned and undisputed head of the Soviet Government; now is the logical time for him to speak for Russia to the President of the United States.

What is most needed now is initiative, decisiveness, imagination, in pushing for world peace. An invitation to Khrushchev would possess all these elements.

Speech of Hon. John E. Fogarty at the Annual Dinner of the Society of Friendly Sons of St. Patrick

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include a speech which I delivered at the annual dinner of the Society of Friendly Sons of St. Patrick of Westerly, R. I., on March 16, 1958:

St. Patrick's Day is a day for remembrances. It is a day on which we recall again the great names of Ireland, the names of the countries and the towns and the villages, of the hills and the valleys, of the lakes and rivers and bays of Ireland. A day on which we recall again the names of her saints and her scholars, to recite and list again the names of her great patriots and leaders, of her singers and of her poets. Even though many of us have never seen the places, just as we have not seen or known the saints of Ireland, both the persons and the places come alive again in our minds and in our hearts. We recall the names of Donegal and Tyrone and Armagh in the north, of Kildare and Meath, Wicklow and Dublin in the east, of Waterford and Cork and Kerry in the south, of Limerick, Clare, Galway and Sligo in the west. The names of Niall, Cormack, Brian, Murray, O'Connor, Parnell, O'Connell, Plunkett, Emmett and Hyde; the names of Patrick, Bridget and Columkille, and Brendan and Malachy and all the rest of the saints, and the great leaders and the scholars, and the bards and genealogists and the poets of Ireland.

It is difficult for those who are not Irish to understand the character of the Irish. There is a strong undercurrent of sadness in any joyous Irish celebration. And, on the other hand, even in Irish mourning there is an element of the joyful. The Irish wake is not an accident. This seeming division characterizes the history of the Irish people as it does characterize the Irish personality. The line between the consideration of Ireland as a gray-haired old lady mourning in the shadows for the loss of her sons and waiting in vain for help from across the waves, and the consideration of Ireland as vigorous and fertile, producing sons and daughters and sending them forth triumphantly to the ends of the earth, the lines between the things of time and those of eternity, between the times of peace and the time of trouble have been finely drawn. It is common in the characterization of nations to picture them in an hour of triumph, and of strength and victory, rather than in a time of defeat and suffering. This is not the case with Ireland and the Irish people. The Irish character has not been formed and proved in one short test, or in one shining hour. It has been slow tested and proved in a long and bitter history, in defeat and oppression and suffering. It has been proved not only as to heroic virtues, but also as to unheroic ones; not only as to courage and fortitude and greatness of mind, but as to patience and tolerance and long suffering; the little and unheroic virtues, without which neither a nation nor a man can claim perfection.

It seems as a result of this long slow testing, the Irish have developed a sensitivity which permits them to hear the last note of the harp, or the song of freedom, after other ears have become deaf to it. It permits them to see the last spark of freedom in what was once a great fire after other eyes no longer see that light, and to feel the warmth of freedom, and of hope, in what to others may appear to be a cold lump of peat. The Irish character as a result of this testing and trial has been marked by a great longing and aspiration for freedom. That longing and aspiration have been expressed in the five great loves of the Irish people.

First is their great love for country, for the soil of Ireland, for its towns and its people. So great is this love and longing, that the greatest punishment set for Columkille, the saint, was that he could no longer set foot on Irish soil. And so we have, all of us, in a sense remained exiles whenever we have been away from Ireland. Like Columkille we can say: "There is a gray eye which ever turns to Erin. What joy to fly upon the white-crested sea, and to sight the waves breaking upon the Irish shore. To return to Ireland where the song of the birds is so sweet and the clerks sing as well, where the young are so gentle and the old are so wise, where great men are noble and the women so fair."

The second great love of the Irish is their love of religion, for the things of the spirits. At the time of the coming of christianity the Irish spirit was willing and ready. St. Patrick came and was received without martyrdem. The same cannot be said of the other lands, not of Rome, not of Gaul, nor of the East, nor even of the new continents found across the sea. Ireland gained the title of Isle of Saints and became the source of missionaries to all corners of the world.

The third great love of the Irish is their love of learning. It was this great love that kept alive the flame of knowledge and the pursuit of truth during the dark period of the 5th, 6th and 7th centuries.

The fourth great love is that of political freedom—a love which sustained the Irish in standing against the Danes and the Normans, the Tudor armies, the hosts of Cromwell, and all the soldiers of the King of England.

It is this love of freedom which inspires the Irish people and their friends all over the world to create conditions in which the immoral and absurd partitioning of their homeland can be brought to an end—not only in order to right a wrong and to secure another triumph for freedom and democracy but so that the undesirable social and economic consequences of this national dismemberment may be ended also—and may I add that those who help to speed the coming of the day of the inevitable and peaceful reunion of Ireland are securing the foundations for a splendid future for the Irish homeland.

The fifth great love is that of poetry and song. A love so strong and deep and so consequential that as late as the 15th and 16th centuries English rulers were moved to impose special penalties on bards, minstrels, rhymers, and geneologists who sustained the lords and gentlemen in their love of rebellion and other crimes and which moved the soldiers of Cromwell to break the harps still found on the walls of the cottages of the Irish at the time of the invasion. The ancient Gaelic law recognized this in forbidding the seizure by justice in any house of any Gael whatsoever, one of his books, his sword, or his harp. For his book was the symbol of his intellectual and of his spiritual freedom. The sword was the symbol of his political freedom, and the harp was the symbol of all the things that the human heart aspires to.

The world needs the revival of the five great loves of the Irish today as it has always needed them. It needs love leading to positive action. In a time when the traditions of the past are rejected and frowned upon, when learning and truth must compete in the marketplace with falsehood and error and the only test is that of which is most useful, there is a great need for the return of the love of truth and the love of learning. When love of country and love of political freedom in many areas of the world have been destroyed, there is a great need for the revival of the Irish love of country. When the faith has grown cold and has been rejected by many, the love of the faith, too, must be revivified. When love of poetry is looked upon by some as unmanly, when it has little or no place in the deliberations of man, there is a great need for a revival of this Irish love of song and poetry. This, then, is the pattern and the way.

The responsibility of the sons of St. Patrick is clear. Let us hope that all may so meet and fulfill their responsibility that each and every one say that he has been the good servant of learning and of song and poetry, but in all things God's good servant first. And then we can hope that the good St. Patrick in his right may judge us all with gentleness.

Please, God, let our souls be forever free. Let us be men of our time and have the courage to stand fast by the cause of justice and righteousness and, by our steadfastness, win all mankind to an appreciation

of the merit of the cause which we plead—so that, in some distant day, it may be said of some of us that there was one sanctified spot dearer than all others—where the dew glistened on the softest green, the spirit of Ireland hovered, and shook the stillness of the Irish dawn on its journey to the stars.

Hon. Frank Ikard

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. THORNBERRY. Mr. Speaker, in the March 30, 1958, issue of the Dallas Morning News, Dallas, Tex., appeared a splendid article written by the able correspondent of that newspaper, Mr. Robert Baskin, about our friend and colleague, Hon. FRANK IKARD, of Texas.

Mr. Baskin's excellent story demonstrates why FRANK IKARD is held in such high esteem not only by those of us who work with him daily but also by his constituents of the 13th Congressional District of Texas. No one can come to know FRANK IKARD without recognizing him as a man of character and stature.

Here is the article by Mr. Baskin:

FRANK IKARD: POLITICAL COMER
(By Robert E. Baskin)

A strapping 6-foot 4-inch Congressman from Wichita Falls last week was well on his way toward becoming one of the most important men on Capitol Hill.

The tide of events this winter has rapidly brought Representative FRANK IKARD into the forefront of major congressional developments. He has met this challenge with an ever-increasing amount of hard work and perseverance.

A modest, soft-spoken man of 43, IKARD would never lay claim to any particular accolades for the service he is rendering.

But as Texas' representative on the House Ways and Means Committee, he occupies a position of power that is both legislative and political.

Since Congress reopened in January the House committee has been laboriously preparing tax legislation for this session. From every segment of the Nation's economy has come advice on what tax policies should be pursued. Soon a tax bill will emerge.

On top of that, the committee has been considering extension of the Reciprocal Trade Agreements Act. Here IKARD has been most active, leading the fight for workable controls on foreign oil imports, which have had a devastating effect on Texas' economy.

A relative newcomer to Congress, Ikard enjoys the confidence of Speaker SAM RAYBURN, whose blessings are necessary for any Democrat to ascend to the Ways and Means Committee. There is political power in this committee because its Democratic members are also members of the committee on committees, which determines other Democratic committee assignments.

"The most important thing that can happen to a fellow in Congress in his committee assignment," IKARD says, recalling that his first-term assignment was to the Committee on Merchant Marine and Fisheries, which had little relation to his inland district.

IKARD comes of old Texas stock. His grandfather, W. W. Ikard, settled in the north Texas open range country in 1867, making his headquarters in Clay County. The family has been prominent in that area ever since.

The future Congressman was born at Henrietta, attended the public schools there and went on to the University of Texas, where he received a law degree in 1937. He then entered one of Wichita Falls' leading law firms.

In 1942 IKARD went into the Army, and his next 3 years were years of great hardship; not only for himself but also for his wife, the former Jean Hunter, of Wichita Falls, whom he married in 1940.

IKARD became a frontline rifleman in Company K, 110th Infantry, 28th Division. He fought in Normandy, northern France, Aachen, the Siegfried Line, and the Hurtgen Forest. He was wounded twice.

Then one day in November 1944, his company found itself surrounded at a road junction near a river in Luxembourg. It was out of food, ammunition and medical supplies. Casualties had been heavy. Company K was captured by the Germans.

For nearly 6 months the War Department listed IKARD as missing in action.

During this time, he was a prisoner living in a shack in the railroad yards at Halle, Germany, on the Elbe River. Allied bombings were frequent, and food was scarce.

Liberation did not come until spring, and by then IKARD's 225-pound frame had been reduced to 135 pounds by malnutrition.

In captivity, IKARD had time to think of the future.

"I had never had any intention of getting in politics in any way," he says, "but in prison I just got sold on the idea that more people ought to take part in government. I came out with the decision that that was what I wanted to do, although I had no particular goal in mind."

He returned to his Wichita Falls law firm, and his first political office came in 1948 when Gov. Beauford Jester named him judge of the 30th district court.

In 1951, Congressman Ed Gossett resigned to accept a business position in Dallas, and IKARD announced for Congress. He beat seven opponents in a special election. In three elections since then he has had no opposition.

Recently's IKARD's name has appeared in speculation on possible candidates for the Senate race this summer.

"The only interest I have at the moment," he says, "is doing as good a job in the House for the 13th District as I can."

Legislatively, he is interested mainly in agriculture and oil and gas, the basis of his district's economy.

IKARD can be roughly classified as a middle-of-the-road Democrat, with certain strong conservative leanings.

Of his tax philosophy, he says: "I feel very strongly that our tax laws should be for revenue only instead of for social reforms, which should be dealt with directly."

Currently, IKARD believes that small businesses need tax relief, and he is pressing for such action at this session.

When Congress is in session, the Ikards and their town sons, Frank, Jr., 16, and Bill, 12, live in nearby Chevy Chase, Md. The Congressman is at work early and stays late, and he says he misses the dove hunting and book collecting that he once had time to enjoy in Texas.

Russell Lee—Camera Artist

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 3, 1958

Mr. YARBOROUGH. Mr. President, Russell Lee, of Austin, Tex., is an artist who paints with a camera in place of a brush. As a matter of fact, he does very good work with a brush, too, but his finest artistry has been achieved in pictures he has taken of real life.

His wonderful works mirror life as it really was or is. The magic eye of his camera has trained on happiness and sorrow, love and hate, confidence and fear, hunger and plenty, war and peace, all the ingredients of this thing called life. To me, Russ Lee's wonderful protraits not only depict life, but give a clear insight of the artist himself. Obviously the artist must understand his subject before he can effectively reproduce it for the people. Mr. Lee's work could only be accomplished by a man whose heart and conscience and character matched his photographic genius.

Mr. President, in the Austin American Statesman of Sunday, March 23, published an excellent feature story written by Nell Fenner, the woman's editor of the newspaper, concerning Russell Lee's work. I ask unanimous consent to have the story, headed "Camera Artistry," printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAMERA ARTISTRY
(By Nell Fenner)

[Pictures referred to in article not printed in RECORD]

The pictures on this page tell their own stories—a smile, a wait, a handclasp, a plot, and a little girl's mystic concern with the present and future.

And that of the deep inner eye of the artist who photographed them—Austin's own Russell Lee.

That familiar and generous smile at the bottom of the page is, of course, on the face of the most authentic Texan of them all, J. Frank Dobie. Russ caught this shot of Pancho's photogenic mug during a writer's outdoor gathering at Joe Small's Lake Travis cottage.

The youngsters waiting and watching at upper left are truly children of darkness. These are a coal miner's children as Russ saw them back in the 1930's at a window of their shack wondering when, or if, their father would come home from down in the mines. Darkness is inside this home and smudged over on the faces of the children.

Holding hands (lower left) is an expression of love at any age but it's seldom done any more by sophisticated folks in public. This tender gesture here unites an elderly east Texas couple who openly believe that the old ways are the best—and dress that way to prove it.

At upper right is what looks like a friendly political plot between these two Democratic women. Russ' lens captured this enthused discussion at a recess during a July political rally in Belton in 1956. All the flavor is here, hot dog stand in background and cokes in paper cups. You can almost hear the woman at left saying: "Now, honey, you go back to your precinct and get out the vote, and let's get our boy elected." Answer: "Now you know you can count on me."

The center photo is a 1949 scene in Corpus Christi where this child was sitting on the front steps of her home with a calm, resigned dignity that belies the living conditions around her. Russ took this for a research project for the University of Texas sociology department on living conditions of Spanish-speaking people in Texas. This photo really needs no words to explain it.

These pictures tell the story of life as it is experienced day by day by people anywhere and everywhere.

And that is what Russ Lee does with a camera.

"Photography," he says, "means the responsibility to express accurately and honestly those things that are a part of life."

This sounds like an artist's viewpoint, and it is. Russ is an artist. Now he uses a camera, but once he used a brush and paints. Here's what he will tell you about himself in his picture-filled home at 3110 West Avenue.

"I took up painting a few years after college, after having been a chemical engineer 4 years. Painting was a creative challenge, but soon I began to feel that there was a fleeting image I couldn't capture. It would be gone so quickly I couldn't get it down. That's when I learned about the camera."

So Russ took up photography "just to help my painting." But soon he learned that photography was his medium.

That was in 1935, and in a year's time he was launched on a photographic career that has taken him all over the world and placed his name among those of the top photographers of the world.

In 1936 he went to work as a staff photographer with the United States Government's Resettlement Administration, which later became the Farm Security Administration, and in 1942, the Office of War Information.

During those 7 years he photographed conditions on farms and of migratory labor throughout States west of the Mississippi River. The some 35,000 pictures he took are now in the Library of Congress. Many of them were used overseas during World War II to show other countries what rural America was like. Many of them illustrate the American Guide Series of books published by the WPA for various States.

During the war years of 1943 to 1945, Russ served in the Air Transport Command of the United States Air Force. He photographed check points from the air for ATC's air routes all over the world.

After the war he became staff photographer for the Coal Mines Administration, under the Department of Interior, doing a survey of housing, medical care and living conditions in coal mining areas. This work was later published in a book called A Medical Survey of the Bituminous-Coal Industry."

It was after this, in 1957, that Russ and his wife, Jean, moved to Austin. They had been on fishing trips earlier at Buchanan Lake and decided Austin was the place for them. (Although Russ is a native of Illinois, Jean was born and raised in Texas.)

Russ' work now is mostly industrial photography, which still takes him all over the world. In addition, he handles special assignments for many national magazines—Fortune, the New York Times magazine, Look, Ladies Home Journal, to name a few. He covered the 1952 and 1954 Texas gubernatorial campaigns for the New York Times Magazine.

Closer to home, he has illustrated magazine stories by such Austin writers as Hart Stillwell and Joe Small. He has photographed the University of Texas relays for Sports Illustrated.

In his industrial work, mostly for oil companies, one trip took him to Saudi Arabia, England, Denmark, Holland, West Germany, France, Italy, Turkey, Libya, Venezuela, Colombia, Cuba and Canada.

Although Russ' work is almost entirely outside of Austin, he nevertheless contributes his talents to the community. Right now he is taking pictures at his own expense at the Austin State School and the Pre-School for Mentally Retarded to illustrate a report being compiled on their work.

A project he is particularly interested in is a photographic workshop at the University of Missouri. Now in its 10th year, he has been chairman of it for 9 years, and will attend the 10th session in May. A nontechnical workshop, he calls it an experiment in photographic expression. The object is to teach photographers to start thinking in terms of good pictures.

Two of Russell Lee's pictures were included in the highly acclaimed Family of Man exhibit that opened in the New York Museum of Modern Art, toured many parts of the world and was published in book form.

Russ is no gadget loving photographer. He'd rather talk about people, and the way he sees them—and captures them on film. He has found those fleeting images with his inner eye.

Aid to India

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 3, 1958

Mr. MANSFIELD. Mr. President, on behalf of the Senator from Massachusetts [Mr. KENNEDY], I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial entitled "An Imaginative Proposal for Helping India," from the Providence Journal of March 31, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN IMAGINATIVE PROPOSAL FOR HELPING INDIA

The India aid program submitted jointly by Senators KENNEDY (Democrat, of Massachusetts) and COOPER (Republican, of Kentucky) is perhaps the most positive, imaginative, and potentially stimulating proposal of its kind to have been presented to Congress and the American people since President Eisenhower outlined his atoms-for-peace plan 4 years ago.

And, if the United States and its Western allies haven't lost their capacity to crusade—to find their own welfare in the greater good of all mankind—the Kennedy-Cooper program could provide just the inspiration needed to restore to the West its flagging confidence and renew its sense of direction.

First, the two Senators have focused attention on the crucial nature of India's drive to create a healthy industrial state within the framework of democracy. India is the point on which balances the fate of a free and representative society in teeming, emergent Asia and Africa.

If India's experiment continues to offer hope, Asian nations not caught up in the Communist net will be encouraged to follow in a movement that could be democracy's vindication and victory. If, on the other hand, India fails—and its second 5-year plan is sagging badly as a result of a poor year for crops and global inflation—Red China and the Soviet Union will appear to offer the only hope for peoples as desperately depressed as they are in Asia.

This message has been said before, of course, but rarely as persuasively as Mr. KENNEDY presented it to the Senate, or as abundantly supported both by facts and, since Senator COOPER is former Ambassador to India, by personal confirmation.

But more importantly, they have outlined a specific plan of action commensurate in scope to the size of the challenge posed by India, a plan that could make the difference between freedom and totalitarianism for India, Asia, and ultimately the Western World.

The proposal would, in effect, make India the target of an economic campaign comparable to the Marshall plan which in the last decade has changed the face of Europe. But instead of making it an all-American operation, Senators KENNEDY and COOPER propose to enlist the nations assisted to economic health by the Marshall plan in a vast coordinated effort to bring India the capital, agricultural knowledge, and industrial skills it needs to achieve its second 5-year plan.

Senators KENNEDY and COOPER recognize that two stimulants are needed. The United States, as the leader and the wealthiest member of the Atlantic community, must lead the way by coming forward with an economic aid offer that will enable India to get off the treadmill.

But India, too, must reciprocate, as the nations of Europe did through the OEEC, by dropping its shroud of pride and presenting the lending nations with a candid appraisal of its economic condition and needs so that a realistic development program can be worked out among India, the United States and any other contributing nations.

This requisite is one India could and should honor. If it is a string or a condition, it is one attached only in the interests of getting India on its feet as fast and efficiently as possible.

If there is one fault with the Kennedy-Cooper plan, it is that it limits itself to India, leaving for later consideration those nations from Pakistan to Malaya which rim the Indian Ocean and which, with India, create an economic unit.

The two Senators have endeavored to raise America's sights high, but perhaps they should try to raise the goal just a bit higher by proposing an economic aid program that would embrace all those nations which would join in a central Asian counterpart to the Organization of European Economic Cooperation.

Although creation of such a regional planning unit would require the cooperation of feuding states such as Pakistan and India, that cooperation should not be too much to ask in return for an aid program of the scope envisioned by Senators KENNEDY and COOPER. But the first move is up to the United States in the interest of regaining the initiative in world affairs in the service of freedom.

Freedom Is Still the Answer

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I should like to include an article written and published by a citizen of my home town, the Honorable Robert C. Stovall, of Okolona, Miss.

Mr. Stovall is a man of prominence and tremendous ability. Educated at the University of Mississippi and Harvard Law School, he established himself early in life as an attorney of eminence. Presently he is serving as president of the Columbus & Greenville Railway Co., a short-line railroad which traverses the State of Mississippi. In the midst of his busy life he has also established himself as a successful dirt farmer.

From a reading of the article one will promptly conclude, and correctly so, that Mr. Stovall is a courageous man and a

profound believer in the principles which made our country great. The article is respectfully commended to the reading of everyone. It follows:

FREEDOM IS STILL THE ANSWER

(By Robert C. Stovall)

Again our self-styled political economists are looking for that elusive pot of gold at the end of the rainbow. This time, Malthus and old Dr. Ben Franklin and scores of other wise men to the contrary, we are to achieve an abundant life in the future by doing what comes naturally. A few years hence, they say, there will be 200 million Americans, and these 200 million citizens, some of them as yet unborn, will stimulate trade no end by creating a limitless demand for consumer goods. So we will reproduce ourselves into prosperity. And as to what those 200 million customers will use for wampum, the economists do not say.

Many of us, I believe, are wary of economic theories and fed up with social experiments in defiance of natural law. Have we not weakened our economic structure and lost precious rights regulating and subsidizing ourselves into prosperity? And have we not come to the verge of bankruptcy spending ourselves into prosperity? Here again historical facts do indeed confound the theorists.

For centuries the stock reply of the Chinese to suggested change was: "We tried that experiment and it didn't work; so we abandoned it." We know that 400,000,000 customers failed to make China prosperous. In an atmosphere of filial piety, a Chinese considered numerous progeny his best bet for social security, and he worked the theory to the limit. The result? Well, not a rags to riches story in China, or in India. Rather a grim struggle against starvation. Now the governments are seeking a remedy through birth control.

History teaches that, barring national calamities and international upheavals, a productive people will be a prosperous people; and that the greatest incentive to production—whether a harvesting machine or a drama—an electronic brain or a Parthenon—is freedom—a freedom that comes only with knowledge, responsibility, and self-discipline.

A few weeks back, sputnik soared into outer space, and American confidence plummeted. Certainly it was unfortunate that America should lag behind the Soviet Union in the missile race, due to the betrayal of our secrets by disloyal citizens; to the genius of German scientists, whom our Government permitted the Russians to kidnap and exploit after World War II; to interservice rivalries with our military men; and to an all-out effort in Russia.

But it seemed to me that our reaction to sputnik was singularly deficient in courage and commonsense. You will remember that Mary Ellen Chase emphasized the oldfashioned American virtues of grit and gumption that still prevailed in the fishing village of her childhood. She told of a man who had lost his lobster traps in a northeast gale and loudly lamented his misfortune without exciting too much sympathy. "Why don't he shut his mouth and pick up his feet?" his neighbors said. "You can't sail straight by taking time to bawl about bad luck."

The talk of vulnerability that assailed our ears from sources high and low evidenced, I think, two potentially fatal defects outside the missile program—a lack of self-reliance and a lack of responsibility for our country. How could any American sell freedom and faith short, even in the face of the direst military threat?

The Crusade for Freedom no doubt is doing a thoroughly worthwhile work. But we have informal envoys who are trying to win friends and influence people by boasting of the number of sweptwing cars, deep freezes, washing machines, garbage disposal units, et cetera we have in this country, not realizing that men under oppression, with sore needs of the spirit, are deaf to the lure of material gadgets and luxuries. Some of our citizens are the only people who seem to have been taken by this overemphasis on material possessions.

We think of the Greek who said to the Persian: "You do not know what freedom is. If you did, you would fight for it with bare hands if you had no weapon." That is language a modern Pole, or Serb, or Hungarian would understand. Nor was it propaganda for foreign consumption. To the Athenian his freedom was his most prized possession in the days when Athens created drama and built the Parthenon and defeated the military might of Persia.

You may have read Dr. Edith Hamilton's very arresting book, The Echo of Greece. In it, she tells of a Greek army far from home and surrounded by a much superior force of the enemy, with just the slimmest chance for a successful breakthrough. The general made his men this speech, short, pointed, and sustained by fact: "You live in the only free city in the world. In Athens alone, the state does not interfere with a man's daily life." Naturally, soldiers would make a superhuman effort to get back to a place like that. Wouldn't we all?

In the Golden Age of Greece, Pericles said, "The individual can be trusted. Let him alone." And the founders of our country, notably Thomas Jefferson and James Madison, had the same idea. Then toward the end of the fifth century B. C. and into the next, the Athenians lost their self-reliance, responsibility, and self-control, and soon their freedom, and world leadership. Dr. Hamilton says they went to the theater and laughed at the comedies of Aristophanes that mirrored their ineptitude, corruption, and license. "They were getting in one way or another comfortable assistance from the government. What real difference did it make if officials grew rich and foreign affairs went badly?"

As you remember, after the first stunned silence as sputnik circled outer space, a mighty clamor arose. Billions for defense, for foreign aid, for education, for conservation, and for what have you. Tax and spend, put enough money into the hands of enough agencies, and bureaus, and commissions, and services, and departments, and the country might be saved.

You probably read that testimony before a congressional committee recently disclosed that a certain document from Russia was received by seven different governmental agencies, translated into English, stamped secret, and filed by each one of them. Not one communicated with any other or attempted to put the paper in the hands of our scientists, where it conceivably might have value, before it was pigeonholed. To heighten the absurdity, it was not secret at all but had been published and distributed in Russia. Then the amazing fact came out that often scientific articles were published in the United States, translated into Russian and printed in Russian newspapers, sent to Washington by our representatives over there, retranslated into English, and filed away. Would another billion dollars for an eighth agency cure a performance like that?

We think, too, of the officers at Harmon Air Force Base in Newfoundland, who, to save a bookkeeping headache, buried spare parts that had cost the American taxpayers over $33,000. You will recall that, exhumed on congressional instigation, parts worth $18,502 survived the burial and were still usable. According to the warrant officer, the captain had said to him, "We got a hole; we might as well use it." The Army unit to which these bright young men were attached has a million dollars worth of spare parts instead of the $75,000 worth it is supposed to have. Billions for defense, but what good will they do unless we first fill up the holes?

"A dismal failure," Senator ELLENDER says of our foreign-aid program. Allowing for possible political bias on the Senator's part, has there ever been a report of real achievement in the way of friendship and cooperation from these squandered billions from any source other than the agency itself? Will more billions tossed about in the same fashion change that picture or merely lead us nearer bankruptcy and overwhelming debt?

It seems we were not much disturbed by the unfavorable comparison of our schools and colleges with those of European countries until sputnik soared. Had we forgotten that Thomas Jefferson said that no nation can be ignorant and free?

The Russian satellite pointed up the importance of mathematics and science in a school curriculum and made courses in co-ed cooking, love and marriage, and life adjustment sound somewhat inadequate for the age in which we live. Let us have more money for schools but let us ask if it is to be invested in scholarship or wasted on educational fads and theories.

Certainly booklearning is important for the development of the whole man and for the progress, culture, and safety of the state. I think we should be more concerned with both the quality and quantity of instruction our young people have. But scholarship of a sound and basic character will not save our Nation without a concept of freedom as a possession of great price to be had only on terms of responsibility and self-control.

Dr. Hamilton tells us that, when an Athenian youth was 18, he went to a temple with his family and friends, and in a solemn ceremony, took this oath: "I will not bring dishonor upon my weapons nor desert the comrade by my side. I will strive to hand on my fatherland greater and better than I found it. I will not consent to anyone's disobeying or destroying the constitution but will prevent him, whether I am with others, or alone. I will honor the temples and the religion my forefathers established." I should like to see that engraved on the walls of our schools and on the hearts of our youth. I think it would be a splendid oath for Congressmen to take—and cabinet members—and judges. In that way, we might avoid another insult to freedom in a future Little Rock.

Our existence as a free nation and as the last best hope of earth may well depend on education—in and out of school—not for life adjustment but for life mastery through the Christian faith of our fathers.

Starvation in Missouri

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. SMITH of Kansas. Mr. Speaker, a great deal has been written as to cause of the so-called recession. In my opinion, the causes of the recession have been increased a hundredfold by the fact that the gloom peddlers and crepehangers are always talking the public into a genuine fear. Recessions generally are caused by the public refusing to buy. As long as this fear of the buying public exists, recession recovery will be slowed.

The editorial clearly portrays the attitude of many Democrat Members,

They seem to have forgotten some of their own attitude back in 1949–53. The American public generally sees through this Democrat attitude just cheap political maneuvering.

The editorial from the Joplin Globe follows:

[From the Joplin (Mo.) Globe of March 29, 1958]

STARVATION IN MISSOURI?

Much has been heard recently about the political hysteria in Washington over the current slump, and all sorts of wild-eyed spending schemes for relief. But we had no idea our illustrious Senator THOMAS C. HENNINGS had gone loco on the subject until his Report From Washington came in the other day.

We were shocked to learn from Senator HENNINGS, in Washington, that people all over Missouri are starving, including people in Joplin. He links us with Valley Forge, which connotes privation and suffering, in discussing a chins-up speech made there recently by former President Herbert Hoover, in this paragraph:

"If the unemployment situation in Valley Forge is anywhere near as bad as it is in the Bootheel, St. Louis, Kansas City, Joplin, and a lot of other parts of Missouri (where large numbers of people are going hungry for the first time in a generation), I am sure that this speech must have appalled many of the listeners."

Perhaps Senator HENNINGS needs to shake the Washington fog from his brain and come on back to Missouri, breathe some clear, wholesome air, and observe first-hand that our supermarkets still are crowded, we still are troubled with car traffic jams more than we are with hunger, that people are well fed, well clothed and well housed, and that very few if any are, except by choice, going in rags, or barefoot or living in tents. He undoubtedly would be abashed to observe that most of them have bank accounts and TV sets and can even go out for dinner occasionally. Oddly enough, all but a relatively small percentage have jobs.

Of course, if Congress becomes so silly as to appropriate all of the billions recommended by Senator HENNINGS in a full typewritten page of welfare gimmicks, few in Joplin or anywhere else in Missouri will even have shirts in another year or so.

Maybe the Senator has forgotten that it is his colleague, Senator STUART SYMINGTON, and not himself, who is running for reelection this year.

The most amazing thing of all is that by expounding such political gibberish, Senator HENNINGS insults the intelligence of his own constituency.

A Presidential Retirement Aid Bill

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Globe-Democrat:

A PRESIDENTIAL RETIREMENT AID BILL

While the Congress is considering the question of Presidential disability, it might at the same time return to a long-pending bill to grant former Presidents retirement aid in the form of a pension, staff, and other facilities consonant with their services in the world's greatest office.

Under present law a former President receives no pension or remuneration of any kind, nor does his widow, with the pitiable exception of free postage.

In 1957 the Senate passed a bill providing $25,000 annual compensation and other facilities to former Presidents and their widows, but up to now the House has not acted.

The bill, in addition to financial aid, would provide secretarial and clerical assistance on a basis comparable to the staff of a Senator from the least populous State of the Union, suitable office space in a Federal building, free transportation within the United States and its Territories and compensation of $10,000 to widows of former Presidents.

Some Presidents, like Mr. Hoover, have been wealthy men and have had no need for assistance from the Government. President Hoover has indicated that he would not avail himself of the act if it were passed. He drew no salary during his term as President.

Some Chief Executives like President Grant have died in virtual poverty. The picture of General Grant laboriously striving to finish his memoirs to pay his bills while he was slowly dying of cancer at Saratoga Springs, N. Y., is a picture which should haunt the Nation forever.

Other Presidents, like Mr. Truman, have finished their term of office in modest circumstances and have had to write or even indorse advertising to provide for themselves and their families.

Former President Truman, in his broadcast of February 2, said:

"I have the biggest individual mail in the State of Missouri, and maybe bigger than any in a lot of other States * * * It takes three clerks to answer my mail. My postage bill is something tremendous * * * I see an immense number of people * * * and I have to have some place where I can talk to them. I can't talk to them in a cubbyhole or a back room. If I hadn't inherited some property that finally paid things through, I'd be on relief right now."

This is just not right. It reflects not so much on our former Presidents as the Nation which provides for them in so niggardly a manner.

Congress should make one of its urgent items of business a proper provision for former Presidents and their widows.

Political Science Fellows

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. ANDERSON of Montana. Mr. Speaker, I wish to pay tribute to an organization and a program with which, no doubt, many Members of this House are already familiar. I refer to the American Political Science Association and its congressional fellowship program.

Each year, for the past 5 years, the association has selected a small number of promising young political scientists and journalists to spend a year working in Congress. During the past year, 9 political scientists and 6 journalists were selected by a distinguished panel, including William White of the New York Times, Warren Unna of the Washington Post and Times Herald, Senators Mundt and Sparkman, and Representatives Yates and Curtis.

The purpose of the fellowship is simple: to provide a familiarity with congressional politics that cannot be acquired through books, alone. Rather than simply observe and interview Congressmen, these fellows work in the offices of Members of their own choosing. Having just completed some 3½ months working on the House side, they are now beginning their apprenticeships in Senate offices, where they will remain for the rest of the session. Upon completion of their stay in Congress, they will return to the campuses and newspapers across the country, better prepared to teach and write.

Having had a fellow, Mr. William Mitchell, of Harvard, in my office, I can personally testify as to their diligence, loyalty, and intelligence. They make signal contributions both to offices and to the Congress. I am pleased to see Mr. Mitchell and his friends have the opportunity of working in the Senate, but I am sad at the loss of a valuable worker, and pleasant companion. Apparently, some of my colleagues feel as I do about the congressional fellows, for I have noticed that they make use of them year after year. Is there a better indication of the high esteem in which they are held?

I hope that as new groups of these fine young men and women come to Washington, those of you who have not had the pleasure of working with them will choose to do so. They need our cooperation, and we need their knowledge and skills. That knowledge and skill is at our disposal and without cost either to us or the taxpayers. I can think of no better investment.

Who Pays for Federal Aid?

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Frank Tripp entitled "Voter Pays Plenty for Free Projects." This column was published in the Binghamton (N. Y.) Sunday Press, March 9, 1958.

Mr. Tripp resides in Elmira, N. Y., in my congressional district and in addition to being a national syndicated columnist, is also chairman of the board of the Gannett Newspapers, Inc. His approach to subjects can probably best be described as nonpolitical but completely human.

The article follows:

VOTER PAYS PLENTY FOR FREE PROJECTS

(By Frank Tripp)

It was inevitable that two recent columns would bring reaction, pro and con, agreement and abuse. The ones about "Mr. Fall

Guy" and about our self-reliant forebears and their genuine freedom.

It is becoming more noticeable every day that this generation is unwilling to listen to or admit the diabolical evolution that took the mastery of their lives away from them and made them pawns of a mass system controlled by the extravagance, waste and something-for-nothing promises of power-seeking politicians, labor czars and do-gooders.

To get the cards out on the table, in my book, 7 out of 10 of the sacrificing public souls who give their lives to fellow man start out as guys looking for a job and end up promising Utopia to keep it. That goes from the White House down.

It is the simplest thing in the world to do great deeds, make great reputations, and happy the people if you can do it on the people's money and fool them into liking it.

That has happened in this great land by and through the most colossal humbug in history; that there ever was or ever can be man-given something for nothing. For example:

Every time a community builds a schoolhouse into a university, a highway, an airport or a costly what-not, it calms the taxpayers by seeking State aid. The State in turn goes all out to pass it on to Federal aid.

The sap voter falls for it 'cause "it ain't going to cost nobody nothing." The trap was deliberately set for him.

Just who or what are State aid and Federal aid? Why, mister they are you.

You'll find them, and those of a hundred others, in every tax you pay, in every car you drive, in every loaf of bread you eat—plus the salaries and waste of the system that every party fights to control.

It was more honest back when politicians paid dollars to buy floaters to vote for them. At least it was not the taxpayers' money that is now spent in billions to buy votes through increasingly extravagant pet schemes that make the populace more and more dependent upon the state, and less and less the rulers of their own lives; softies, taxdrained suckers.

There was a time when there was a difference in political parties; when principles were involved and voters affiliated because of basic differences. Today the voters' choice is which can most fool them that it will see them from the cradle to the grave—in ease and luxury—on their own money, they forget.

Each upon taking over, be it State or Nation, accentuates the hokum of the other and adds a few more giveaways and more patronage to win the next election.

They have not only lavished every cent they dare tax from people, but have built a debt that the youngest babe and his great grandchildren will never see paid. Why not? It is the people's debt, not the party's.

The few among them who resist this pillage bat their heads against party loyalty, die, or retire, discouraged. The system grows vaster, stronger; the people more helpless, more mendicant.

So, you "fall guys" who called me names, here's a round-robin picture of the mess you've plunked yourselves into.

As long as you think that the Government, or any group that owns you, body, soul, and pocketbook, can give you something for nothing, you'll vote yourself and your children deeper into the mire—someday maybe into a communism of your own making.

If it wasn't for the kids I've brought into the world, I wouldn't give a —— how you vote. The only sound thing that some of you harp on is that there isn't much choice.

And there won't be, until people take over at their hometown level—and stop selling their vote for some selfish pet project.

The Nation's Railroads Are Entitled to Immediate Relief by this Congress

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. VAN ZANDT. Mr. Speaker, on March 25, 1958, an article appeared in many of the Nation's newspapers under the caption, "Two Month Deficit of Eastern Rails Is $43 Million." The article said in part:

> Twenty major eastern railroads showed combined losses of $43.5 million in the first 2 months of 1958. * * * This compared with the net loss $6,011,250 in the 1957 period. * * * This January–February deficit was 6 times larger than the net loss of $7,218,417 in the same 2-month period in 1932 when one-third of the Nation's railroads were in bankruptcy.

Mr. Speaker, if there was ever any doubt that the once mighty railroad industry is tilted toward financial disaster, the results for the first 2 months of 1958 supply a conclusive answer, and at the same time demand prompt remedial action from this Congress.

It is true that at this moment hearings are under way by the Smathers committee in the Senate. Based on available information about the best that can be expected in the way of legislation is relief for the Nation's railroads by repeal of the wartime excise tax on the transportation of persons and property and curbing the power of the public utilities commission of the several States in regulating certain phases of the railroad industry. If the wartime excise tax is repealed and the power of the public utilities commission is curbed such action is woefully inadequate in solving the overall problem.

In addition should the Senate enact any legislation based on the recommendations of the Smathers committee, it will be at least May or June before it could be received by the House where hearings would also be necessary. With Congress adjourning in July or August, let us face the fact that the chances of this type of legislation being approved by the House before adjournment are highly doubtful.

Mr. Speaker, lengthy hearings involving thousands of pages of testimony have already been held by the House Interstate and Foreign Commerce Committee as the result of recommendations presented for the consideration of President Eisenhower by the Presidential Advisory Committee on Transport Policy and Organization. This Committee also spent many months studying the transportation industry so that Congress has ample evidence of the need of an efficient transportation system which includes the railroads of the Nation.

In addition to the hearings that were held, several bills are pending before the House Interstate and Foreign Commerce Committee, but no action has been taken on them. These bills while not containing the complete answer to the railroad problem are a step in the right direction.

Mr. Speaker, on March 20, 1958, on the floor of the House, I quoted Mr. David C. Bevan, vice president of the Pennsylvania Railroad Co., when he said on March 19, 1958, at Cleveland, Ohio:

> The railroad industry has working capital sufficient to meet payrolls for only 1 week. * * * We need immediate action, not studies. * * * The industry is facing a dire emergency.

In addition to Mr. Bevan's statement on March 27, 1958, Eugene V. Attreed, vice president and director of the Railroad Division, Transport Workers Union of America, AFL–CIO, said in part:

> We are hearing and reading a great deal these days about the Nation's railroads. The plight is real, and unless our National Government takes immediate and extensive remedial action the damage to our country will be grave.

Confronted with these dire warnings, I have introduced this date a House resolution providing for the creation of a select committee of 9 Members of the House of Representatives to be appointed by the Speaker, 5 from the majority party and 4 from the minority party 1 of whom he will designate as chairman.

The select committee would be authorized and directed to conduct a thorough and complete study and investigation of the present financial condition of the Nation's railroads, which has resulted in widespread unemployment in the industry.

The select committee would also be authorized to formulate an emergency legislative program designed to aid the railroads in such a manner as to relieve unemployment in the industry and assure the continued maintenance of a railroad system adequate to meet the needs of the United States in time of war or other emergency.

The select committee would be required to report to the House as soon as practicable but not later than June 30, 1958, with its recommendations, including recommendations for legislation.

This resolution if approved immediately would give the select committee or its subcommittee nearly 2 months to complete its assignment. Meanwhile it would have the necessary authority to subpena witnesses and the production of such papers and documents as it deems necessary. In other words, the select committee would have all the necessary power to go to work and report back to the House by June 30, 1958.

Mr. Speaker, undoubtedly some may wonder why this subject should not be handled by the House Interstate and Foreign Commerce Committee. My answer is that the House Interstate and Foreign Commerce Committee has enough to do with its full agenda between now and the adjournment of this Congress. In addition, this is emergency legislation to meet an acute situation that affects not only the transportation industry but our national defense, as well as unemployment and the health and welfare of the American people as a whole. Therefore, time is of the essence

and a select committee is the only feasible answer.

I can go one step further in warning Congress that unless drastic action is taken immediately, railroad bankruptcies will not only magnify and prolong the business recession but could lead this Nation into a complete economic upheaval.

Mr. Speaker, my resolution creating a special select committee is designed to get action by this Congress at the earliest possible moment on extending relief to the Nation's railroad industry, and I am hopeful that the resolution will receive immediate approval so that this select committee can begin to function at the earliest practicable date.

Recreational Facilities in Missouri River Basin

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, April 3, 1958

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by Mr. Melvin O. Steen, director of the Nebraska Game, Forestation, and Parks Commission, concerning the recreational facilities in the Missouri River Basin.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RESERVOIR AREA MANAGEMENT FOR RECREATION

(By Melvin O. Steen, director, Nebraska Game, Forestation, and Parks Commission)

In calendar year 1945, a new and awesome era for this Nation and for all nations began with a blinding, searing flash over Hiroshima. This was year 1 of the atomic age.

In that same year, in the breadbasket of America, 9,000 miles from the rubble that was once a Japanese city, another era began that was destined to have great impact also on our Nation. This was the Missouri River Basin development program, fathered by the Pick-Sloan plan, and devised to terminate the destructive force of floods, while at the same time providing power, irrigation, and recreational opportunities for a dynamic and progressive people.

The basin, including parts or all of 10 States, comprises 20 percent of the Nation's entire land area. Geographically and ecologically, the basin includes a vast and varied region, ranging from deciduous forests and bottomlands in the southeast, across a wide expanse of ever-changing prairies, to pine forests and towering mountains in the northwest.

In this vast region we find the industrialist, the businessman, the truck gardener, the corn farmer, the wheat grower, the rancher, the lumberjack, the miner, and a host of other Americans with callings as diversified as the land on which they live. It is said that variety is the spice of life; certainly variety sparks the economic life of the Missouri River Basin.

The self-evident contribution of flood control, irrigation, and hydroelectric power to our economic life is not the subject of this paper. I am concerned here with the social and economic values of outdoor recreation, a so-called secondary benefit of this development program.

Recreation means different things to different people. To some it is as uncomplicated and inexpensive as a game of bridge with the couple next door, to others a fancy night club is essential. To most Americans, however, hunting, fishing, hiking, camping, picknicking, boating, swimming, or some other outdoor sport is the preferred and principal recreation. More Americans seek relaxation and enjoyment in outdoor recreation than in all other forms combined.

In the early days of basin history, outdoor recreation was no problem; at least it was not the problem that it is today. To the trapper, the trader, the cowhand, and the settler, outdoor activity was a way of life rather than a form of recreation. Even when this pioneer life was supplanted by modern agriculture and industry, outdoor recreation was quite easy to find. It is in recent years that the shorter workweek, higher family income, improved roads and transportation facilities, more people, and more private property have brought a new problem—the problem of places to go for outdoor recreation and enough space in which to enjoy it.

We are concerned about this today, but our real problems lie in the future—many of them just around the corner, I may add. The events and problems of the next quarter-century can best be described in the Ozark adage which proclaims "you ain't seen nothin' yet."

It is my considered opinion, that the American people are currently in a phase of population dynamics that we biologists call an irruption, a phenomenon which, for present purposes, I briefly describe as an explosive expansion into favorable environment by an animal population.

Consider, if you will, that while today's babies grow to 25-year-old adults, the population of the United States will increase from 170 million to 250 million, 70 percent of which will be urban residents. Developments that now seem fantastic will become commonplace. Science will make major breakthroughs on many fronts. Standards of living will rise substantially; time for travel and recreation will be bountiful. Distance will be no barrier, because no part of this world will be more than a day's travel away. We can eat breakfast in Nebraska and dinner in New Zealand. The need for resources will increase greatly. We will join the have-not nations, competing in world markets for raw materials. This will bring great changes to the resource-rich Missouri Basin. Great changes will come to this breadbasket of the Nation, if for no other reason than population increase alone. I remind you that, 25 years hence, 80 million new Americans will seek food, shelter and recreation in this land of ours.

To bring the current rate of population increase close to home, let me illustrate by telling you that one city the size of McCook is added to our population each and every day; two States like Nebraska are added each and every year. Moreover, the rate of increase accelerates from time to time, to the amazement of many population specialists who have been forced to revise their forecasts upward repeatedly in recent years. Can it be that they do not recognize an irruption when they see one, or that they believe man is not subject to the same natural laws and population dynamics as other animals?

Whatever our individual and specific conclusions may be, some facts we all accept. We agree that this Nation is growing at an unprecedented and ever-increasing rate, and we know that the atomic age can bring more human progress in a year than mankind achieved in a century before. I fear, however, that most Americans do not grasp the significance of these truths. They do not really understand that this Nation is already well along in a new and swiftly moving era—an era with potential that staggers the imagination—wherein events will dwarf, in both speed and scope, all past human history into relative insignificance.

In this new and exciting era, adequate recreational outlets for our people will be imperative, because we must maintain a high level of social health to meet the impact of the atomic age. Healthy recreation is essential to a healthy society, and there is no better recreational medicine for the mental and physical health of man than that which he finds out-of-doors. The course we should pursue is well defined, for it is very clear that the American people can better afford to build and maintain playgrounds than penitentiaries.

The Nebraska Game, Forestation, and Parks Commission is charged by law with major responsibility for the preservation, development, and maintenance of outdoor recreation in this State. In view of this, and of the age in which we live, only our legal and financial latitude to meet this responsibility limits our performance. Financing is the basic problem; all our performance is, of course, governed by this primary factor.

Within these limitations, we will make every effort to develop and maintain the recreational potentials of the Missouri Basin program in our State. One such current effort is based on a memorandum of understanding between the Bureau of Reclamation and our agency, which agreement enables us to develop and maintain recreational facilities and natural resources on certain reservoirs within the Republican River Valley. The favorable terms of this agreement, and the generous cooperation of the Bureau of Reclamation, have enabled us to do far more than would otherwise have been possible.

Since 1952, when the agreement was completed, we have moved forward as fast as orderly progress and available funds would permit. We have stocked these reservoirs with more than 2,500,000 game fish, ranging from catfish to rainbow trout. We have recreational areas, boat-launching sites, tree plantings, and the roads originally developed by the Bureau of Reclamation. Through cooperative effort we have constructed terraces and grassed waterways, reseeded and retired marginal acreage, and developed and maintained wildlife plantings. Through better land use we have implemented erosion control, improved the soil, and enhanced wildlife environment. We have also made major reductions in wheat and corn acreages, substituting alfalfa, sorghums, and other crops which are not surplus in the national sense.

We have encouraged private and group developments to the extent permissible, and there are now 48 cabin leases outstanding, and 2 organized camps and 2 concessions in place on the reservoir lands. In addition, the We-So-Braska Girl Scout Council is currently constructing their permanent summer home at Swanson Lake. This new organized camp will include a beautiful, modern lodge and grounds and a primative camping area. It will serve the Girl Scouts of 17 southwestern Nebraska counties.

At Swanson Lake, too, an attractive and practical shelter house has been constructed and put in public use. This development was a joint project of the Trenton Chamber of Commerce and local communities in this region, and is an outstanding example of community interest and enterprise, as well as a welcome addition to public service facilities.

Since 1952, more than 1,500,000 people have used the recreational facilities of these reservoirs, and public use increases annually. In 1957 alone, over 350,000 people found

recreational outlets on these impoundments. If we disregard all future problems and needs, if we consider only the present, we can still easily justify recreational developments in the Republican River Valley.

As I have indicated throughout, our work on these reservoirs has been made possible through the help provided by the people of the Republican River Valley, and because of the outstanding cooperation of the Bureau of Reclamation. Our cash expenditures to date have totaled $117,927, but we have realized a total income from these reservoirs of $103,931.

This favorable ratio of income to expenditures on public-use areas is a matter that calls for some discussion, for I am certain that other departments in the basin have the same problems we face in Nebraska. Briefly, our current income, and our potential income, is such that we must make each new public-use area as nearly self-supporting as possible.

Most of our annual income must be used to meet the basic costs of wildlife management, and even so, this management falls short of desired levels. After we meet this fixed and inescapable overhead, we have a limited balance that we reserve for capital expenditures—primarily the acquisition and development of public-use areas and facilities.

When we develop such an area (or if we take over the management of an area developed by some other agency) maintenance becomes our responsibility. I choose to describe this maintenance cost as a mortgage on our future income—a mortgage that has no maturity date and never can be paid off. To make matters worse, the annual payments we must make go up and up through the years, as operating costs increase and the public requires more service.

Since our capital investment fund is our only reserve, an increase in fixed overhead means a reduction in capital improvements. If we keep mortgaging our future, we eventually reach a point where all income must go into fixed overhead—when little or nothing can be done to keep pace with growing needs for public-use facilities. If I may be pardoned this personal reference, I have seen many administrators in my field mousetrap themselves and their agency into virtual stagnation in this way. They didn't or wouldn't tell the citizen hat no administrator and no governmental agency can give the people something for nothing.

However, when we face the problems of the future with realism and vision, we find that it is no great trick to maintain sound financing and healthy growth—we need only have the fortitude to tell the people the truth, and to resist deviation from a sound approach to our problems. Good public-use areas can be made self-supporting, or largely so. In the case at hand, most of the income stems from agriculture. We are told, from time to time, that the state should not engage in farming. We are not really farming, of course; we are landlords, the farming is done by tenants. Actually, our other income these past few years was such that we had a choice of being in the farming business or out of the recreation business on the Republican Valley reservoirs. In any event, what is wrong with making sound and profitable use of the people's land, especially when it results in better social health and in the added profit of very substantial trade income for this region.

In summary, if this paper makes any contribution whatever to the work of the interagency committee, I hope it will be along the lines I have pursued throughout. I trust that I have given you a better understanding of the part recreation should play in the Missouri Basin development program, and of the problems we face in developing the potentials of that program.

Finally, I hope our little sightseeing trip into the next quarter century has given you new concepts and increased determination to drive forward with the full basin program. If you think I may have described some sights that are not there, I can only say that my associates around the Nation tell me I have a pioneering mind, yet when I look back on my 30-odd years of experience in our field, I realize that my greatest administrative weakness is my inability to think big enough and far enough ahead.

I believe that we face a greater challenge, here in the breadbasket of this great Nation, than we realize. I believe we should take a new look at things, and resolve to do our best, individually and collectively, to meet this challenge.

Gentlemen, we are already in the early stages of an era wherein an avalanche of world-shaking developments will descend on us in swift and bewildering array—we face the challenge of the atomic age, we must make ready to meet it.

The Importance of Housing for the Elderly

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 3, 1958

Mr. WILEY. Mr. President, under the new housing legislation which has just been signed by the President, we may expect a boom in home construction throughout the land.

There are, of course, a great many phases of America's housing needs. One particular phase which has always been of special interest to me is the matter of housing for America's elderly citizens.

As my colleagues are now aware, the number of men and women over the age of 65 is now well above the 14 million mark. Four hundred thousand Americans pass that milestone each year. What is more, thanks to the extension of life span, our elderly citizens are the second fastest growing age group in the Nation.

By 1975, there will be no fewer than 20 million Americans 65 years of age and over. These Americans need good homes. They need homes especially adapted to the needs of elderly folk—homes easy to maintain, homes economical to construct and to pay the mortgage on, homes with built-in features which are of special use to the elderly, particularly the handicapped.

We need housing for the elderly in our cities; we need it in our countryside, and, yes, we can use it in vacation areas as well.

As I have previously indicated in public comments, it would be a wonderful thing if hundreds of thousands more Americans could enjoy, in their retirement years, small cottages located in healthful surroundings as in the many lake areas of my State.

Recently, I sent to Commissioner Norman P. Mason, of the Federal Housing Administration, a message from one of my constituents, a good friend of mine, Mr. Stuart M. Stebbings, of De Pere, Wis., on the subject of homes for the elderly, especially in resort areas. I send Mr. Mason's reply to Mr. Stebbings to the desk.

By way of further background on this overall subject of housing for the elderly, I append two articles which, I believe, will be of interest to my colleagues. One is from the January 19, 1958, Milwaukee Journal entitled "Housing for Elderly Has Modern Design." The second is an article on a different approach to this problem, utilizing former hotels for continued residence by the retired. It is entitled "New Concept in Low-Cost Housing" and was published in the Life Begins at Forty column of the New York Journal-American, on March 24.

I ask unanimous consent that these items be printed in the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

FEDERAL HOUSING ADMINISTRATION,
Washington, D. C., March 18, 1958.

Hon. ALEXANDER WILEY,
United States Senate,
Washington, D. C.

DEAR SENATOR WILEY: * * * I appreciate the opportunity this gives me of discussing with you some of the operations of FHA.

Mr. Stebbings' proposal for summer cottages for elderly people or retirement homes in vacation areas, has much appeal. FHA will insure mortgages on seasonal homes or homes located in resort areas that may be used only part of the year or, in some cases, all of the year. These homes, of course, must meet FHA requirements as to construction and location and generally must be in areas where there is some possibility of year-round living. FHA has insured a considerable number of such properties.

However, FHA would not insure a mortgage on a cabin or vacation house, or part-time homes located in a remote area where it might not have any stable resale value or in those cases where the property did not meet FHA minimum construction standards. The National Housing Act provides mortgage insurance to enable families to acquire good housing on reasonable terms.

FHA is experimenting with a new program designed to make its services more readily available in small communities and localities distant from metropolitan centers where FHA insuring offices are located. This is entitled the Certified Agency Program, and under it, local banks and other lending institutions in small communities of not over 15,000 population, are certified as agents of the FHA. These local lending institutions then may process the loan, have the appraisal of the property made and make the commitment for FHA insurance of the mortgage. This is very close to what Mr. Stebbings suggests in the postscript of his letter. This program is on an experimental basis in selected areas of the country and as experience is gained, we are actively considering its further expansion.

I would suggest that Mr. Stebbings discuss with the Milwaukee FHA insuring office, the types of construction and locations he has in mind.

Sincerely yours,

NORMAN P. MASON,
Commissioner.

HOUSING FOR ELDERLY HAS MODERN DESIGN

LOS ANGELES.—Churches are borrowing new architectural designs from postwar resort and garden apartments to provide up-to-date living accommodations for aged citizens. It is no longer a question of supplying them with creaking rocking chairs on the porches of old folks homes.

In this area, the southern California Presbyterians have chalked up an outstanding success with White Sands, a beachfront development at La Jolla. Until very recently it was a luxury hotel.

Nearly 200 older men and women now live at White Sands in comfort and dignity. A second home in the Pasadena area is on the drawing boards—a sleek structure of concrete, glass, and steel.

The key to these unique middle-income housing trends for seniors is their financing. Lacking huge endowment funds, the religious groups are appealing to members with savings who, through substantial downpayments, can bear the cost of construction.

ONE HUNDRED AND SEVENTY-FIVE DOLLARS A MONTH

At White Sands, entry fees beginning at $7,500 guarantee a single resident life occupancy of a room. Choice meals, resort recreational facilities, maintenance and medical-nursing service come to another $175 a month.

At Presbyterian village, on the outskirts of Detroit, 75 oldsters have completed 2 years' residence in cottage-dormitory type accommodations. Included on the 32-acre site are apartments, a community residence hall, and an infirmary. Eventually, the Detroit presbytery hopes to have 75 buildings.

Unlike luxury setups on the west coast, the village rents its apartments at $75 to $90 a month, with dormitory room, board, and nursing service for $150 a month. Guests who cannot afford the fees are helped to apply for old-age assistance, with the presbytery of Detroit making up the difference through assessments on each church.

ASSESS MEMBERS

Original financing of the village was arranged through large individual gifts and an assessment of $1 for each church member in the presbytery. When finally completed—and all mortgages are retired—Presbyterian village will cost between $6 million and $7 million.

At Spokane, on the other hand, the synod of the Washington Presbyterian Church will turn to cooperative financing to pay for building and operating a manor type residence.

Rooms and apartments with private bath (some with kitchenettes), and wall to wall carpeting, will start at $5,500 for a living room-bath combination and will go up to nearly $21,000 for a fully equipped two bedroom apartment.

Monthly maintenance at Spokane's Hawthorne Manor will be lower than in California—about $100. A 25 percent reduction of both the founder's fee and the monthly bill is available for retired ministers.

NEW CONCEPT IN LOW-COST HOUSING

(By Robert Peterson)

MIAMI BEACH, FLA.—Charles Lavin, 61, will probably go down in geriatric history as the David who slew the Goliath of heavy housing costs for older people. And his weapon was as simple as a slingshot.

He turned the trick by simply taking over fine old hotels and letting people come to live in them on an annual basis performing most of the hotel services themselves. He found that with minimum services and with high, year round occupancy based on two persons per room he could offer comfortable living complete with 3 meals a day for as little as $65 a month—and still make a reasonable profit.

I talked with Mr. Lavin at his Miami Beach headquarters. He's bronzed and well-built, with gray-black hair and a strong, serene face.

"With building costs what they are today," he said, "you just can't go out and build housing which will rent for anywhere near what most older people can afford. I've found that the solution is to take over hotels which are no longer paying their way. By turning them into retirement hotels, keeping them full the year round, and letting guests perform most of the services, you can offer people an amazing bargain in good living."

Mr. Lavin already has 15 retirement hotels in half a dozen States. They are nonsectarian and are open to respectable, congenial people who can care for themselves. They are all hotels of fine reputation. One of his recent acquisitions is the famed MiraMar Hotel in Sarasota. I stayed there just 2 seasons ago and paid $20 a day.

At his hotels, and at retirement hotels operated by others who have latched on to his idea, the chef is the principal employee on the staff. Many of the services, such as carrying trays, running elevators, and having charge of the linens, are performed by guests. Guests who volunteer to work 2 hours or so daily are placed on the petty payroll and receive a token salary of $10 a month.

"I'm convinced that a lot of illness among older people is brought on by boredom and insecurity," said Mr. Lavin. "I have many people in their seventies and eighties who have been in my hotels for years and have never been seriously sick.

"With interesting contacts, things to do, and a sense of security stemming from their very modest living costs, they tend to stay emotionally healthy and this helps keep them physically healthy."

What Part Will I Play As a Citizen?

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I would like to take this opportunity to express my warmest congratulations to Miss Cynthia Shoemaker, daughter of Rev. and Mrs. Stanley J. Shoemaker, Shelby, Ohio, who has recently been selected as 1 of the 12 winners in the Ohio State essay contest conducted by the American Legion. Miss Shoemaker's essay, "What Part Will I Play As a Citizen?" is absolutely one of the finest it has ever been my privilege to read. In my opinion, her essay richly deserves the acclaim which it has so justly received, and, Mr. Speaker, it is reassuring to me, in these days when so-called juvenile delinquency receives so much publicity, to know that the future of our great Nation will be entrusted to such outstanding young people as Miss Shoemaker. Her work is a credit to her parents, and to her school, and I am extremely proud to number her among the young people of my congressional district.

As a reward for her achievement, Miss Shoemaker will soon be coming to Washington for a 10-day visit, and during that time she will be one of the guests of honor at a luncheon given by the Ohio congressional delegation. I am looking forward to this opportunity to meet and talk with this outstanding young lady. In the meantime, Mr. Speaker, it is my privilege to submit her essay for publication in the RECORD:

WHAT PART WILL I PLAY AS A CITIZEN?

(By Cynthia Shoemaker)

Good citizenship begins in the home. I want to make my home a center of love, friendship, cooperation, and harmony. If I can cooperate with the members of my family for the welfare of the home, I will be able to cooperate with the other American citizens for the welfare of the whole country.

My next step toward being a good citizen will be to assume my responsibility in the community. Before I can be a good citizen in the community, I must learn how my local government functions. After I have investigated the importance and the duties of each office, I can then use my power to vote for the candidates who meet the requirements. Choosing the persons best qualified for the various offices will make the government function honestly and smoothly. Besides being active in the political phase of community life, I will also try to set an example to others of community respect and pride. I intend to support any project for the welfare of the community and its citizens. The community is only what its individual citizens make it. I will try to do my part.

It naturally follows that my good citizenship in the home and in the community should develop into good citizenship in my country. I feel a deep love for America with all its ideals, standards, and opportunities. Rather than to take for granted all the rights and privileges of our land, I wish to show as much appreciation for our rights as did those of the past who fought and died to create freedom and democracy. Recognizing the value of freedom of religion, of speech, and of press—some of the benefits of a great democracy like ours—I will try to be worthy of living in such a land of opportunity and freedom as our United States.

The previously stated qualities of knowledge of the local government, of the use of the voting power, of community respect and pride, and of interest in community projects can again be applied to the National Government. With my voting power I will put the "X" on my ballot for the candidate who will lead our country honestly, wisely, and unselfishly. I will respect the law and cooperate with the law enforcement bodies. I plan to contribute as much of my time and money as possible to the agencies which work for the public welfare: The various charities, mental institutions, research programs, foreign welfare agencies, hospitals, and countless other organizations. I will support those projects which enrich the American youth: Better schools, planned recreational programs, vocational guidance, and religious organizations. All these I will uphold because today's youths are tomorrow's leaders.

There are many other aspects of citizenship than those which I have mentioned. No matter where the road of good citizenship may lead me, I will endeavor to be a responsible and helpful traveler on that road. I feel that God has put us all on this earth for a purpose, and I am grateful that I can fulfill my purpose in the best land of all, the United States of America.

Why We Need Farmers

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1958

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks, I ask per-

mission to insert a small but forceful item which one of my constituents from Trail, Minn., found in the March issue of the REA paper Volts and Jolts.

The article follows:

During a 70-year lifetime, an average American consumes 6,000 loaves of bread, 3 oxen, 4 calves, 4 sheep, 300 chickens, 12,000 pounds of vegetables, 9,000 pounds of potatoes, 14,000 pounds of fruit, 6,000 quarts of milk, 5,000 eggs, 8,000 pounds of sugar, 2,000 pounds of cheese, all of which came from America's 4,782,393 farms. And then some people have the nerve to say the farmer isn't an important segment of our population.

You Have Much at Stake in Freer-Flowing Trade

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. LOSER. Mr. Speaker, under unanimous consent, I wish to call to the attention of the House a very fine editorial on the Reciprocal Trade Agreements Act, appearing in the Nashville (Tenn.) Tennessean of a day or two ago. It discusses the issues raised on the act with great clarity.

A very poignant paragraph therein strikes me as being worthy of emphasis. It states that "it cannot be said that complete free trade is to the best interests of all sections, but certainly they will be best served by freer trade on a reciprocal basis—which is the end result of extending the reciprocal trade agreements program."

I heartily commend the reading of this editorial to my colleagues. It follows:

YOU HAVE MUCH AT STAKE IN FREER-FLOWING TRADE

If you are a housewife, a repairman or a clerk, perhaps it is difficult to think of the Reciprocal Trade Agreements Act without some degree of detachment.

You might well ask, "So what if it does expire this summer. How does it affect me and my pocketbook?"

Well, President Eisenhower said Thursday night that world trade makes jobs for at least 4,500,000 American workers, a sizable segment toward making the national economy strong. Much of American prosperity is wrapped up in foreign trade. If you are a businessman or a farmer with things to sell here and abroad, foreign trade affects you directly.

Why all the argument about it? In brief, this is the way it works:

Suppose you make toys, or work for a company that makes toys. A company in Japan also makes toys, ships them here and sells for a lower price. You appeal to the Government for help, to set up a "protecting" tariff so foreign toys will have a higher price and your business can go on. But once we erect a barrier, other countries also erect barriers and pretty soon a great many businesses in America have goods to sell but no market.

Much has been said, and will continue to be said, about the rise of the protectionist feelings in the South and Southeast where the cotton textile industry is located. Textile people say they can't meet some foreign competition. And, indeed to assert that some of these industrial plants will not be affected is to overlook the truth.

It cannot be said that complete free trade is to the best interests of all sections, but certainly they will be best served by freer trade on a reciprocal basis—which is the end result of extending the reciprocal trade agreements program.

At the present time the South's total foreign trade is somewhere in the neighborhood of $5 billion a year. In 1938–39 this average total was $1,085 million. The South's share in the whole foreign trade of the Nation has increased from less than 20 percent in 1938–39 to 26 percent in 1954–55.

The influx of the cotton textile industry has been only one of the many factors which has made for a general improvement in the region's economy. More and more the South is growing new crops, more and more it is becoming industrialized with plants that range from automobile assembly and parts to manufacture of synthetic fabrics.

The region expects to grow more diversified in coming years and this will put the South in a greater position for an expanded share of foreign trade, of having a more stable economy, and of putting more dollars in its pockets. It would be shortsighted indeed to restrict the 2-way flow of trade between this region and the world before we have even reached a third of our industrial potential.

In the years before World War II, the South shipped out more than it shipped in but in more recent years it has moved toward a closer balance of exports and imports. And it has been during this period of achieving a closer trade balance that the South has made the most progress.

At our doors lie Latin America and Africa—great potential customers of goods. We would be less than farsighted not to capitalize upon these markets, to sell them products in exchange for minerals, oils, or coffee. In doing so, we not only help our own region, we help these nations support themselves.

At this critical juncture of the cold war, economic trade is the greatest, single weapon we have to employ against the Soviet Union. If we retreat from our policy of a freer-flowing trade, we will weaken our alliances, further destroy confidence in our leadership in the world and push nations that need trade into the hands of the Communists. And, as Mr. Adlai E. Stevenson so succinctly put it, "in the long run, impoverish this Nation."

What does foreign trade mean to you? It means helping to win a war. It means helping to assure our continued prosperity. It means dollars and cents.

Proposed Resolution in Honor of the 800th Anniversary of the City of Munich, Germany

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 19, 1958

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proposed resolution in honor of the 800th anniversary of the city of Munich, Germany:

Whereas the city of Munich, Germany, throughout the history of civilized man has always been regarded as a key center of learning, culture and science, and

Whereas the people of Munich for centuries have been taken this great heritage to all corners of the world, and

Whereas the people of Munich and their compatriots in Germany have contributed much to the enrichment of the American way of life, and

Whereas the United States of America has prospered under the contributions made by the people whose ancestors first came forth from that great center of Central Europe in all aspects of art, music, science, education, medicine, and other constructive contributions for the advancement of mankind, and

Whereas the city of Munich, founded in the year 1158, is joyously entering a period of celebration during the summer of 1958, marking the 800th anniversary of its founding, therefore be it

Resolved, That we, the House of Representatives, proudly and with pleasure salute and hail this great city in recognition of its 800th anniversary and pray that the world will continue to benefit from its expanding heritage.

A Wisconsin Speech Correction Leader Points the Way to a Fuller Life for Children

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 3, 1958

Mr. WILEY. Mr. President, among the greatest assets in the lives of all of us are the teachers who give to us their wisdom, their sympathy, and their encouragement.

In last Sunday's Milwaukee Journal, I was pleased to read a heart-warming article which describes the forthcoming 80th birthday of a teacher who is one of the outstanding leaders in a field in which we can use far more experts than we now have. A refer to Miss Rhoda Zucker, supervisor of the University of Wisconsin Milwaukee speech correction clinic.

Miss Zucker is the founder and director of the clinic. Last week, she and her colleagues attended the annual meeting of the Wisconsin Speech Correction Association, where she was awarded an honorary life membership.

Mr. President, I cannot commend too highly both this fine woman and all the unnamed men and women who have helped open to our children doors which otherwise might have remained locked.

It was teachers of this sort who opened doors for the great Helen Keller (who is now, incidentally, 77 years young, herself). We need inspired teachers of this caliber for the hundreds of thousands of youngsters in our land who otherwise might not achieve at least part of their birthright to speak and to hear. Yes, we need more technicians, more speech and hearing therapists. We need more understanding of this human brain and its speech and hearing centers as well as understanding of the ear, mouth and throat.

Communication is one of man's most essential needs. Every child, normal or retarded, 100 percent healthy or brain-injured, must be given an opportunity to communicate. There must not be an iron curtain over speech and hearing.

The little boy or girl who stutters or lisps must not be denied the help to which he or she is entitled.

Mr. President, I send to the desk the article which was published in the Milwaukee Journal. However, since I also wish to stress the point that the Congress likewise has responsibilities in this field, I also send to the desk excerpts from testimony and a report of the House Appropriations Committee. The latter House of Representatives Report No. 865, which was submitted by Representative JOHN FOGARTY, of Rhode Island, who has industriously contributed a very great deal, not only to this field, but also to many other related fields. The testimony which I have sent to the desk was taken at the hearings which Representative FOGARTY and his deeply interested colleagues conducted.

In this connection, Mr. President, I stress the fact that the University of Wisconsin, the Cove Schools in Racine, Johns Hopkins in Baltimore, as well as many other leading educational and medical institutions in the United States, are helping to conduct research which will shed more light on speech and hearing problems. I hope all this work will move full speed ahead.

Speech and hearing research is still, amazingly enough, almost in its infancy, compared to other types of research. I am sure that, as it gets increasingly underway, much of it under the capable guidance of the National Institutes of Health, it will pay for itself a thousandfold, both from an economic standpoint and from a humanitarian standpoint.

Dr. Pearce Bailey and his able colleagues at the Institute who are conscientiously dedicated to this objective, can feel a well-deserved sense of satisfaction in the knowledge of the new frontiers they are opening up toward a better life for children and adults alike.

Dr. Bailey and his associates are, of course, confronted by a vast number of possible outlets for a limited amount of Federal research funds. The House Committee which is sympathetic with that problem of so many financial needs urges, however, intensified use of funds for this speech and hearing phase.

Therefore, Mr. President, I ask unanimous consent that the article and the excerpts from the hearings and report be printed in the Appendix of the RECORD.

There being no objection, the article and excerpts were ordered to be printed in the RECORD, as follows:

SECOND TRY AT RETIREMENT WORKS

(By Marilyn Gardner)

Miss Anna Carr's retirement 11 years ago proved to be something of a failure. So, 5 years ago, she tried again. And, this time, it seems to be working.

"My friends don't say retired, though," she said. "They say 'retread.'"

Miss Carr's first retirement was from Milwaukee State Teachers College—now the University of Wisconsin—in Milwaukee, where she had founded and served as director of the school's speech-correction clinic.

Shortly after she had retired from the college, she went to Ann Arbor, Mich., to visit a friend teaching at the University of Michigan.

"What?" said the friend upon hearing that Miss Carr had retired. "Nonsense. We need you here." So, Miss Carr went back to work, this time as the senior clinician at the university's speech-correction clinic.

Miss Carr, a tiny, lively woman whose curly, white hair was accented by her brillian red dress, stopped off in Milwaukee recently to visit old friends and colleagues at the university.

She had come from Madison where she attended the annual meeting of the Wisconsin Speech Correction Association and where she had been awarded an honorary life membership in the group.

HOW DOES SO FEEL?

Miss Carr herself seems a bit surprised that she will be 80 years old next month. "I don't feel like 80," she said, "but then, I don' know how you should feel. I always remember the story about an elderly woman whose niece asked her how it felt to be 80 years old. 'Why, I don't know,' the woman answered. 'I've never asked one of them.'"

One of the best known authorities in the field, Miss Carr traces her career in speech correction back to the early 1920's when, as a tutor for veterans of World War I who were students at Iowa State College, Ames, Iowa.

"Some of them needed help with their speech," she remembered, "and that's when I became interested in it."

Miss Carr described herself as a second-grade pioneer in the field of speech correction for, while such work was being done when she began her studies, the field wasn't nearly as broad or comprehensive as it is now.

She is 1 of 3 coauthors whose book, Rehabilitation of Speech, has become a standard text for students of speech correction. The book was published in 1937, and subsequent editions came out in 1947 and 1957.

"I believe it is the first text published which covered the whole field," Miss Carr commented. Then she added with a smile, "I've heard that some people in speech correction call it their bible."

STUDIED LATIN FIRST

A native of Galatia, a small town in southern Illinois, Miss Carr was graduated from Cornell University, majoring in Latin. After graduation, she began teaching school "here, there, and everywhere," she said. "If I told you all of the places, it would take much too long."

When she became interested in speech correction, she went to the University of Iowa in Iowa City for graduate work, getting her master's degree there.

"One of my teachers there was from Latvia, and I think it was he who put the idea in my head to go to London to study."

She was able to manage a year's work in phonetics at University College there, but then returned to this country "while there were still some coppers left in my purse." She came to the University of Wisconsin for additional graduate work.

When she finished her work at the university, Miss Carr took a position as director of the speech-correction department of the Wausau elementary schools. "I was the director and the department, too," she continued. "And, was I busy."

BUSY IN CITY, TOO

In 1930, she came to Milwaukee to teach at the college here. "We ran a three-ring circus," she remembered. "I was teaching, directing the elementary-school clinic, and working with college students who needed speech correction to become teachers."

Today, Miss Carr said, more emphasis is being put on the problems of the deaf and hard of hearing in connection with speech defects.

"After all," she explained, "we don't learn to speak without our hearing. If a child is born deaf, he won't learn to talk. But if he has been deafened after he has learned to talk, he won't have any trouble speaking."

The "team approach" is another relatively new development, she continued. Since many speech defects involve other problems, the speech correctionist must work with other people in solving the problem or know to whom the child should be referred.

"Many defects are physical in nature," she said, "but others are psychological. And still others may have, if not their origin in, at least no help from the home situation."

IMITATES SOUNDS

Since one learns to speak by hearing speech, a child is apt to "imitate whatever he hears in the home," Miss Carr added, "whether it's the Spanish language or a Southern drawl. If there's a lisp in the family, the child may speak with a lisp, although it could be caused by other things, too."

A baby's first attempt at speech, known as "baby talk," is part of this imitation process, she said, and is a perfectly normal phase of a child's speech development. "That is, of course, provided it doesn't go on beyond the age when he knows better."

A baby, she explained, "hears all this talk going around him, so he begins to try it, too. He bubbles and babbles, making all kinds of strange sounds, just enjoying his ability to make noise."

"Then one day he accidentally makes a sound like 'mah,'" Miss Carr continued. "It's an easy sound to make, so he does it again—mah-mah. 'Oh, he's beginning to talk,' says the flattered mother. 'Say mama, honey.' So he says it again, imitating her, and he learns to talk."

"A young child, however, can't make a wide variety of sounds," she said. "First he tries those that he can see being formed by a parent's lips or tip of tongue. These are sounds like 'puh,' 'buh,' 'mmm,' 'th' and so forth."

BABY TALK BEGINS

"Gradually he begins to try sounds he can't see made," she said, "sounds like 'err' or 'sss.'" And here is where so-called baby talk often begins.

"No one knows just why a youngster has trouble with these sounds," Miss Carr said. "It's probably caused by several things.

"Take the 'sss' sound, for instance. You need teeth to make that sound," a commodity most babies don't have. So instead of the "sss" sound the baby substitutes the "th" sound, one he can make easily. That's why you hear things like "thither Thuthie."

"Probably," Miss Carr concluded, "it's that a baby imitates what he hears, but substitutes sounds he can make or sounds that he thinks are the same. Many of our sounds are much the same you know.

"You stand in the next room and I'll say 'sss' and then 'th' and see if you can tell the difference. It may sound the same to a baby."

EXCERPT FROM CONGRESSMAN FOGARTY'S REPORT URGING INTENSIFIED WORK BY THE NATIONAL INSTITUTES OF HEALTH

"Finally, the committee is not entirely satisfied with the status of research, on sensory disorders, including sight and hearing, and expects greater effort to be expended in these areas, both in the laboratories of the institute and in the laboratories of grantees, during the coming fiscal year."

EXCERPTS FROM HEARINGS ON DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE APPROPRIATION BILL, 1959 FISCAL YEAR—TESTIMONY OF DR. PEARCE BAILEY

HEARING AND SPEECH DEFECTS

Mr. FOGARTY. We asked you last year in our report to get started on a research program in the neglected field of hearing and

speech defects. What have you done about it?

Dr. BAILEY. We have done considerable, Mr. Chairman, to stimulate research in this field. There has been a considerable increase in the number of grants. In 1958, 35 research grants totaling $514,405, and 4 field investigations totaling $119,013, were awarded.

Mr. FOGARTY. Is this on speech and hearing defects?

Dr. BAILEY. Yes, sir. In addition to that we have started a training program in otolaryngology.

Mr. FOGARTY. Give us a breakdown of these projects, please.

Dr. BAILEY. Yes.

Mr. FOGARTY. We have not had much chance for progress in this field.

Dr. BAILEY. It is just beginning. It was an untouched field.

COMMENTS OF CONGRESSMAN WINFIELD DENTON AND DR. BAILEY

SPEECH DEFECTS

Mr. DENTON. Did you tell us all you were doing on speech defects?

Dr. BAILEY. I did not go into detail, Mr. DENTON. We have a large experimental and basic program at Bethesda that we have developed and there has been a considerable increase in the amount of research and training support given on the outside. The program is so young it is hard to say——

Mr. DENTON. We started it a year ago; did we not?

Dr. BAILEY. That is right.

Mr. DENTON. There is nothing reported yet in the way of new discoveries?

Dr. BAILEY. No; except basic ones. We found new methods of conducting sound in the brain and things of that sort, but nothing which might be applied to the problem directly.

Texas Newspaper Supports Alaska Statehood

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, April 3, 1958

Mr. YARBOROUGH. Mr. President, one of Texas' best known big-city daily newspapers is the Houston Press. Under the leadership of its capable editor, George Carmack, a combat veteran of World War II who now uses his pen to fight for what he believes in, as he once used his sword in combat in the South Pacific, the Houston Press has been in the very forefront of the battle to uncover corruption and governmental chicanery in Texas and to improve our State government.

Mr. President, on March 31, 1958, an editorial entitled "Open the Frontier" appeared in the Houston Press. In the editorial, the Press points out that by granting statehood to the great empire of Alaska the Congress could provide a psychological and economic lift to the American economy.

It is fitting that a Texas newspaper should editorialize in favor of statehood for Alaska. A nationally prominent University of Texas historian, Dr. Walter Prescott Webb, who was recently elected president of the American Historical Association, in his book The Great Frontier, proves the historical validity of the views expressed in the Press' editorial. Dr. Webb and the Houston Press both pointed out that the existence of an open frontier, ripe with opportunity, begging for human hands and human brains to explore and utilize its resources thoroughly and wisely, provides not only a challenge but a real opportunity for a frontier-conscious people to better themselves materially and in every other way.

Mr. President, I now ask unanimous consent that the editorial entitled "Open the Frontier," from the March 31 issue of the Houston Press, be printed in the Appendix of the RECORD, and I commend it to my colleagues for its articulate reasoning in support of immediate statehood for Alaska.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OPEN THE FRONTIER

Congress argues heatedly over remedies for the recession but still delays action on a measure that could easily provide the psychological and economic lift needed to bolster the people's confidence.

That is statehood for Alaska.

Creation of this 49th State would demonstrate that America has not stopped growing, that it still is willing to recognize its pioneers who settled a frontier Territory and civilized it. Most of our States, after all, once were Territories just as Alaska is.

Statehood would open up the vast area and resources of Alaska for development, which can occur only at a snail's pace under the rigid restrictions of Federal control.

This development would mean jobs of many kinds—in the timberlands which have hardly been touched, in oil and mineral exploration which barely has begun, in the tourist industry in one of the world's most attractive areas, and in the increased transportation, trade, and services that would be needed.

Many of our displaced farmers could earn a good livelihood by growing food, most of which is imported into Alaska at high cost now and much more of which would be needed by a growing population—and the land would be there for the taking, as it was in the old West.

Tens of thousands of Americans have migrated to Alaska in recent years even without the extra opportunities statehood would bring. Many more willing hands, and capital as well, would follow promptly if this great frontier were thrown open as it should be.

By granting statehood to Alaska, Congress would do justice to the Americans who are there now and provide opportunity for millions more. And this is the time to do it.

Voluntary Plywood Quotas Do No Good

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1958

Mr. MACK of Washington. Mr. Speaker, the gentleman from Oregon [Mr. PORTER] and myself, last Thursday on the House floor, debated the issue of Japanese plywood imports and their effect on Pacific Northwest prosperity and employment. The gentleman from Oregon claimed the Japanese have imposed voluntary limits on the amount of plywood Japan will allow her plywood industry to ship into the United States.

It is true Japan, last year, placed a voluntary quota on the quantity of plywood that she would ship into the United States. But once Japan imposed that voluntary plywood quota she forgot about it and paid no attention to that so-called voluntary quota.

In 1957 Japan announced she had placed a voluntary quota on plywood shipments to the United States of 435

million square feet. Instead of observing her voluntarily imposed quota limit, Japan shipped into the United States in that year 679 million square feet or almost 250 million square feet more than her voluntarily imposed quota.

Voluntary quotas that are not observed are no better than no quota at all.

The voluntary plywood quota Japan said she was imposing upon herself by quarters for 1957 and the actual amount of plywood by quarters she shipped into the country were as follows:

	Quarters of 1957	
	Voluntary plywood quota of Japan	Actual imports of Japanese plywood
January-March	89, 993, 000	161, 000, 000
April-June	91, 800, 000	177, 000, 000
July-September	98, 970, 000	173, 000, 000
October-December	155, 000, 000	168, 000, 000
Total	435, 763, 000	679, 000, 000

In every single quarter of 1957, Japan exceeded the voluntary quota she said she was going to observe.

If American plywood workers are to be saved from unemployment and loss of income, quotas must be imposed by the United States Congress on plywood imports. Experience has demonstrated that voluntary quotas do no good.

Return of Enemy Property and Payment of War Claims

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. HARRIS. Mr. Speaker, on March 28, 1958, I placed in the Appendix of the RECORD a letter of the same date which I received from Mr. William B. Macomber, Jr., Assistant Secretary, Department of State, outlining on behalf of the administration a program for limited return of enemy property and the payment of war damage claims of American nationals against Germany arising out of World War II.

On March 31, I acknowledged receipt of Mr. Macomber's letter and requested that a draft bill be prepared, which I would then introduce, designed to carry out the administration's program.

My letter to Mr. Macomber reads as follows:

MARCH 31, 1958.

Hon. WILLIAM B. MACOMBER, Jr.,
Department of State,
Washington, D. C.

MY DEAR ASSISTANT SECRETARY: This will acknowledge receipt of your letter of March 28, 1958, submitting the administration's proposal for a limited return of vested German assets and for the payment of war damage claims of American nationals against Germany, arising out of World War II.

I am in complete agreement with your statement that action should be taken promptly if the beneficiaries of this legislation are to derive any benefits from this program during their lifetimes.

In order to bring the administration's program before the committee in the proper form, may I request that you prepare for introduction a draft bill designed to carry out the administration's program.

I trust that the spade work on such a bill has already been completed by the several agencies which will be responsible for carrying out the administration's program, and I hope that the submission of the draft bill will not be delayed too long so that the committee will be in a position to schedule hearings on this important legislation at the earliest possible date.

Sincerely yours,

OREN HARRIS, *Chairman.*

We Need Real Tax Reform: Not Just a Shot in the Arm

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. BAKER. Mr. Speaker, under leave to extend my remarks in the RECORD, it gives me great pleasure to include the very fine editorial that appeared in the April 5 edition of the Saturday Evening Post which has a circulation of approximately 5½ million weekly. The editorial deals primarily with the merits of the Sadlak-Herlong tax-reduction proposal, H. R. 6452, and I believe it contains some very interesting and enlightening statements.

The editorial follows:

WE NEED REAL TAX REFORM: NOT JUST A SHOT IN THE ARM

In view of the disturbing rise in unemployment and considerable grinding of gears throughout the whole economy, it was inevitable that some relief from the heavy tax burden should be explored as a means of getting things started again. High taxes are only one of many factors that have caused the economy to shrink. But to many, including Vice President NIXON, tax reduction, as opposed to an artificially inseminated public works program, seems the quickest way to do something about it.

Anyway, a spate of bills and proposals has hit Congress, the bulk of them based on the idea that tax reduction would increase the ability of individuals to purchase the products of industry and thus halt the business recession. Few of the bills provide that Government economies should accompany reduction in taxes.

However, neither among responsible leaders in Congress nor in the Treasury Department is there much support for tax reduction as an important means of adding to purchasing power. For example, Senator HARRY F. BYRD, of Virginia, commenting on the proposal to increase the $600 exemption to $700, said that this would give the taxpayer in the lowest brackets an extra soda pop per day, but would cost the Government $3 billion.

This sums up the difficulty in the way of tax reduction as a "pump priming operation." If you cut taxes without reducing expenditures, the national debt soars still higher, causing inflation and a further decline in the value of the dollar. If you reduce Government expenditures, at least some of the supposed benefit from a tax cut is canceled out, because the economics would remove from the spending stream as much purchasing power as tax reduction could put into it.

The truth is that the country is now paying the penalty for failing to revise its tax system when the going was good. As has been pointed out frequently by Roswell Magill, former Under Secretary of the Treasury, entirely too much reliance is placed on the income tax as a producer of revenue. Under the present tax system, the Government's income is linked too closely with the incomes of the taxpayers. During a recession, the demand for more Government spending to relieve distress runs into loss of revenue as incomes and profits shrink. The resultant strain could be critical. At the present time we are cruising in the stratosphere of taxation as far as the big income groups are concerned, while at the same time it would be politically impossible—and also unfair—to add to the burdens of the lower brackets—where the bulk of income-tax revenue comes from.

The question arises what to do, as far as tax reduction is concerned, to stem the recession. One group, headed by Senator PAUL DOUGLAS, of Illinois, favors cutting income and excise taxes by as much as $4,600,000,000 immediately, apparently relying on the stimulating effect of such action to give the economy the needed shot in the arm.

A more gradual approach which has wide support takes the form of a bill introduced by Representative ANTONI SADLAK, of Connecticut, and Representative A. S. HERLONG, Jr., of Florida. This bill would cut income taxes at once and would continue to reduce the rates over a 5-year period, at the end of which the rate for the lowest income brackets would be 15 percent, and for the highest, 42 percent. Mr. SADLAK would permit the President to postpone the implementation of the bill if the Government found itself in a financial jam as a result of reduction of the rates. But both sponsors of the bill regard tax reduction, particularly for the middle-income groups, as a stimulant to investment in industry and to the creation of new jobs and business opportunities.

Even more generous cuts in the individual and corporate income tax would be possible in Congress could be persuaded to look into the manufacturers' excise tax which has been successfully tried in Canada. The virtues of this tax were recently described by Mr. Magill, in a bulletin of the Tax Foundation, as follows: "Such a tax is collectible from relatively few taxpayers; it produces revenues in bad times as well as in good. If it were inserted into our Federal system, it would doubtless replace many of the present special excise taxes levied at various rates on selected transactions." This tax, as opposed to hit-or-miss levies like the tax on telephone calls, should cause little hardship.

It could be, of course, that appearance of a real intention to go to work on the fundamentals of the tax problem would have something of the stimulating effect which some people expect from an immediate income-tax cut. Representative SADLAK, for example, believes that his plan to cut income-tax rates on the larger incomes would encounter less popular resistance today than it would have done a few years ago. For one thing, it is generally recognized that the confiscatory rate on the top incomes produces a very small proportion of the Federal revenue, but does effectively discourage investment. In short, the Trumanesque antipathy to what used to be called the trickle-down theory has been at least partially dissipated by belated understanding of the fact that freedom of capital to be employed in productive industry, as opposed to seeking shelter in tax-exempt bonds, does trickle down to the benefit of the rest of us.

Consequently, if the leaders in Congress really hope to use relief from taxation to stimulate economic activity, they will start to work to reshape the tax system so that it can produce what the Government actually needs without harassing individuals and discouraging investment, as our present income-tax system undoubtedly does.

The Soviets' Unilateral Drive

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I wish to include the text of an article by David Lawrence entitled "The Soviets' Unilateral Drive," which appeared in the April 1 issue of the Washington Evening Star:

THE SOVIETS' UNILATERAL DRIVE—FREEING OF SATELLITE NATIONS SUGGESTED AS OPPORTUNITY FOR A GOOD DEED

(By David Lawrence)

Some people hereabouts are always urging our own Government to take the propaganda initiative away from the Soviets. This correspondent has been cogitating about it for some time now and, with all due humility, offers a plan that may at least achieve a high point in dramatic technique.

First, inasmuch as the Kremlin wants a show or a spectacular demonstration of some kind, let the summit conference be a show and let it be held in Madison Square Garden, New York, where it can be witnessed by millions of persons day in and day out.

Second, let an admission fee be charged and the TV rights sold for a big sum. Then let all the proceeds be distributed to the families of the thousands of Hungarian patriots who were killed or maimed in the recent attempt of the Hungarian people to regain their freedom.

Third, if the foregoing—which requires international agreement—cannot be achieved, let there be some unilateral decisions made. This means that, without any agreement with the other party, one side takes it upon itself to stop doing certain things that are harmful to people in another country.

Thus, the Soviet Government could stop oppressing the people of Poland, Bulgaria, Rumania, Czechoslovakia, East Germany, Hungary, Latvia, Estonia, and Lithuania. This is far more important than to stop testing nuclear bombs. For it is asserted by the scientists that the amount of radioactivity from nuclear tests isn't any more harmful than medical X-rays of the luminous rays of a wristwatch. As for the police measures taken by the Kremlin to deprive millions of persons in Eastern Europe of their liberties, this is much more damaging to mankind. Indeed, many people would prefer death to any enslaved life under Communist tyranny.

Another unilateral decision Moscow could make would be to open up her radio and her television to ambassadors from foreign countries, just as America does.

Still another bit of unilateral righteousness which the Communists could exhibit would be to let law-abiding citizens of other countries travel where they like inside the Soviet Union.

The Soviets might also make a unilateral resolution to admit not just a handful of correspondents to reside in Moscow but as many as wish to do so. This is what a free press really means. What are the Communists afraid of? Why do they maintain censorship on all outgoing news and radio broadcasts made by correspondents resident in Moscow?

There is another unilateral adventure on which Moscow might embark. It could return the territory of East Germany to the people of Germany. This is a step which would do much more to hasten the peace of Europe than any phony gestures about stopping the testing of nuclear weapons.

"Unilateral" is a big word nowadays in the propaganda of the Communists. It implies self-denial and a wish to go ahead with good deeds, irrespective of whether an adversary does the same. But, strictly speaking, the latest proposal of the Soviets isn't onesided at all. While agreeing to give up the testing of nuclear bombs for a while, the threat is also made to resume testing later on if the United States doesn't also agree to stop testing. So it's really a maneuver that merely publicizes a fake desire for an international arrangement to stop testing. The United States has all along advocated the same objectives but has insisted on a system of safeguards to prevent concealment or cheating.

There is a place where this kind of agreement can be negotiated. It's in the United Nations Disarmament Commission. But the Soviets have not been willing thus far to go again to that body for further talks. It's really a boycott of the United Nations. The Communists seem to prefer the theatrical stuff which, they believe, will deceive the world, including many gullible persons in America.

So maybe the Madison Square Garden idea is the answer, after all. Of course, nothing would be agreed to there, but this would also be true of any other type of conference.

For there will be no peace until menacing dictatorships are overthrown and the world has been made "safe for democracy." This was a World War I slogan, but it is even more pertinent today when some of the large empires of the past which nourished freedom are being broken into fragments due to alleged nationalistic feeling, only to have these smaller countries gathered one by one under the yoke of Soviet imperialism. Meanwhile, the remainder of the free world, threatened by aggression, staggers under the heavy cost of armament.

It would be relatively inexpensive to carry the true story to the peoples behind the Iron Curtain so that they will know that the appeasers in our midst are not the spokesmen of the West. It is important that the oppressed peoples should never feel they have been forsaken but that, instead, they can rely on the moral support of the whole world whenever they start breaking the chains of their bondage.

Recovery Through Production

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I wish to include the text of a letter from Mr. Arthur A. Hagman, publisher of Inside Michigan as well as the advance text of an article that will appear in the April issue of that magazine. The article, entitled "Recovery Through Production," offers a suggestion as to how the foreign-aid program could be used to stimulate economic prosperity here at home:

EAST LANSING, MICH., *March 27, 1958.*
Congressman ALVIN M. BENTLEY,
New House Office Building,
Washington, D.C.

HONORABLE SIR: Thank you for your considerate acknowledgment of my letter of March 11, with which was enclosed manuscript for an article to appear in the April issue of Inside Michigan. Enclosed are page proofs.

We are pursuing our studies of the automotive impact upon the national economy and are coming up with some significant facts, figures, and charts.

For example, the stimulated purchase of some 150,000 motor vehicles per month would require the reemployment of hundreds of thousands of jobless workers in the automotive and allied industries. The cost of such purchases would be in the neighborhood of $780 million for a period of 3 months.

Through such production of value, Government has a chance to recover a substantial part of investment from income and corporation profits taxes. Then, too, such industrial prosperity multiplies its effects throughout the national economy, bringing some 2 million additional jobless people into an income-tax bracket.

The alternative is an extension of unemployment compensation benefits which do not spark new job opportunities and which do not provide a return of Government investment. Actually, the cost of an additional 13 weeks of unemployment compensation for 2 million people at $30 weekly would cost Government $780 million—without tax return or stimulating influence.

Production of value seems like an immediate remedy to the current recession. I would be happy to prepare to testify before the Foreign Affairs Committee to this effect.

Sincerely,

ARTHUR A. HAGMAN,
Publisher, Inside Michigan Magazine.

RECOVERY THROUGH PRODUCTION

The American public is generally aware that foreign-aid programs of the past and present have been designed to bolster our national economy, while assisting backward nations of the world to achieve higher standards of living.

The principle in itself may be commendable, but unless the shot-in-the-arm formula can stimulate the flow of a healthy life-blood through the arteries of our Nation's economy, the mutual-security program falls short of the cure. Industrial production in given classifications, spreads its benefits throughout the Nation, with taxable returns to government.

During President Roosevelt's first 8 years in office, no effort was made to stimulate industrial recovery. All emphasis was placed on relief plans, WPA, CCC, and other made-work programs which had no bearing on economic development. As a consequence, unemployment remained at over 17.5 percent during Roosevelt's first two terms of office, continuing until World War II.

War production immediately after Pearl Harbor started the wheels of industry rolling. The emergency curtailed civilian production while directing the entire national labor force into war work. Prime contractors spread industrial work to subcontractors, who in turn spread their requirements among all conceivable suppliers of raw materials. Thus, prime contracts to major industries filtered through to the very grassroots of our national economy.

Only a national war emergency saved our country from a continuation of high unemployment, WPA, CCC, and outright relief.

If a peacetime emergency is in the offing it cannot be solved by handouts, or nonpro-

ductive work. We must provide a program for production of value, with the end products of manufacture being used to develop the backward countries of the world.

An analysis of present foreign aid spending is revealed in a booklet titled "The Mutual Security Program at a Glance," prepared for the February 25 Conference on Foreign Aid Aspects of United States National Security, headed by Eric Johnson.

This booklet reports that total mutual security shipments during the period of April 1948 through June 1957, amounted to $11,539 million. This is somewhat over $1 billion per year.

The unfortunate conclusion is reached that the entire program contributes very little to the creation of new job opportunities or improved business conditions in our country. Of the 11 principal commodities shipped by mutual security, 5 are classified as surplus farm products equal to one-half of the total expenditure, or $5,573 million for the period.

Other semiraw materials, which create a limited number of new job opportunities are listed as coal, chemicals, and petroleum, in an amount of $1,287 million. Automobiles, trucks, tractors, buses, and other motor vehicles accounted for only $351 million.

It must be obvious to everyone that the mere shipment of surplus farm products can provide but a slight stimulant to an ailing economy. Certainly the expenditure of some $504 million for tobacco to backward nations of the world is of little aid or comfort to them and cannot conceivably be a curent to our current recession. Shipments of other surplus products of agriculture may be of some comfort to indigent peoples of the world, but can hardly improve their economic self-sufficiency.

By comparison, mutual security shipments of motor vehicles of all kinds amounted to only $351 million for the same 10-year period—or about two-thirds of the amount expended for tobacco.

If the foreign aid program is a prescription designed to remedy the economic problems of our Nation and the world, and to develop mutual security, more consideration should be given to providing the useful items of industrial production.

The influences of industrial production requirements are felt throughout every segment of the national economy. Industry draws upon every natural resource of the land and upon every conceivable form of business. Industrial workers and others involved, represent a large segment of consumers of that which might otherwise be surplus farm products.

To make matters worse, the Defense Department is buying motor vehicles from Japan, contributing further to hardships imposed upon American taxpayers.

According to reports released from the Pentagon, the Defense Department last year contracted for over $100 million worth of motor vehicles from Japan, to be delivered over a period of 5 years.

By stimulating American production through purchases of manufactured products—useful to international development and mutual security—will our Nation balance the higher costs involved by savings in unemployment compensation payments.

Motor vehicle manufacturing represents the classic example of impact through the production of value. The automotive industry directly employs 1,250,000 people. Another 10 million Americans are employed full time or in part, by tens of thousands of parts manufacturers and service businesses associated directly or indirectly with automotive production.

The current slump in automotive purchases, equal to about 130,000 motor vehicles worth $260 million per month, could well be remedied by mutual security and Defense Department purchases equal to that now being expended for tobacco and other nonwork producing commodities, together with that of motor vehicles purchased in Japan.

Speech of Joseph Kajeckas, Chargé d'Affaires ad Interim of Lithuania, at the Commemoration Ceremonies of the 40th Anniversary of Declaration of Lithuania's Independence

---

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. RODINO. Mr. Speaker, it was my privilege to have participated as a guest speaker at the commemoration ceremonies on the 40th anniversary of the declaration of Lithuania's independence on March 23, 1958, in Newark, N. J.

Addressing the audience also on that occasion was Mr. Joseph Kajeckas. Although I was unable to understand his address, which was delivered in his native tongue, I could feel its moving and stirring eloquence. Now that I have been able to read this translation, I can readily understand the feeling and inspiration which he invoked.

It is a fitting tribute to great people. I know that all who cherish freedom and liberty—all Lithuanian-Americans and others of Lithuanian origin join in the expression of sentiment contained in Mr. Kajeckas' address.

Under leave to extend my remarks in the RECORD I include Mr. Kajeckas' address:

TRANSLATION OF AN ADDRESS DELIVERED BY JOSEPH KAJECKAS, CHARGÉ D'AFFAIRES AD INTERIM OF LITHUANIA, ON MARCH 23, 1958, AT ST. GEORGE'S LITHUANIAN HALL, NEWARK, N. J., AT A COMMEMORATION OF THE 40TH ANNIVERSARY OF THE DECLARATION OF LITHUANIA'S INDEPENDENCE

This anniversary of Lithuania's independence is out of the ordinary. It is the first such anniversary in many years without the late Minister Povilas Zadeikis among us. You had the privilege of hearing him speak in this city in the past. We grieve at his death, but we realize that although the man himself has passed on, the aspirations of the country he served remain unchanged, because their source—Lithuania's glorious past, undying rights, and national tradition—remains likewise unchanged. Let us open the curtain somewhat on the glorious past.

According to Prof. Clarence Manning of Columbia University, "the Lithuanians had established a powerful and independent state in Europe during the Middle Ages. They were able to check the German drive to the east for centuries. They protected Europe against the Mongols and the Tators. They furnished a power and a government behind which the eastern Slavs could live in peace and safety with a freedom that was unknown in Muscovite Russia. They blessed their subjects with more human freedoms than in the neighboring countries. They encouraged education and toleration, and they played their part in the general development of European civilization."

We know, however, how the greed of powerful neighbors overwhelmed the progressive, humanistic state of Lithuania, the darkness of a seemingly endless night descending on Lithuania and remaining for 120 years. This curtain of darkness was not lifted until the momentous February 16 that we commemorate today.

Four decades have passed since that day when a group of Lithuanian patriots in Vilnius proclaimed Lithuania a free and independent state, thus fulfilling the prayers and aspirations of many years. Let us recall the path of suffering that was traversed: Unsuccessful insurrections to restore Lithuania's honor; the period of the suppression of the press, accompanied by the smuggling of books into Lithuania; the school of suffering, when mothers secretly taught their children while at the spinning wheel; the exile of persons to Siberia for the use of prayerbooks and texts in the Lithuanian language; the persecution of Muravyov; Krazial; impressment into the occupying force's military service; Russification; economic subjugation; and even the erasing of Lithuania's name from the map. Such was the fate of Lithuanian sons and daughters, deprived of their ancient state. Such was the sad tale of Lithuania's subjugation. "Let Lithuania be darkened and silent," the oppressor had said.

The act of February 16 broke the chains of slavery. Lithuania's breast sighed its relief as the weary nation took on its new life, as Lazarus come from the grave. With the act of February 16, she turned the imposed shameless page of her history, the story of her suffering, and dedicated herself to the work of reconstruction. Fortunate were those who lived to see that day, but how many were those who closed their eyes on life with the sight of their nation's plight still before them.

One of those who died such an untimely death is the man whose 100th anniversary we celebrate this year, Vincas Kudirka. During the years of freedom, I was fortunate enough to have been able to visit his tomb on the banks of the Sesupe, and during this jubilee year, I remember that visit with pride. That man, besides his numerous writings and the composition of the national anthem, left for his countrymen the advice, "My Lithuania, when your enemies sink their teeth into you, you will survive only if, as a hydra, you grow several heads when one is severed." Today more than ever, the systematic extermination of the Lithuanian nation goes on. Thus, it is appropriate for us to keep Kudirka's warning in mind. At the time when Lithuanian heads in the homeland are being cut off by the enemy's cruel slaughtering, it is at least possible for Lithuanians abroad to help save the situation. Their heads and hearts can be saved for the Lithuanian cause; they not only can, but should be saved, since Lithuania's cause is also the cause of the whole free world. If the light of liberty is extinguished anywhere in the world, the prospect of peace and freedom for all nations is made just that much darker. John Donne rightly said, "Ask not for whom the bell tolls: it tolls for thee."

"As many as the dying leaves of autumn," fell Lithuania's sons in defense of her freedom. Let us especially remember on this occasion the brave men who were the signers of Lithuania's Declaration of Independence. Most of them have either passed away or were killed, and to honor their memory and in general to honor all those brave men who gave their lives for Lithuania, I now propose a minute of silent prayer.

I will not enumerate the blessings of Lithuania's freedom. There are too many among you who have been witnesses to those blessings, and you know them full well. Neither

will I detail the darkness and cruelty of Lithuania's present enslavement. Between Lithuania's past freedom and present enslavement, the contrast is enough to sadden the hearts of all men who cherish human dignity and the beautiful and good acts of a brave nation.

On February 16, though, we remember past celebrations, when people, having decked their homes with the tricolored symbols of their country, rejoiced in the proud displays and songs of the Lithuanian Army on parade. In villages and towns, men, women, and children of all ages joined their hearts in happy song, while organizations came in bands to the house of prayer to thank their God for the blessings of His peace and the fruits of liberty under the independence won through so many centuries at such a price; they came in throngs to the tomb of the unknown soldier to honor his heroism and of all those who fell in loyalty to his own cause; they went to the public halls to enumerate their achievements, to feasts, toasting a nation reborn in freedom. The invalids of the wars of independence were proud of their sacrifices for the fatherland; the volunteers of the wars of liberation were proud of their services. That day was always the greatest of occasions for a Lithuanian: The day of his rejoicing and the day of his honor.

So it was in the days of freedom. And now? Now, the conquered banner of our country has been furled; either it is cruelly mangled by the invader's boot, or reverently hidden by men who still keep its faith. Going to church together in organized groups is prohibited. The Lithuanian anthem, during the jubilee year of its composer, is silenced. Lithuania's military uniform is no longer seen, and the soldiers' happy song has died. Silence holds its dominion over the unknown soldier's sarcophagus; a cruel and alien hand has scattered and desecrated its honored stones. The enemy's sacrilegious power has left no room for the crosses which once stood by that holy shrine, and has irreverently plucked out the symbols of a brave nation's suffering. The bugle's tribute to the colors at this tomb is no longer heard at sunset; the liberty bell, like America's own, that Lithuanian-Americans had given their country, no longer tolls its angelus in accompaniment to the soldiers' prayers as our nation's flag begins its descent. That pregnant moment at the sunset when Lithuania's amber, green, and red gave over its domination of our country's rolling fields and peaceful plains to the stillness of night is gone now, and lives only in the memories of men whose burning faith in a once-strong, grand, and proud national heritage can never leave their hearts.

The ugliest side of present-day imperialistic communism consists in the fact that they justify the murder and extermination of innocent people, innocent Lithuanians, as being virtuous. If the annihilation of a person or of a nation serves communism, then, in their jargon, that is good and to be praised. If the trampling on of solemn treaties serves communism, in their dictionary, that is good and meritorious. If lying serves communism, then one can lie as much as possible—the more you lie, the better Communist you are. To serve their purposes, the notions of freedom, independence, coexistence, democracy, peace, nonintervention in other countries' internal affairs, colonialism, etc., are distorted beyond recognition.

Let us glance briefly at the record of imperialistic communism's lies, violence, and treachery. With Lithuania, the Kremlin had numerous, well-written, and valid treaties, among them the treaty of nonaggression; but it trampled on these treaties with the clearest of consciences. Stalin isn't blamed for this by his successors; the undertakers of Lithuania's freedom, Molotov and Dekanozov, did not suffer because of the violation of those treaties; they were punished for something else; for the cruel deportation of innocent Lithuanians and Baltic people in general to Siberia. Servo also was not punished. He remains even now firmly entrenched in the Kremlin's upper echelons.

The Soviets speak of the creation of a neutral zone in Eastern Europe. Long ago, such a zone existed in the Baltic States without the helping hand of the Kremlin. The Baltic States freely declared themselves neutral on the eve of the last World War. What better conditions for peaceful coexistence could one dream of? However, such conditions were not suitable to the carnivorousness of the Kremlin, and it swept away that zone.

When, for security reasons, the free world establishes, by mutual agreement with interested nations, various military bases far from Russian soil, the Soviets are extremely sensitive. Yet, the Communists were the first to impose such bases in the Baltic States for aggressive purposes. They still keep those bases there, and have even extended them throughout the whole territory of the Baltic States.

The Communists are also sensitive in regard to the alleged intervention of other countries in the affairs of the Middle East. They even denounced the recent statement of the United States Secretary of State, made on the occasion of Lithuania's Independence Day, as intervention in Soviet internal affairs, as if Lithuania were their estate and the Lithuanians their serfs without any rights.

The heart of every free and enslaved Lithuanian rejoices at the action that the Soviets call intervention. It was because of the intervention of President Wilson at the time that a whole series of peoples once enslaved by czarist Russia, Lithuania included, became free and independent after World War I. We remember also that, in spite of the Soviet cries of interference, the Philippines are free today and the Central American Republics can exist peacefully and securely alongside the powerful United States.

The record of imperialistic communism in this respect, on the other hand, is an open book. No one else but the Kremlin continues to occupy Lithanian people against their will. And it was not by the doves of peace that the Soviets came into control of the Baltic States, but, by their own admission, through the use of bayonets, tanks, and planes.

Such, then, are the policies of the Kremlin—policies foreign and disgusting to any free country. But without any justification, the Soviets point an accusing finger at other nations. According to the Russian proverb, it is the thief's own hat that is on fire. The only way the Soviets can raise the sunken national honor is by withdrawing from Lithuania and the other nations that they have enslaved.

There is being distributed in the United States a Soviet propaganda magazine in which Moscow praises itself for a new discovery in economics. They supposedly have done away with unemployment in Lithuania, and for this they seek credit. We give them that credit, but it cries to heaven for vengeance. After having killed Lithuanians, after having deported hundreds of thousands of them, after having sent countless others as "volunteers" to labor in their virgin lands, after having frightened away tens of thousands of Lithuanians as refugees to the Western World, they praise themselves for having gotten rid of unemployment. But brains aren't necessary for such a discovery; all one needs is a guiltless thirst for blood, and the discovery produced is called barbarism. The Soviet version of their discovery is understandable, however, when we remember that lies and deceit were and are now the Soviet's sputniks, fellow travelers.

Gen. Mark Clark, who negotiated with the Communists for about 10 years, was right when he stated: "There is no decency in the Communists. They'll cheat, they will lie, they will murder, they will do anything to attain their end of world domination, and they will sign a solemn pledge today, fully intending to abrogate that pledge the next day."

Albert Camus, the 1957 Nobel prize winner, said that "The Hungarian revolution blew to bits the biggest lie of the century: a lie that tried to pass off a regime of police tyranny as a proletarian revolution. * * *"

But let us return to our commemoration. Let us, on this solemn occasion, give thanks to those who so much deserve it. First, let us give thanks to the suffering Lithuanian nation. She, by her perseverance, safeguards the aspirations of the Lithuanian people, which aspirations created the basis for the act of February 16. We are grateful to President Wilson for his proclaimed principle of the right of self-determination of nations at the time, and, as a result, for the favorable international climate which enabled the Lithuanian people's will to manifest itself effectively. We are grateful to the signatories of the act of February 16; we especially wish that the three living signers of that act may live to see it renewed in a new birth of freedom. We give thanks to the Lithuanian Army, thanks to which we enjoyed 22 years of independence. We are grateful to the provisional government of Lithuania and its underground heroes for their determination to restore Lithuania's honor.

We are grateful to the Government of this country, especially President Eisenhower and Secretary of State John Foster Dulles and their predecessors for their nonrecognition of Lithuania's occupation by force, and for their numerous meaningful statements in that regard, together with the statement that Mr. Dulles made on this particular commemoration this year.

We thank the governors of the several States and mayors of cities of this country, including the Honorable Governor Meyner of the State of New Jersey and Mayor Carlin of the city of Newark, for their highly esteemed proclamations throughout the years; also we thank numerous Senators and Congressmen, including the Honorable Congressman Rodino of the State of New Jersey, for their many stirring speeches supporting the aspirations of the Lithuanian nation and sympathizing with her plight. In general, we thank all friends of Lithuania and the great-hearted American people for the various ways in which they have supported Lithuania's cause.

Finally, we thank all our own countrymen and Lithuanian-Americans; those who organize in liberation efforts; federations; alliances and organizations; sponsors of Lithuanian-language radio programs, including Mr. Stukas; the reverend clergy; writers and journalists; teachers, especially the sisters in our Lithuanian schools, and all those individual persons who in one way or another have rendered their aid toward Lithuania's liberation, the easing of her plight, and the raising of Lithuania's good name above her great sorrow.

The Lithuanian nation will remain eternally grateful for such wholehearted and noble efforts. She has a long memory as regards her benefactors in the hour of misfortune.

Today Lithuania is stepping into the fifth decade of proclaimed independence, but is also finishing the 18th long year of slavery. She has not yet reached the crest of her Golgotha. One can still not see the end of her way of the cross. But, in her suffering and anxiety, she is greater than the so-called man of the year for 1957, just as Nero's persecuted Christians were greater than the emperor who was powerful enough to hold the lives of men in his balance. In the first road of suffering to Golgotha, the long arm of the

Roman law was required to force a bystander, Simon of Cyrene, to help carry Christ's cross.

Lithuanians need no police power to help carry the cross of their suffering nation: a Lithuanian heart is sufficient. Thus, especially in this jubilee year, which is also the jubilee year of our country's patron, St. Casimir, let us be determined to bring down the cloud over Lithuania's horizon, to light the fire of freedom once more in her sky, to ease the suffering of Lithuania, to help it keep and persevere in the hope of freedom until the Easter morn and the resurrection of that oppressed nation. For rise it must; it cannot have suffered so much in vain. God bless our common efforts to this end.

The Town That Cares and Shares

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I wish to include the text of an article from the December 1957, issue of Coronet magazine entitled "The Town That Cares and Shares." The article concerns Frankenmuth, Mich., a town in my congressional district and which, as I have had occasion to state in the past is unique for the spirit of self-reliant community service which its people have developed and maintained during the more than 100 years of its history.

THE TOWN THAT CARES AND SHARES

Official Washington was astounded in 1952 when the villagers of Frankenmuth, Mich., spurned Federal funds and built their own flood-control dike, without going into debt.

But Frankenmuth was merely staying in character. For this unique community has neither asked nor accepted favors since the 1840's when its founders, fewer than a score, put their axes to the cork pine woods to make a clearing for a town.

Frankenmuth began in a unique experiment and has continued unique to this day. To spread the gospel to the American Indian, a Lutheran missionary society in Bavaria, Germany, decided to send not just a missionary but an entire congregation. The pagan Indians then would have not only the words of a preacher but the example of practicing Christians to bring them into the faith.

The preacher, Pastor August Craemer, and the 15 men and women who volunteered for the venture, called themselves "The courage of the Franconians"—Frankenmuth—coming as they did from the region along the Main River where the inhabitants were called Franken.

The first chore on arriving at the Cass River in Michigan, at a spot approximately 80 miles north of Detroit, was to build a log church and living quarters for the pastor. Their first pledge was that their individual and collective lives would always be the personification of the injunction contained in Galatians VI: 7 and 10. The promise was kept.

The results have made Frankenmuth, population 1,620, a place apart. It has no crime. (Its jail has been turned into a warehouse.) Its one policeman devotes himself mostly to traffic matters. Everyone pays his taxes in full and on time.

In 1952, when Frankenmuth decided to dike the rampaging Cass River, most of the funds came from the village and township treasuries. Folks along the river were assessed for the balance. There were a few complaints—by those who felt that others were benefited more than themselves. A Frankenmuth businessman, believing that all property owners profited from the improvement, agreed to pay the bills of those who thought the assessment inequitable. It all worked out satisfactorily.

Frankenmuth has no poor people. Few businesses have ever failed, no one ever has been on public relief. Even during the depression it had no unemployment.

Service to others is the keynote of this remarkable town's philosophy. If a man has always done his share of service to the town, the town is ready to aid him when he needs aid. "In Frankenmuth," its people say, "we care for each other, we do not grow weary in well doing."

Some years before the dike was built, the river flooded through the town and crumpled Albert Hetzner's new garage. Everyone suffered heavily, but Hetzner lost everything.

On the basis of the biblical injunction "let us do good to all men," the business district began a collection. (The first contributor was Hetzner's keenest competitor.)

In just 4 days the collection totaled $3,100, and work on a new garage was begun immediately.

Frankenmuth's extensive public improvements have always been on a pay-as-you-go basis. It is debt free.

For its youngsters the town has provided excellent schools, a $125,000 recreational hall with 12 bowling alleys, an ice-skating rink, a new park and swimming pool, lighted baseball and softball diamonds. The way the town feels about its youngsters is summed up by former Mayor Otto Trinklein: "Our sons hunt and fish with us and our daughters and wives are friends. These are reasons why we never have any serious juvenile problems."

Frankenmuth's code of conduct began with the town's founding, when each adult gave 1 day a week to work for the village. This idea of service has continued right up to today, though progress and scientific development have cut down the amount of such work. But the spirit survives. Frankenmuth never lacks volunteers for any project.

And because its citizens invest in each other, practically all of Frankenmuth's considerable industry is not only locally but family owned, and operated by third- and fourth-generation descendants. Nearly everybody owns a piece of the town's biggest industry, Universal Engineering Co., the two mutual fire and automobile insurance companies, the flour and woolen mills.

Frankenmuth stubbornly maintains its Bavarian traditions (even today German is spoken in almost all of its households) but its Americanism ranks high. Nor has it forgotten its religious origin. St. Lorenz Lutheran Church is a center for activities. Founded in 1845, it has given the denomination 68 ministers and 71 lay teachers. For a long time it was almost obligatory that every family have at least one member dedicated to religion. Although the village is 95 percent Lutheran, "we look to the day when the spires of all faiths will tower above our trees."

Frankenmuth retains the gemütlichkeit which first made it famous through a broad section of Michigan and the Middle West. Ask a villager what gemütlichkeit means and he will struggle with comfortableness. He will finally agree it is a way of life that tastes the full flavor of good food, good home, good businesses—all earned through honest labor and pride of craftsmanship.

This gemutlichkeit has made it the Nation's only town to give its name to an entire meal. Boston named baked beans, Frankenmuth chicken dinner. For 50 years Frankenmuth chicken dinners have been famous. Now 10,000 persons weekly—5,000 to 7,000 on the average Sunday—descend on the town's three major restaurants for their all-you-can-eat chicken dinners.

More than half a million chicken dinners a year come under the head of big business in a community this size. Yet the town hasn't a single professional chef. The cooks are from the surrounding homes and farms, as are the several thousand other people employed in this chicken-dinner business.

William Zehnder, restaurant proprietor, puts it this way: "These folks love life and find joy in giving their best to each meal. Their neighborliness and natural service help explain why 100-mile journeys for a Frankenmuth chicken dinner are not uncommon."

Change has been slow, if any, in the ownership of the town's businesses and industries. The names of many of its founders are still conspicuous in its business district.

Frankenmuth's oldest continuous business is Hubinger's grocery, begun when the town was only 2 years old and operated today by Miss Hattie Hubinger, granddaughter of the first owner, George Hubinger. He and his bride honeymooned on the ship which brought the town's founders to America.

Frankenmuth's lumberyard, offshoot of the sawmill built to clear the townsite was, until recently, operated by four great-grandchildren of the mill's first owner. Most of the district's prosperous farms are in the hands of the same families that cleared them from the virgin forests.

Many rural communities complain about the profits taken by middlemen on farm products. Frankenmuth processes its own, and keeps the profits. Its grain is ground in its own 87-year-old mill with the poetic name, Star of the West. Its wool becomes blankets or batting for stuffing comforters on the ancient looms installed 75 years back primarily to weave heavy fabrics for clothing, and horse blankets for the men and teams working in Michigan's pine forests. Local pigs and cattle end up in dozens of types of sausages produced by the three sausage plants.

A seeming alien note in Frankenmuth's industrial picture is the multi-million-dollar Universal Engineering Co., which turns out precision parts for Michigan's busy auto plants and employs nearly 500 persons. It was started in 1925 by a Detroit industrialist who had heard of the town and the high caliber of its workers.

Clinton Grainger, copublisher of the town's weekly newspaper, explains why the firm, today the world's largest producer of drill bushings, was welcomed by the community: "It was just another phase of our program to assure employment for our young folks and encourage them to stay home, just as building our $125,000 recreation center was part of that plan. As a result, our youngsters stay here and we've got more jobs in our town than we have citizens."

Hospitality and friendliness are a part of the Frankenmuth heritage. One feels at home the instant he sets foot in the town.

Richard Rummel, the village photographer, and over the past 20 years president or secretary or board member of the chamber of commerce, says, "Outsiders are very welcome here. We want them as businessmen, or residents, or both. We welcome anyone who will bring in a type of business or industry not competitive with one already established here. It's natural that we want to protect our own business people. We give every encouragement to those who want to raise their children in a community where juvenile delinquency is nil."

Further evidence of the warm welcome awaiting outlanders comes from the fact that it is not necessary to be a native or Bayerisch (German for Bavarian) or a Lu-

theran to be a town official. Mayor Jim Wickson, for example, misses out on two counts; he is Canadian born, his forebears were Swedish and English.

H. J. Schluckebier, auto dealer, great grandson of one of the town's founders, will tell you that Frankenmuth is what it is because "Our businessmen do the things most chambers of commerce, commercial clubs, and service organizations just talk of doing. We believe in each other, seek to be fair to each other, believe in hard work."

But the actual secret lies in Galatians VI, verse 7, which long ago became the village's code of conduct: "* * * for whatsoever a man soweth, that shall he also reap."

Personalized Rehabilitation Services of the Disabled American Veterans

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. METCALF. Mr. Speaker, a most unusual record of unselfish service for handicapped war veterans, and their dependents, has recently come to my attention. It concerns the personalized rehabilitation service activities of the Disabled American Veterans. When it was formed in 1920, the organization was composed exclusively of America's war wounded and disabled veterans. It was granted a special charter by the Congress in 1932.

Starting out as an organization of handicapped veterans of World War I, its congressional charter was amended in 1942 to extend eligibility to any American citizen, who has been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. The DAV is therefore composed exclusively of America's disabled defenders.

Although all of the some 2 million war veterans who are receiving disability compensation from the United States Veterans' Administration have substantially benefited by reason of its legislative and rehabilitation activities, less than 10 percent of them are dues paying DAV members—all of whom receive the Disabled American Veterans' Monthly which keeps them informed as to all developments which may affect their future.

Detailed facts are set forth in DAV annual reports to the Congress, printed as House documents by the United States Government Printing Office.

At its national convention in Louisville, Ky., in June 1941, the DAV formally decided that its contribution to the Nation's national emergency defense effort would be to see to it that all ex-servicemen and women should have the benefit of expert advice and assistance of trained national service officers, in the proper preparation, presentation, and prosecution of their respective claims, with the Veterans' Administration and other governmental agencies, for service connection of their disabilities, disability compensation, hospitalization, medical treatment, prosthetic appliances, vocational training, and finally selective placement into self-sustaining suitable jobs, utilizing their remaining abilities.

Far too many World War I disabled veterans, who failed in time to get the benefit of such expert advice, had suffered the disillusionment of being unable technically to prove their legal entitlement to such benefits to which they considered themselves equitably entitled—because of their inability to procure detailed, specific, factgiving affidavit evidence to substantiate their claims.

That the DAV has been faithful to its self-assumed policy, of extending such much needed services to disabled veterans following World War II and the Korean conflict, is indicated by a résumé of some of the many services extended by its nationwide staff of full-time national service officers during the last 10 years, as follows:

Claim folders reviewed	3,453,604.00
Rating board appearances	1,382,863.00
Favorable awards obtained	537,367.00
Service connections obtained	99,054.00
Increased compensation obtained	225,493.00
Monetary benefits obtained	$179,083,769.66

Infinitely more could have been accomplished if the DAV had been enabled financially to maintain an even larger number of trained national service officers, gradually reduced from more than 400 in 1948 to about 150 at the present time. Nevertheless, during the last 10 years, the DAV has expended the aggregate sum of about $12,197,600 in the maintenance of such special advocates. This sum does not include administrative expenses at its national headquarters at 5555 Ridge Avenue, Cincinnati, Ohio, nor the cost of its national publication.

To estimate the DAV's cost of extending needed service to individual distressed disabled veterans involves differing circumstances proving entitlement to service connection, an increased disability rating, medical treatment, prosthetic appliances, vocational training, and so forth. Advising and assisting individual claimants requires time, ranging from a few minutes up to many hours. Most claimants have no conception of the time that their attorneys-in-fact must expend in carefully studying the evidence in official claims folders, in preparing briefs, in making presentation to claims and rating boards, and so forth.

Thousands of claimants have been given pertinent, helpful advice, not measurable or recorded in the monthly reports required to be submitted by each national service officer to the national director of claims, Cicero F. Hogan, located at the DAV national service headquarters, 1701 18th Street NW., Washington, D. C.

Measured by the DAV's overall costs of about $12,197,600 during the last 10 years, one would find that the DAV has expended about $3.50 for each claim folder reviewed on behalf of a claimant, or, measured another way, about $8.80 for each appearance before a rating agency, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, or about $14.10 for direct monetary benefits obtained for claimants for each rehabilitation service dollar expended by the DAV, not counting the fact that such benefits will generally continue for many years.

These statistics fail to reveal the humanitarian dividends thereby obtained for the scores of thousands of distressed disabled veterans, and their dependents, who have been directly benefited for the rest of their lives.

Most of these serviced disabled veterans have probably assumed that the DAV has been getting some kind of financial help from the Federal Government. No money has ever been appropriated to the DAV by Congress.

It is true that, because the Veterans' Administration has realized the value of such personalized services, it has, throughout the years, been furnishing office space for all DAV national service officers, in its regional, district, and central offices.

DAV income has been procured from membership dues, but, more importantly, since 1942, from its Idento-Tag project, by which most automobile owners throughout the country receive miniature automobile license tags. Incidentally, attachment of such Idento-Tag to keyrings has enabled the DAV to return about 643,000 sets of lost keys to their owners during the last 7 years—without regard to whether they had previously submitted any donation. Fortunately, Idento-Tag recipients who do respond with donations have long enabled the DAV to maintain a larger staff of full-time national service officers than maintained by any veteran organization.

If, however, twice as many Idento-Tag recipients were each year to donate only $1 in response to receipt of their miniature automobile license tags, then the DAV would be enabled to expand its rehabilitation service setup into all of the some 175 hospitals of the United States Veterans' Administration, where they could then extend much needed rehabilitation service to so many additional scores of thousands of discouraged disabled veterans.

Incidentally, the Idento-Tag project is owned and operated by the DAV itself at its national headquarters at 5555 Ridge Avenue, Cincinnati, Ohio. Most employees consist of disabled veterans, their wives, their widows, and other handicapped persons—a rehabilitation project in itself—under the direction of the DAV national adjutant, Vivian D. Corbly.

Because the income from the Idento-Tag project has not been sufficiently adequate to provide for its staff of full-time national service officers, resignations have reduced their number from about 400 in 1948 to about 150, notwithstanding appropriations aggregating $3,240,000 during the last 9 years from its incorporated trustee, the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D. C.

Its reserve funds therefore again need to be built up, by greatly increased volume of donations by disabled veterans—

all of whom have so much benefited by reason of the DAV service program—and by other social-minded Americans. Much needed are many more bequests in wills, designations as beneficiary in insurance policies, assignments of stocks and bonds, and benefactors of perpetual rehabilitation funds, in some multiple of $100—a grassroots idea spontaneously started by a group of concerned disabled veterans in Montana.

After the end of each fiscal year, an updated memorial honor roll of the benefactors, who have established such perpetual rehabilitation funds with the DAV service foundation (presently ranging from $100 to $1,000) will be included in each DAV annual report to the Congress.

Only the interest earnings will be available for appropriation to the DAV for its use in maintaining service officers in the respective States from which each perpetual rehabilitation fund originated. This unique idea, if supported by a sufficient number of social-minded Americans—as well as individual disabled veterans and their DAV departments and chapters—holds hope for eventually building up sufficient reserve funds, so that the earnings therefrom can enable the DAV to maintain much needed rehabilitation service for disabled veterans in each State throughout future years.

The experience as to World War I veterans, for whom service connections were procured as much as 35 years after active service, indicates that such expert service officers will be needed for many decades into the future.

Fellow Americans who think about it will realize that security for America's war disabled, and their dependents, is inevitably linked up to future security for America. Americans who help the DAV directly, or through its incorporated trustee, the DAV service foundation, will thereby be helping many more of America's disabled defenders, and their dependents, and their communities, and will also thereby help to fortify America's future security.

Union Strike Funds

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I wish to include the text of a letter written to me by one of my constituents who, although a union worker, has some justified complaints regarding the dues which he has been forced to contribute to the strike fund:

DEAR MR. BENTLEY: Despite the fact that I am a good union member of the CIO, local 599 I find, or am getting to more or less get the opinion that the unions of today, who represent so many millions of factory workers, are getting to the point of dictatorship, whereas the working man must comply to every desire that certain radical unionist demands.

I firmly believe as many of my shopmates do, that the unions are being operated by a select few men who are interested in only personal glory and just for the money that they can squeeze out of the working man.

My main issue is this; in 1955 they took from our paychecks each month was $7.50. As you probably know that was the year of a new contract to be negotiated for the CIO for the Big Three corps. The union stated that the extra $5 per month was for the strike fund. Now a certain man desires a like sum to be deducted every month for the same purpose. I would sincerely like to know what happened to the huge fund that was built up in 1955 and why they want to try the same stunt 3 years later.

I do believe that the demand by some of these certain corrupt union radicalist are the very roots of this country's recession, which my family is experiencing right now as I expect to get laid off shortly, as I have only 4 years of seniority.

In closing, I only wish that I could express my opinions which my shopmates also share, to the people that could be most benefited by it.

If ever I can be of any service in any way I would be more than willing to donate my time in anything that I could help with, as I am quite well schooled in several subjects.

Yours truly.

——— ———.

Water Storage Needs and Wilderness in the Columbia River Basin

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. METCALF. Mr. Speaker, on February 13, 1958, the executive committee of the Wilderness Society, one of this Nation's great conservation organizations, adopted a statement on water storage needs and wilderness in the Columbia River Basin.

The press release on that statement follows:

WILDERNESS SOCIETY SUPPORTS CERTAIN COLUMBIA BASIN DAMS

In a statement on dam projects in the Columbia River Basin, released today, the Wilderness Society has supported Paradise, Libby, and High Hells Canyon, as alternatives to projects that would seriously encroach on scenic, wildlife, and other wilderness assets.

The Wilderness Society, a national conservation educational organization with headquarters at 2144 P Street NW., in Washington, D. C., describes its purpose as the development of knowledge and appreciation of wilderness and protection of areas where it is preserved. The society cooperates with many other conservation and civic groups.

Other proposed dams that might be favorably considered, according to the society, include Pleasant Valley or a combination of Pleasant Valley and Mountain Sheep.

"We realize," said Executive Secretary Howard Zahniser in releasing the statement, "that in order to preserve wilderness and other natural values in some places we shall have to meet the needs for water storage in other places. We believe also" he said, "that those who are concerned primarily with water programs should likewise realize that a sound overall program must include the preservation of outdoor resources."

Dams that the society opposed in its statement include Glacier View, Penny Cliffs, Crevice, Spruce Park, Long Meadows, Ninemile Prairie, Bruces Eddy, Nez Perce, Lower Canyon, Freedom, Wenaba, and Narrows. These dams, according to the evidence now available, the society said, "would seriously encroach upon areas having unique scenic, wilderness, and wildlife assets."

The society's statement, adopted by its executive committee on February 13, 1958, was entitled "Water Storage Needs and Wilderness in the Columbia River Basin."

You will note that the dams which the Wilderness Society opposes include Bruces Eddy on the North Fork of the Clearwater River in Idaho, for which Congress authorized planning money with adoption of the conference report on S. 497.

Consistent with their policy of insisting on a thorough study prior to authorizing such projects, the Wilderness Society and the other conservation organizations did not oppose this provision of this bill. However, there will continue to be strong opposition to construction of Bruces Eddy, at least until we know what is going to happen to the recreation and wildlife resources involved.

The complete policy statement follows:

WATER-STORAGE NEEDS AND WILDERNESS IN THE COLUMBIA RIVER BASIN

The executive committee of the Wilderness Society, having reviewed water-storage needs and various proposals for dams in the Columbia River system, adopted the following policy on February 13, 1958:

Projects for construction have been considered in relationship to their impact upon areas of wilderness and other undeveloped country on several of the Columbia River tributaries. It is recognized that, in striving for the preservation of these wild areas, it will be necessary to meet the needs for water storage at other sites which do not encroach upon lands that have been dedicated to wilderness uses or upon other areas of high scenic or recreational value. A sound overall program for developing the water resources of this region should be consistent with and include the preservation of these outdoor resources.

Following a thorough consideration of all the values involved, a sound appraisal from an overall point of view should be made of any project proposed for construction within the Columbia River system. The society will contribute, within the limitations of its resources, to the study and appraisal of each of the proposed dams to determine its effects upon the fish, wildlife, and other wilderness resources of the Northwest. Such appraisals should be designed to facilitate the selection of alternatives to harmful upriver impoundments without jeopardizing the irreplaceable recreational resources of this region. Surveys and studies should be made by all the appropriate Government agencies involved and made available for public consideration.

The society will actively oppose not only any dams in dedicated areas of wilderness but also any proposals for authorization of dams at sites where complete studies of the impact of these projects upon wilderness, wildlife, and other recreational resources have not been completed by all appropriate agencies or where recommendations resulting from these studies have not been made available for full consideration by the public.

Evidence now available indicates that several of the dams currently proposed for construction within the Columbia drainage would seriously encroach upon areas having unique scenic, wilderness, and wildlife assets.

Such dams include Glacier View, which would flood western portions of Glacier National Park; the Penny Cliffs project, which

would back water for 6 miles into the Selway-Bitterroot Primitive Area; the Crevice impoundment, which would inundate wild sections of the Salmon River Gorge within both the Selway-Bitterroot and Idaho Primitive Areas; and the following proposed dams at valuable wildland sites not included in specially designated areas of wilderness: Spruce Park on the Middle Fork of the Flathead River in Montana; Long Meadows on the Yaak River in Montana; Ninemile Prairie on the Blackfoot River in Montana; Bruces Eddy on the North Fork of the Clearwater River in Idaho; Nez Perce on the Snake River in Idaho and Oregon; Lower Canyon and Freedom on the Salmon River in Idaho; Wenaha on the Grande River in Oregon; and Narrows on the upper Snake River in Wyoming.

In order to satisfy current requirements for water storage, there are other projects, which do not necessitate sacrifices of irreplaceable outdoor values, such as those in wild and other undeveloped areas. From information available at this time, some of the dams currently proposed for construction appear to involve only minor losses to outdoor recreational resources. Because of their locations at downstream sites, Paradise on the Clark Fork River in Montana, Libby on the Kootenai River in Montana, and High Hells Canyon on the Snake River in Idaho and Oregon afford maximum flood-control and hydroelectric-power potentials without serious encroachment upon areas of outstanding recreational value. Other proposed dams that might be considered include Pleasant Valley, or a combination of Pleasant Valley and Mountain Sheep on the Snake River in Idaho and Oregon.

The staff of the Wilderness Society is instructed to cooperate with other conservation groups in studying the various projects which have been and may be proposed for construction in the Columbia Basin, and, in counsel with the executive committee of the Wilderness Society, to formulate statements on the position to be taken by the society on each of these dams as they may relate, either directly or indirectly, to the protection of recreational values. The society will also endeavor to work in fullest cooperation with other conservation groups to obtain general agreement on the positions that may be taken on these various proposals in the light of recreational, hydroelectric power, water storage, and general long-range economic needs of the region.

Higher Education and the National Interest

EXTENSION OF REMARKS
OF
HON. HARRY G. HASKELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. HASKELL. Mr. Speaker, Dr. Lawrence G. Derthick, the United States Commissioner of Education, is, in my opinion, a very able man. On several occasions in the past he has addressed himself to some of the many problems that face this Nation today in the field of education. On March 5, 1958, Dr. Derthick spoke before the final general session of the 13th National Conference on Higher Education, sponsored by the Association for Higher Education, which was held in Chicago.

Under leave to extend my remarks in the RECORD, I include his speech, as follows:

HIGHER EDUCATION AND THE NATIONAL INTEREST

(By Lawrence G. Derthick, United States Commissioner of Education, Department of Health, Education, and Welfare)

It is a privilege to have this opportunity to spend a few minutes with you who represent every aspect of American higher education—all subject fields; all types of public and private institutions; teaching, research, and administration.

I wish to discuss one of the most critically important aspects of education in the national interest today—the development of effective teamwork at the policy level between institutions of higher education and the Federal Government "to insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity."

It is my strong conviction that we have reached an era in the development of American education when new and concrete advances must be made. We are a juncture in the history of our country when education in its relationship to security and national well-being is every bit as critical as when the ordinances in 1785 and 1787 were enacted to establish the concept of Federal participation in eduction. The steps we need to take now may well be as fundamental as those taken in 1862 and subsequently to establish and support the land-grant colleges of the Nation.

Today we need a new perspective. The very security of the Nation depends on the education and technical training of our manpower. We simply cannot maintain or advance our position of leadership in the free world without more and better education.

Higher education in the United States is provided by more than 1,900 institutions of various types—universities, liberal-arts colleges, junior colleges, institutes of technology, and professional schools. The educational administrators and the faculties in the colleges have made valiant efforts to meet the needs of the country for higher education. The deficiencies in meeting these needs are attributable only in small part to lack of energy or vision on the part of those connected with the colleges. The great deficiency lies in the fact that society has not yet provided the financial resources necessary to establish and maintain the kind and extent of higher education required, and to make it possible for all our youth who are capable of doing so to enter upon and complete a program of education at the higher level.

These shortcomings are principally reflected in the large gap between the total numbers now being educated beyond the secondary school and the numbers who have ability to benefit from college attendance. Of particular significance is the failure to extend higher education to the gifted young who have potentialities for the greatest contribution to the future of our country.

Our concern is deepened by the fact that the requirements of our expanding population in the years to come must be fulfilled by a pool of very restricted manpower. Let me cite only one example to dramatize the situation. Today we have some 2.3 million 18-year-olds in our total population of 170 million. Twenty-three years from now in 1980 it is estimated that our population will number about 250 million. Yet there will be fewer than 2.3 million persons 40 years of age—an age at which it can be expected that many in this age group wil have begun to assume leadership positions. This means an almost inconceivable scarcity in the leadership age groups 20 to 25 years hence.

With only about 6 percent of the world's 2.6 billion people and yet consuming half of all the goods and services produced in the world, the United States occupies a unique and increasingly difficult position today. We must have the trained leaders in every field to provide us with the skills necessary to meet all our domestic problems and, in addition, to show the free world the kind of inspired leadership so essential in these times. The responsibility for developing this leadership rests squarely upon our system of free education for all, and upon the citizens who sustain this system.

The American public has, I believe, become fairly well informed about the strengths and shortcomings of our elementary and secondary schools. Public alarm at the crises in these schools has produced an eagerness to do something about it, and has started us moving on the right road. Our colleges and universities fortunately still have a little additional lead time in getting ready for similar crises in higher education. Realizing this, the President, at the request of the Department of Health, Education, and Welfare, appointed in the spring of 1956, a Committee on Education Beyond the High School to study the needs of higher education and to make recommendations on how they could best be met.

The major recommendations of the President's Committee called for doubling faculty salaries within the next 5 or 10 years, and for taking other appropriate measures to strengthen the human and physical resources required for the effective operation of the Nation's colleges. To follow up the work of the President's Committee, Secretary Marion B. Folsom established a special departmental task force last August to consider what the Federal Government should do to help with the impending crisis in higher education. As the chairman of this task force, I can assure you that during the fall and winter we explored a great many possibilities for assistance.

Our present approach was formulated only after long and serious consultation with representatives of our own and other Government agencies, including the National Science Foundation. We drew upon the findings of the President's Committee and other studies in the field. We relied upon the counsel of many of you in this room.

The finished product represents what we believe to be a sound and realistic approach of Federal assistance to help improve American education at critical points. We realize that our new program is by no means the final answer to the complex problems involved, but we do think it makes a constructive step forward. It has been painstakingly prepared in each detail and remains faithful to the historical tradition of education in this country.

Since many of you are already familiar with the nature of our proposals, I will deal only briefly with the three main sections which relate most directly to higher education.

THE CONSERVATION OF TALENT THROUGH PROGRAMS OF TESTING AND COUNSELING, AND BY PROVIDING FEDERAL SCHOLARSHIPS FOR HIGHER EDUCATION

Thousands of America's best young minds—potential scientists, teachers, and leaders in many fields—are foreclosed from college training each year. A number of studies have shown that many students in the top of their classes drop out of high school before graduation, or do not go on to college after graduation.

It is clear, I believe, that the identification of able students who can profit from further education is an essential first step in developing the Nation's manpower resources,

Lack of understanding of potentialities, lack of motivation to continue education beyond high school, and financial reasons account for the loss of most of the superior students who drop out of school before completing their education.

Considerable financial aid to college students is available from private, State, and Federal sources, and from colleges and universities. But most of the scholarships are not large enough to pay even the major costs of going to college. Three-fourths of the scholarships awarded by colleges and universities in 1955–56 were less than $375. Under the proposed administration bill, the Federal Government would provide funds for scholarships of up to $1,000 a year for four years to the most capable students unable to pay for a college education. The scholarships would be awarded and administered by State scholarship commissions or boards.

The number of scholarships proposed will, we believe, make a significant contribution to the national interest by providing higher education for the development of talent that would not normally be available because of financial handicaps. On the other hand, we believe the program is not so large as to discourage further scholarship assistance by institutions, State, and private donors. Nor do we believe that it will constitute an excuse for any withdrawal or diminution of existing scholarship programs.

We do not expect this small but important scholarship program to meet the needs of all students who will require financial assistance. The States, private donors, higher institutions themselves, and all others responsible must continue such efforts unabated.

Not only must adequate provision be made for faculties and facilities needed by expanding higher education, but every effort must be made to keep the cost to the student at the lowest possible level. It will be of no avail to raise large sums for scholarships and other types of financial assistance to students if these aids are wiped out by rising tuition charges. It is in the national interest, I am convinced, that higher education should be available to all who can profit from it, regardless of economic status. Increases in tuition and fees beyond the normal rise in the cost of living, especially in our publicly controlled colleges and universities, seriously imperil our national tradition of equality of educational opportunity and handicap the fullest utilization of our most precious resource: talented youth.

THE EXPANSION AND IMPROVEMENT OF MODERN FOREIGN LANGUAGE INSTRUCTION AT ALL LEVELS OF EDUCATION

The United States has with good reason been called the most backward major Nation in the world when it comes to speaking to the people of other nations in their own tongues. We were made painfully aware of this during the Second World War and again in Korea; we still have not learned our lesson in this field. Even today, only 1 new Foreign Service Officer out of 4 has a proficiency in any foreign language, according to the State Department. Language deficiencies still seriously handicap our efforts to build a durable peace, and leave us dangerously vulnerable in our competition with world communism.

The basic overall objective of our proposed foreign language development program is to strengthen language training resources for education, business, industry, the professions, and Government. This would be done through an expansion of foreign language institutes and centers in selected institutions of higher education, and through increased research and studies in the field of language instruction.

THE EXPANSION AND STRENGTHENING OF GRADUATE EDUCATION AND THE PROVISION OF FEDERAL FELLOWSHIPS FOR POTENTIAL COLLEGE TEACHERS

As you are only too acutely aware, the growing shortage of adequately trained teachers for institutions of higher education is one of the most serious single problems confronting all of American education today. It is to the graduate schools that we must look for the bulk of new college teachers, and yet of the 9,000 students awarded the Ph.D. or equivalent doctors' degrees in the graduate schools every year, no more than 3,500 are available as new college teachers.

Financial support of graduate students is generally accepted as necessary in order to develop the trained manpower required by our society. However, such assistance is not available in sufficient amount to enable the graduate schools to resist the inroads upon potential graduate students by nonteaching professions and occupations.

The present proposal, which provides for grants to institutions and for a limited number of fellowships to graduate students, is, I believe, one way to turn the tide which is running against higher education. Perhaps it will not enable the colleges to offer larger salaries to attract teachers—other ways must be found to do that—but it will materially increase the basic supply from which teachers can be drawn. Surely, if we do not increase this supply, no amount of money for salaries will bring enough qualified teachers into the colleges.

We would emphasize that the terms of this legislation leave to the universities the responsibility for developing sound programs of graduate education. In administering aid to graduate education, it would be our intention to ask the university one major question: How can we help you produce more and better college teachers? All we ask is that the institutions provide sound programs clearly related to this objective.

In this section as in the four other major sections of the proposed legislation we have taken great care to preserve the principle of institutional and local responsibility for education by placing upon the institutions and the States the responsibility for designing and administering plans which will help us achieve national objectives essential to our security and survival as a free Nation.

I believe that the Office of Education can and should provide those services, implicit in a leadership role at the Federal level, which are appropriate to the requirements of 1958 in the national interest and that are consonant with the American tradition of institutional and local control of education. I like to put it that we should exercise leadership without domination; assistance without interference.

The challenge of the national interest to higher education today demands a creative and productive partnership between the Federal Government and the vast resources of our colleges and universities.

Almost daily as I read testimony before congressional committees and listen to and talk with key leaders speaking from unusual vantage points, I am deeply stirred and excited by a mounting conviction that education is indeed the crucial weapon in the cold war as well as the instrumentality that alone can bring lasting peace and a better way of life to the world's hungry and deprived multimillions of people. Failure to attain the full potential of our educational power throughout each successive stage of our American school system could cost us the blessings of democracy purchased by our forebears at great sacrifice.

We have not a moment to lose and much of the responsibility for mobilizing educational power is in your hands. This mobilization needs to reach every institution in this country and stir teachers, parents, and citizens at every school level. Each of us who teaches ought to approach youth daily under the conviction that every single classroom is more important than any missile launching site and that from the minds and characters therein nourished will come the answer to survival.

Dr. Edward Teller, in a televised interview only 3 nights ago, reaffirmed what many wise men have recently emphasized when he predicted in effect that by 1970, unless we have a dynamic acceleration in mobilizing our educational power, we may well lose our way of life even without a war. He believes we are running that far behind in the tempo of educational effort.

It is not enough for those of us who teach or who are head teachers to serve our profession as inspired warriors. There must be an electrifying awakening on the part of our people to the facts of life in this crucial contest. We have the resources—human and material—and we have them in abundance. But I would like to see us take just one page from the Russian book, and I refer to the kind and degree of determined effort and support they are investing in their educational system. It would be well for us not to forget a pointed remark made to the American education delegation at Geneva by a high Soviet education official: "We challenge you Americans to a competition in the classrooms."

When our people generally awaken to the full significance of this challenge, every schoolhouse at the crossroads and every college campus will be tooled and geared to generate the quality and quantity of brainpower needed for a space age.

It is a shame upon us, for example, that while professional and scientific authorities tell us that we have an estimated 300,000 persons in each year-group who have the capabilities to achieve the Ph. D. level, only about 9,000 Ph. D.'s are actually awarded each year. If we could multiply our output of trained manpower at the Ph. D. level by 33 times, just consider what tremendous additional brainpower we would have for creative endeavor, for scientific achievement, for research, and for all of our scientific and professional fields in which amazing advances are in store.

This big job is bigger than any one institution or any association of institutions. It requires increased teamwork at every level, in every State, and with the Federal Government itself an active partner—all within the tradition of State and local and institutional control of education.

Naturally, we at the Federal level feel that we would be guilty of the worst kind of default in responsibility if we did not seek to play our now obviously necessary role in this enterprise. We ask that you, the representatives of American higher education, clarify your wishes so that the Office of Education may cooperate with an effective national policy that will be representative of the 1,900 institutions of higher education. I think that you can appreciate the difficulty that we have had during the past few years in securing a reasonably clear mandate for action from American higher education.

We need and we shall value your personal participation, your united counsel, and your thoughtful support so that we of the Office of Education may fulfill our responsibilities and obligations in the national interest.

Contributions of the Irish to the Early Foundation and Freedom of America

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. FOGARTY. Mr. Speaker, the story of the contributions of the Irish to the early foundation and freedom of America and their participation in the formation of many of our historic events is indeed a memorable chronicle. It is one which is frequently recalled and outlined at this time of year when the descendants of those valiant immigrants pay homage to the Patron Saint of Ireland who sustained their forebears through the adversity and hardship which confronted them in this great land of opportunity.

But certainly it has not been more forcefully or eloquently recalled than by the Chief Justice of the United States Court of Military Appeals, the Honorable Robert Emmett Quinn, on the occasion of the 58th annual dinner of the Society of the Friendly Sons of Saint Patrick of Providence, R. I., on Monday evening, March 17, 1958.

A former legislator, Governor, and jurist of my native State of Rhode Island, Chief Justice Quinn received a warm welcome and response from the large number of members of the society who were privileged to hear his remarks. Because of his eminent qualification as an officer in the United States Navy during World Wars I and II, as well as a devoted scholar of American history, Judge Quinn's address was particularly impressive. Due to its inherent historic value, Mr. Speaker, I submit the speech of Chief Justice Quinn for inclusion in the CONGRESSIONAL RECORD.

The address follows:

Mr. Toastmaster, Mr. President, your excellency the most reverend bishop, Your Excellency Governor Roberts, distinguished members of the judiciary, both Federal and State, your honor the mayor, distinguished State officers, members of the Friendly Sons of St. Patrick and their guests, first, I would like to thank the toastmaster for the generous introduction and to advise the assembled gathering that I am really only a pinchhitter tonight. Senator KENNEDY was scheduled to respond to the toast, "the United States," but was unfortunately detained. Senator KENNEDY, of course, is a distinguished Member of the United States Senate, an author of note, a philosopher, and has been permanently mentioned as a candidate for President of the United States. But with all due deference to Senator KENNEDY, there are other young men in the Congress of the United States who are equally able and highly thought of by their associates and I think I would really be remiss if I did not say to you that one of the most valuable, most illustrious and best liked Members of the Congress of the United States is your own beloved and distinguished toastmaster, Congressman JOHN E. FOGARTY.

The toast assigned to me is the United States. This is a monumental subject. Histories about it have been written. I might talk about the Supreme Court or the Congress of the United States or of the United States Navy, which has very many distinguished representatives including two admirals here tonight; but this is St. Patrick's night and I think I should confine myself to the Irish in the United States. However, I think I should say this: There are really only two first-class powers in the world today. With all due regard to England, France, Italy, Germany, and so forth, there are only two great powers—the United States of America and the Soviet Republic and there is a fundamental difference between them. The philosophy of the Soviet Republic is based upon godlessness, treachery, deceit, doubledealing, and complete ruthlessness. The philosophy of the United States is based upon honesty, integrity, honor, and the fear and love of God. The announced policy of the Soviet Union is to destroy the United States and so we must keep our country strong and keep our weapons clean.

Among the sentiments which operate most powerfully upon the human heart, and most honorably upon the human character, are those of veneration for our forefathers, and of love for our posterity. They are the connecting links, between the future, and the past. By the fundamental principles of Christianity, the happiness of every human being is interwoven by countless, but imperceptible ties with that of his contemporaries.

By the power of filial reverence and parental affection, individual existence is extended beyond the bounds of a single life and the happiness of every age is chained, in mutual dependence, to that of every other.

Admiration for his ancestors excites, in the breast of every man, interest in their history and pride in their accomplishments. Love for his posterity spurs him to labor for their support, stimulates him to virtue for their example and creates in him the tenderest solicitude for their welfare. So, man was not made for himself alone. He was made for his country, by the obligations of his citizenship; he was made for his species by the Christian duty of universal charity; he was made for all the ages past, by the sentiment of reverence for his forefathers, and for all future times, by the impulse of affection for his progeny; and under the influences of these principles, "Existence sees him spurn her bounded reign." These influences redeem him from subjection to time and space; he is the glory of creation, bounded in this world only by the boundaries of the universe, and destined to life and immortality in the world to come when the fabric, of nature itself, shall dissolve and perish.

And so, St. Patrick's night brings back the fondest recollections of the passing years; it stirs the depths of our emotions; it is a day of gladness and of sorrow, as we look back upon the vista of other times, and other men, and live anew, the triumphs and the failures of our fathers, in their age-old fight, for freedom and nationhood.

A distinguished Icelandic anthropologist, Prof. Jon Steffensen, has come to the conclusion that a considerable proportion of the blood-thirsty Viking pirates of the ninth century and onward probably were restless Irishmen out on the loose.

If this assumption, based on the measurement of some hundreds of skulls, including those of two saints, is true, it means that men with Celtic blood ravaged much of northwestern Europe during the Dark Ages and almost certainly set foot on the American Continent 300 years or so before Columbus.

The evidence in favor of these highly consequential emigrations has been published in the current Journal of Royal Anthropological Institute here by Professor Steffensen, a member of the Department of Anatomy and Physiology at the University of Iceland, Reykjavik.

The evidence shows that, on the basis of their still determinable biological characteristics, the Vikings (a term derived from the Old Norse or Icelandic word "Vikingr," meaning "sea rover" or "pirate") can be divided into two groups, eastern and western.

Irishmen may have been the first to set foot on the Western Hemisphere. There is indisputable proof that thousands of Irishmen were on ship to America in the 1500's. In 1656, the whole eastern shore of Maryland settled with Irish. There was a great influx of immigration up the Delaware to Pennsylvania in 1729.

In the South, Mitchell laid out the city of Atlanta; O'Brien founded the city of Augusta; McCormick named the city of Dublin, Ga.

Governor Dongan of New York long before the Revolution called first assembly of the representatives of the American people. The first governor of New York was an Irishman, son of an immigrant from County Longford. The first mayor of the later great metropolis was the son of a man from Galway.

James Hoban, Architect of White House and Superintendent, 1792.

Thousands in New England—John Sullivan from Limerick, schoolmaster at Dover and Berwick, over 50 years. John Sullivan was:

1. Father of a governor of New Hampshire.
2. Father of a governor of Massachusetts.
3. Father of an attorney general of New Hampshire.
4. Father of attorney general of Massachusetts.
5. Father of New Hampshire's only major general in the War of the Revolution.
6. Father of first judge appointed by Washington, in New Hampshire.
7. Father of four sons who were officers in the Continental Army.
8. Grandfather of an attorney general of Massachusetts.
9. Grandfather of a Governor of Maine.
10. Grandfather of a United States Senator from New Hampshire.
11. Grandfather of an attorney general of New Hampshire.
12. Great great-grandfather of a distinguished Union officer in Civil War.

The first white child born in Western Reserve, what is now Ohio, was an Irish boy named "Cummins."

The first house built in the western district was built by an Irishman.

Irish immigration at rate of 20,000 per year in 1770. But many had to change their names.

Embargo on Irish trade made Irish anxious to fight for the Colonies.

The Boston Tea Party met in an inn kept by John Dugan. The tea was thrown into the harbor Griffin's Wharf.

Patrick Carr was one of men killed in Boston massacre.

Benjamin Franklin went to Ireland in 1771 to visit the Friends of America.

Eleven of the fifty-six signers of the Declaration of Independence were Irish. Among them were:

John Hart, of New Jersey; James Smith, of Pennsylvania; George Taylor, of Pennsylvania; George Reed, of Delaware; Thomas McKean, of Delaware; Charles Carroll, of Maryland; Edward Rutledge, of South Carolina; Robert E. Paine, son of Robert O'Neil.

Chancellor Livingston of New York swore George Washington in as President of the United States. He also began the negotiations which led to the purchase of Louisiana Territory.

William Collins was teaching school in Hartford, Conn., in 1660.

The first telegraph line was built by an Irishman; telegraph line was invented by an Irishman.

An Irishman invented the submarine, reaper, mowing machine, steamboat, and an Irishman built the Erie Canal.

Irishmen built the railroads, dug the canals, explored the mines, made the mills and factories run.

Irish blood was shed on every battlefield of the Seven Years' War.

The first strong voice "Give me liberty or give we death" was the Irish voice of Patrick Henry.

First general officer killed in Revolution was Maj. Gen. Richard Montgomery, born in Donegal.

Forty-eight Irishmen were in George Washington's regiment in Virginia in 1754.

General Sullivan's men manned the guns on Dorchester Heights on March 17, 1776, when the British under Lord Howe evacuated Boston.

"St. Patrick" was the countersign of Washington's Army that night. Five full regiments of Irish troops came over with the French.

One hundred and thirty-eight Irish names among the Minute Men at Lexington.

Colonel Custis wrote: "Then honored be the good and old services of the sons of Erin in the War of Independence. Let the shamrock be entwined with the laurel of the Revolution and truth and justice guiding the pen of American history inscribe on the tablets of American remembrance, 'Eternal gratitude to Irishmen.'"

Thomas Johnson in the Colonial Congress nominated George Washington as Commander in Chief of American Army. He and six sons fought with him. Johnson was offered Chief Justiceship of the United States Supreme Court.

John Hancock and Thomas McKean, presidents of the Continental Congress, were Irishmen.

Joseph Reed, secretary to Washington, was Irish. Offered $50,000 to desert, he replied, "I am not worth purchasing, but such as I am, the King of England is not rich enough to do it."

Generals: Morgan and Hand, leaders of rifles; Knox, head of artillery; Moylan, head of cavalry; Montgomery, in command of Northern Army; John Dunlap, Andrew Lewis, John Fitzgerald, Ephraim Blaine, William Irvin, Richard Butler, Dan Morgan, Walter Steward, William Thompson, Anthony Wayne, and John Stark were all generals in the Continental Army.

Of the famous Board of Conference of 5 members, 2 were Irish, Dominick Lynch and Joseph Reed.

Captain Parker commanded at Lexington; Captain Barret commanded at Concord, and Captains Smith, Davis, and Walsh fought there.

Royal Governor Hutchinson wrote to his King, "Without the Irish rebels in Massachusetts, the Province could not have been wrested from the crown."

At Bunker Hill, Major McClary was second in command and Col. Mike Jackson was there with his five sons.

Governor Clinton was the man who stopped the British from sweeping up the Hudson to reach New York.

Colonels Shee and Hand and Montgomery commanded the Pennsylvania troops; Colonel Haslett commanded the Delaware troops.

Crossing the Delaware was the most dramatic episode of the war, followed by the battles of Princeton and Trenton. Knox, Sullivan, and Ewing commanded there—and there Colonel Haslett, Heale, and Fleming gave up their lives. At Brandywine and Germantown, Sullivan, Nash, Irvine, and Wayne commanded; and Nash and Irvine laid down their lives.

There John Barry commanded a land force. Colonels Gibson, Fullerton, and Potter were with him.

And so at Fort Mifflin, Chestnut Hill, Quaker Hill, Cherry Valley—Sullivan, Maxwell, and Clinton.

Then Valley Forge, Monmouth, Tappan, Green Springs, Saratoga, Cowpens and down to Yorktown, when Moyland led to victory and the colors were handed to Robert Wilson.

Galloway, Ramsay, Plowden, and Froude admit one-half of the American Army was Irish.

AMERICAN NAVY

John Barry first commissioned officer:

There are gallant hearts whose glory
Columbia loves to name;
Whose deeds will live in story
and everlasting fame.
But never yet one braver,
Our starry banner bore,
Than saucy old Jack Barry,
The Irish commodore.

He won his first battle with British ship *Edwards*. Won last with *Sybil* in 1783. He commanded *Alliance*, finest ship in American Navy. He was offered $100,000 to desert, and replied, "I have devoted myself to the service of my country and not the value of the command of the whole British Navy could seduce me from it."

The father of Andrew Jackson, seventh President of the United States, and one of the great figures in our history was born in Ireland.

President Polk was a nephew of Col. Thomas Polk, born in Ireland. Colonel Polk called the convention in May 1775 which passed the Mecklenburg resolutions declaring independence of the colonies a year before the Declaration of Independence.

President Buchanan was the son of an Irish immigrant.

President Arthur was the son of an Irishman, as were McKinley, Wilson, and Truman.

Dolly Madison was the granddaughter of William Coles, born in County Wexford.

The mother of Commodore Oliver Hazard Perry was also born in Ireland.

Gen. Phil Kearny was the hero of four wars.

Maj. Gen. James Shields of County Tyrone, is the only man in the history of the United States to represent three different States in the United States Senate—Illinois, Minnesota, and Missouri.

Gen. Patrick Cleburn of County Cork was the most dashing general of the Confederate Army.

Col. Charles G. Halpine wrote the famous war song, We Have Drunk From the Same Canteen.

Ireland never accepted the sovereignty of England. She fought the invaders for 800 years.

In 1541 the Irish Parliament convened by Henry VIII declared Ireland to be a kingdom and chose Henry VIII, King of Ireland.

In 1782 the English Parliament declared no power on earth but the King, Lords, and Commons of Ireland competent to make laws for Ireland.

The Act of Union of 1800 was based on a petition signed by only 1,000 people, while 700,000 petitioned against it, and 5 million Catholics were disenfranchised. It was carried out by 135,000 armed soldiers and a parliament in which all but 7 members were bribed.

But this, my friends, is neither the time nor the place to ask you to listen to a detailed account of the story of the Irish people; to tales of valor unsurpassed; to courage without fear; to honor without stain; to prisons made holy, to scaffolds made altars; to suffer under laws described by the philosopher Montesquieu "as contrived by the devil"; all this you will hear St. Patrick's night from tongues more eloquent than mine. So we'll lay aside the history of Ireland, and the story of the Irish people. But we can't lay aside two magnificent attributes of the Irish race—courage, and devotion to the ideal of nationhood. That spirit of nationhood, of liberty, and independence for the Emerald Isle, has persisted through the centuries, and its fires will never die.

If it be brave to live and struggle without surrender, as our fathers did under laws with "cruelty writ in every line" and still smile, surely the Irish were brave. If it be greatness to live and struggle without surrender in a land "where liberty hung crucified for centuries, dying perpetually, yet never dead, wasting forever, yet enduring still," and after all this, to win recognition to freedom in the end, surely the Irish had greatness.

Listen to the magic words of Robert L. Taylor. If I were a sculptor, I would chisel from the marble, my ideal of a hero. I would make it the figure of any Irishman, sacrificing his hopes and his life, on the altar of his country, and I would carve on its pedestal, the name of Robert Emmet.

If I were a painter, I would make the canvas eloquent with the deeds of the bravest people who ever lived; whose proud spirit, no power can ever conquer, and whose loyalty and devotion, to the hopes of free government, no tyrant can ever crush. And I would write under the picture Ireland.

If I were a poet, I would melt the world to tears with the pathos of my song. I would touch the heart of humanity with the mournful threnody of Ireland's wrongs and Erin's woes. I would weave the shamrock and the rose into garlands of glory for the Emerald Island, the land of martyrs and memories; the cradle of heroes; the nursery of liberty.

Tortured in dungeons, and murdered on scaffolds, robbed of the fruits of their sweat and toil, scourged by famine, and plundered by the avarice of heartless power, driven like the leaves of autumn before the keen winter winds, this sturdy race of Erin's sons and daughters, have been scattered over the face of the earth; homeless only in the land of their nativity but princes and lords, in every other land, where merit is the measure of greatness.

How strange it is, that this land that sent her sons as soldiers to the defense of every stricken nation should receive so little outside help in her struggle for independence and statehood. France, Spain, Austria, Canada, and the United States felt the rallying force of the Irish volunteer in every fight for freedom; and, more, Washington felt not only the power of Irish manhood in the Continental Army, but the might of a contribution of half a million dollars when it was needed most, given by 29 Irishmen of the city of Philadelphia, all members of the Friendly Sons of St. Patrick.

And this same intrepid, dauntless devotion to the ideal of nationhood lived through the centuries, until on July 11, 1921, Ireland became a nation. Alone, unaided, an unarmed people, against the might of an empire, won for itself recognition and independence. Army without banners, is the description given by the poet, to the little band that won that age-old fight. Army without banners indeed—army without adequate arms equipment—army poor in everything material with which wars are won. But army rich in courage, rich in the justice of its cause, rich in the spirit of its patriots, transmitted to them by their heroic fathers; rich in the consciousness of nationhood; rich with the determination to live like heroes, and die like men; rich in the armor of justice and Christianity; rich in the teachings and prayers of St. Patrick; and rich in the graces of Almighty God.

This is our legacy. May no man among us ever surrender that heritage. May no one of us ever betray that trust. May no member of this organization ever haul that banner down, no matter what it costs to keep it streaming from the masthead. In eternal testimony to the love and devotion of every good Irish American for this great Republic—to the dignity and worth of every human creature made in the image and likeness of God—to freedom and independence and moral courage—to the Star Spangled Banner—to the United States of America.

AFL-CIO Opposes Enactment of the Financial Institutions Act, S. 1451 and H. R. 7026

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following testimony of George D. Riley, AFL–CIO legislative representative, which he presented to the House Banking and Currency Committee on February 7, 1958:

STATEMENT OF GEORGE D. RILEY, AFL–CIO LEGISLATIVE REPRESENTATIVE, BEFORE THE HOUSE COMMITTEE ON BANKING AND CURRENCY, RELATIVE TO THE FINANCIAL INSTITUTIONS BILL

My name is George D. Riley. I am a legislative representative of the AFL–CIO. I am accompanied by Nathaniel Goldfinger, who is an economist in the AFL–CIO research department.

We are grateful to Chairman SPENCE and the members of this committee for the opportunity to appear before you and to present our views on a few aspects of the bill, entitled Financial Institutions Act.

The AFL–CIO is a trade union federation, not a banking institution. We are not experts on the intricate details of our complex banking system. However, the Nation's banking system, which is involved in this proposed legislation, is of obvious interest to the 13½ million members of AFL–CIO unions and their families. This bill is of interest to every American, since it deals with a basic aspect of our economic system and social structure.

The bill is a long one—some 250 pages long It recodifies our various banking laws and contains a great many changes in those laws. We are attempting to consider, therefore, a very long, complicated, and technical bill that affects our entire banking system and the general welfare of the public.

This bill, as we understand it, emanates from the recommendations of a 27-man advisory committee, appointed by the Senate Banking and Currency Committee. These 27 men are, in all likelihood, honorable men of stature. Most of them, however, are bankers—including 5 former presidents of the American Bankers Association. Since bankers are human beings, subject to the operations of self-interest, it would not seem too strange if items of self-interest are to be found in the intricate details of the many pages of this bill.

I think that all members of this committee will admit the possibility, at least, that the public interest and the interest of the banking community, may not always be identical. This factor concerning the origin of the bill should be enough to warrant extreme caution in examining it, before recommending its adoption as the unified banking law of the land.

Many Members of the Congress would be outraged if a 27-man advisory committee, including 20 members of the AFL–CIO executive council, were to advise and recommend to the Congress on the detailed writing of a technical labor law. Most Members of the Congress would probably want to study such a bill—as they should—and hear the views of various groups. The financial institutions bill, now being considered, deserves at least as much caution and detailed study, since the Nation's banking system is more complex and less familiar to most people than are labor-management relations.

The following are our views on a few specific sections of the bill.

THE FEDERAL USURY LAW (TITLE I, SECTION 35)

The bill now being considered, would eliminate the Federal usury law—the 7 percent maximum interest rate—from conditional sale transactions (such as installment purchase contracts), which include most consumer and many small-business loans.

Under the existing law, the Federal Government, in effect, tells the States to name a maximum interest rate. If any State fails to do so, the Federal Government's limit of 7 percent applies.

The States do have maximum interest rates on some types of transactions—in which case, the State maximums prevail. The Federal maximum interest rate prevails, however, in transactions where the States have not set their own maximum interest rates.

Section 35 of the bill states that "the purchase of obligations or evidences of indebtedness from the actual owner thereof shall not, for the purposes of this section, be deemed a loan or discount." In other words, as we read this proposal, the Federal maximum interest rate would not apply to most consumer and many small-business loan transactions, since those transactions would not be considered loans, under the meaning of the law.

Any limit on the interest rates paid on most consumer goods and many small-business loans, therefore, would depend on the State laws. The vast majority of State usury laws, as we understand it, are antiquated and do not apply a maximum interest rate limit on conditional sales transactions that include most consumer goods and many small-business loans.

In the absence of effective State usury limits, passage of this bill would eliminate any maximum interest rate limitation on most consumer goods and many small-business loans. In effect, therefore, the bill proposes to permit the raising of interest rates paid by consumers and small businesses, under the usual type of consumer or small-business loans. The limited protection given to the consumer and small-business man, under existing law, would be eliminated, except in those few States that have modernized and fairly effective usury laws.

In our opinion, adoption of this proposal would be a sad case of special legislation that would bring actual or potential harm to a majority of American families and that would be for the benefit of a tiny minority.

What is needed is not the elimination of the limited Federal usury law for most consumer and many small-business loans, but a strong and modernized usury law that would protect the public.

Under existing circumstances, for example, a consumer or small-business man is usually told that his interest payments on the purchase of an automobile, television set, truck or equipment, is 5 percent or 6 percent. The loan, however, is also usually subject to charges and is amortized over a period of time. Instead of a 5 percent or 6 percent interest rate, the borrower, under those conditions, probably pays an effective interest payment of about 10 percent or more. The effective interest payment is usually about twice the nominal interest rate that is stated in the terms of the loan. Unfortunately, most people are not aware of this situation.

A modernized usury law would name a maximum effective interest rate, rather than a maximum nominal interest rate. At a minimum, a modernized usury law would require the open and clear statement of the effective interest rate and charges on the papers signed by the borrower.

The existing Federal usury law is in need of changes—it is in need of strengthening, not weakening. It is the consuming public and small business that need Government protection against high interest charges—not the bankers who are the beneficiaries from those charges.

STATE EXAMINATION OF NATIONAL BANKS PROHIBITED (TITLE I, SECTION 51)

This provision prohibits any State or any State agency or officer, under State or local law, from examining a national bank or requiring it to pay a license fee, any other kind of fee or penalty to the State. This prohibition proposes a further weakening of the protection of the public interest.

The Senate committee report on this bill states: "Various States have enacted legislation requiring national banks to acquire a State license in order to qualify as a licensed lender. The general purpose of licensing laws of this type is to protect the public in the field of small loans and installment purchase contracts * * * such (State) laws usually require examination of all licensed lenders by State authorities."

The consuming public would be placed in a rather helpless position if this provision, section 51, is adopted, along with the proposal to eliminate the Federal usury law from most consumer and many small business loans. As we understand it, adoption of the two proposals would result in the following:

Section 35 says that there is no Federal maximum interest rate on conditional sales transactions (such as installment purchase contracts), except if they come under the usury laws of the State in which the bank is located. In other words, if there is a State maximum interest rate, it would apply.

Section 51, however, tells the States that they cannot effectively enforce their maximum interest rates, if they have any. This is done by prohibiting the States from licensing or examining national banks which do the overwhelming bulk of banking business.

The combined effect of sections 35 and 51, it seems to us, would be to give the consuming public a run-around. The consumer would get no protection from the Federal Government and would be told to look to his State for assistance. Most State laws, however, are antiquated and inadequate. Furthermore, the States would be told that they cannot effectively enforce their usury laws, in any case.

Section 51 deserves a careful analysis from the viewpoint of public interest. The prohibition against State examination or licensing of national banks, as we see it, should not be adopted. There could be some reasonable argument for its adoption, only if the Federal Government were to provide a strong and modernized national usury law and adequate protection of the consuming public and small business, as well as effective national enforcement of such strong and modernized Federal usury provisions.

SECRECY OF EXAMINATION REPORTS (TITLE I, SECTION 50)

This provision would classify as confidential—and as privileged against disclosure—examination reports made by national bank examiners, related correspondence, papers and other information obtained by the Comptroller, without the consent of the Comptroller. Such documents, under this provision, would be secret—not subject to subpena by the courts, for example, without the Comptroller's consent.

This secrecy proposal seems like a strange one to us. Isn't it peculiar, to say the least, to grant confidentiality to bank examination reports, particularly at a time when legislation is being urged on the Congress for full public disclosure of trade union finances?

THE FEDERAL RESERVE ACT (TITLE II)

The Federal Reserve System is one of the most important economic arms of the Government. Its powers are very great. Its activities have a significant effect on the welfare of the American people and American institutions, including State and local governments. The Federal Reserve's operations affect the money supply, interest rates and the growth of the national economy.

The Federal Reserve System is much too important and much too powerful to be dominated by one tiny segment of American economic life. Title II deserves most careful study, analysis and revision.

The main body of the Federal Reserve System is the seven-member Board of Governors, appointed by the President and confirmed by the Senate. Some idea of the extremely great powers of the Board of Governors over the economic life of the Nation can be seen from the following description in a Federal Reserve Board publication:

"It is the Board's duty to supervise the workings of the Federal Reserve System * * * the Board appoints 3 of the 9 directors of each Federal Reserve bank, including the chairman, who is also the Federal Reserve agent and the deputy chairman. Appointments of the president and first vice president of each Federal Reserve bank are subject to the Board's approval. The Board also issues regulations that interpret the provisions of law relating to Reserve bank operations. It directs the System's activities in bank examinations and in economic research and publications.

"Of the principal monetary actions of the Federal Reserve, the Board has full authority over changes in reserve requirements and margin requirements. It also has authority to establish the maximum rates of interest that member banks may pay on time deposits. It 'reviews and determines' discount rates established by the Reserve banks. While the terms of consumer credit were being regulated, the Board had sole responsibility for their determination and enforcement. In general, the Board of Governors is responsible for formulating national credit policies and for supervising their execution. The members of the Board are also members of the Federal Open Market Committee.

"This (Federal Open Market) Committee, comprising the 7 members of the Board of Governors and 5 representatives elected by the Federal Reserve banks, has the responsibility of deciding when and how much to buy or sell in the open market and under what conditions."

The Board of Governors of the Federal Reserve System should be a public body. If it is to be a public body in composition and viewpoint, section 38 of title II should be amended.

Section 38 states: "In selecting the members of the Board, not more than one of whom shall be selected from any one Federal Reserve district, the President shall have due regard for a fair representation of the financial, agricultural, industrial and commercial interests, and geographical divisions of the country."

This language in section 38 should be amended. There should be specific mention in this section for fair representation of labor, consumer and small business interests on the Board of Governors. Without such fair representation of the largest economic groups in the country on this powerful Board, it is hard to conceive of it as representative of the American public.

Labor, consumer and small business interests should be fairly represented on the Board of Governors. In addition, the number of members of the Board, who come from any one economic segment of our society should be specifically and strictly limited. Only in this way will it be possible to hope that the direction of the Federal Reserve System will reflect the viewpoint of the American people, rather than the viewpoint of a tiny minority.

Section 17 of title II should likewise be amended to provide for labor, consumer and small business interests to be represented on the 9 member boards of directors of the 12 regional Federal Reserve banks. In addition, the number of members of these boards of directors, who come from any one economic segment of our society should be specifically and strictly limited. The American people should be protected against the possibility that either the Board of Governors or the boards of directors of any of the 12 regional Federal Reserve banks will become dominated by a tiny economic segment of American life.

The Federal Open Market Committee is, perhaps, the most powerful economic arm of the Government. This Committee, as now constituted, is composed of the 7 members of the Board of Governors, plus 5 representatives elected by the Federal Reserve banks. It is our understanding that these five are usually from banks and financial institutions. In effect, therefore, the Federal Open Market Committee, with its great powers over the economic affairs of the Nation, is strongly influenced, if not dominated, by bankers.

This condition must be corrected to protect the public interest. Title II of the bill should be amended to strictly limit the number of members of the Federal Open Market Committee, who come from any one economic segment of American life. This powerful Committee should be a public body, fairly representative of the American people—not a bankers' committee or bankers' and big business committee.

Section 8 of title II provides for a Federal Advisory Council of 12 members. A publication of the Federal Reserve Board states: "The Federal Reserve Act provides for a Federal Advisory Council of 12 members, 1 from each Federal Reserve district, selected annually by the Federal Reserve bank through its board of directors. Council members are usually selected from among representative bankers in each district. * * * It confers with the Board of Governors on business conditions and makes advisory recommendations regarding the affairs of the Federal Reserve System."

This important Advisory Council is, in effect, a bankers' council. This condition should be changed by amending section 8. There should be specific language, requiring fair representation on this council of labor, consumer, small business and farmer interests. There should likewise be specific language to strictly limit the number of members of this council who come from any one economic group in our society.

The Federal Advisory Council, as well as the Board of Governors, the boards of directors of Federal Reserve banks and the Federal Open Market Committee should all be opened up to fair representation of the large and important economic groups of the country. These Government agencies and committees should not be representative of the big banks and blue chip corporations alone.

If organized labor strongly enforced or dominated the National Labor Relations Board, there would be outcries throughout the land. The Federal Reserve System, with its tremendous powers over the economic life of the Nation, should not be considered the private domain of the banks and the blue chip corporations. The entire Federal Reserve System should be carefully examined and opened up so that it may become, in fact, a public system, representative of American economic life.

Section 10 of title II, as well as other sections of this title, provide for a change in the voting procedures of the Board of Governors. The proposed revision in section 10 sounds perfectly innocent, when it suggests that an affirmative vote of a majority of the Board of Governors in office should be sufficient for taking important actions—instead of the affirmative vote of not less than five members, as provided in the present law.

This proposal, it seems to us, is not as innocent as it sounds. It suggests the possibility that the President may permit membership on the Board of Governors to fall from 7 to 6, 5, or 4—by not making appointments when vacancies occur. It suggests, furthermore, the possibility that a 9- or 10-member Federal Open Market Committee—the members of the Board of Governors, plus five others, who are usually bankers—can be completely dominated by the banking group.

This proposal for a change in the voting procedures in the Board of Governors should be most carefully examined for its implications and rejected, if there is anything in it that may be harmful to the public interest.

Every provision of title II—whether or not it involves changes in the present law—should be thoroughly studied and examined.

It is a sad commentary to think of the present influence of the banking group on the Government agency that determines interest rates and the money supply. It would be as if the Department of Labor set American wage rates—with high officials of the Department, and an advisory council of that Department, composed of former and present members of the AFL–CIO Executive Council.

The Federal Reserve System can and should be a public system that is representative of all important economic groups in the country. If this Federal Reserve System, with its tremendous powers over our economic life, is to be preserved as a vital part of a free economy, its entire composition and complexion must be changed. The opportunity to make the Federal Reserve System a thoroughly public system is in the hands of this committee and of the Congress.

FEDERAL CREDIT UNION ACT (TITLE VII)

The constant growth in numbers of credit unions is clear indication of the interest in and participation in the affairs of such voluntary and cooperative financial organizations in recent years.

Briefly, credit unions are groups of persons in the same locality, of like purposes, who may wish to lend to or borrow from each other for sound everyday purposes to maintain and advance the cause of sound American standards of living.

A great many of our members also are members of credit unions typically operated at their places of employment. It may be that some persons in credit unions may never exercise the opportunity to borrow or are fortunate in not having to borrow; nevertheless, they themselves may be the lenders whose money is productive of a fair rate on their investments.

On the other hand, many loans are on an emergency basis or for a specific occasion and are approved to meet the contingency without undue delay.

It might be stated that trade unions and credit unions have much in common and accomplish a great deal through organized action. And while each serves a definite need, their functions dovetail to a great extent by providing security and independence. Loans to members of credit unions result in helping them out of debt, not embedding them deeper.

Credit unions are an important part of the American scene, both in industry and in Government employment.

Specifically referring to S. 1451 now before your committee, it is our hope that there will be no action taken by the Congress which in any way would make the task of credit unions in serving their membership difficult or the interests of such members disadvantageous.

I have examined the statement of the Credit Union National Association, Inc., pre-

sented to your committee recently and can say that we indorse the general purposes of that statement. CUNA is the organization best informed on the activities and operations of individual credit unions, and we hold its views in proper regard. For this reason, we feel justified in indorsing CUNA's remarks and adding any of our own which are indicated.

Some of the definitions in S. 1451 provide needed clarification; namely, that of "Federal credit unions." Better definition of a Federal credit union could hardly be asked.

We find no fault with the language in section 3 of title VII providing a modernized version of the creating act for the Bureau of Federal Credit Unions. Other sections designed to eliminate obscurity and provide modernization also appear to be proper in the bill as passed by the Senate, including increase in signature loan limit, declaration of dividends, elimination of unnecessary phrases, and regulation of Bureau employees.

Section 25 regarding "Space in Federal Buildings" would extend to certain persons employed by the American Legion and Red Cross the rights to credit union membership maintained for Federal employees as well as continuing the memberships of retired Federal employees. This liberalization is to be commended.

Section 26 extending the provisions of the act to include all States, the District of Columbia, the Territories and possessions, the Commonwealth of Puerto Rico, and the Panama Canal Zone are desirable and are indorsed.

I fully realize that the subject of taxation basically, as mentioned in section 23, does come to your committee but that S. 1451 is reaffirming existing law on this subject. Representation on this point has been made before the Ways and Means Committee, which fact takes care of the subject quite well. Credit unions have been included under this tax arrangement for more than 20 years. We hope to see the same plan continued without interruption or modification.

There are certain other changes proposed in the legislation, notably in section 7 and elsewhere, to which opposition has been voiced. Our suggestion in such cases is as contained at the outset of this statement in line with the position set forth on the bill in general by CUNA, which is that we are following the lead of CUNA in its stand on title VII overall.

We do, however, have reference to section 7 (b) dealing with audits of credit union affairs as set forth on page 231 of the bill as passed in the Senate and reads as follows:

"(b) The Director shall encourage every Federal credit union to make an adequate internal audit of its affairs at least once each year. In any case in which the Director deems it is necessary, either because of the absence or inadequacy of any such internal audit or for any other reason arising in the course of the supervision of any Federal credit union, he may require at such times as he deems necessary that such Federal credit union have an audit by an independent individual or firm approved by the Director or in the alternative require that it be audited by the Bureau. The expense of any such audit by the Bureau shall be considered part of the examination fees authorized in subsection (a) of this section."

There would appear to be the danger that small credit unions could be audited out of existence through financial costs of several audits a year. Certainly we do not oppose audits but there should be a limit, however, to the number of audits required in a given year.

This long, complicated, and technical bill affects various aspects of our economic and social life. We have offered some comments, questions, and suggestions on a small number of issues in this bill. We believe that there are many points in this bill that deserve most careful scrutiny.

We urge this committee to give careful consideration to every provision in the bill, in an attempt to protect and advance the public interest.

The Inquiring Fotographer

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 13, 1958

Mr. RAY. Mr. Speaker, one of the most interesting newspaper columns I see is that published as a regular feature in the New York Daily News under the title "The Inquiring Fotographer." The question asked and the answers received in this morning's edition of that paper are timely and should have special interest for us in Congress. I am sorry I cannot include in the RECORD the photographs of the individuals whose answers are given in the column:

THE INQUIRING FOTOGRAPHER

(By Jimmy Jemail)

The question: Are you worried that the Government will do too little to curb the recession or too much?

Where asked: Various spots.

The answers: Ed Doonan, Ardsley-on-the-Hudson, paper manufacturer: "Too much. The consumer is the key to the recession, not Government spending. If he won't buy, no amount of Government spending will help. The thing for the Government and other agencies to do is to instill confidence in the consumer."

Robert Rosenthal, 250 East 176th Street, ticket broker: "Too much. This is a normal period, a shakedown from the crazy times we have gone through. Abnormalities are being corrected. Too much Government spending will get us back to abnormality, where too many guys were getting a free ride. Let us get back to a merit basis."

Herbert J. Simmonds, Rye, manufacturer: "Its very difficult for the Government to know whether it is doing too much or too little. Too much spending will result in uncontrolled inflation. It is better to let the laws of economics take their natural course. Fewer people will be hurt."

Tom Ferrara, East 45th Street, restaurateur: "I am frankly worried about too much Government spending. We are in a vicious cycle. If the Government spends more money, taxes must go up. Then the unions will demand more money and prices will follow wages. So we will find ourselves back where we came from with even more inflation."

I. Neil Thompson, Huntington, district manager: I am afraid the Government will spend too much and do too little in other ways. That is because the recession is now psychological. The people should forget their fears and spend a little money. That is a lot better for them than more inflation."

Raymond Hoffman, First Avenue, plumbing and heating contractor: "Too much. In my opinion, the politicians in Washington do not give a damn for the country. All they tre interested in is getting reelected. Various blocs will make deals with each other for more spending. They will spend my last dime and yours."

Israel's 10th Year

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. FULTON. Mr. Speaker, we in America are proud of the wonderful spirit and remarkable progress our friend and neighbor, Israel, has made in her first 10 years.

We salute the courageous people of Israel and wish you well as you enter your second decade of achievement:

[From Near East Report of April 1, 1948]

ISRAEL'S 10TH YEAR

Israel will celebrate its 10th anniversary on April 24. The accompanying statistics are convincing evidence of unique achievement. The figures leap upward. They can be understood only against the background of history.

The generation of Jews which is now building Israel survived the Hitler holocaust which took the lives of 6 million men, women, and children. The survivors of the concentration camps who reached Israel are moved by the urgent compulsion to make up for the lost years and to win security for the future.

The Jews of the Western Hemisphere who lived through the Hitler tragedy were shocked by the incapacity of the democratic world to stop Hitlerism. In the last decade they have helped Israel to become a sanctuary in which Jews could lead a normal, free, and secure existence.

HAVEN OF REFUGE

The extraordinary immigration brought Jews out of the displaced persons camps in Germany, Austria, and Italy immediately after World War II; lifted Jews on a flying carpet from medieval Yemen; transferred the oldest Jewish community in the world out of ancient Babylon; ended second-class citizenship in the squalid mellahs of north Africa; reenacted the exodus from Egypt, and provided a haven for Jews from behind the Iron Curtain.

Prior to Israel's establishment, between 1919 and 1948, Jewish immigration to Palestine was preponderantly from Europe (79.6 percent) while the Middle East produced only 8.7 percent. Since Israel's establishment, 43.3 percent came from Europe, 31.5 percent came from Asia, 24.4 percent from Africa, .08 percent from North and South America. In the last 2 years, the immigrants came primarily from strife-torn north Africa, from Hungary and from other countries behind the Iron Curtain.

Immigration cannot possibly continue at the past rate because the sources are drying up. Very few of the 5 million Jews of the United States have any intention of emigrating to Israel; there are not many Jews left in the Arab countries or in the satellite countries behind the Iron Curtain. And the 3 million Jews of the Soviet Union are held virtual prisoners. Their opportunities for escape are faint. Thus, on March 25, the leading Soviet cultural newspaper, Sovetskaya Kultura, in a long statement attacking Israel, warned Soviet Jews against migration to Israel, charging that Israel was established as a result of the deception of millions of persons urged to leave their native countries.

Israel itself, like most of its newcomers was poverty-stricken, and the resettlement was a costly undertaking. If Israel had been called upon merely to develop its economy for the 800,000 Jews and Arabs who lived there in 1948, it might have needed very

little outside assistance. But to achieve the staggering task of receiving, rehabilitating and resettling more than 900,000 immigrants, Israel, like other countries which have been host to large-scale immigration, had to spend far more than it could produce. The new nation had to raise approximately $2 billion. This has come from reparations from West Germany which agreed to pay $822 million over a 12-year period; from the free gifts of the Jewish communities of the United States of America, such as the unprecedented UJA; from the sale of Israel bonds; and from the generosity of the United States Government and its people.

The total of American aid now exceeds $540 million in loans and grants. This large investment has brought concrete results. The Israelis have raced to integrate themselves and to become economically independent. Economists have found much to criticize in their economy (the Israeli's are their own sternest critics), yet observers have testified to Israel's progress.

DEVELOPMENT

In its current MSA presentation, the Administration points out that 20 new independent nations have come into being since World War II. Half have a per capita income of less than $100, while 7 have a per capita of less than $200. Israel is at the top of the list with a per capita income of more than $500, while Malaya is next with $310 and Lebanon with $258.

Another appraisal of Israel's progress was given in Washington on January 31, at the annual conference of the Middle East Institute by Professor A. J. Meyer, the associate director of the Center of Middle Eastern Studies at Harvard University. Referring to the Israel Government's development program, Dr. Meyer declared that the country has pushed ahead at an extraordinary rate. He said:

"Israel's real gross national product per capita rose by 25 percent (an average of 6 percent yearly) from 1950 to 1954 despite massive immigration and a large-scale inflation. Through this same period the country invested at 20–30 percent of gross national product and increased productivity at per worker approximately twice as fast as per capita product—at about 12 percent per year."

Thus, there has been a determined effort to irrigate Israel's barren and eroded soils. The land under cultivation in this period of the state's development has increased from 400,000 acres to 950,000 acres. Israel is now producing about 70 percent of its own food.

BARRIERS TO PROGRESS

Israel's economic problems have been complicated by the refusal of her neighbors to make peace. Israel has been compelled to maintain a highly trained and well-equipped army—a severe drain on her resources. (While the United States has given Israel large-scale economic aid, it has never given Israel military assistance such as it has extended to her Arab neighbors, Iraq, Jordan, Lebanon, and Saudi Arabia.) In addition, the Arab economic boycott has affected Israel's economy. If the Arabs had been willing to make peace with Israel from the beginning, there would have been a normal interdependence. Israel would have purchased agricultural commodities from her next-door neighbors in a complementary exchange for the products of her factories. But the boycott and blockade have raised Israel's costs since she has had to buy and sell in expensively distant markets.

These obstacles have had the effect of spurring Israel to greater effort and within the last year or two, Israel has been expanding trade relations with countries like Japan, Ghana, Burma, and other newly established nations in Asia and Africa. The Israelis, who have begun to acquire some technical proficiency from American teaching and example, have been exporting their skills to other lands.

A major factor in widening Israel's horizon of friendship and trade was the ending of the Egyptian blockade of the Straits of Tiran and the firm stand of the United States and other great maritime powers in asserting the international character of that waterway.

Summary of American aid to Israel

[In millions of dollars]

	MSA grant	MSA technical aid	MSA loan	Surplus foods	Export-Import Bank loan	Total
1948						
1949					[1] 135.0	135.0
1950						
1951		0.084	[2]			.084
1952	63.5	.9				64.4
1953	70.2	2.6				72.8
1954	52.5	1.5				54.0
1955	20.0	1.5	20.0	13.0		54.5
1956	12.5	1.5	12.5	27.9		54.4
1957	15.0	1.6	10.0	10.7		37.3
1958	7.5	1.5	(2)	35.0	24.2	[2] 68.2
Total	241.2	11.184	[2] 42.5	86.6	[1] 159.2	540.684

[1] Israel has repaid $33.5 million in principal and $28.6 million in interest on this loan.
[2] Israel is negotiating for $15 million from Development Loan Fund.

HOPE FOR PEACE

The two major questions which confront Israel are economic development and military security. Reparations from Germany are scheduled to end by 1964, and by 1961 the Israelis will have to begin to redeem bonds which were first marketed in 1951. Israel leaders are now giving sober consideration to the problems which will arise as these obligations come due and sources of income are curtailed.

The economic issue is linked closely with peace. All free-world diplomats would like to see an Arab-Israel peace settlement, but there is widespread skepticism over the prospects of any change in the situation as long as the Soviet Union continues its penetration of Asia, the Near East, and Africa, and lavishes political support on the Arab cause.

Accordingly, unless there is some revolutionary change in the Near East which will enable one or the other of the contending Arab factions to recognize that Israel is a permanent part of the landscape and that it is in their best interests to reach cooperation and understanding with Israel for economic development and mutual defense, an early peace is unlikely.

Israel's economic problems have an intimate relationship with the political question because Arab leaders who have relied on the boycott and blockade as weapons to harass and weaken Israel in the past, will persist in that campaign until they are compelled to acknowledge that Israel will be able to surmount its economic difficulties.

The Arabs watch eagerly for any sign of a decline of America's support, whether it be in the sale of Israel bonds, in contributions to UJA, or in the American-aid program. (This year, the administration increased the Israel aid program in acknowledgment of the needs and opportunities in Israel, and in disregard of the Arab boycott.)

The record of Israel's achievements and the promise of Israel's future show quite clearly that the friendship of the American people has been the most indispensable and the most significant source of Israel's strength. Nothing is more important than American friendship in any consideration of the prospects of Israel's survival and ultimate peace.

Israel's progress in 10 years

[Dollars in millions]

THE PEOPLE

	How many came	Imports	Exports	Exports a percent imports
1948	101,828			
1949	239,576	$253	$29	11.7

Juvenile Delinquency

EXTENSION OF REMARKS

OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. LIBONATI. Mr. Speaker, my colleague, Congressman ALFRED E. SANTANGELO, on March 19, 1958, spoke to the Boys' Club of New York alumni on a very important subject, Juvenile Delinquency. Congressman SANTANGELO, while a State senator in New York, was selected as a member of the Temporary Commission on Youth and Delinquency. This commission made a thorough study of the problem throughout the State of New York, and as a result, Congressman SANTANGELO has become intimately familiar with many aspects of this troublesome problem. His speech furnishes a keen analysis of the causes, prevention, and control of juvenile delinquency, and will, I know, prove interesting and stimulating reading:

Mr. Chairman, Mr. Rolnitzky, Mr. Capra, members of the Boys' Club Alumni of New York, I am very pleased to speak to you on a subject which demands the most serious attention of all people in our community. At the outset, I want to compliment this organization for providing the opportunities for personal development for the youth of our city and permitting children to develop themselves culturally and physically. You demonstrate the essence of a successful life, a sound mind in a sound body. I take this opportunity to pay tribute to men like Peter Capra, your director, a dedicated citizen who is giving his time, attention, and energy toward your programs. I salute your membership and alumni who are providing the scholarships to all children regardless of race or religious background in secondary education and in colleges. If we had more men like your members, our city would be a better place in which to live.

I desire to speak to you about the broad subject of juvenile delinquency. I wish to talk about the nature, the extent of the problem, its causes, prevention, and control. More claptrap, hogwash, and balderdash has been uttered about juvenile delinquency, that as a result there exists a mass of confusion and loose bricks lying all around without any construction.

NATURE OF PROBLEM

The problem of juvenile delinquency forms a daily part of our newspaper reading. It is a common source of anxiety among parents, adults, and scary females. It is a frequent subject of discussion in the pulpit, in the lecture hall, the classroom, the clinics, and in meetings where the most wonderful asset of our life, our children, are seriously considered.

Each group tends to view the problem in terms of its own particular area of concern, whether it be law, religion and morality, social organization or personality development. In talking of juvenile delinquency, I am talking about persons under the age of 21 years whose conduct includes all unlawful or persistently antisocial behavior.

Certainly the problem is a legal problem. It involves provisions of law, statutes for their punishment and for their treatment. Certainly it is a moral and religious problem also, involving values by which men order their lives and their conduct. Certainly also it is a social problem, involving a threat to a stable society by children who are maladjusted and antisocial. Finally it is a problem of personal development that affects not only the individual delinquent himself, but also the church, the home, the school, the health services, the character-development agencies, and other community groups. Adding it all together, it is a challenge.

That challenge we accept.

EXTENT OF PROBLEM

To read the newspapers, one would think the youth of our country is in revolution, that they have run riot, and that rebels without causes have taken over the Government. Newspapers for their own personal gain have glorified and dramatized the problem to such an extent that the public and even the world believes that our country is basically morally rotten and that our rottenness has permeated our children. The facts belie such impressions. Statistics show that 1 out of 161 children comes to the attention of the courts. Six and two-tenths out of 1,000 are involved in acts of juvenile delinquency. This amounts to six-tenths of 1 percent. Other statistics increase the amount to tremendous proportions of 2 percent of our youth. At any rate, 98 percent of our children walk through the corridor of life called adolescence without running into trouble or beating their heads against the walls. We are not concerning ourselves here with the 98 percent, but with those 2 percent.

On a nationwide basis, delinquency increased from 1940 to 1954 at a rate of 102 percent. The high level of juvenile delinquency was reached during the war years and declined through 1948. The increase between 1948 and 1954 was 58 percent. While our child population increased by 13 percent from 1948 to 1954, juvenile delinquency in that same period increased by 58 percent, or approximately 4 times the growth of the rate of increase of our youth. In the State of New York, the total increase of juvenile delinquency from 1940 to 1954 was 37 percent, as compared to a national average of 102 percent. Obviously the city of New York is not the den of iniquity that certain people portray it. My experience on the Temporary Commission on Youth and Delinquency disclosed that juvenile delinquency was relatively higher in urban centers than in rural centers or communities. The nature of the acts of delinquency also differed in these communities.

While there has been a relatively small proportion of young people involved in acts of delinquency and the rate of increase has not been of mountainous proportions, the instruments of evil and destruction which the children have in their possession and which they use in the perpetration of their horrible deeds have frightened and terrorized our community. While the numbers are small, nonetheless we must give serious consideration to and examine thoroughly our legal practices and our social measures.

THE CAUSES

There is no one cause for juvenile delinquency. There are many and varied causes. My conclusion has been that the major causes are as follows:

1. A breakdown in respect for authority, both for the State and for the family.

2. There is a breakdown in the family, because of increasing divorces, the absence of parents from the home and its corollary, a lack of love and affection. Of course, we also find in certain instances, a smother love of the overly protective parent which brings about juvenile delinquency.

3. Thirdly, and most important, the youth of our country have a feeling of frustration, of not being wanted. This feeling gives rise to a rebellion within them, so that they are truly rebels without causes. They experience a feeling of not being wanted in the home, in the school group or in the community.

They struggle for recognition and desire to be recognized in some form or another.

As a resident of this town, New York, I have looked about and seen a breakdown in respect for authority. The young boy is a mimic and just as we see God in our own image—just as the Negro sees God as a Negro and the mouse visualizes God as a bat, so do the young men adore the apparently prosperous and influential people around him. When a young boy sees a racketeer sporting around in a flashy car, with a quick buck for spending in a local bar or bistro, he is overwhelmed with admiration and perhaps seeks to emulate that character. The bookmaker on the corner or the policy runner who is always ready with a roll has his influence on the kid playing ball in the street. The young boy who sees the cop get his payoff from the bookmaker or policy runner thinks that all cops are crooked and dishonest and that if he should get into trouble he too could pay and get off unscathed. He is in for a rude awakening when he finds that except for the practices connected with gambling, cops are inherently honest and will arrest and prosecute crimes of violence, larceny and homicide. The young man who is fortunate enough to live on the same block as does a baseball or other athletic star is living in the proper climate. He seeks to emulate or imitate that athlete. If fortunately the boy lives on the same street as a Perry Como or Jerry Lewis or similar great entertainer, he aspires to be one of them. Our economic ghettos and our trend toward communities where only the poor live and where there is not a variety of people, tends to eliminate the opportunity for helpful idolatry and hero worship. Few children admire lawyers because on the street lawyers may be considered shysters and not great men. We as lawyers must look inward to see whether or not we are carrying out our part of our destiny, that is, to be an inspiration to the young man on the street corner and on the street.

In my own opinion, I believe that our mass mediums are instrumental, more instrumental than I care to admit, in the provocation and spread of juvenile delinquency. A young man's mind is inflamed by newspaper stories of shootings, killings, and gang wars. If he does not get the idea from the street corner, he picks it up from the newspapers and television. Recently on television was publicized the making of "zip" guns, together with the method of making them. I, for one, never knew how to make a "zip" gun and learned the technique on TV. I am sure that thousands of boys also saw the same display. Newspapers inveigh against the horror magazines, but I believe that the yellow journalists and the tabloids have created more harm than they realize as a result of their publicity, they unwittingly glorify the young hoodlum.

Our Constitution guarantees freedom of the but the press has failed to regulate its own publications. The press contributes in more ways than one toward the climate of juvenile delinquency and in many instances by its publicity destroys the residue of good within a boy and by its quixotic attacks at windmills prevent public officials at times from doing what is right for fear of being pilloried and destroyed.

PREVENTION

The problem today is, what are we going go to to prevent juvenile delinquency? My solution is to restore respect for authority and to instill in the youth of our country a feeling of belonging, with a desire to do good.

We must restore the responsibility to the persons and the places where it can do the most good and where by nature and circumstances the most can be accomplished. We must restore responsibility to the parents. This is a primary responsibility. You are all aware that where the parents pay attention to their children and where they are at home sharing in common pleasures, there is less apt to be outbreaks of delinquency. Because of broken homes, children are thrown into the streets, torn between conflicting interests.

As a result of the hearings held by the New York State Temporary Commission on Youth and Delinquency, I introduced a bill which became the law of the State of New York and which unfortunately our social minded judges are not inclined to enforce. This bill provided that when a young man got into trouble, a judge of the domestic relations court could call the parents in and impose conditions upon the parents, which were reasonably calculated to prevent the recurrance of juvenile delinquency. Where the parents willfully disobeyed the conditions imposed by the court, the court could impose a fine or sentence on the parent. Forewarned is being forearmed and while a parent may have an excuse because he did not know where his children were, once he has been apprised he must assume that duty of controlling that which his own acts created.

That solution, of course, is not a cure-all. We also must restore teacher responsibility. The teaching profession has been struggling for decent wages and for better educational plants. Our public schools are overcrowded. Teachers fear the disciplining of children because they fear they will lose their jobs, which means their bread and butter. I for one would strengthen the hands of the teachers by permitting them to exercise discipline, to use the rod where the occasion permitted it and to grant immunity to the teachers for their disciplinary action. Boys who know that teachers may utilize the rod are less likely to challenge their authority. Parents are to blame because they fail to support a teacher who stands in loco parentis when the teacher and child come into conflict. I would require parents to give permission to teachers to practice discipline in accordance with their judgment. Where the parent refuses to give such consent, I would authorize the teachers to expell the children or call the parents to book because of the child's lack of respect, intransigence or belligerence. Some people may say that schools are overcrowded and that teachers cannot cope with overcrowded classes. That is a lame excuse. I take this opportunity to pay tribute to the parochial schools. They too are overcrowded but in the main there is no disciplinary problem in these schools. Children in parochial schools are encouraged to participate in school plays, choral groups, games and speeches. The parents are also called upon, ad nauseum, to share the children's activities and to view the results of their children's histrionic talents. The enforced attendance by parents at these functions creates both interest and a common endeavor which promotes understanding, affection, love and respect one for the other. The public schools can well profit from this example. However, people are afraid to talk about parochial schools and their methods because of the fear that one is recommending a union of church and state.

A young man's leisure hours are a source of temptation and a climate in which he can get into trouble. They are supplementary to the home and to the school. Keep a boy busy in sports and activities and you will normally keep him out of trouble. He should be encouraged to participate in school and also out of school in baseball, basketball, chess, and other activities. I cannot pay too much tribute to organizations such as the Boys Club, who fill in the hours for young men to provide stimulation and joint activity, who give the young men a feeling of belonging and recognize an achievement regardless of its importance. The Big Brother movement is a tremendous life in our area. The Boy Scouts of America do a yeoman job and give the boys an opportunity to participate and also to receive vacations in the country, away from the sultry heat of the city streets.

Our parks give needed recreational facilities but for the poor boy they are too far away and not accessible. The playgrounds in the housing communities afford better opportunity and better avenues of release of energies. We have very few tennis courts and our playgrounds in the county of New York are not easily accessible to the teenager. In the rural sections, I have seen with pleasure the efficacy of the 4–H clubs which provide for a development of skills and ready outlets for the young man's energy. The Police Athletic League renders a great deal of service and affords various outlets to the young boys. Of course all these activities cater to the great bulk of our youth, the 98 percent. Our job is to take care of the other one-half of 1 to 2 percent of the boys who are juvenile delinquents. The police department can be of great assistance and can make or break a young man with its understanding. Wholesale arrests and roundups by scary police officers, who lock up groups of boys who are overly active but not criminals do not help the situation. Police officers, before coming into the force, should receive courses on psychology. More foot patrolmen would be of great assistance because the greatest deterrent either to crime or juvenile delinquency is the presence of a bluecoat walking up and down the street making himself part of the community life.

The courts can be of great assistance. I think everything should be done to prevent that first arrest and judges, many of them who have understanding, will dismiss cases so that there shall be no arrest but only a scolding. Lawyers can also prevent crime by talking to these juvenile delinquents as "dutch uncles." While they think their job is to "beat the rap," I think we as lawyers have a duty to ourselves and to the children to moralize with them and to encourage them to stay out of future mischief.

Government can provide an expanded housing program, for low-income people which provides decent accommodations. While a poor home is not a certain source of juvenile delinquency, decent housing accommodations do not embitter children of their surroundings and we can at least provide these with modern utilities and decent sanitary conditions.

The Federal Government, the State and the city can also assist. The Federal Government can give grants-in-aid to support programs which are designed to encourage the development and growth of children. The Division of Juvenile delinquency in the Federal Government is understaffed and undermanned and while it performs a valuable function, it can be expanded. The State of New York, as a result of a bill which I introduced, has created a permanent State Youth Commission, under the chairmanship of Mark McClosky. It is the function of the State Youth Commission to coordinate State governmental programs, to work with the local communities in promoting and expanding recreational centers, programs, and to provide the funds for local groups which are working in this common struggle to prevent and eliminate juvenile delinquency. The city of New York, by opening the school playgrounds after school, has been doing a great job not only through its educational system but also through its police department. There are many other methods of preventing it, but each one of us has the responsibility to set an example by being models of virtue and still comport ourselves as human beings.

REHABILITATION

We talk a great deal about rehabilitating the juvenile delinquent and the youthful offender, but we do very little about it actually. The famous Glueck's made a survey and found out that within 5 years 85 percent of the children who were guilty of delinquency repeated and transgressed once again. This is a horrible indictment of our

system. We little realize that when a boy gets into trouble he is actually condemned to menial employment and to second-rate citizenship. Every agency of government interposes its strength to keep this child from becoming a useful citizen and losing himself in the anonymity of every day life. A boy, after making a mistake, receives the blessing of our youthful offender law, gets a break and, being released, resolves to walk the straight and narrow path. He applies for a job—civil service closes its doors to him. He cannot become a police officer because the police department under the leadership of its police commissioner not only refuses appointments to boys who have made one mistake but also extends the principle of refusing appointment to a boy whose father has been a convict. The boy cannot even get a job cleaning the streets because civil service will not approve or certify him as qualified. He cannot get a liquor license because the ABC and the State liquor board will refuse him a license. He cannot even become a barber because that requires a license. If his crime has been a serious one, the docks and waterfront are closed to him. The State civil service also closes its doors. He can't get a Government clerical job—the Post Office Department will not even let him carry letters. The electricians and plumbers deny him, as a license is required. If he wants to drive a truck, he needs a driver's license and perhaps he cannot even get a driver's license. Even if he wants to be a grocer, he finds himself handicapped, because he might need a beer license and can't get it. Where is he to turn? He can only hold jobs which are menial and which pay little. The road back is difficult. Not only are obstacles put in front of him by the State and Federal Governments, but now the New York City Housing Authority has adopted a program to evict the families of boys who have gotten into trouble. One hundred and seventy families have been evicted and many others are threatened with eviction.

During my senatorial career in the New York State Senate I made a recommendation and introduced a bill which redefined the term "arrest." A person who has been adjudicated a juvenile delinquent or youthful offender should not be considered as a person having been arrested. In this way, a boy would be able to say truthfully, as on a civil service questionnaire, that he has never been arrested. We public officials will not take the responsibility to give a juvenile delinquent or youthful offender a chance to gain public employment. We act this way because we know that if the boy transgresses once again a newspaper will call for the removal of this public official. It requires courage for a public official to give such a boy an opportunity in public employment and there are very few with such courage. Despite these obstacles some boys rehabilitate themselves. I salute them.

Members of the boys club, it has been a privilege and a pleasure for me to talk with you and if I have been too long please believe that I feel like Mark Twain who was called upon to speak, and after making a long speech, said: "Please forgive the length of my speech, I didn't have time a prepare a short one."

Trial by Jury

EXTENSION OF REMARKS

OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered by our colleague, the Honorable EDWIN E. WILLIS, of Louisiana, to the Louisiana State Bar Association meeting at Alexandria, La., in November 1957, on the subject of Trial by Jury. Representative WILLIS is a member of the Judiciary Committee and one of the most able and learned lawyers in the House of Representatives. His address deals with a subject that is fundamental, and the subject and the address should be of concern to every Member of the Congress, as well as to the people of the country generally.

I concur wholeheartedly with the views so ably expressed by Representative WILLIS. The jury trial is one of our most cherished and privileged possessions, and it is imperative that it be held sacred. I regret to have to say that there are a number of organizations in the country which have little or no regard for the principles of liberty upon which this country is based. I agree with Mr. WILLIS that in all criminal prosecutions a man has an indubitable, inalienable, and indefeasible right to be confronted with his accusers and witnesses, to call for evidence in his behalf, and to a speedy trial by an impartial jury of his vicinage, without whose unanimous consent he cannot be found guilty.

The address of Mr. WILLIS is as follows:

(By Edwin Willis)

The origin of trial by jury is disputed by historians. It is evident, however, that the principle of trial by jury emanated from the sense of justice and fair play of our ancestors. This is clear when one studies the forms of trials that existed among all nations in primitive times.

As far back as the ancient days of the Greek and Roman emperors we can discern modes for the settlement of disputes which resemble our concept of modern juries. The Roman tribunal was somewhat similar to the modern jury but they employed men possessed of legal knowledge in place of a formal judge. The Romans also had a procedure comparable to our present system for challenging jurors.

The old custom of the Roman emperor in summoning before him persons who lived in the neighborhood to declare under oath their knowledge with respect to facts of public interest was indeed the germ of the modern trial by jury.

RIGHT OF EXAMINATION

In the early Middle Ages this Roman procedure was employed on ecclesiastical questions by Frankish bishops and by Charlemaine and the other Frankish kings in connection with civil issues. Some centuries later we find virtually the same custom in the inquisition processes employed by the Norman dukes.

I digress to point out another right which not only implements the jury system, but without which jury trial would be completely ineffective. I refer to the right of an accused to confront and cross-examine his accusers. We have it on highest authority that this particular right was derived directly from the Romans. Except for it, one of the most courageous and profound of all the early Christians would have been doomed to die on the cross, as did the Master before him.

At the second trial of St. Paul before Festus, the so-called witnesses did not testify. Instead Tertullus, the orator, made this argument:

"We have found this man to be a pest, a promoter of sedition among all the Jews throughout the world, and a ringleader of the sedition of the Nazarene sect."

Paul said, "I am standing at the tribunal of Caesar; there I ought to be tried. To the Jews I have done no wrong, as thou thyself very well knowest. For if I have done any wrong or committed a crime deserving of death, I do not refuse to die. But if there is no ground to their charges against me, no one can give me up to them; I appeal to Caesar."

Then Festus, the Roman governor, made this ruling:

"Thou hast appealed to Caesar; to Caesar thou shalt go * * * Romans are not accustomed to give any man up before the accused has met his accusers face to face and has been given a chance to defend himself against the charges."

But, regardless of the true origin of trial by jury, there is no dispute that the system, as we know it today in America, was derived from England.

During the reign of Alfred the Great, from 871 to 901 A. D., we can find semblance of settlement of disputes by juries. But the common-law system of trial by jury developed from the 10th to the 16th centuries. William the Conqueror employed the jury system, as it existed in 1085, in compiling the Doomsday Book.

In the early days trial by jury was not a matter of right, but merely a privilege, to be granted or withheld as a favor of the King. Henry II did encourage jury trials during his reign in the latter half of the 12th century. He also employed a jury for indicting those individuals who had violated the King's peace by the commission of serious crime.

During this period of development the function of the jury was not to render a verdict but to supply evidence on oath as witnesses do today. The ancient jury was very similar to our modern concept of the grand jury, to the extent that the evidence amounted to an indictment.

Until the 13th century, however, this indictment by the jury was followed by a trial by ordeal, battle or comporgation. It was dissatisfaction with such modes of trial, and the opposition of the church, which finally led to the acceptance of the opinion of a second jury, a deciding one. Here we see a resemblance of our petit jury.

MODERN SYSTEM

The abuses of King John resulted in changing the privilege of a trial by jury to a right. This ended the practice of selling and buying writs, which had flourished under him. The Magna Carta, granted at Runnymede in 1215, provided that no free man should be impoverished, dispossessed or in anyway detained, except by the fair judgment of his peers and according to the law of the land. Here was the true beginning of our system of trial by jury, as a fundamental right.

The history of trial by jury during the Middle Ages is replete with incidents of abuse of, and hostility for, this system by kings and their ministers. They converted the process of attaint, which was originally devised to provide extra protection for the accused and to be a royal weapon against the corruption of justice, into an attack on the jury itself. Thus, if they considered a verdict by a jury unjust, they preferred charges against its members and tried them before the star-chamber court, which functioned without a jury. That court over the years became an instrument for religious and political persecution. That institution, with its denial of a jury trial, was one of the main causes for the downfall of Charles I and his ultimate beheading.

In 1641, when Parliament obtained the upper hand, one of its first acts was to abolish the star-chamber court and to assert the right of every Englishman to a fair and open judgment by his peers. It also abolished the right to punish jurors for verdicts considered to be unjust, and substituted therefor the remedy of a new trial. Actions of attaint were prohibited in 1670 in the famous Bushell case when a judge at-

tempted to imprison a whole jury for a verdict with which he disagreed.

There were other instances of intimidation of juries during these years. The actions of bloody Judge Jeffries were notorious. However, public acceptance and confidence in the verdicts of juries overcame all such attacks. Able and courageous leaders of the English bar, such as Erskine, Coke, Bacon, Burke, and Fox led the fight to preserve the sanctity of jury verdicts.

During and after the French Revolution, fear of revolutionary elements led to repressive censorship and limitations of civil liberties in England. In 1793 habeas corpus in certain cases was suspended. Fox led the movement which resulted in repealing the suspension.

POWERS EXTENDED

In 1792, Fox had also been responsible for a new libel law which extended the power of juries to decide the whole case, both as to the law and the fact. Here, indeed, was a victory for democracy and trial by jury. And since the beginning of the 19th century, there has been very little threat to the right of trial by jury in criminal cases in England.

The old adage that distance lends enchantment did not apply among the American colonists in their relationship with the English Crown. Although the same conditions on the whole prevailed in colonial America as in 18th century England, with respect to the administration of justice and trial by jury, the attitude of the colonists was from the beginning different. Being in no position to fear feudal exactions of exploitations, the colonists looked upon the king not as their protector but rather as the potential aggressor upon their rights. In this spirit they protested every effort to curtail trial by jury as an act of tyranny.

Thus the English Parliament passed the famous Navigation Acts and in 1696 reorganized the admiralty courts so as to better cope with flagrant smuggling in and out of the Colonies. These admiralty courts, however, were not part of the traditional common law system and did not provide for a trial by jury. As a result, English or English-appointed judges frequently sentenced American seamen and merchants arbitrarily. The more effective these courts became, the more the colonists resented them, and the more they came to insist upon trial by jury as a fundamental right.

The Stamp Act of 1764, offensive enough in its imposition of taxation without representation, added insult to injury by providing that all violators were to be tried in the admiralty courts where trial by jury is not provided. The Americans did not accept the British view that Parliament was completely sovereign, and could constitutionally pass any measure it chose. In their eyes, the Stamp Act was, among other things, a clear effort to bypass and thus to deprive them of the right to trial by jury. The reaction against it was so strong that it prompted the Colonies to pass acts of nullification. The Virginia resolution, introduced by Patrick Henry, the Stamp Act Congress, and, above all, the boycott of all English merchandise, forced the repeal of the Stamp Act.

This effort on the part of the English Parliament to bypass jury trial was to be repeated by the American Congress almost 200 years later in connection with so-called civil rights legislation, except that equity instead of admiralty courts were to be the instrument.

The final British effort to tamper with the traditional trial by jury in the colonies came with the misnamed act for the impartial administration of justice. This was one of the intolerable acts passed in 1744 as a realiatory measure for the Boston Tea Party. This act provided that certain offenders were to be transported to England for trial there. This repudiation of the colonists' own right to judge their fellow citizens was one of the last acts which made reconciliation with England impossible, and thus provoked the war for American independence.

RIGHT PRESERVED

It was in the light of this background that the Founding Fathers were determined to preserve and perpetuate the jury system when our Constitution was adopted.

It is illuminating to note, however, that there was no real controversy in respect to trial by jury in criminal cases. In fact, jury trial in criminal cases was provided for in section 2 of article 3 of the original Constitution. The seventh provision of the Bill of Rights refers to trial by jury in civil cases. Here the colonists were erecting a barrier against extension of any power, even in civil cases, comparable to that which had been vested in and exercised by the admiralty courts during the domination of England.

Jefferson was in Paris at the time of the adoption of the original Constitution. During the time of the great debates on the proposition to ratify the original instrument in the conventions of the several States, Jefferson wrote from Paris to a friend:

"There are instruments for administering the government so clearly trustworthy that we should never leave the legislature at liberty to change them. The new Constitution has secured these in the executive and legislative departments, but not in the judiciary. It should have established trials by the people themselves, that is to say, by jury."

Accordingly, our forefathers imbedded jury trials even in civil cases as part of the Bill of Rights. And the constitutional guarantee of the right to jury trial has withstood the most severe stresses and strains in our turbulent history.

Thus, the fear of the panic created by the French Revolution hit America with such force that it prompted the passage of the Alien and Sedition laws dealing with treason, and curtailing the right to criticize our Government. But devotion to the principle of trial by jury was so deeply imbedded in the minds of our ancestors that no one had the temerity to suggest the elimination of trial by jury under these laws.

SYSTEM NEVER SUSPENDED

In fact, in our entire history, when the greatest of threats have been leveled at the very existence of our Government itself, trial by jury has never been suspended; not even in wartime. It was preserved during the trying days of the Revolutionary War, the War of 1812, the War Between the States, and through two world wars.

It is this deep-rooted belief in trial by jury that is responsible for the law and jurisprudence to the effect that citizens cannot be tried by the military courts in this country.

There is one exception, however, to this history of trial by jury in America, and that is during the reconstruction era. It was the most flagrant example in our history of a peacetime suspension of the right of trial by jury. It was accomplished by the establishment of military governments in areas where fighting had ended. But the excesses of the military governors and of the carpetbaggers and scalawags who surrounded them aroused public hostility. This deliberate repudiation of all the philosophy upon which the Constitution was conceived caused the reconstruction acts to be condemned by all men of good will.

EROSION OF RIGHTS

Despite the provisions of the Bill of Rights, however, trial by jury has been gradually eliminated in civil proceedings before so-called administrative bodies and tribunals. The Honorable David F. Maxwell, former president of the American Bar Association, had this to say on the subject:

"For some time I have been deeply concerned by the insidious process which has been gradually eroding our right to trial by jury in civil cases. The right of trial by jury is firmly imbedded in the American system of jurisprudence and is as old as the country itself. Reference to it is found in the Declaration of Independence, which deplores the abuses and usurpation by George III 'depriving us in many cases of the benefits of trial by jury.' Article VII of the Bill of Rights guarantees trial by jury 'in suits at common law, where the value in controversy shall exceed twenty dollars.'

"Yet, during the past half century, bit by bit, there has been a whittling away of jury jurisdiction. Arbitration has replaced the jury trial in many areas, notably in the motion picture, building trades and textile industries, and generally in the field of labor law.

"Various administrative bodies and tribunals, both on a Federal and State level, are determining the rights of citizens in a manner affecting their everyday lives, without the benefit of juries. In Saskatchewan, Canada, such a board is vested with authority to award damages in automobile accident cases on the basis of liability without fault, and there are many authorities in this country advocating the adoption of a similar system here. The Compulsory Arbitration Act in Pennsylvania, adopted in 1952, provides that the trial court may, by appropriate rule, substitute arbitration for trial by jury when the amount in controversy is $1,000 or less, and the constitutionality of the act has been upheld by the supreme court of that State."

As one of those who firmly believes in trial by jury, I, too, was concerned about recent attempts to limit and circumscribe this constitutional right of our people.

CIVIL RIGHTS ACTION

Thus, we heard and learned a great deal about the precious right of trial by jury during the debates on so-called civil-rights legislation in the Congress last year. A discussion of civil rights is, of course, beyond the scope of this assignment, but I mention our experience because it provided a new meaning to jury trials as a fundamental right.

The question was not whether, after trial of an injunction suit on its merits, a person charged with contempt of court for violating the injunction decree is entitled to be tried by jury. And no amout of specious argument by the proponents of the bill could make it so. The proposition was whether we should substitute an initial civil remedy for a present criminal prosecution as was accomplished through the admiralty courts during colonial days.

Thus, for the last 70 years or more a person charged with depriving another of any conceivable civil right, including his right to vote, can be prosecuted and tried, but only before a jury of his peers. Forsaking principle for expediency, Mr. Brownell, the Attorney General of the United States, took the position, however, that the jury system is no longer to be trusted in so-called civil rights cases.

NEW REMEDY CREATED

Accordingly, a new remedy was created. But, mind you, the new cause of action is not granted to the persons aggrieved. It is to be exercised exclusively by the Attorney General. The class injunction suit is to be filed in the name of the United States against the people of a whole community and the action can be brought without the consent and even over the protest of the real parties at interest, a reprehensible practice for which a lawyer could be disbarred.

Stated differently, the real issue was whether Congress could, as a matter of good constitutional law, or should, as a matter of

cynical congressional policy, pervert equity courts as criminal tribunals.

We did succeed in providing a jury trial in certain criminal contempt proceedings which can result in imprisonment. From my point of view, the jury trial provision is far from satisfactory, but it was the best we could imbed in the so-called civil rights bill. In any event, if this limited provision can serve as a challenge to succeeding Congresses and to the members of the bar to continue the fight against further erosion of jury trial as a fundamental right, I think our efforts will not have been in vain.

Reports on Bills To Authorize the Enforcement of State Statutes Prescribing Criminal Penalties for Subversive Activities

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. SANTANGELO. Mr. Speaker, several bills have been introduced to correct the so-called wrong of the Supreme Court in connection with the case of Pennsylvania against Nelson. Much of the criticism against the Supreme Court is motivated by dissatisfaction with the Supreme Court's decision and its liberal viewpoint. The Association of the Bar of the City of New York, after an exhaustive study, opposed H. R. 977 and S. 654, which seeks to correct the Supreme Court's decision in the case of Pennsylvania against Nelson. For those who seek an unbiased, unprejudiced viewpoint regarding the decision, I ask unanimous consent to have incorporated in the Appendix of the CONGRESSIONAL RECORD the report of the bar of the city of New York, which opposes the enactment of the proposed legislation in H. R. 977 and S. 654.

REPORTS ON BILLS TO AUTHORIZE THE ENFORCEMENT OF STATE STATUTES PRESCRIBING CRIMINAL PENALTIES FOR SUBVERSIVE ACTIVITIES

In *Pennsylvania* v. *Nelson* (350 U. S. 497 (1956)), the United States Supreme Court held that the Pennsylvania sedition statute was superseded in view of the scheme of Federal antisubversive legislation by which, the Court concluded, the Federal Government had occupied the field and precluded State intervention with respect to the same offenses. This holding had the effect of rendering unenforceable similar statutory provisions in other States. After the Nelson decision, the Committee on the Judiciary of both the Senate and the House of Representatives, during the 84th Congress, 2d session, recommended the passage of bills which would permit the enforcement of any State statutes prescribing criminal penalties for sedition against the United States or any State, unless Congress specifically prohibits their enforcement.

Three bills to the same effect have been introduced in the present Congress. Of these, the bills presently under consideration are H. R. 977 and S. 654, which are companion bills corresponding to the bill approved in the last Congress by the House of Representatives, Committee on the Judiciary. Their text is set forth as an appendix.

In the Nelson case, the defendant, an acknowledged member of the Communist Party, was convicted in a Pennsylvania State court of a violation of the Pennsylvania Sedition Act. Nelson was also convicted in a Federal court of violating the Smith Act (18 U. S. C., sec. 2385) and the Federal general conspiracy statute (18 U. S. C., sec. 371). The supreme court of Pennsylvania reversed the conviction under the Pennsylvania Sedition Act on the ground that the Federal Smith Act superseded the enforceability of the State sedition statute which proscribes the same conduct. The Court emphasized that the evidence against Nelson related solely to alleged sedition against the United States, and in no respect was directed against the government of Pennsylvania as such. The United States Supreme Court upheld the ruling of Pennsylvania's highest court in the decision *Pennsylvania* v. *Nelson* (350 U. S. 497 (1956)) which the bills under discussion seek to reverse.

The Supreme Court's decision was rested on three principal grounds, which may be summarized as follows: (1) The Congress determined in 1940 that it was necessary for it to reenter the field of antisubversive legislation from which it had largely abstained since the end of World War I. Thereupon and in succeeding years, Congress enacted a series of statutes which includes, among others: the Smith Act, proscribing advocacy of the overthrow of any government—Federal, State or local—and membership in a group which so advocates; the Internal Security Act of 1950, requiring registration of Communist action organizations and Communist-front organizations, and registration of the members of the former; and the Communist Control Act of 1954, imposing further penalties on the Communist Party and the members thereof, and upon Communist-infiltrated organizations. This scheme of Federal legislation creates a pervasive totality of Federal regulation, which makes inescapable the conclusion that Congress has intended to occupy the field of sedition * * * and no room has been left for the States to supplement it. Therefore, a State sedition statute is superseded regardless of whether it purports to supplement the Federal law. (2) The Federal statutes touch a field in which the Federal interest is so dominant that the Federal system must be assumed to preclude enforcement of State laws on the same subject, in accordance with the principles enunciated in such decisions as *Rice* v. *Santa Fe Elevator Corp.*, (331 U. S. 218 (1947)) and *Hines* v. *Davidowitz* (312 U. S. 52 (1941)). (3) Enforcement of State sedition acts presetns a serious danger of conflict with the administration of the Federal program.

The Court's decision appears sound on the basis of the stated reasoning. The precedents relied upon foreshadowed the result, which was predicted and has been favorably viewed by legal commentators. However, the question now presented is not whether the Supreme Court correctly read the intent of Congress at the time of the enactment of the various antisubversive statutes, but rather whether it is wise national policy for Congress at this time to revitalize the State sedition statutes, and whether this result should be sought by the enactment of the proposed legislation. The committee believes that both of these questions must be answered in the negative.

1. The bill under discussion would single out criminal statutes relating to subversion and advocacy thereof for extraordinary and indiscriminate treatment in determining the interrelationship of all Federal and State statutes concerned with these subjects. The usual method of determining the enforceability of State legislation in relation to Federal enactments has been judicial determination on a case-by-case basis, so that evaluation may be made of the impact of Federal and State acts on one another in terms of practical operation and the national or local problems presented. The bills would displace this usual method of Federal-State accommodation by a blanket declaration that, "except to the extent specifically provided by any statute hereafter enacted by the Congress," no State statutes prescribing criminal penalties for sedition against or overthrow of Federal or State Government shall be unenforcible by reason of existing Federal legislation, or any future Federal legislation.

Some 42 State statutory provisions would immediately be revitalized, all of them primarily directed against overthrow of the United States Government, bearing such diverse titles as antisedition laws, criminal anarchy laws and criminal syndicalist laws. Even more diverse are the substantive and procedural provisions of the various statutes, some having provisions plainly at variance with the Federal legislation; others being vague and lacking even in basic procedural safeguards. Some, like the Pennsylvania statute, would punish utterances which encourage any person "to commit any overt act with a view to bringing the Government of this State or of the United States into hatred or contempt," provisions which raise sharp constitutional questions as the Supreme Court specifically indicated. Yet the bill would at one swoop reanimate all these measures, without distinction or particularization.

Even if Congress were willing to take such blanket action with respect to all existing State statutes without detailed study of their diverse provisions, should it also be required to accept the burden of exercising continuing surveillance over all future State enactments which might adversely change or add to existing State legislation to the detriment of the Federal scheme? If Congress does not promptly enact Federal legislation to supersede such undesired new State acts, the courts will be utterly powerless to give relief if the bills under discussion are adopted. Moreover, continuing alertness by Congress to the mere provisions of all present and future State legislation would not alone suffice, for it is in the operation and specific applications of statutes that problems of inconsistency in interference become apparent. In the harmonizing of the statutes of our Federal and State governments, it has been pointed out that: "Proper accommodation is dependent on an empiric process, on case-to-case determinations. Abstract propositions and unquestioned generalities do not furnish the answer."

The pressures under which Congress operates in this dynamic era obviously do not render feasible its now undertaking to perform this painstaking empiric process presently carried on by the courts.

2. It is to be borne in mind that the conduct and advocacy for which Nelson was convicted under the Pennsylvania statute were directed toward the attempted overthrow of the United States Government. The same appears to be true with respect to prosecutions under virtually all the State statutes. This consideration adds support and emphasis to the determinations of both the Pennsylvania Supreme Court and the Supreme Court of the United States, that this legislation which seeks preservation of the Federal Government and the Republic touches a field in which the Federal interest is dominant. Decisions of the Supreme Court which have upheld enforceability of State legislation concurrently with comparable Federal legislation have usually stressed the existence of a predominantly local interest. But, as the Pennsylvania Supreme Court asserted in ruling against the State statute in Nelson: "Sedition against the United States is not a local offense. It is a crime against the Nation." The State court

also emphasized that so far as relates to the State's police needs: "There are many valid laws on Pennsylvania's statute books adequate for coping effectively with actual or threatened civil disturbances." Consequently, there is no basis for a contention that the present State sedition statute, and the comparable State acts, are necessary to the exercise of the State's police responsibilities.

It is clear that the problem of subversion against the Government of the United States is a national rather than a local problem. In this respect and others it bears a relationship to the crime of treason against the United States, punishment of which is confided under the Constitution to the Federal Government, and may not be subject to State prosecution. The present Federal antisubversive legislation further expressly indicates that considerations of international politics and foreign policy may also be involved. All these are factors which emphasize the need for a uniform national standard and an integrated centralized program, rather than suggesting a need for localized diversity of standards and decentralization of control, factors traditionally advanced in opposition to uniform Federal legislation. For more than a century, ever since *Cooley* v. *Board of Wardens of Port of Philadelphia* (12 How. (53 U. S.) 299 (1851)), such considerations have been recognized as highly significant by the courts in cases under the commerce clause. Where the subject matter has indicated the desirability of a uniform national system of regulation, rather than local diversity, the tendency has been to hold that the States are precluded from acting at all.

Consideration of the national character of the offense also brings into focus some practical problems of enforcement. As the Pennsylvania Supreme Court noted, a group advocating overthrow of the United States Government might well be but part of a larger group spread over a number of States. In prosecuting such an interstate group, the most successful results are likely to be achieved through a unified plan under centralized control, with careful determination as to the sequence and timing of the prosecution of the various participants. From the viewpoint of the overall Federal plan of attack, a State prosecution might well result in premature warning or harmful advance disclosure of evidence, as the State court suggested. Local prosecutors, whether motivated by personal ambitions, political opportunism, or merely by uninformed and misguided zeal, might thus hamper and frustrate effective Federal police and prosecutive activity with respect to important phases of the Federal legislative scheme. Even if this has not yet occurred, as the minority urges on the basis of the Department of Justice's brief in *Nelson*, it would represent a continuing threat as new personalities and new local political campaigns are injected into some or all of the 42 States whose sedition statutes are to be reanimated by the bill under discussion.

The mere fact that jurisdiction in the field is reserved to the Federal courts will surely not prevent the cooperation, when requested, of local law enforcement agencies with the Federal authorities. However, the Federal authorities should at all times exercise an overriding jurisdiction in this sensitive field, an impossibility if the local authorities are enforcing local rather than Federal statutes. It is submitted, therefore, that the proposed bills would hinder rather than augment the protection of our Nation from subversive activity.

3. Most important, problems of individual rights and traditional values are not to be ignored in the effort to guard our Nation against those who ignore or seek to trample on them. We have been wisely admonished that if this indifference to traditional values should spread to us, it would be the greatest threat to our own liberties.

A traditional value of paramount importance which would be adversely affected if the various State sedition acts are reanimated relates to the preservation of freedom of expression guaranteed by the first amendment. The State court was mindful of this problem in pointing out that State and Federal laws should be so administered as not to threaten the right of the individual to speak freely and without fear, even in criticism of the Government, it found this an additional factor weighing in favor of Federal supersession. The Federal legislation here involved has also been recognized as involving sensitive problems in the area of first amendment freedoms; indeed, in the first prosecution of Communist officials under the Smith act, the Supreme Court, while upholding the convictions, pointed out through Chief Justice Vinson that since "teaching and advocacy of the overthrow of the Government * * * contains an element of speech * * * we must pay special heed to the demands of the first amendment marking out the boundaries of speech."

We cannot ignore that impingements upon freedom of expression result from the existing Federal antisubversive legislation, and that they extend well beyond the confines of the courtroom alone. They necessarily include, in addition, FBI investigations, grand jury investigations, and investigations by committees of both Houses of Congress with all their glare of harsh publicity for the witness. It cannot be doubted that in the aggregate these measures create pressures causing some individuals to refuse to participate in virtually any organization, no matter how innocuous or worthy its avowed purposes, and to refrain in other ways from engaging, as stated by Justice Frankfurter, in the interchange of ideas particularly with respect to controversial subjects, where such interchange is most needed in solving the problems of a democratic society.

Yet the restrictions and pressures upon freedom of expression resulting from the Federal program have, nevertheless, been generally accepted in the interest of assuring the national security. But by reviving the State sedition statutes en masse, all these pressures and restrictions will be intensified and duplicated at the State level, in the State courts, the State investigative agencies and the State legislative committee.

We submit that our objective should be an efficient and integrated system designed to achieve our Nation's security with a minimum, not the maximum, of restrictions on fundamental rights. This is in harmony with the salutary judicial principal that when measures affect the freedoms that are basic to liberty, such measures must be narrowly drawn to meet the supposed evil, closely tailored to impose only so much restraint as is essential for the purpose. Those who would now impose additional retraints and penalties upon the citizenry must bear the burden of demonstrating their need in terms of the national interest and security. That demonstration has not been made, and cannot be made, with respect to the proposed legislation here discussed.

4. An especially troublesome facet of the problems resulting from the proposed duplication of antisubversion legislation at the State level is presented by the possibility of double or multiple prosecutions and punishment. The Supreme Court in Nelson expressly pointed out that it did not reach the question whether double or multiple punishment for the same overt acts directed against the United States has constitutional sanction. Even if it be assumed that the constitutional problem may be hurdled, the basic policy question will nevertheless remain. Where the same act has been held to constitute both a Federal and State offense, it is generally because the same physical act may offend a State policy and a different policy of the United States. Thus, in the classic case of *Fox* v. *Ohio* (46 U. S. (5 How.) 410 (1847), in sustaining a State conviction for the forging of counterfeit checks, the court reasoned that the Federal Government proscribed counterfeiting in order to protect the currency, while the State was punishing a private cheat upon its citizens. Here, however, the selfsame policy underlies both the Federal and the State legislation, and both would punish the very same conduct. In these circumstances, there seem peculiarly apposite the words of Mr. Justice Washington, writing in 1820: "To subject them (the defendants) to the operation of two laws upon the same subject dictated by distinct wills particularly in a case inflicting pains and penalties is to my apprehension something very much like oppression if not worse."

Under the Federal and State statutes here involved, the pains and penalties are both severe and disparate. Thus, the Federal Smith Act provides for a maximum imprisonment of 10 years and a fine of $10,000, and the Pennsylvania sedition statute for a term of 20 years and the same fine. In this very case, Nelson was convicted under the Smith Act, and was also convicted and sentenced under the State act to a prison term of 20 years, supplemented by a $10,000 fine and $13,000 as the costs of the State prosecution. Consequently, while Congress, with primary responsibility for the national security determined on a maximum 10-year sentence for this offense, this defendant would serve 30 years. Moreover, the Federal judge called upon to fix a fair sentence under the Federal Act cannot know whether the defendant will be subjected to additional and serious punishment for the same acts in consequence of one or more State prosecutions. This will necessarily impede fair and intelligent sentencing under the Federal legislation.

Prosecutions in the State courts would present still another troublesome consideration. Under the doctrine that the 14th amendment does not incorporate all of the guaranties of the Bill of Rights, State court prosecutions do not afford a defendant many of the important protections guaranteed in the Federal courts. Thus, for example, the fifth amendment's privilege against self-incrimination need not be observed in State court prosecutions, and evidence obtained by wiretapping and illegal searches and seizures may be received in evidence. Where a defendant is charged with acts of subversion against the Government of the United States, it seems anomalous and paradoxical that he should be subjected to prosecution in State courts which deprive him of very important protections guaranteed and required in the courts of the United States.

5. The thrust of the minority report is that in a nation of dual sovereignties, the States should not be deprived of all power in regard to sedition. Initially, this argument reflects a somewhat exaggerated view of the effect of the Nelson decision, for there is no inference that all State power will be eliminated in regard to detecting or preventing aspects of sedition which have local significance. Indeed, the Supreme Court has already upheld in unequivocal terms State laws requiring State employees to take an oath with respect to advocacy of overthrow of the State or Federal Government and to reveal Communist affiliation, and requiring teachers to meet similar standards.

The Nelson decision merely rules in favor of Federal supersession with respect to a crime of national importance, as to which the national interest is dominant, and on the basis of well-established principles, con-

sistent with past decisions on the interaction of State and Federal authority. The minority report acknowledges that in such earlier decisions as Gitlow, Whitney, Gilbert and Fox, upholding State sedition statutes, the question of Federal supersession held determinative in Nelson was not in issue. In those cases, either there was no Federal sedition legislation in force at the time or the point was not raised.

Nor can we attribute validity to the minority report's justification of the bills on the ground that the criteria confessedly being the intent of Congress, Congress is the logical body to declare such intent. This would constitute a mischievous oversimplification of the established, tried, and tested principles governing Federal-State accommodation which, as has previously been pointed out, entail an empiric process of judicial determination on a case-to-case basis. The draftsmen of the proposed legislation, as well as the minority here, implicitly acknowledge the soundness of this established procedure by leaving it untouched in all fields of legislation other than that relating to subversion. This highly sensitive field is alone singled out for blunderbuss congressional treatment, sealed off from normal judicial examination and accommodation.

The minority report's assertion that there are no sound reasons for Federal preemption in the field of sedition is sufficiently answered, we believe, by our preceding discussion pointing out the important national, individual, and civil liberties interests in support of a single and uniform Federal system of control. This in no way precludes, of course, the closest possible coordination between Federal and State officials in securing evidence concerning seditious activities for the purpose of insuring prompt and effective prosecutions under the various Federal statutes. For the reasons heretofore discussed, it is quite conceivable that this cooperation will be even closer and more effective than if there is a rivalry on each side to initiate its own prosecution, with all the attendant publicity and other advantages for the ambitious prosecutor.

Finally, the minority report argues that the States should be given power to prosecute subversion against the Federal Government in order to guard against the possibility of Communist penetration in positions capable of avoiding or preventing Federal punitive action. It is difficult to believe this melancholy conjecture is advanced seriously. If there is any inadequacy in the present loyalty and security measures relating to Federal personnel—as to which no showing whatever has been made—the logical remedy is to perfect those Federal security measures, rather than to shift vital national security responsibilities to the States. It is clearly illusory to assume that the national security would be enhanced by such dispersion of centralized responsibility, any more than national security would be enhanced if each State were placed in possession of all our defense secrets and nuclear weapons and its own army and navy, as a like precaution against subversion in high Federal posts.

We believe there is, as there must be, full confidence that the powerful investigative and prosecutory forces at the disposal of the Federal Government can be relied upon to continue, with complete loyalty, their vigorous enforcement of the comprehensive Federal antisubversion legislation heretofore enacted by the Congress.

We, therefore, propose the following resolution for adoption by the association:

Resolved, That the Association of the Bar of the City of New York opposes the enactment of the proposed legislation embodied in H. R. 977 and S. 654, 85th Congress, 1st session.

New Jersey

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. SIEMINSKI. Mr. Speaker, the World Almanac of 1958 lists many fine things about New Jersey.

One wishes that the Almanac had mentioned that the congressional delegation from New Jersey ranks among the first.

For the present, we shall have to be contented with the population, the motto, the bird, and the flower of New Jersey, its mountains, industry, waterways, crops, highways, and institutions, as follows:

NEW JERSEY: GARDEN STATE

Capital, Trenton; area, 7,836 square miles, rank, 45th; population (census of 1950), 4,835,329; rank, 8th; motto, Liberty and Prosperity; flower, Bogbice Violet; bird, Eastern Goldfinch; tree, red oak; third of the Original Thirteen States.

New Jersey, one of the Middle Atlantic States, is bounded north by New York, east by New York, the Hudson River and the Atlantic Ocean; south by the Atlantic and Delaware Bay; west by Delaware Bay, Delaware and Pennsylvania. One of the earliest lands to be settled by the Dutch early in the 17th century, it was the scene of much action in the American Revolution, developed iron furnaces and grist mills, and became a great industrial State.

There are low mountains in the northwest, and rolling hills leading down to a coastal area with many waterways and inlets. The Delaware River runs along its west line. Its shipping facilities make it a large freight terminal. It divides authority over tunnels and bridges with the Port of New York Authority and the State of Pennsylvania. Newark, Jersey City, Hoboken, Perth Amboy, and Camden handle shipping for foreign ports. New Jersey contributes a huge figure to the total tons of New York Harbor.

Highest point in High Point, Sussex County, 1803 feet, Delaware Water Gap, in the Kittatiny Mountains, is 900 feet wide between mountain sides, 1,600 feet high.

Represented in 90 percent of all industries, its more than 12,000 factories employ 323 classifications of labor. The State ranks first in the United States in dollar value of chemical products and has many laboratories for physical and chemical research. Important are electrical machinery, food products, textile products, apparel, transportation equipment, primary metal industries; petroleum and coal products, fabricated metal products.

Chief crops are corn, peppers, asparagus, beets, eggplant, lima beans, and potatoes. The principal fruits are apples, blueberries, cranberries, cherries, grapes, peaches, raspberries, and strawberries. New Jersey holds high rank in the poultry industry, dairying and the processing of vegetables, especially tomatoes. The first dairy cattle artificial insemination project in America was launched in Hunterdon County; also the common-carrier shipment of day-old baby chicks, now a multi-million-dollar business nationally.

Among New Jersey's institutions of higher learning are: 4 universities, including Princeton and Rutgers, the State university; the Institute for Advanced Study; 26 colleges; 8 professional and technological colleges.

Atlantic City, Ocean City, Cape May, Asbury Park, Ocean Grove, Wildwood, attract hundreds of thousands each year. There are 23 State parks with almost 27,000 acres, 11 State forests with more than 150,000 acres.

New Jersey's many points of historic and scenic interest include the Palisades, massive vertical wall of rock rising more than 500 feet above the Hudson River; Morristown National Historical Park, General Washington's winter camp site.

The State's network of modern highways has the highest ratio of multilane mileage in the Nation. Included are the 118-mile New Jersey Turnpike, Garden State Parkway (165 miles, Paramus to Cape May), Newark had the first great air terminal in the United States.

Chief railways: Pennsylvania, Lackawanna, Jersey Central, Erie, Lehigh, West Shore, B. & O., Reading.

New Technique for Water Supply Meets Strict Requirements

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. REECE of Tennessee. Mr. Speaker, an article in the magazine The Plant entitled "New Technique for Water Supply Meets Strict Requirements" has come to my attention.

The problem of water supplies has been given much attention in recent years due to seasonal local shortages and regional droughts. These conditions, together with increasing calls for more water, point up the fact that water is not in unlimited supply.

In light of these conditions, it is most encouraging to note any well-planned effort on the part of a regional group, a community, or an industry to make more intelligent use of water supplies.

This article tells clearly how the Flick-Reedy Corp. is building just west of Chicago a plant which will provide its own water supplies from the rain that falls on its land. This firm's thoughtful solution to the water problem should be brought to the attention of all industrial firms which are planning new plants or replacement programs in the period ahead.

The article follows:

NEW TECHNIQUE FOR WATER SUPPLY MEETS STRICT REQUIREMENTS

All water needed for air conditioning and other industrial purposes at the new $2,300,000 metal-fabricating plant nearing completion at Bensenville, Ill., for the Flick-Reedy Corp., well-known manufacturer of industrial air and hydraulic cylinders, will be drawn from manmade lagoons. This completely internal system for supplying process water is unique in that it is independent of any outside source of supply and will rely upon nature and an effective means of collection to keep sufficient water in the storage reservoirs. The system provides up to 18,000 gallons of water per hour for the plant's designed level of operation. Esti-

mated cost of water is only one-half cent per thousand gallons.

As finally evolved, the system is comprised of two supply lagoons, which overflow into a sanitary lagoon. Excavated from the heavy soil of the plant site, each supply reservoir is 75 feet wide, 600 feet long, and has an average depth of 5 feet. Maximum capacity is 1,800,000 gallons per lagoon.

The lagoons are supplied by rainwater collected from the 5-acre roof area of the 220,000-square-foot plant and from 5 acres of paved parking areas. Each inch of rainfall (annual rainfall in Illinois is approximately 37 inches) results in a potential 10-inch rise in the storage ponds * * * or 280,000 gallons of water. Since rainwater is soft, no treatment is needed before use in the plant's processes.

Water for clean operations, such as cooling and heat treating, will, be returned directly to the lagoons after it has served its purpose. However, water for such operations as ferric oxide plating will not be returned immediately but first passed through several phases of treatment.

Upon discharge from the plant, the contaminated water will be transferred to a halding tank, retailed for a short period while sediment and heavy wastes fall to the bottom, and chemically neutralized. Next it will move to a small aerator-type sewerage unit and after treatment flow to the sanitary lagoon.

Water for drinking and other personal use is drawn from a deep well on the plant site; thus no dependence is placed on municipal supplies.

Smashing through the water barrier by means of an internal water system meant much to DuPage County as well as to the company. The Flick-Reedy plant is the first manufacturing facility to go up in 20 years in an area expected to accommodate much of Chicago's future industrial growth (Bensenville is about 15 miles northwest of Chicago's Loop). In seeking an orderly industrial development and thereby avoiding the staggering difficulties encountered in some communities which have grown without proper planning, county officials have adopted a strict water-conservation program which gives consideration to water tables, drainage and flood control, and to demands on water-producing and sewerage facilities.

Mr. Sweeney's Rare Idea

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 31, 1958

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Indianapolis Times:

MR. SWEENEY'S RARE IDEA

We don't know Mr. James C. Sweeney, 7701 West Chester Pike, Upper Darby, Pa. Know nothing about him, either.

But Mr. Sweeney has sent us a novel idea—an idea practically no one has mentioned in years and years. In the whipped-up recession excitement of current Washington, it is, indeed, unmentionable.

All Mr. Sweeney has in mind is this: Each year when the Federal budget is made up, put a little something in the pot to pay on the debt. Amortization is the word—a common practice in business, and even among State and local governments. But in Washington it sounds as strange as a cussword in Polynesian.

Mr. Sweeney has figured out that if we were to amortize the debt by A. D. 2000 it would take around $11.4 billion a year for interest and payment on the principal. Which means it could cost us nearly $500 billion to get rid of it.

If we should take another 50 years, the annual interest and principal payments would run about $8.8 billion—and the total cost by A. D. 2050 would exceed $826 billion.

Stretching it out until A. D. 2100 would cost a little less per year—$8.4 billion, roughly—but the ultimate cost would be $1.2 trillion.

All this, of course, Mr. Sweeney figures on the theory that we start paring down the debt from its present height of $275 billion—instead of heaven knows what it will be in a few more years—and that we keep up the payments year after year, the same as any one (except Uncle Sam) deals with a fixed charge.

The alternative, and present course, is to go on paying interest of about $8 billion a year forever—until 2000, 2050, 2100, 2601, always. And for that what do we get? Debt never paid off.

What we are paying out in interest each year, as Mr. Sweeney points out, would soon pay off the debt if these sums were applied to the principal. But interest paid on a debt which never is reduced, as he gently puts it, "is virtually money wasted."

Taxpayer money.

Postmaster North, 67, Retires With Plaudits

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. CANFIELD. Mr. Speaker, I have always admired Mr. Roy M. North who retired last Tuesday as our National Capital City's postmaster after a distinguished career in the postal service which saw him begin as a railway mail clerk in his native Georgia and later become an Assistant Postmaster General.

Well do I recall the presentations of Mr. North when he appeared before our House subcommittee handling Treasury Department and Post Office Department funds. This was back in the 80th Congress and I was then the subcommittee's chairman. Mr. North greatly impressed me by his obvious sincerity and his knowledge of postal operations. Serving as Washington's postmaster in recent years, he has turned in an outstanding performance and I was pleased to read the story appearing in Tuesday's issue of the Washington Evening Star, captioned "Postmaster North, 67, Retires With Plaudits."

The Star article follows:

POSTMASTER NORTH, 67, RETIRES WITH PLAUDITS

Roy M. North, 67, Washington's postmaster since 1949, retired today with plaudits from two Federal officials for his 48 years of postal service.

His own boss, Postmaster General Summerfield, and J. Edgar Hoover, Director of the Federal Bureau of Investigation, commended him for his work. Since 1953, it has dealt in part with experiments that may revolutionize the Nation's mail delivery.

The biggest single need in the postal service, he declared, is a perfected machine to sort the mail within the post office.

"There is a need to eliminate a lot of manual labor," the husky, gentle voiced postmaster said. "And the way the post offices are expanding, I'm sure it wouldn't cause anybody to lose his job."

WILL BE ON CAPITOL HILL

Mr. North isn't retiring from active work.

"I wouldn't be satisfied doing nothing," he said.

Instead, he will become the legislative representative for the National Association of Postmasters, and will spend much of his time lobbying on Capitol Hill.

The Georgia-born postmaster started his career as a railway mail clerk, and was commissioned as a postal inspector in 1915. He drew national acclaim in the early twenties for helping to solve a $2 million train robbery at Wittenburg, Mo.

He was appointed Deputy Third Assistant Postmaster of the United States in 1933 by President Roosevelt, who became a close friend. President Truman named Mr. North, a Democrat, to his past position.

HASN'T TAKEN ALL OF LEAVE

"I think I've given the Government its money's worth," he said. "I've taken only about one third of my annual leave, worked about 50 hours a week and have 2,100 hours of sick leave unused. A lot of my time has been spent in working with experimental machines and techniques being tested in the Washington Post Office."

Mr. North says he will now have more time to spend with his wife at home, 2501 Calvert Street, NW. But, he admits, he will have to be mightly careful about it.

"Women don't generally want you under their feet," he asserted. "And there's always a chance they'll catch you with an unmailed letter in your pocket."

The Place of the Church-Related Colleges in America Today

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 5, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in RECORD, I include the following address given last fall by Dr. Kevin McCann, president of the Defiance College, Defiance, Ohio. President McCann is perhaps better known as the author of the official biography of President Eisenhower, having served on the general's staff in Europe during the war, and on the President's staff in the White House.

With all the current discussion and reappraisal of our educational institutions and standards, it is important to read this analysis of what our country needs and can receive from the church-related college—and what the church-related college needs and ought to receive in understanding and support from our country.

WHY THE CHURCH-RELATED COLLEGE TODAY?

(Address by Kevin McCann, president of the Defiance College, Defiance, Ohio, at Hartwick College, Oneonta, N. Y., on Founder's Day, October 3, 1957)

If at the outset I may be permitted a personal profession of commitment, I would

say that I am president of a church-related college because in no other human enterprise can I see a like opportunity for stewardship:

Stewardship that is an acknowledgment and partial payment, at least, of the debt each of us owes the Republic and the men and women, our forebears in blood and in spirit, who built it.

Stewardship that is an active effort to help one's own generation to preserve, expand and pass on a glorious heritage, a little strengthened, a little magnified because we have lived.

Stewardship that is a recognition that none of us can hope to win salvation if concerned only with the treasures of earth and the service of self.

More pointedly, in this age when all the peoples of the world hunger for a creative peace and a decent fellowship among men, I most firmly believe the colleges of religious faith—Jewish and Catholic and Protestant—have a stirring and effective answer to the paramount question before us:

How can this Nation, under God, as successfully wage the peace as it has waged war?

Here is a question to excite, to inflame, to inspire all of us; a question imbrued with the blood of those many thousands who died far from home that we, their fellow Americans—so comfortable, so prosperous, so sure of ourselves—might have the freedom and the will and the enduring courage to wage the peace they did not live to enjoy.

To answer it is so fraught with blessing that none of us can excuse his silence by claiming that to speak out would be an effrontery or an immodesty.

In that light I shall attempt, as a church-related college president, to sketch for you my own version of the answer. But first we of these colleges must face the fact that, though our friends may be legion, our mission as institutions of learning and education is seldom fully understood—sometimes not by ourselves.

Science is now preponderant in its influence on the affairs of men and nations. The liberal arts are often reduced to reading courses and discussion groups. Financial resources measure the repute of a school. Religion in many places is a search for the lowest common denominator of natural reason unaided by revelation. In such circumstances, we of the church-related college—before all else, certainly before we propose answers to questions of great moment—must justify our existence to others and to ourselves.

We cannot justify it because our graduates through many decades were builders of the Republic and missionaries around the earth. For every evidence of greatness we adduce, a comparable instance of narrowness and selfishness can be raised up from the past. And the balance sheet might be a standoff of good and not-so-good.

We do not contribute to the Nation and to the world solely because the religious spirit of our students is fostered and religious activities are a college concern. Many State universities would put to shame many church-related colleges were it possible accurately to compare, one beside the other, the intensity of religious spirit and the integrity of religious activities on their several campuses.

Nor can we demonstrate a unique capacity to shape the future merely by the statement that, compared to other schools, our facilities are as good, our faculties as wise and knowledgeable, our student bodies as alert and—because we are, almost all of us, very small—the immediate interplay of minds and personalities produces better educated men and women. Our smallness, like our comparative poverty, is a quality most of us wish we were rid of. In any case the largest college or university is just as small and the teacher-student relationship just as close as a single classroom on the campus. Moreover great teaching does not diminish in quality because those who share it increase in number.

We can justify our existence only when we recognize that we, as colleges, were born out of faith in God, the Creator of men and of things, the source of human worth and dignity, revealed to us in only one book, and that we were given by those who founded us the mission of speaking the faith and of interpreting by its light all that pertains to the conduct of life, from a crisis in one soul to a crisis in world politics.

Secular skills and knowledge and wisdom are within our domain as centers of learning. We seek for our students command and eminence in them. We reject naught of the world that may be of profit and worth to those who must live in the world. But we are colleges of the book and the revealed word. And therefore we—the Christian colleges—must view all things and all men in the shadow of Christ crucified, in the glory of Christ arisen. Therein lies our uniqueness. There is the badge that distinguishes us.

Today we honor the founder of such a college tradition. To him the war for independence was a current event. The Republic was an experiment; the Constitution untried; the continent a wilderness beyond the Alleghenies. On this occasion then a review of the Nation's history since his day might seem a proper theme for a speaker. Certainly the story of America should be an inexhaustible mine of inspiration to those who doubt the present or fear the future.

Today however those who doubt and fear can instantly retort: "Things are not now what they have been before; history has lost its pointedness of example and precedent; the old saws and adages, proverbs, principles, purposes are null and void; man at long last possesses the power to destroy mankind."

Such retort is for us, both of the Jewish synagogues and of the Christian churches, the latest damnation of our faith as foolishness. Not God, as we have believed, but men—insanely arrogant or stupid or criminal men—can write finis to what we have called His creation and His children made in His image. What merit, what value or refuge in a creator who cannot sustain his creation against the wilfulness of created men?

That question, if not blasphemy, is nonsense. We know our world will not perish utterly in a nuclear holocaust nor humanity be blotted out by blast and radiation because a tiny few might seem to have that power within their control. Although common sense may be silent, faith will cry out that God will not permit such an end to the world.

Nevertheless we read with apparent avidity the most dire prophesies of doom. We immerse ourselves in a frantic whirl of getting and spending that indicates we live only for today because subconsciously we expect tomorrow to be the blank after the blast. We realize that this is an age of explosiveness in the physical areas of human living, in the manifold patterns of human thinking and feeling. But in our country at this moment we seem to rest in a trough of inertia about personal responsibility, about free cooperative action, about the challenges that confront us as individuals and churches and church-related colleges.

In this year of 1957, to every problem that extends beyond immediate personal advantage or hurt, the almost universal reaction seems to be: That is the Government's job.

Such a reaction should be just as much nonsense to one who believes as the nonsense that the destiny of mankind, no longer within the providence of God, is now at the whim and sufferance of a few men. For us of this Republic, Government is the servant of the Nation's high purposes, not a trash can for abandoned privileges and responsibilities and duties.

Government, for instance, waged the Second World War most successfully only because Government was the focusing agent of a united people's will to win. Whatever the cost might be to all of them or to any of them. Government cannot as successfully wage the peace today because once-united people have straggled and dispersed and even fled the field.

That is a blanket indictment, to be sure; and not completely true. Battalions and regiments still labor in the battle for men's loyalties and friendship. And one man, at least, who 2 years ago at Geneva melted the glacial ice of the cold war, still works tirelessly for peace. Such genius and wisdom and faith as his cannot go unrewarded. But first the American people must rejoin the campaign as a united people, moved by a passionate conviction that here is a job to be done, far more important than the pursuit of new comfort and ostentatious show.

Government can only marshall money and talents and machines. Propaganda cannot arouse the will to sacrifice and to persevere. Propaganda can only inflame the emotions when the will is already committed.

The promise of rewards in more trade, in more money, in more leisure cannot ignite an unquenchable zeal and a hard determination in the minds of the people. Such a promise may move some, but the many know firmly and deeply that the history of secular promise is a history of delusion and vain hopes.

Only conviction—a conviction that is explosive in times of immediate crisis, a conviction that endures through the distractions and cares of daily life, a conviction that is ever dynamic and creative—can arouse a people to unity of action and sustain them in it. To such conviction, a church-related college can contribute mightily.

Is that part of the college mission? For that matter—and after all this talk—what is the mission of the church-related college?

Certainly, and not in least part, its mission is denominational—to preserve the traditions of its constituency, to support with reason and with knowledge the faith of its churches, to fortify and expand and inspire its denominational fellowship. Such a purpose is worthy and valid.

In all the anxious searching for a more visible unity among those who accept the gospel of Christ, let us always remember that the present separations and differences among us were rather born in agonized searching of soul and conscience, rather maintained in the courage of martyrs and the constancy of self-effacing witnesses, than begotten of greed for power or nourished in command of power.

To forget that fact is to erase noble areas from our heritage and to guarantee new anguish in their restoration—for restored they will be, or we shall end up with churches whose boast will be that they are nonsectarian as a supermarket.

But the mission of the church-related college extends beyond the cares of its denomination into a mission that is universal: the teaching and the study and the propagation of truths that for us of the Christian faith are keys to the Kingdom; that for all men give significance and meaning to life.

These truths—enunciated by the prophets of Israel, enriched and clarified along the Sea of Galilee, in the villages of Judeau and in the holy places of Jerusalem, preached thereafter to all men and all nations—are not a monopoly of the church-related college. At the heart of Western civilization and integral of the American heritage, they are shared by men and women and children of all the continents. They are the possession of the scholarly and the illiterate, the poor and the prosperous, the prudent and

steady, the volatile and erratic. And through the ages they have been a mightier force for peace on earth, for justice and mercy among men, than all the arms and money and treaties of empires.

To a church-related college, the profession and practice of these truths is of first importance because only in their light and in their full acceptance can the arts and sciences be applied for the whole good of the whole man—divine in his origin, divine in his aspirations, divine in his destiny. And in their application to the affairs of the day lies the answer to the question: "How can this Nation, under God, as successfully wage the peace as it has waged war?"

What are these truths?

For all of us they are much the same in number. But for each of us certain among them stand forth in special aptness to a momentous question or a tangled problem. I hope you will allow me to pick out six truths that seem to me essential to the answering of this one question about the waging of the peace. Fundamental to all, I would say, is:

The frailty of man in his works and ways. The just man falls many times a day. The just nation is a bewildering confusion of idealism preached and crimes against idealism practiced. But in all men and in all peoples there is an eternal compulsion to do justice and to do good. That compulsion, not rooted in the policies of government or in the painfully contrived philosophies of men, is an insistent force within the human conscience, distinguishing man from the beast, arming the individual man with a strength that overrides all temporal power. And consequently the second of these truths concerns:

The supremacy of conscience. No human authority, external to individual man, can impose upon him a serfdom of will or mind, if the authority hopes long to endure. In all the history of mankind that we can read clearly, no earthly power has won final victory over a dedicated conscience. Supreme in its authority, conscience is supreme too in its efficacy when the contest is between good and evil, between justice for men and the debasement of men, between peace and fruitless strife. Inseparable therefore from the frailty of men and the supremacy of conscience is a third truth.

The purposefulness of living. Men's frailties and the world's tyrannies between them may sometimes make of human living an apparently hopeless pattern of goodness forever compromised and evil often triumphant. But recognizing that we do not live for today or this year or this decade alone, hearing all about us the ceaseless call of many consciences and witnessing the ceaseless response to those calls, we can see the guiding hand of a provident God in the history of men and of nations. Of course what we believe good and holy may be banished from this place or that, for a few years or for many. But in dungeon or hiding place, on the field of battle or on the mountain tops of public view, there will be those, careless of self and even of life, who will not permit such banishment to last. And on this fact hinges a fourth truth:

The inescapability of sacrifice. The vanity of a generation, the insanity of its self-delusion, is measured by its confidence that ways have been devised to make the course of life a journey of ease, free from pain and sorrow and danger. We may extend the expectancy of life for that fictitious being the average man. We may gild and upholster and plate with chrome the surroundings of that hapless creature the common man. But even as the ancient Greeks, we must not envy any man while he lives nor call any man happy until he dies; for all their days all men without exception walk in the valley of the shadow of death and their constant companion is imminent misfortune. As we all walk in the same valley, we all live within a common kinship, for another of these truths is:

The brotherhood of man under God. Not just a humanistic sentiment or a theological deduction, this is a physical fact, intensified and elevated for us by all the teachings of our faith from the stern words written by a prophet of God—"whoso sheddeth man's blood, by man shall his blood be shed; for in the image of God created He man"—to those warm words spoken by the Son of God—"Judge not that ye be not judged * * * By this sign shall men know that ye are my disciples that ye love one another." In our frailties we may come to abhor or to condemn individuals, even to attempt their destruction. But unless we ever seek a sympathetic understanding of all peoples, our faith is a lie and our practices as individuals, our policies as a nation, are futile.

Finally, we who strive to follow the Christ are of all men the most senseless unless this is for us the highest of all truths:

The end of man is God. In all the wisdom of the philosophers, in all the works of the scientists, in all the prizes of secular and temporal achievement, there is still no answer to: "What doth it profit a man if he gain the whole world * * *?"

These 6 are not worn out platitudes, although my wording of them may be tired and worn. They are not tedious and solemn cautions, although my presentation may be without lustre and fire. They are keys to a reward beyond the ravages of rust and moth and thief.

In their practice man can win a glimpse of glory before death and enjoy a foretaste of a greater happiness; rising above his own frailty even as he forgives a like frailty in his fellow man; sharpening and heeding his conscience that he may be powerful for good; strengthened amidst reverses and disasters by his trust in the providence of a Heavenly Father; courageous in sacrifice as he was redeemed by sacrifice and born in sacrifice; unaffrighted by the armies of evil since he is joined in a vaster and mightier brotherhood; adventuresome and persevering to win a goal not limited like the finite world nor expressed in its transitory rewards.

Here is the answer to that paramount question: How can this Nation, under God, as successfully wage the peace as it has waged war?

A nation without patience and forbearance and pity toward frailty will bog down in frustration and cynicism. A nation without a higher respect for the commands of conscience than for the demands of expediency will be trapped in opportunism. A nation without dedication to the pursuit of the ideal will degenerate into compromise with whatever chance and circumstance make possible. A nation without decent regard for the dignity of all men—beginning with the least of its own citizens—will win no more than sullen fear or grudging silence. A nation without faith that man is divine in his destiny will find its own destiny, when challenged mortally, is defeat, ruin, extinction.

A nation accepting religious truths as its political guideposts, committed to them and observing them out of conviction, may seem a hopeless dream. But this Republic through generations has been for hundreds of millions a hopeless dream realized. We won a high place in the hearts and minds of men everywhere, unique in history, not because this Nation was a mighty hurler of mass death or a headlong dispenser of subsidy and bribe or a tireless merchant of golden promise and attractive word, but because—imperfectly, of course, yet steadily and often in high dedication—it sought the realization of divine truths as a way of life.

We have not changed. We still so seek. To much of the world however we seem to have become engaged with an adversary on fields of his choosing: In a race of arms, in a contest of spending, in a war of propaganda. Thus preoccupied we seem to forget that our greatness as a nation has been our way of life, our approach to the problems of human life, our faith in God and in the efficacy of His eternal truths.

Armed we must be and better armed than any enemy. Sound spenders we must be if our friends are to rise strong and healthy out of weakness. Heralds of fact we must be or our cause will be lost in a ceaseless smother of lies. And government must have our wholehearted support in those rules that can be effectively discharged only by government.

But our way of life, our approach to the problems of human life, our faith in God and in the efficacy of His eternal truths—in these we as individuals and as groups of individuals are the doers and the witnesses and the missionaries.

The practice of all these I find more perfectly exemplified on the campuses of religious faith than anywhere else in all this land. I find in a college such as this a great voice and a treasury of zeal that can recall the Nation to a purposeful unity under God for the better achievement of His truths.

I suggest no new organization for the defense or the practice or the propagation of the word. But had I a voice that could penetrate into every college born of faith in God, I would cry out: "Let us every day and every moment of every day remember that we have a higher mission than secular concern."

In these days of godless conspiracy to enslave and deprave, that mission requires of us fullness of service to God as ever and, more sharply than ever, a fullness of citizenship.

America is no Caesar. America is ourselves. American strength and wealth and position are in our spirit, in our minds, in our conscience. Not a secular concern, American citizenship in its fullness is the practice of religious truth and its fullest possible practice is a religious duty.

Few in this world of rampant secularism and materialism will agree to that statement, you may retort. But we do; certainly we should. And we are not few.

As colleges we are numbered in the hundreds; we are rich and strong in the experience of years, in the intellect and genius of our facilities, in the fire and enthusiasm of our students—rich and strong and potent and creative because we have an inspiration and a commitment that is eternal and universal.

And behind us, supporting us, asking of us only leadership, are the tens of millions of men and women of the synagogues and churches of America. Whatever their differences, they are one in their faith in God the Father who created man in his image that he might do justice and love mercy and walk humbly and thereby enjoy in peace the good things of this world.

We who have met so many challenges and wrought so many triumphs out of misfortune and disaster will not fail in leadership now. We do have the answer how this nation, under God, will as successfully wage the peace as it has waged war. We cannot stand silent or we betray our faith and our mission. And that, I am firmly convinced, will not come to pass. We will speak out and this land, this world, will be the better for our witness.

The Seventh United States Army

EXTENSION OF REMARKS
OF

HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. FEIGHAN. Mr. Speaker, last November, in the course of an inspection trip on behalf of the Committee on the Judiciary, I had the opportunity to visit and see firsthand, the fine work being done by the Seventh United States Army in Germany. It was my pleasure to meet the commanding officer, Lt. Gen. Bruce C. Clarke, at his headquarters, and to observe some of the work being done by the Seventh Army. It is important for the American people to know about the high type of leadership that is being given to Amercan soldiers abroad who today form the frontline of defense of the human freedoms we Americans so cherish. All too frequently the impression is given that the life of the American soldier abroad is an easy one and that our military commanders are not always conscious of the need for economy together with maximum preparation for any eventualities. I found the situation in the Seventh Army adverse to any such impression. From the commanding officer on down to his staff, I found a healthy spirit reflecting the need for economy and maximum efficiency, together with a well-planned program to maintain good relations with the German people during these difficult days when it is necessary for the military of the United States not only to defend our own interests, but to provide a shield of protection for other free people.

General Clark has prepared a summary of activities of the Seventh Army for the calendar year of 1957 which reflects great credit on him and on the officers and men under his command. I believe this report will be of real interest to the American people. Under leave obtained, I insert it in the RECORD:

SEVENTH UNITED STATES ARMY—SUMMARY OF ACTIVITIES, 1957

(By Bruce C. Clarke, lieutenant general, U. S. Army, commanding)

As we of the Seventh Army witness the close of another eventful year and as we continue to carry out our important tasks in many areas of Western Germany, I will review briefly the major accomplishments that have marked the progress of the command during these past 12 months.

Nearly every member of the Seventh Army was associated in some manner, either directly or indirectly, in the vast program of modernization undertaken during 1957. The Seventh United States Army set the pace for the United States Army in the evolution from a World War II organizational structure into the streamlined and highly mobile combat force we now possess. All major fighting elements of this command completed the conversion to the Pentomic or other new concepts in record time and during the process suffered no significant loss of combat effectiveness. I extend my congratulations and appreciation to all of you whose efforts have contributed to the success of this history-making operation.

In addition to reorganizing, Seventh Army continued to receive and release many units under Operation Gyroscope. At the present time 70 percent of the Seventh Army is participating in this program. In connection with Gyroscope operations, we have completed recently a restationing program, initiated to balance properly our tactical units along the critical east-west border. This 3-way switch of units involved the 2d and 4th Armored Divisions and the 8th Infantry Division.

Our training facilities and training emphasis have continued to keep pace with our increased responsibilities. Training areas have been improved greatly with the addition of realistic combat courses and firing ranges designed to coordinate further the tank-infantry-artillery fighting teams. Army training tests have been revised to insure a uniform standard of proficiency for the reorganized tactical units. Although training requirements have been increased and proficiency goals raised, 88 percent of all units tested during 1957 attained ratings of superior or excellent. During 1957, no battalion or battle-group-sized unit has failed an Army training test. During the past year, 18,418 Seventh Army soldiers were graduated from USAREUR and Seventh Army school courses; and, with its 8th year of operation completed, the Seventh Army Noncommissioned Officers Academy has graduated 33,665 highly trained noncommissioned officers. The value of this fine school is evidenced by the adoption this year of its salient features by the Department of the Army as the basis for training all noncommissioned officers. The 5 division academies have added significantly to this output of fine noncommissioned officers.

Ranger and night training has been stepped up. A program for infantrymen to qualify for the coveted expert infantry badge has been stressed.

The vital marksmanship program has made great strides during these past months. A total of 1,620 soldiers competed in small arms matches at Seventh Army and higher level, with 523 awards being presented to participants. In our program to qualify every rifleman as a sharpshooter or better, we have been about 75 percent successful. In addition, an energized automatic rifle marksmanship program was instituted to increase the combat effectiveness of rifle squads and to raise the proficiency of Seventh Army Le Clerc Teams. In the family of larger weapons, several thousand tank crew members fired during the annual tank-gunnery program. An outstanding 87 percent qualified as expert gunners in this training during 1957 as compared to 74.6 percent in the preceding year. In the artillery and missile fields, significant progress has been made in gunnery. Averages are well above the previous year.

A continuing program is underway to insure that maximum time is allotted our combat leaders, particularly at company level, for the actual field training and combat development of their units. One means of effecting this has been to reduce to a minimum the cumbersome administrative loads formerly carried by the smaller tactical organization. The establishment of a unit administrative center and the consolidation of supply records at battle group, battalion and equivalent level has not only improved the quality of administrative actions, but has permitted the company and battery commanders to get away from their desks and lead their units. Consolidation of unit fund activities at battalion or battle group level has been very successful.

In the field of supply and logistics we have made substantial progress and plans are now nearly perfected to coordinate further these activities in the Army rear areas through a Seventh United States Army support command.

Every practical assistance has been given to the growing German Army. A great many personnel from other NATO nations and from other MAP nations have visited and observed our units in training and in field exercises.

Our status of combat readiness has remained at a very high level.

The many accomplishments realized during the past year are particularly noteworthy when viewed in the light of imposed budgetary limitations. Implementation of a quarterly review and analysis of Seventh Army's programed objectives has been most helpful in stimulating prior planning, objective thinking and an analytical review of activities. These studies have contributed greatly to our policy of receiving maximum returns for each dollar spent. I am sure that I need to say no more about the "belt-tightening" which each tactical and technical service has experienced during the recent months. We have accomplished the requirements placed on us by a high order of economy and improved management.

I would like to discuss now some of the outstanding achievements which can be attributed directly to the cumulative and combined efforts of all personnel. Good advances are continuing in the field of German-American relationships. We would not be enjoying this valuable association if it were not for the sincere friendliness and helpfulness extended to the German people by each of you. While furthering this worthy cause, all members of Seventh Army can view with pride the results of their disciplined safety habits. Army motor vehicle accidents decreased by 9 percent and fatalities from such accidents were 30 percent lower than last year. In addition, there were 15 percent fewer military injuries which means 1,200 fewer disabled soldiers. Total property loss, including fire damage, decreased by 10 percent over 1956 for a monetary savings of $250,000. While the members of this command were contributing $366,370 to the 4 major charity campaigns conducted in 1957, more than $6 million were being placed in soldiers' deposits. In November, the number participating in a formal savings program reached 56 percent, for an alltime high.

During 1957, 15,000 members of Seventh Army participated successfully in the educational program at all levels of schooling. These individuals have made not only a valuable contribution to their personal future, but have increased their worth to the service. In many instances, this increased individual proficiency was rewarded with advancements in grade. Since the end of 1956, Seventh Army received and reallocated 43,785 enlisted promotion spaces.

The increasingly careful observations conducted by inspector general teams throughout the command have disclosed marked improvements in our many fields of activity. In those instances where deficiencies have been noted, the constructive guidance presented by the inspectors has been utilized most effectively by commanders at all levels. By this prompt action, many potential pitfalls and actions detrimental to efficiency have been eliminated. In this regard, an accomplishment of major importance was the decrease in serious crimes among Seventh Army personnel. While the worldwide incidence of crime increased, the crime rate in the Seventh Army decreased from an average monthly rate of 1.13 per thousand in 1956 to a rate of 0.83 per thousand, this past year.

I point out, also, that the fine results realized from improved preventive maintenance procedures are reflected clearly in the reports I receive from our command maintenance inspection and spot check teams. The highly serviceable condition of our equipment is especially gratifying when you consider that many of the items of equipment continue to receive hard field usage, and, of course, in many cases the items have seen long service.

The Seventh Army athletic program for 1957 included participation by 101,500 individuals in the 14 separate sports activities which were viewed by approximately 2,534,000 spectators. Emphasis on carrying on sports at lower unit levels insofar as practicable have produced beneficial results. This field of endeavor also played an important role in the enhancement of community relations, in that 843 contests were participated in jointly by German and Seventh Army personnel. An estimated 342,000 spectators, mostly German, were attracted to these events.

I am very pleased to note that the overall health of the command continued to improve during 1957. With the exception of our minor bout with Asiatic influenza, a marked decrease was registered in the occurrence of other types of diseases. Let us all hope this happy situation continues.

Finally, I wish to point out that changes have been made in Seventh Army Headquarters to enable it to handle expeditiously a modern field army geared to the atomic age. Some reductions have been made. Staff and command procedures have been streamlined to eliminate command and staff inertia.

Again, my congratulations are offered to each of you for the outstanding advances you have made in your many areas of great responsibility. The Seventh Army has achieved a high order of professionalism in all areas of endeavor. I urge you to face with confidence and faith the new problems which will confront the United States Seventh Army during 1958. My confidence in you to meet and solve these is unbounded.

I wish you and the members of your command a healthy and a peaceful new year.

Retired Officers Endorse H. R. 689

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. HUDDLESTON. Mr. Speaker, it is with a deep sense of responsibility and grave concern that I again call attention to the sound principle of equalization of rights and benefits for personnel of the Reserve components of our Armed Forces as compared with those of the Regular components. As the Members are aware, I have spoken out in support of this principle many times in the past.

Since I am convinced that the long-established intent of Congress is to grant equal treatment to Regulars and Reserves, I have introduced clarifying legislation, H. R. 689, which is a companion measure to S. 1085, introduced by Senators SPARKMAN and JACKSON. The purpose of this legislation is not to enact a new law or extend the provisions of the present law but merely to affirm and effectuate the congressional intent to equalize the treatment accorded Regulars and Reserves under similar circumstances.

Numerous organizations having World War I officers in their ranks have endorsed this legislation. Endorsement has come at the local, States, regional, and national level. As representative of the hundreds of endorsements for this meritorious legislation, and under leave heretofore granted, I am pleased to insert a resolution adopted by the Heart of America Chapter of the Retired Officers Association of Kansas City, Mo., on February 1, 1958:

Whereas the Heart of America Chapter of the Retired Officers Association of Kansas City, Mo., has always supported the principle of equalization of rights and benefits, including retirement rights, for personnel of the Reserve components of the Armed Forces as compared with Regular personnel of these services, and as between the Services themselves; and

Whereas such equalization is not only in the interest of justice and fair play, but by force of example encourages participation of younger personnel in the National Defense, maintains the active and favorable interest of older Reservists, and promotes a high moral among those engaged in the national defense; and

Whereas it has long been the declared intent of Congress to grant equal treatment to Regulars and Reserves, as evidenced by legislation through the years, including the original Selective Service Act, such equalization being also one of the major declared purposes of the Army and Air Force Vitalization and Retirement Equalization Act of 1948 (Public Law 810, 80th Cong.) and of the Career Compensation Act of 1949 (Public Law 351, 81st Cong.): Therefore, be it

Resolved by the Heart of America Chapter of the Retired Officers Association of Kansas City, Mo., in a called meeting assembled in Kansas City, Mo., February 1, 1958. That the Congress pass clarifying legislation as proposed in Senate bill 1085 and House bill 689 so that Regular and Reserve officers will be accorded equal treatment with particular reference to retirement benefits and that we urge our United States Senators and the Representatives from this area to support the above mentioned bills, S. 1085 and H. R. 689.

KENNETH MARTIN,
Secretary.

Russian Betrayal of Polish Underground Is Recalled

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Washington Post, Wednesday, April 2, 1958, written by Stefan Korbonski, who was chief of civilian resistance in the Polish wartime underground, and which recalls a tragic series of events which transpired in Poland in the spring of 1945:

I REMEMBER EASTER—RUSSIAN BETRAYAL OF POLISH UNDERGROUND IS RECALLED

(Fourth of a series)

(Stefan Korbonski was chief of civilian resistance in the Polish wartime underground. He also directed, with his wife Zofia as his chief cipher officer, the secret radio communication with the Polish government-in-exile in London. In April 1945, he was appointed chief of the Polish underground. He was arrested by the Russian NKVD, later released and then fled with his wife to Sweden. He is vice chairman of the Assembly of Captive European Nations and the author of Fighting Warsaw. His wife is with Voice of America.)

(By Stefan Korbonski)

All through the grim years of the German occupation of Poland and our work with the underground, my wife Zofia and I had looked forward to the first Easter we would celebrate with our friends when our country was liberated. It became a symbol of hope to us.

But as events turned out, that first postwar Easter in 1945 proved to be the most tragic time of my life.

A few days earlier, on March 28, I had stayed behind while other leaders of the Polish underground drove to a deserted villa at Proszkow, near Warsaw, for secret talks with a certain General Ivanov. He had been identified only as a personal representative of Russian Marshal Zhukov.

The Polish delegation was headed by Jan Jankowski, the underground vice premier. It included Kazimierz Puzak, president of the Polish underground Parliament, and Gen. Leopold Okulicki, commander-in-chief of the Polish underground army.

The Russians had invited our underground leaders to a conference on two major points: One, the situation arising from the continued occupation of Poland by the Red army and Soviet authorities more than 6 months after the first Russian military units had entered the country; two, the indisputable fact that the Polish underground government still remained underground.

There had been reason enough for the caution of the underground leaders. As the Russians moved across Poland, our guerrillas reported the Russians first put on a display of friendliness, but then ordered the partisan officers to dissolve their units and become integrated into Communist units. When they refused, they and underground officers were disarmed and arrested.

The Russians had guaranteed complete safety and immunity to the Polish underground delegates to the Pruszkow conference. But Vice Premier Jankowski asked me to stay behind. Since I was secretary of the interior in the underground government, and chief of radio communication with the Polish government in exile in London, Jankowski thought it was essential for me to keep London informed of the proceedings of this parley, which the Russians insisted must be held in secret.

Several days passed.

Then our intelligence reported that mysterious cars had left the villa. Although I suspected strongly now that the invitation had been a trap, I hesitated in alarming London, for fear of endangering both the delegates and the talks. We assumed the talks might last several days and I decided to wait until Easter Sunday before taking definite action.

Meanwhile, I followed Jankowski's warning to go deeper into hiding with my wife. We waited out the approaching Easter holiday with anxiety and fear in an isolated hut in the country. Easter has always been a very important holiday for us in Poland and if the delegates failed to return home by then, it would mean they had been arrested. We waited in vain.

Early on Easter Sunday, I notified London by secret code of the Russians' treachery.

Then, desperate to forget for a few hours our feeling of impending tragedy, we accepted an invitation to Easter lunch with a trusted friend.

The table was set with the traditional miniature paschal lamb made of sugar and butter. There were brightly painted Easter eggs, a roast suckling pig and other Polish holiday specialties. As we wished each other "Wesolego alleluia," two Russian officers barged noisily into the house.

We were stricken with fear. They had traced us, we thought. We, too, would share the fate of the delegates to the conference. A second glance at the intruders calmed us—

they were both very drunk and their sole interest was the table.

Uninvited, they immediately fell to eating and drinking with a will. Shortly afterward, one of them fell sound asleep with his head on the table. The other officer tried to rouse him. Failing, he apologized for their intrusion and for his comrade's behavior. As he left, he whispered confidentially to our host: "As for that Stalin, he's a thorough scoundrel."

The British Broadcasting Corporation told the world the story of the treacherous arrest of the Polish underground government. The Polish government in exile immediately nominated me to succeed Vice Premier Jankowski.

In June of 1945, a show trial of the Polish delegates was held in Moscow. They were charged with conspiracy against the Soviet Army by staying underground after the Russian occupation began. They received long jail sentences and Jankowski and General Okulicki died in prison.

Later, we learned the true identity of "General Ivanov." He was none other than Gen. Ivan Serov, present chief of the Russian secret police.

Recession From What?

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. DAGUE. Mr. Speaker, perhaps I have not given the writings of Dorothy Thompson the careful attention they deserve, since in her recent article entitled "Is a Perpetual Boom Desirable?" I find so much that makes sense, probably because it coincides with my own thinking.

For instance Miss Thompson asks, "What is full employment? That everybody who has a job must keep it and all who are seeking one must find it? And find it in exactly the place they want and at wages unrelated to their productivity?" And then she adds, "But thousands of mothers are also in the labor force, often very much to the detriment of their children and their home life, and dubiously, even, to its real financial advantage."

A little farther along in her article she makes this statement which, in my opinion, sums up all that spells economic insecurity among too many of those who make up our labor force:

The 40-hour week has been established, but an enormous number of families have not based their expenditures on such earnings but on the anticipation of an overtime and an annual raise, and have been spending in advance of income, as the per capita indebtedness reveals.

And then Miss Thompson touches on my pet peeve when, in discussing salesmanship as it applies to automobiles, she sets forth this view:

Too much salesmanship can create sales resistance. And many people—

Myself included—

detest the new-model cars and are discovering, also, that a car, if well cared for, will perform for many years longer than the dealer wants the buyer to think.

In my opinion this mature and able columnist has given forth with a veritable lung-full and to all of her comments which I have quoted I want to lend my endorsement with a fervent "amen."

Washington and Small Business

EXTENSION OF REMARKS
OF
HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. IKARD. Mr. Speaker, in my extension of remarks I would like to include an article written by C. Wilson Harder, entitled "Washington and Small Business," which I think is very timely:

As of this writing, it appears almost certain, with sufficient support from the people, that there will be some type of tax reduction.

The month of February 1958 may well go down as a climactic month in the Nation's history.

For this was the month when it came out in clear focus the damage that had been wreaked on the domestic economy by the long concentration of foreign giveaway programs, and other grandiose schemes.

Since long before the last election, the Nation's small-business men, voting through the National Federation of Independent Business, have called attention to the serious economic disturbances in the making due to unrealistic tax policies which prevent the expansion and healthy maintenance of independent business.

In early January George Burger, vice president of the organization, appeared before the House Ways and Means Committee with a review of small business sentiment for several previous months. He even quoted one member who wrote as follows:

"It is my opinion that the point of diminishing returns has already been reached as far as taxes are concerned. High taxes have eliminated the possibility of any appreciable reward, with the result that many are liquidating their businesses, while others are trimming down their operations to get in shape so that they can liquidate with a minimum of loss."

But other segments of Government kept talking about the upturn in conditions. However, the official report of 5 million unemployed released in March, had a major effect in Washington.

The proposal to combat unemployment by a huge post office building program, if postal rates were increased, fell quite flat.

But many in Washington wonder how stepping up of public work projects can solve unemployment problems brought about by lack of business expansion.

It has also not escaped attention that Detroit, other big employers, were the first to hand out pink slips. On the other hand, small business, which Representative WRIGHT PATMAN characterizes as 95 percent of the firms which employ 20 or fewer people, has been trying to keep their staffs together.

Thus, it is dawning on many in Washington that a few big corporations can provide a great deal of employment when business is booming, but they are the first to throw the economic machinery into a tailspin when conditions soften.

And so, there is growing more and more the feeling that instead of vast Federal projects to take up the slack of unemployment it will be much sounder to give independent business the go ahead signal and trust it is not too late for independent business to take up slack.

Actually, there is nothing particularly surprising about the present situation and conditions.

As evidenced by the constant reports for several years by the National Federation of Independent Business, such a situation was inevitable unless concrete action were taken on an adequate small-business program.

How Local Zoning Laws Keep That School Out

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. SHELLEY. Mr. Speaker, under leave granted to extend my remarks, I include the following article which appeared in the Voice of St. Jude in the February issue of this year. This article, entitled "Keep That School Out," was written by the widely published Catholic author, Mr. Paul Brindel, of California.

Mr. Brindel's article is an extremely important discussion of how local zoning laws deny, in many cases, a basic freedom of democracy. As is pointed out by this article, there exists a very serious threat to our democratic traditions in that zoning ordinances are used to keep out private and parochial schools. I am proud that there are groups today on the firing line who are appealing the decisions of these local planning bodies. Mr. Brindel's closing statement from the Notre Dame Lawyer article is particularly cogent:

This country owes its origin to people who refused to be denied the right of the free exercise of religion. If the democratic system is to realize its proclaimed values, zoning ordinances must be designed and applied accordingly.

The article follows:

KEEP THAT SCHOOL OUT

(By Paul Brindel, OSB oblate)

Last March 31, Corpus Christi Parish School was dedicated in Piedmont, Calif., a San Francisco suburb. Several hundred other new parish schools in most of our 48 States have been similarly dedicated this year. What was so unusual about this Piedmont school? Why this article and pictures?

Because that school is a symbol, in fact a monument to religious freedom as set forth in the first amendment to the Constitution of the United States, and repeatedly upheld by the courts of our land. Three years ago, there was grave doubt as to whether Corpus Christi parish ever would have a school for its 800 families. Not because of lack of teachers or funds but because zoning ordinance approved 3,408 to 1,285 in 1936 by Piedmont voters, specifically excluded all private schools from 98 percent of the city's areas. So, when the parish in 1954 applied for a school-building permit, it was refused.

As in other parishes, the attitude of some laity was to bow to the inevitable. There were the usual platitudes. "It's the law, and we can't antagonize our neighbors. * * * The

majority voted that way, and the majority rules in this country. * * * It will hurt our business, or profession. * * * Let"s forget it and send our children to public schools, or to Oakland parochial schools." (Piedmont is surrounded by the city of Oakland.)

Like other priests over the centuries, Father Edwin J. Keller, pastor of Corpus Christi Parish, paid little heed to this counsel of despair, of collaboration, appeasement, and compromise. Nor did the Most Reverend John J. Mitty, archbishop of San Francisco. In that archdiocese, title to parochial schools is held separately by the Roman Catholic Welfare Corporation. Accordingly, attorney for the corporation, Andrew F. Burke of San Francisco, petitioned for a writ of mandate to compel the city of Piedmont to permit erection of the school. The first hearing was before 3 justices of the California district court of appeal. On January 24, 1955, they ruled unanimously in favor of the school, holding the zoning ordinance unconstitutional. Undaunted, the Piedmont city council voted to carry the case to the California Supreme Court at additional cost of hundreds of dollars to the taxpayers of all faiths, or no faith.

On October 27, 1955, the California Supreme Court, 4 to 3, similarly held the Piedmont zoning ordinance unconstitutional, stating:

"Parents have the right to send their children to private schools, rather than public ones, which are located in their immediate locality or general neighborhood."

Corpus Christi Parish could now proceed with its school. But equally important, churches and schools in 47 other States were once again freed from the menace of discriminatory zoning laws and local bigotry. For this California Supreme Court decision reversed a dangerous trend starting in 1948, to the effect that local zoning ordinances take precedence over the free exercise of religion as guaranteed by the first amendment; that even the constitutional right of parents to educate their children as they choose must yield to a reasonable exercise of the police power of the State.

How did this all come about when in 1925, the United States Supreme Court in the famous Oregon parochial school case—*Pierce* v. *Society of Teachers* (268 U. S., 510–534)—had held:

"The fundamental theory of liberty, upon which all governments in this Union repose, excludes any general power of the State to standardize its children by forcing them to accept instruction from public teachers only. The child is not a mere creature of the State; those who nuture him and direct his destiny have the right, coupled with high duty, to recognize and prepare him for additional duties."

In his encyclical, Christian Education of Youth, Pope Pius XI quoted the foregoing 1925 decision. He apparently believed the issue settled, once and for all, and so did most Americans. What happened?

One answer is that like all things human, the law is constantly subject to change, to new interpretations. (In 1896 the U. S. Supreme Court approved racial segregation; in 1953 it disapproved it, unanimously.) Actually, the two cases which had upset the legal applecart—the established doctrine of the Pierce case, never should have happened. The first was in 1948 and resulted from the attempt of the Mormons in Porterville, Calif., to build a church upon land otherwise zoned. The Mormons appealed, and lost successively in two California appellate courts and the United States Supreme Court. The same thing happened in 1954 to the Lutherans attempting to build a high school in Wauwatosa, Wis. Why were these two epochal cases lost, while the Piedmont case was won?

The August 1957 issue of The Notre Dame Lawyer, America's outstanding Catholic legal quarterly, gives this answer:

"The Wisconsin Lutheran High School case, like Porterville, proved again the fallacy and danger of invoking only the 14th amendment in zoning law appeals involving churches and religious schools. In both of these cases, the constitutional question of free exercise of religion was entirely neglected. While these cases left much to be desired from the standpoint of constitutional procedure, the Piedmont case was to prove a model in this respect."

Yes; the Piedmont case was a model. A few months later, 3,000 miles away, Porter R. Chandler and David R. Shearer, attorneys for the diocese of Rochester, cited it, and turned to Mr. Burke for advice in winning the right to build a new Catholic church and school in a restricted residential zone of Brighton, N. Y., a suburb of Rochester. This case may well be studied by every pastor, chancellor, and Catholic lawyer, for it bares the latest technique and strategy of the forces of intolerance—evasion rather than outright prohibition.

The 1933 Brighton zoning ordinance did not say you could not build a church or school in zone A. All you needed was approval by the town planning board. But just try to get this approval, as the diocese of Rochester discovered. So, again, a long, expensive legal battle. Unlike in the Piedmont case, the diocese lost in the lower courts. Only in the New York State Court of Appeals in 1956 did victory come overwhelmingly, 6 to 1. One paragraph of that decision might well be memorized:

"We know of no rule which requires that churches may only be established in sparsely settled areas. On the contrary, as was said in *O'Brien* v. *City of Chicago*, 'wherever the souls of men are found, there the house of God belongs'."

And so, the never-ending battle for freedom of religion and education continues, even in these United States. As this is written, the California District Court of Appeals has before it the denial by the Menlo Park City Council of a use permit for a Jehovah's Witnesses church. This denial was based upon "inadequate parking which would create a traffic congestion." It seems a paradox that, despite extreme theological differences, the Catholic Church and the Witnesses have been the most successful in fighting discriminatory zoning laws in a score of States and always winning out, finally.

California has probably the worst record in respect to discriminatory zoning-law cases and some churches are strangely reluctant to fight for their rights in the courts. In 1954, the planning commission of Ross, a San Francisco suburb, refused the Adventists permission to build a church. In September 1957, the First Christian Church of San Rafael, another San Francisco suburb, was denied a building permit. Neither of these cases was appealed, despite offers of free legal assistance.

For the estimated 6 million Catholics now living in United States suburbs, the Notre Dame Lawyer sounds this warning:

"A common denominator in many zoning-law cases is their suburban origin. One-sixth of today's 170 million Americans reside in the suburbs, and the rights of minorities frequently clash with the local public opinion of the miljority in these areas. * * * This country owes its origin to people who refused to be denied the right of the free exercise of religion. If the democratic system is to realize its proclaimed values, zoning ordinances must be designed and applied accordingly."

A Passover—Easter Reflection

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. MULTER. Mr. Speaker, as we all prepare to return home for religious celebrations it is fitting that we pause a moment and reflect on the brotherhood which exists between Christian and Jew. Accordingly, I commend to the attention of our colleagues the following thoughts on this subject by the Reverend William F. Rosenblum, D. D., from the Empire State Mason of spring 1958:

A PASSOVER—EASTER REFLECTION

(By Rev. William F. Rosenblum, D. D.)

During the closing weeks of last December the celebration of Christmas began just when the observance of Hanukkah came to an end. As the eight tapers of the Menorah burned out in our Jewish homes the lights of Christmas trees all over the Nation and throughout the world burst into glow. To me this succession of rites suggested a truth which all mankind would do well to recognize, which we in Masonry acknowledge, that in our different religions there is a common core of origin and a common significance and appeal.

The fanatics and reactionaries in all our denominations would like to have people forget or ignore it but the fact is that both the Hebrew Hanukkah and the Christmas yuletide, as so many holidays of all our religions, had their beginnings in primitive festivals; in this instance in the revelries which obtained at the winter solstice. Our ancestors, wishing to make their gods understand their need for light and warmth, believed in all their naivete, that by kindling huge fires and dancing frantically around the flames, their deities could be made to relent and cause the days to grow longer again and the cold to abate. Our Hebrew forebears, first to discover the existence of the One God and to abjure idolatry, frowned upon these pagan excesses. They chose their epic Maccabean victory as a more spiritual foundation for the Festival of Lights. When Christianity came to flower it saw in the Nativity a similarly more exalted feason for the winter ceremonial, for its plea to God for the blessings of light.

Thus, too, at the springtide of the year, the thoughts of men have turned from earliest times to the mystery and majesty of the resurgence of nature and renascence of life. They saw the fields dress themselves anew in gold and green, the trees put on once more their leafy garb, the birds find new wing and new voice, the flocks increase. Their hearts burst with the desire to praise the Creator for all this birth and rebirth. The Israelites early eschewed the primitive sex abandon which reigned at this season. They chose instead the historic emancipation of their ancestors from Egyptian bondage as the basis of their joy at the liberation of nature from its cold winter imprisonment. Christianity saw in the resurrection the ideal theme for its Easter ceremonials. In the Sedar, dramatized in story and song in the Jewish home, is the tie which binds us together—Christian and Jew—for this was the Last Supper which Jesus, as a loyal and observant Jew who wished not to add a jot or tittle to his religion, celebrated at the Passover.

Our Masonic fraternity, in its Maundy Thursday pageantation of the Feast of the

Paschal Lamb, employs this tradition to stress lessons of faith, of freedom, of brotherhood and of peace in our own age. Some of our Jewish brethren feel ill at ease because one of the features of this ceremonial is for all to be seated in the form of a cross. Their uneasiness can be understood because over the centuries, and even in recent decades, in the world outside our precincts, the cross has been used all too often by blind bigots and cruel persecutors as the symbol of their hatred rather than the sign of love it is purported to be and what, in genuine Masonry, it was intended to signify from the start.

As I see it, in our modern civilization and especially in our Masonic circles, albeit we will never be indifferent to our differences in creed and custom, since variety is not only the spice of life but in many ways the very law of life, it is imperative to note that our separate religions have developed along parallel lines, that while we do not always travel on the same path, our destination is the same—we are always walking toward God.

The six-pointed Star of David signifies this desire of man to reach toward God and to be in communion with his fellowmen to all four corners of the earth. The Cross of the Christian, sublimely interpreted, represents the same ideal—its perpendicular symbolizing man's reaching from earth to heaven, the horizontal emphasizing that the hand of man must always be outstretched to his brother. Both the Star and the Cross can indeed be accepted today by all people of good will, especially in our Masonic temples and, through our exemplification of this conviction in our daily lives, as keys to brotherhood, as our declaration that all we say and do is in the name of the Lord.—for love and for life.

Uriel, Flame of God—A Christmas Story

EXTENSION OF REMARKS

OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including, herewith, a unique Christmas card, with strong Easter thoughts as well, which is pertinent to our current endeavors in launching earth satellites. It is felt that this story, entitled "Uriel, Flame of God," may inspire our people beyond the mere mechanics of man's conquest of space.

Written by a young woman named Madalene Lehrer, who also made an illustration inspired by an old German wood engraving of the Middle Ages depicting a medieval seeker's glimpse of the mysteries of the universe, its simply told story of our planetary system seems particularly appropriate for the American people at this time.

The story follows:

URIEL, FLAME OF GOD—A CHRISTMAS STORY

Uriel, the bright archangel stationed in the Sun, guardian over all the luminaries in the heavens, looked out upon the vast Universe and observed that all was well.

Far, far out in space swung mighty Jupiter, largest of the planets, attended by 12 moons, a most marvelous sight. Saturn, next in size, with its picturesque rotating rings and nine satellites. Great Uranus, emitting a greenish glow, lord over five circling orbs. Farther out, hung mysterious Neptune with its two moons. Then, Uriel—whose name means "Flame of God"—peered into the outermost distance, and pitied poor frozen Pluto, in eternal darkness, swinging in its dizzy orbital inclination, and receiving, even at perihelion, only the feebiest rays from the Sun.

Nearest of all, and the smallest, sped swift Mercury. Next, the Angel of Light admired beautiful blue Venue, most brilliant, and 12 times brighter than the brightest star, Sirius. Then came Venus' sister-planet Earth, with its pale moon. And just beyond Earth, the red-hued Mars, commanding two moons, and more sparkling than any star or planet except Venus.

It is decreed that archangel's must labor ceaselessly and be vigilant. Sometimes, to test Uriel's alertness, the Lord sent a comet to sweep the skies with its flamboyant, trailing tail. But these fiery phenomena never disturbed the majestic rhythms of Cosmos.

Once, however, when danger was imminent, it was Uriel, sharpest-sighted spirit in all the heavens, who gave the warning of treacherous Satan's approach toward Earth. But Adam heeded not, and the compassionate Messenger grieved deeply. For it was then that Earth—which had been 1 of the most luminous of planets, although 1 of the smallest—lost most of its radiance. Henceforth, Uriel watched even more lovingly over this willful world, and after a time, himself visited the planet to serve as guide for Enoch. And God sent him also to instruct Esdras in the secrets of the Universe, and to answer his questions.

But now, the Regent of the Sun sighted contently as he guarded his cosmic charges. All were accounted for—the fixed stars and the vagabond comets, the galaxies and nebulae, the auroral lights, even the minutest atoms, and all nine celestial wanderers whirling and spinning with divine precision in their eternal journey around the Citadel of Light.

But wait.

"What is that speck of dust?" exclaimed Uriel as his eyes pierced through the murky haze surrounding Earth. "It was not there before. Now it orbits around Earth, traveling faster than its moon." The Shining One looked long and pondered. Then he knew. That particle was a new moon which man had flung into space.

Swiftly Uriel spread the alarm through Heaven. From their far-off stations instantly appeared the Sons of Light. A great conclave was called in the secret place of the Most High, and the seven archangels stood before God.

Now around each of the Seven glowed such an intense light, that together their brilliance was blinding in its brightness. But even their light was but a shadow in the presence of the Lord. The Chosen Ones who were permitted to look upon His face likened it to a luminous pearl, while sunbeams hovered around His hair, and blazing stars burned in the depth of His eyes. And all around Him radiated an aura of flashing lightning rays so that the effulgence paled the Sun in its splendor.

The Almighty bade His messengers speak.

"The Earthlings are fast learning the secrets of space," began Uriel solemnly. "Their orbiting moon-speck fires desires for greater achievements. They dream of travel to their moon, then Mars." And then he asked, very slowly, "Will they thus help or harm themselves and Space? Shall we assist or delay them in their progress toward the far-off worlds?"

"Let man cleanse his heart and his thoughts," advised Raphael, "before sending up more moons. Let him send up, instead, pure prayers so that I may present them to You freely, oh Lord."

"Earth needs more flowers," reminded Gabriel gently, remembering the time when he was chief of the angelic guards over Paradise. "Flowers purify the atmosphere of poisonous gasses. Earthlings must learn to look up to heaven as the flowers do."

All this time, one of the archangels, while listening, had been watching intently the planet Earth. Suddenly he called out, "Look! It is glowing brighter. What can that mean?" And the others leaned forward to look at the strangely brightening globe.

"Let Uriel explain," commanded the Lord.

The sharp-sighted one replied, "Earth's people are celebrating a time called Christmas. They have lighted all their lamps in their streets and houses, and have adorned even the trees with blossoms of lights."

The Almighty, musing, asked half aloud, "But have they lighted their hearts?" So He looked down to see for Himself. And at the sight His countenance became stern, so that lightning flashed from His eyes.

Michael, beholding the face of his adored Lord, burst out saying, "Yes, once a year they celebrate the birth of the Christ Child by exchanging gifts among themselves, and toss the smallest part to God. They pronounce peace and good will while preparing for war. They pretend to give to the poor in Your name, oh Lord, but create a make-believe character and enthrone him everywhere. Truly," continued Michael, "their plight is pathetic. They meddle with the elements and squander the treasures from the ground, and now they play with a newer and more terrible toy."

Then Gabriel, in a voice trembling with the thunder of indignation, asked, "How long, oh Lord, will You suffer their self-seeking and mockery, and permit their dangerous experimentations?"

"They will destroy themselves," cried the other archangels.

But the Lord remained silent. And as His gaze again followed the foolish planet, the anguish which filled His countenance grew so intense that even His angels averted their faces.

Then Uriel, remembering how Earth in an ancient time had crucified the Lord, shuddered with pain. Slowly on the archangel's shining brow appeared great drops of sweat like purest crystal, and two glittering tears like pear-shaped diamonds rolled down his cheeks. He knelt to hide his suffering and buried his face at the Lord's feet.

"Send me down to the earthlings once more, Lord," he pleaded, "so that I might help them to find You."

Now, if God is moved to compassion for even a small sparrow, how much greater was His love for this resplendent Prince of Heaven, upon whose hands and feet now appeared the stigmata of the cross. The Lord lifted him up, saying, "Wait and see. I gave them power of free will to choose between Satan and Me."

Instantly a nameless thrill ran through the holy assembly. For surely, some faint and feeble sounds had escaped from earth and, penetrating through its choking atmosphere, had floated up to heaven. It was the sound of singing. For there remained among the mislead multitudes on earth some sincere hearts whose joy it was to sing, not only at Christmas time, but always, a song praising God.

The six archangels, turning to Uriel, asked, "What is that song which they sing to the Lord?"

And he answered, "The song is called, How Great Thou Art."

"And know you the name of the man who wrote the song?"

"His name is known," Uriel assured them.

Again the Brothers asked, "What man created that orbiting moonspeck?"

And Uriel replied, "Not one man, but hundreds toiled long and hard to achieve it."

Then the blessed Lord smiled.

And all the archangels knew His judgment, and together with one glorious voice ex-

claimed, "The song is mightier than the satellite, for the song men sent up has reached the Most High."

Then the hosts of heaven and the hierarchy of light caught up the song, and with it the hearts of men.

Uriel, because of his readiness to renounce heaven for the earthlings, now stands at the left hand of God's throne, guarding the luminaries in the firmament, and his responsibilities are multiplied.

The Day We Celebrate

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. DORN of South Carolina. Mr. Speaker, it was my privilege to hear Lt. Gen. Thomas F. Hickey address the Hibernian Society of Savannah, Ga., on March 17. General Hickey is doing an outstanding job as Commanding General of the Third Army. General Hickey has had a most illustrious career in the service, rising from an enlisted status to the command of our largest Continental Army. He has made many friends in the Southeast. We admire his character and leadership.

Mr. Speaker, I commend to the attention of the Congress and the country the following splendid address which was greatly enjoyed by all of us at the Hibernian banquet in Savannah:

THE DAY WE CELEBRATE

This is the day when those of us of Irish origin or filiation—wherever we may be—gather together to display our fierce pride in our name and race, and to pay tribute to St. Patrick and that green little isle of saints and scholars. Today—all over the world—the sons and daughters of Kathleen ni Houlihan are meeting for the purpose of visiting again in spirit the land of their forebears, and, to allow their memories to dwell on the triunity of St. Patrick, Ireland and the shamrock. And, there is nothing unusual in these assemblages, because men and women from every county in Ireland have emigrated to every corner of this globe. Exiles continue to be Ireland's oldest and most dominant product. These exiles have generally arrived in time to assist in building a nation. If not—they have arrived in time to govern it. So, the basic purpose of our meeting together—on this the day we celebrate—is to proclaim our love and our devotion to the spiritual and temporal ideals implanted in us at birth by our Irish forebears.

The history of every country to which the sons and daughters of Erin have emigrated bears shining testimony to the part they have played in the establishment and preservation of their adopted country. Their spirit of nationalism has never been a local product. It has reached out to embrace all peoples and nations—wherever the twin evils of tyranny and oppression have raised their ugly heads. The Irishman's love of liberty, nourished through long periods of oppression in his native land, has been the impetus that allowed him to flourish in the free air of freedom elsewhere. No other country in history has lost so many of its people through emigration. Yet, they did not leave from a spirit of adventure alone. They left a country where their religion and language were proscribed; where the cultivation of their history and their heritage was forbidden; and, where their economic life was blighted by trade restrictions and a system of absentee landlordism. It was flight from these unjust conditions that caused our ancestors to leave Ireland and which allowed them to build the long and lustrous record of loyalty, devotion, and patriotism in their adopted lands. And, the Irishman took with him—to the ends of the earth—as he sought liberty and hope, a deep and abiding faith in God; and a reverence and respect for the family, our fundamental social unit and the basis of our society.

These are the hallmarks of the Irishman, wherever he may be. He knows, despite his love of Ireland and his devotion to his adopted country, that every land including his own is a temporary domicile. He knows that outside of Heaven there is no permanent home. And, that is why Irishmen are born missionaries. Steeped in the spirit of Patrick, they have traveled all over the world, combating atheism and unbelief, secularism and materialism, serene in the knowledge that God is monitoring their work. They have always opposed any remedy for man's ills that overemphasizes the importance of material things and pretends that God is not necessary. They have always opposed any false cure that would have matter seen through the senses replace God, and that would produce a code of morality derived from the transient ideas or the irrational whims of an individual, a group or a nation. Their attitude of strength, sturdiness, uncompromising understanding, and strict adherence to important essentials, assisted them in carrying their faith throughout the world. Few of them have had their names inscribed in the calendar of saints, and it must be because God, monitoring their work, knows how the Irish resent the singling out of an individual. Then too—it would have to be a very special soul to be singled out from so many who are so worthy.

And the zeal of the Irish schoolmaster and scholar who spread Christian learning and culture and tradition throughout Europe and the rest of the world, also spread the fame of his race on his journeyings. He it was who knew education in the true sense of the word. He knew and taught that the purpose of education was not alone to fill the mind with knowledge. This is merely instruction. Education, to him, meant the strengthening and development of all man's faculties. He did not confine the term to the intellect alone, because he felt that true education did—or should—be concerned especially with the will. He believed that to impart intellectual culture without moral culture—such as is happening today in many of our institutions of learning—increased rather than decreased the possibilities of evil. Because without imparting the instrument of moral education—discipline—it is impossible to inculcate in the individual, the habit of self-restraint. And, without the habit of self-restraint, the individual cannot develop the willpower that makes character.

What shall we say of the Irish mother whose devotion to her God and to those whom He has entrusted to her care has been enshrined in song and story? Her labor and sacrifice for her loved ones was a willing task—welcome in its never-ending demands on her love and affections. The moral code she taught her children was a simple one but it was a rigid one, too, because it was based on rigid norms of what is right and what is wrong. She taught rules of conduct that were to govern their free actions; as the precepts to subordinate their conduct to what is right and proper. She taught them to respect and obey their parents; to provide for their families; to control their lower appetites; and, above all, to honor God and place their country's interests above their own. And, she taught too, that the effectiveness of this code was based on the restrictions which the individual imposed upon himself through a disciplined mind and an unselfish restraint.

Such is the heritage of those who have made the isle of saints and scholars famous in history. These are the real monuments to the real Ireland. One has to look behind the keen intellect, the strong will, the sharp wit, the blend of realistic bluntness and hidden sentimentality, the mixture of warm-hearted sympathy and hard-headed practicality; the championing of the underdog and participation in every lost cause while, at the same time, remaining the citadel of conservatism—one has to look behind all this to really understand the Irishman. One must get to know the fervor and depth of his religious convictions. God is an ever-present reality to the Irishman. He does not grope in the shadow of atheism and unbelief which surrounds him. He knows that material prosperity is not real freedom. He knows that it is the goals of life and not the goods of life that are important. He believes that no individual or group can be allowed to profit at the expense of public morality. And, he knows that there can be no real freedom unless there is order in our social and moral life. He is still steeped in the spiritual impulse which St. Patrick gave to his race. And, the Christian tenets which Patrick made known to our Irish ancestors over 1,500 years ago are needed—in their practical application—in this country and the world today. The spiritual zeal of the Irishman must be copied if we are to combat the secularism and materialism in our midst.

The man and woman of Irish ancestry is today a bulwark in the defense of our way of life. He mans the ramparts because his history tells him that he has always fought best when alien fog attempted to dim his ideals. Just as Patrick lighted his fire on Shane Hill in defiance of King Leary because he believed that the one true God toook precedence over Leary's pagan gods, so, today, men and women of Irish extraction must keep Patrick's fire burning in this unsettled and contradictory world. The spiritual fervor of the Irishman requires that he combat the atheism and unbelief—and pseudo-liberalism—which is threatening our way of life. His heritage requires that he defend the principles that the basic rights of man are God-given rights; that the purpose of the state is to safeguard these God-given rights; and, that the just powers of government are derived from the consent of the governed. He must defend these principles in a troubled, frustrated, and undisciplined world, where an evil, atheistic, materialistic concept of government is an insidious threat to man's liberty and his human dignity as a son of God—a fallacious form of government which has depended on hate and cruelty and violence to subjugate its victims.

Love of God and love of country—these are the moral virtues which light the way against the forces attempting to engulf us. And, his continued glory in his name and his race requires the Irishman to fight against the pagan enemies confronting him today as did his ancestors combat tyranny, oppression, and injustice from the caves and hills of Ireland. So, let us tonight—as we watch in spirit—men and women of Irish ancestry gather together all over the world, to join in the laughter and songs of Ireland—let us remember that a part of our heritage is to share in their faith. This faith is a virtue that a Communist can never possess. This faith is a light that will guide us to our goal despite the indifference and apathy and neglect which surrounds us. This faith is a knowledge preserved and maintained by our ancestors through the centuries. This faith proclaims one eternal truth. And, it is this—the future belongs to no man or group of men. It belongs only to God.

Religious Imperatives and the Foreign Aid Issue

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein views of some of the key leaders of major riligious faiths which appeared in a publication of the Foundation for Religious Action in the Social and Civil Order entitled, "Religious Imperatives and the Foreign Aid Issue."

RELIGIOUS IMPERATIVES AND THE FOREIGN AID ISSUE

VIEWS OF SOME KEY LEADERS OF MAJOR RELIGIOUS FAITHS

Bishop Fulton J. Sheen, national director, Society for the Propagation of the Faith: "Our moral duty to aid the underprivileged arises from the fact that we have superfluities and the superfluities of the rich are the necessities of the poor. It was a pagan, Terence, who said: 'Charity begins at home.' It was Christ, the Son of God, who in the parable of the good Samaritan said that charity begins away from home with people who are not of our race or country.

"In aiding underprivileged countries we are not to think of ourselves as superior because we are economically wealthier; or that those who are aided are inferior because economically poorer. * * * We need to justify our wealth by sharing it; we need to thank God for making us the most prosperous Nation on the earth; we need the blessing of heaven on our hearts and the grace of God on our whole being. Therefore with humility and not with pride and superiority we extend our hands to the needy. Theirs is the burden of being underprivileged; ours is the burden of being overprivileged. It is their stomachs that are empty; it could be our hearts that are empty. In any case, they could conceivably do without our aid, but we cannot continue to be without justice and charity.

"The foreign aid of the United States must introduce some factor besides the economic, political, and military, one which is the strongest in our national traditions and one which the Soviets not only lack but repudiate. They have one fear in our dealing with the rest of the world, that we will take cognizance of that defect which makes them suspect by all the peoples of Asia and Africa, and that is our belief in God, the dignity of the human person, the freedom of conscience, and the principle that the state exists for man, not man for the state. When we go along with the Communist line that matter alone matters, we are weak and they are strong, when we give economic aid on the basis that matter alone does not matter, they are powerless and we are strong. "This is the crux of the question of foreign aid."

Dr. Edwin T. Dahlberg, president, National Council of the Churches of Christ in the United States of America: "All of us, as members of the one body of mankind, are entering upon a completely new era of history—the nuclear space age. We welcome the coming of this age. It is more exciting than the age of Columbus and Magellan. We should look upon it as a part of the ongoing purpose of the eternal God, moving toward a goal that is bigger than any political, ecclesiastical, or nationalistic interest. In the presence of this completely new development in history we can no longer think in terms of 1 nation or 1 continent alone. We must think in terms of the universal and the ultimate. For we are now not only 1 Nation under God, but 1 world under God. This is true whether or not we believe it.

"One of the greatest weapons of the spirit that we could possibly use is certainly that of mutual aid and economic assistance—the kind of aid that will make substantial investments both of public and private money in underdeveloped areas, thereby helping the impoverished nations and at the same time increasing the level of trade, commerce, and industry of our own country. * * * Many people in America have the idea that we are engaged in a vast giveaway program in the field of foreign aid. Actually, it is a very tiny proportion of our mutual-security program.

"A program of mutual aid should not be considered primarily as a weapon or a tool in our fight against communism. It should be based upon an interest in people as people, human beings who are in partnership with us as children of God, and deserving of the same blessings that we enjoy. At the same time it is only fair to recognize that such a program will powerfully counteract the Communist thrust.

"We are now in an international storm of revolution, nationalism, and the unknown dangers of the nuclear space age. I dare to believe that if the major political parties will rise above party alignments and provide for the basic needs of our own people and the world's people, they will receive the increasing support of the Nation. May God with the help of His love and grace help America to rise up in the true greatness of its people and fulfill its mission to the world."

Rabbi Theodore L. Adams, president, the Synagogue Council of America: "We have come here because what is at stake is an overriding moral issue affecting the brotherhood of man and essential spiritual values in face of an unprecedented onslaught of materialist atheism.

"It seems to me that the necessity for this conference reflects a failure on the part of the American people, a failure to act in consonance with its highest ideals.

"What are these ideals?

"They are, first the ideals of our biblical faith; and, second, the ideals which inspire America's democratic traditions. These ideals which are shared by the majority of Catholics, Protestants, and Jews, have as their central affirmations that God is the Lord of history, the creator, sustainer, and redeemer of all mankind, the judge of all men and nations. To Him is due the supreme loyalty, and not to the State, political party, or ruler.

"We know full well that the changeless values of our religious faith, the democratic institutions of our Nation, and the providential abundance of this good earth, have produced all that is good in us. These ideals and material legacies impose upon us, both as a Nation and as individuals, a moral responsibility to transmit to others, and to future generations, our democratic faith as well as our material wealth.

"As religionists, we feel profoundly that the utilitarian motive of benevolence is not worthy of the United States. The moral character and destiny of America compel the higher motives of compassion, of brotherhood, or respect for human personality.

"If this program fails, it will be the failure not only of the United States Government, but of the pattern of America's moral approach in the eyes of the world. It will not fail because the American people have never left unanswered the challenge of morality."

Reverend Demetrios Kalaris and Rev. John Tavlarides, Eastern Orthodox Church, Washington, D. C., in a joint statement: "We Eastern Orthodox clergymen firmly believe that, in the interest of man's welfare and the manifestation of our Christian charity, special support should be given the policies of foreign aid of the United States. We believe that it is in the spirit of brotherhood under God that our country has provided for the needs of people throughout the world and not as some would have us believe, primarily because of selfish motivation or expediency."

Reverend James L. Vizzard S. J., vice president, National Catholic Rural Life Conference: "All people of informed Christian conscience recognize in the mutual-security program our Nation's answer to a religious and moral imperative. If we dedicate ourselves to a program for shared abundance, we may never again be called upon to dedicate our lives and our wealth to a program of shared disaster. We believe that here the United States has the opportunity and the privilege to give moral leadership to the world as it has provided political and military leadership."

Opening invocation by Dr. Charles Wesley Lowry, Chairman of FRASCO, at White House Conference on Foreign Aspects of United States National Security, February 25, 1958: "Eternal God by whose holy inspiration and almighty power our fathers won their liberties of old, we their children and Thine ask in this day of testing that we may be renewed in our love of freedom and in the will to sacrifice for it.

"We ask, O God, that the people of America may be ready to hear, above the noise of selfish clamor, the still small voice of God within, the voice which speaks to us of the things that pertain to peace, justice, and charity.

"Especially, our Father in heaven, we the members of this White House Conference on Mutual Security bow in reverence before Thy great name and implore Thy grace and blessing on our efforts to think what is true and do what is right. May a fire be kindled here which shall spread to many hearts in this land of the free, enabling Americans of every calling to see the vision without which, O God, we perish and Thy world perishes.

"For Thine own name's sake. Amen."

The Honorable BROOKS HAYS, United States Congressman from Arkansas (also president, Southern Baptist Convention): "Will the ideas and method of communism win out in this global struggle or will the ethical and religious way of life we have inherited from our fathers prove victorious? I have no doubts about the outcome, but we must be vigilant on many fronts. Mutual security and sane economic assistance to underdeveloped nations are practical ways in which our great country works from year to year to build a world that is more just and compassionate. It is one way to help lay the foundations for a better life on this earth which God has committed to our keeping."

Rabbi Norman Gerstenfeld, minister, Washington Hebrew Congregation: "The heart of our western heritage of faith is the love of a righteous and merciful God and the love of man, because all men are the children of God. This love must express itself in acts of loving kindness, in aiding our fellow men so that they can solve the problems of poverty and disease, of slavery and tyranny. Foreign aid is not only good religion but enlightened self-interest, for the men we help will become allies in the building of a just world."

Dr. Norman Vincent Peale, minister, Marble Collegiate Church, New York City: "For the United States to discontinue or cripple its mutual security program would please the Communists more than any one thing I can think of. Wherever I have traveled, I have found that thoughtful nationals feel American aid constitutes a serious and sincere effort to help them undergird free institutions."

Mr. Harry W. Flannery, president, Catholic Association for International Peace: "It is my humble opinion that if the full significance of foreign aid could be brought home to the American people, they would be ashamed to realize how little of our national wealth is being devoted to its cause. We have been letting the people in underdeveloped countries believe that our interest in them is derived only from our struggle with the Soviet Union. We should give aid primarily, in accordance with our traditions, in the spirit of justice, and because we have a moral responsibility to do so."

Dr. Paul S. Rees, minister, the Covenant Church, Minneapolis, Minn.; past president, National Association of Evangelicals: "My observations abroad convince me that the discontinuance of foreign aid would be a disservice alike to our own country and to the free world. Weakness in administration should be corrected but no countenance should be given to any proposal for doing away with this arm of helpfulness in a world of need."

Bishop Arthur J. Moore, Atlanta area, the Methodist Church: "Let us not be mistaken, if atheistic communism prevails in the world, it will more deeply wound the human family and damage human society than any merely economic or political system, however bad, could possibly do. By the mutual security program of the United States Government as well as by a powerful revival of the spiritual values underlying our civilization, we can restore hope to the millions of earth and counter unrest and the fear of war with the assurance of peace."

The Right Rev. Angus Dun, Episcopal Bishop, Washington: "I think it is true that you can hardly expect a nation in its corporate political capacity to go beyond enlightened, informed self-interest, but I believe self-interest that is never guided by anything but self-interest will fall short of self-interest. That is, unless it is illuminated by a light coming from beyond the general level of ordinary decencies, it will fall short of the highest interests.

"That is, unless we are helped to look out in sensitivity and pity and generosity toward the desperate needs of multitudes of our fellows, we shall not even achieve the level of our own interests, because it is to our interest that these people trust us, that they respect us, that they turn toward the vaguely understood system of life which has done so much, as we were reminded here, along with very favorable circumstances, certainly, to give us the good inheritance and the position we have."

Dr. A. Powell Davies, deceased, formerly minister, All Souls Church, Unitarian, Washington, D. C.: "There are some people who still trot out the trite canard that loving our neighbor means what we do in direct relationship with him and that we cannot love him through acts of Congress. This is just a tired platitude. In the modern world we cannot even do our ordinary duty to our neighbor except through acts of Congress. This is true within our own country, as we have begun to recognize, and it is also true of our duty to the world."

Dr. Ralph W. Sockman, minister, Christ Church, Methodist, New York City: "The time is at hand for the recognition of the interdependence of all nations. This is an age when the incomparable spirit and achievements of America must be applied to the task of creating the economic, social, and political conditions of a genuine world peace, resting on freedom and justice."

Fourteen chaplains and ministers of all faiths to the university students and community at Purdue University, Lafayette, Ind., in a joint statement: "We are sure, since there is an eternal right concerned with human values, that to ignore the aspirations of people for political freedom, the feeding of hungry men, women, and children, and assistance programs that raise the living standards of people is perilous and will be nationally self-defeating, however many missile bases we erect around Russia or sputniks are put into outer space."

Test Propaganda—Escape From Reality

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. HOLTZMAN. Mr. Speaker, the announcement that the Soviets have unilaterally ceased nuclear testing has had a sharp impact throughout the world. Not too long ago the United States was rudely awakened to the facts of life by the launching of sputnik. In both instances the administration and its leaders sought to minimize these events instead of facing up to the seriousness of the situation.

We do not endear ourselves to our allies and to the uncommitted countries by labeling these things a gimmick. We do not convince our citizens that we will lose our shirts by conferring at any level.

It is late for us now, but there is still time to recoup. We must stop sloganeering and develop a positive and constructive approach. We dare not make mistakes which indicate that a nuclear explosion was heard only 250 miles away, when it was in fact heard almost 2,000 miles away, again reflecting a predisposition on the part of our officials and a negative type of approach.

We must have boldness and imagination, but more importantly we must be honest with our people if we are to survive.

I would like to insert at this point the lead editorial from today's Washington Post and Times Herald, and the column by Walter Lippmann, entitled "The Escape From Reality," which also appeared in the Post today.

The articles follow:

Test Propaganda

If the administration regards the controversy over nuclear weapon tests as merely a battle of propaganda, it is no wonder that the United States has come off so badly. President Eisenhower yesterday termed the announcement of the suspension of Soviet tests a gimmick. It may well be a gimmick, coming as it does just after completion of Soviet tests and before a new series of American tests. But the effect could not really have been offset by just a gimmick on our side.

It is true, as Secretary Dulles observed, that the Russians are formidable propagandists who go to lengths to which the United States will not go. They are capitalizing on men's fears and hopes for their own purposes. But their appeal cannot be countered just by calling it propaganda; nor can these fears and hopes be dismissed as impertinent. The Russians appear to be doing something imaginative and affirmative. We don't. It is as simple as that.

Through a combination of hesitation and poor articulation the administration has accentuated its own dilemma. There seems to have been no very clear idea of what the administration wanted to do in anticipation of the Soviet move—except do nothing. The result is a largely negative position which not even the most polished Madison Avenue gloss could have converted into something positive.

Whether or not the decision not to suspend American tests was right, once this decision was made the administration had two logical alternative courses. One was to make a really thorough, documented explanation of why this country was continuing its nuclear tests—an explanation that avoided the usual pooh-poohing of fears and instead made a sober statement of risks. The best case the administration could make for the testing of clean weapons is that they might permit conversion to the sort of deterrent that would not imperil all humanity in the event of large nuclear war. To make a convincing explanation would have been difficult, but it could have been tried.

The other, and in this newspaper's opinion, far preferable, course was to announce that we were placing further tests under United Nations supervision—and that simultaneously we were making the technology of clean weapons available to the Russians. U. N. supervision would help relieve fears of radioactive contamination. And if the administration really believes in the humanitarian advantages of clean weapons, such as they may be, surely it would be in our own and our allies' interest to encourage the Russians to clean up their own stockpiles.

These courses remain open. A move along either of these lines now would seem belated, but until the administration determines to assert itself in some way this country will inevitably remain at a disadvantage. The best propaganda still is constructive action.

The Escape From Reality

(By Walter Lippmann)

It was an ordeal for Secretary Dulles to have to face a big press conference a few hours after the morning papers had carried the story of the Soviet suspension of nuclear testing. He chose to treat the Soviet move as a tricky and meaningless propaganda stunt, which they with their closed society can exploit, whereas we in our open and free society are unable to match it. This theory may comfort him but it is, I venture to believe, a dangerous form of escapism from the hard realities of the world situation.

For it rests on the notion that our many reverses and the decline of our influence are due not to defects in our policies but to the superior advantages of the Soviet Union in propaganda. That is to say, when our products do not sell, the trouble lies not with the engineering in the quality of the product but in the packaging and the advertising. The whole world would agree with John Foster Dulles if it were not that the world is so gullible that it is being taken in by the Russians. This is flattering to our pride but it is not true.

Consider, for example, the subject of nuclear testing which Mr. Dulles was discussing. He pointed out, quite truly, that the Soviet Union has just completed a series of tests whereas we are preparing to make a series of tests this spring and summer. The Soviet trick is, he says, to suspend the tests which they do not now need for some time to come, hoping to prevent us from making our tests which we very much need to make.

But is this such a difficult trick to deal with? The natural way to deal with it would be to say that when we, like the Soviet Union, have completed our tests, we too will suspend further testing provided the Soviet Union does not resume testing. The world is not so gullible that it would not understand the common sense of this retort.

This retort is not, however, open to us because the controlling fact is that our mili-

tary position in the world is built upon the deterrent power of nuclear weapons. It happens that Mr. Dulles spoke of our desire "to eliminate nuclear weapons effectively from the international arsenals." But why he said this, why he made so utopian a remark, I cannot imagine. For the elimination of nuclear weapons would make quite impossible the strategic containment through a network of alliances to which he is committed.

This is the real reason why American propaganda works badly. If we cannot or will not revise our policies, Mr. Dulles would do better to be candid and to tell the world frankly that we cannot suspend tests because we cannot abolish nuclear weapons without a revolutionary change in our foreign policy. He could then argue that the Russians with their massive conventional forces and their interior lines cannot be contained without nuclear weapons. This would not make him beloved in the world. But it would make him believed.

All this applies to much more than the particular issue of nuclear testing. American propaganda is in trouble not because the Russians are able to lie with impunity but because in so many critical areas American propaganda is trying to sell policies which for one reason or another are obsolete, are fictions, are profoundly unpopular.

There is the central fiction in the Far East that Formosa is China, and that the actual government of China on the mainland ought to disappear. No propaganda can make a policy based on that fiction credible, much less convincing and inspiring. In south Asia there is the fiction, which defies strategic geography, that we are arming Pakistan to defend the Middle East against the Red army. This is a fiction which has earned us the deep suspicion of India. In the Middle East there is the fiction that the Arab States will remain with the West if only we can prevent the Soviet forces from invading them.

And in Europe there is the fiction that Adenauer's Germany will absorb East Germany and that in some unknown way the Red army will roll itself back out of Eastern Europe. The fact of the matter is that the mass of the people do not like these fictions, and the informed leaders of opinion know that they are fictions and do not believe in them. That is why our propaganda works badly.

A wise and experienced man said to me in Paris that the Western World was in a political decline, not so much because the Soviet Union was so strong and so shrewd but because the western democracies made so many mistakes and lacked the political courage to rectify them. Listening to Mr. Dulles at Tuesday's press conference, I wondered whether he was not trying to escape from that bitter truth.

Application for Surplus Foods Surprisingly Low

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1958

Mr. CURTIS of Missouri. Mr. Speaker, I am placing in the Appendix of the RECORD an editorial appearing in the St. Louis Post-Dispatch of Monday, March 31, 1958.

It is gratifying to see that once surplus foods were made available to the needy people of St. Louis the real demand for these foods proved to be small. The fact that the demand was small places the present economic recession in a more real light:

SEEKING SURPLUS FOOD

Social workers say the number of needy St. Louisans who have applied for Federal surplus foods so far is surprisingly low. This is an encouraging fact. It should not be misinterpreted to suggest that St. Louis does not require the surplus food program.

The measurement of need in these cases has to be on an individual, not a mass, basis. No family should be left without food because the head of the family is unemployed. And unless the recession ends soon, more and more citizens may exhaust their unemployment insurance benefits and also be ineligible, under State law, for direct relief.

Mayor Tucker and the Board of Aldermen saw the prospect of hunger looming here and acted quickly. They are to be congratulated for making the Federal food supplies available. If few citizens need those supplies, so much the better.

The Biggest Fraud in Our Economic History Is the Fictitious Pricing Now Used in the Sale of Consumer Goods

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, the independent offices appropriation bill for 1959 correctly increases the appropriations for operations of Government in fields which will tend to alleviate unemployment. However, our present economic distress has another factor, the rising cost of living. I find little in this bill which bears directly on the cost of living except an increase of $100,000 for the Securities Exchange Commission to protect buyers of securities from fraud and deception. I find nothing in the bill to afford similar protection to the great mass of consumers.

This Congress can and should provide the same protection against fraud and deception to the housewife, the small-wage earner, and the social-security pensioner. An increased appropriation of $100,000 to the Bureau of Consultation of the Federal Trade Commission will protect people now grievously injured by fraud and deception in the sale of consumer goods.

Purchasers of securities have special problems concerning fraud and deception, but the consumer of necessaries of life has even greater problems avoiding the deception worked on him every day in the marketplace. The biggest fraud in our economic history is the fictitious pricing now generally used in the sale of all consumer goods. And there is every indication the fraud will grow in extent and viciousness as competition increases for the disappearing consumer dollar.

Fictitious and deceptive pricing, the offer of phony bargains, have been encountered in one form or another by every Member of this body who has shopped for food, clothing, appliances, or whatever, within the past year. It is acknowledged by the Better Business Bureaus, the voluntary trade associations, and the Federal Trade Commission as the most prevalent, pernicious, and destructive fraud presently deceiving the consumer.

Deceptive pricing usually offers: $50 value, now only $25, when the actual price of the article offered has never been more than $25; or even worse, $50 value, now only $25, when the actual price of the article offered has never been more than $17.50. It artificially raises the cost of living and deprives the housewife, the small-wage earner, and the social-security pensioner of the real bargains they so eagerly seek and now so sorely need.

We can stop this practice. The Bureau of Consultation of the Federal Trade Commission has developed techniques of enforcement sufficient to stamp out such cheating. Within the last year, in spite of a personnel shortage, it has successfully attacked two closely allied deceptions, bait advertising and preticketing.

The Bureau of Consultation, by use of its trade-practice rules, has defined bait advertising for one industry, and in cooperation with the business community is obtaining enforcement in several industries. Bait is an offer to sell a line of merchandise at a ridiculously low price in order to coax buyers into the advertiser's store. Salesmen then pressure and persuade a prospective buyer to purchase more expensive equipment on display. The bait line can never be found, or has already been sold out before the first buyer arrives in the store.

Preticketing is now prohibited in several industries. The practice was used by manufacturers and packagers, usually under competitive pressure by their retailers. The packager merely inserted a price tag bearing a fictitiously high price in the package containing the manufactured article. The retailer then could point to the fictitiously high price tag as proof that he, the retailer, had reduced prices on this bargain.

But these are only allied to the principal evil, which is fictitious, fraudulent pricing. And that deception must be eliminated if the consumer is to have an even break in the market place.

I have looked through the hearings of our Appropriations Committee, its report on this bill and the bill itself. While I note information regarding the availability of the Federal Trade Commission's Bureau of Consultation, its trade practice rules and advertising-guide procedures to eliminate fraud between the buyer and seller of consumer goods, the bill does not provide funds sufficient to apply these powers for protection of the large mass of consumers. The purchaser of the necessaries of life should receive the same protection we are willing to afford the purchaser of investment securities.

I am deeply concerned that this Congress may allow one of the Federal Government's most vital powers to protect the consumer to be crippled by lack of

funds in a year when its use is desperately needed.

I support this bill in other particulars. I contend, however, that the consumers of food, clothing, and other necessaries should have at least another $100,000 worth of the same protection we are willing to give purchasers of investment securities.

Proposed Legislation for Revision of Reserve Requirements

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. SPENCE. Mr. Speaker, today I introduced in the House a bill which would make more credit available to offset the current economic recession, and would be of particular benefit to many thousands of small and medium-sized banks throughout the country. The bill changes reserve requirements for banks that are members of the Federal Reserve System. The principal change would be to permit banks to count vault cash as part of the reserves they are required to maintain with the Federal Reserve System. The smaller banks known as country banks hold $1.4 billion in vault cash, and would be the principal beneficiaries of this change. By counting these dollars in meeting reserve requirements, we will greatly expand the capacity of these banks to make loans. I am particularly anxious to expand this lending capacity in the smaller banks, which can do so much to help farmers and small-business men. The bill would also lower the statutory range of reserve requirements for central Reserve city banks to make them equal to the requirements for Reserve city banks. This change is in line with action taken recently by the House Banking and Currency Committee in connection with the proposed new Financial Institutions Act.

The bill was prepared by the Board of Governors of the Federal Reserve System. I am inserting a detailed explanation of its provisions, prepared by the Board:

EXPLANATION OF PROPOSED LEGISLATION FOR REVISION OF SERVICE REQUIREMENTS

The Board of Governors of the Federal Reserve System is proposing to Congress three changes in existing law concerning reserve requirements of member banks. The proposed amendments would:

1. Authorize the Board to permit member banks to include all or part of their vault cash holdings in their required reserves;

2. Authorize the Board to fix the reserve requirements for demand deposits of central Reserve city banks within a range of 10 to 20 percent, instead of the present authorized range of 13 to 26 percent. (For other classes of deposits at member banks, the ranges within which the Board is authorized to fix the requirements would remain as at present.)

3. Make more flexible the Board's authority to permit individual member banks in central Reserve or Reserve cities to carry lower reserves than those specified for banks in such cities.

Purposes of these proposals may be briefly summarized as follows:

1. The counting of vault cash as reserves would correct a generally recognized inequity that now exists because many banks find it necessary for operating purposes to hold larger amounts of vault cash than do other banks. Since vault cash holdings and reserve balances at the Reserve banks are interchangeable and both serve the same purpose in influencing the volume of bank credit, they should both be counted as reserves. Counting of vault cash as reserves would also have collateral advantages, such as reducing the costs of transporting and handling currency and facilitating the holding by member banks of larger stocks of currency that would be available over widely dispersed areas for use in a national emergency.

Such a provision would make possible the release of over $2 billion of reserves for all member banks. Country banks hold nearly $1.4 billion of vault cash, amounting to about 4 percent of their net demand deposits, or over a fourth of their present required reserves, while Reserve city banks as a group have vault cash holdings amounting to less than 2 percent of net demand deposits or a tenth of their total required reserves. The vault cash holdings of many large city banks, however, including most central Reserve city banks, amount to 1 percent or less of their net demand deposits and but a small fraction of required reserves. Thus this provision taken alone would not only add greatly to the total supply of reserves but also would have the effect of widening and distorting existing differentials in reserve requirements as between classes of banks. It would, therefore, be necessary to put these changes into effect gradually and to accompany them by partly offsetting adjustments in the reserve-requirement percentages.

2. Under the present law, by reclassifying cities or by abolishing classifications and also by changing requirements, the Board has legal authority to alter differentials in requirements as between the broad classifications of member banks. By using this authority any undue distinctions between classes of banks may be gradually reduced. If vault cash holdings are permitted to be counted as reserves, it would have the effect of lowering the required reserves of each class of banks, but particularly of country and Reserve city banks, where vault cash holdings are relatively large. The Board consequently is proposing no change in the percentage requirements as now stated in the law for these classes of banks—7 to 14 percent and 10 to 20 percent, respectively, against net demand deposits.

It is proposed, however, that permissible requirements for central Reserve city banks be lowered to the 10 to 20 percent range authorized for Reserve city banks. A maximum requirement of 20 percent against net demand deposits for any bank or class of banks is believed to be adequate for any purpose under present or prospective conditions. While this amendment would retain authority for keeping three classes of banks with differential requirements against demand deposits, it would tend to encourage narrower differentials as between classes of banks.

3. Under existing law individual member banks can be permitted to carry lower requirements if they are located in the outlying districts of central Reserve or Reserve cities. This provision permits the Board to alleviate inequities which arise when banks located in such outlying districts are predominantly engaged in business that is similar to that of banks with a lower reserve classification. It does not, however, permit the Board to bring equivalent relief to such banks if they are located in the central districts of Reserve and central Reserve cities. The amendment proposed would permit adoption of more rational criteria for exempting individual banks than can be used under existing law and thereby make possible elimination of some existing inequities.

With the amendments proposed, along with other provisions of existing law, the Board would have adequate authority to make any changes in the structure and level of reserve requirements that are likely to be appropriate under present or prospective conditions. Legislative authority with respect to both the level and structure of reserve requirements for member banks should be sufficiently flexible to enable adjustments to be made in a manner, in amounts, and at times that are consistent with the aims of monetary policy, with the international position of the country, and with the maintenance of a sound and effectively functioning banking system. Existing law with the amendments proposed would permit moving gradually toward a more equitable and rational structure of reserve requirements and toward making in the course of time any changes in the level of reserve requirements, consistent with appropriate monetary policy and sound banking practices, that may be needed to meet the monetary and credit needs of a growing economy.

Statement on Behalf of United African Nationalist Movement

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made to the House Foreign Affairs Committee March 25, 1958, by James R. Lawson on behalf of the United African Nationalist Movement, 2090 Seventh, New York, N. Y.:

FOREWORD

World war III, in its shooting stage, will undoubtedly will everything to Africa and Asia inasmuch as there will not be enough left of the rest of the world to amount to much of anything.

World war III, as a propaganda battle of ideological ways of life, is in progress now. If it remains as such, the world must choose between communism and America's democracy. There is not room for both on this planet. Communism only has a little way to go now to join the total victory. She only has to convert what is left of Asia, and wait for Africa to be pushed into her arms by Europe's stubborn role as colonist. There will be no need for war then. America will be isolated. A mere glimpse of a globe of the world will announce these facts and what they mean to a grammar-school child. It is almost too late for America to wake up and turn the tables. There are only a few grains of sand left in this hourglass of time for man's dream of freedom for the people and by the people, freedom of worship, freedoom of speech, freedom for the pursuit of happiness. Wake up.

Stop America's complicity with French Air Force that bombed the Tunisian town of Sakiet-Sidi-Youssef on February 8, 1958.

Recommend that all French forces stationed in Tunisia, including naval base of Bizerte, be evacuated. There has been very little economic aid from the United States to Tunisia.

No action has been taken (in the United States) as a result of the announcement of the French of creating a no man's land

about 200 miles long and 15 miles wide on the Algerian side of the Tunisian border, calling for a wholesale displacement of border-area civilians, similar to that between Israel and Egypt. As prowestern as President Habib Bourguiba is, such situations as these will reasonably force him or his country eventually to go the way of Nasser's Egypt. When this happens will you call him a dictator, a bigot and a Red puppet too?

It is encouraging to note that a United States military mission is training the imperial army in Ethiopia. However, our mission should be to help create a huge block of free peoples dedicated to our form of democracy in the entire continent of Africa. We are sure you must be aware that small sections of democracy can be either overrun or isolated.

America has been making a few steps toward helping countries that already have their freedom. But what about those countries that are fighting for freedom now, like Algeria and Kenya? Are we waiting for world war III with Communist Russia so that we can rescue them from the Communist grip as we rescued Ethiopia, France, and Hungary from the Fascist grip? We could have stopped World War II if we had done right by Ethiopia, Hungary, and Czechoslovakia in the beginning of Germany's and Italy's expansion. The stakes are even higher now if we put our foot down on the freedom side of the scales at this moment. The stakes now are clearly phrased with such words as annihilation, total destruction, end of civilization, IBM rockets, sputniks, world communism, atomic- and hydrogen-bomb warfare.

Gentlemen we believe that the only answer to colonialism and communism is nationalism; i. e., Asia for the Asians, the Middle East for the Arabs, and Africa for the Africans.

Just recently we sent the following suggestion to the President:

"Hon. DWIGHT D. EISENHOWER,
President United States of America,
Washington, D. C.:

"Mr. President, Russia sent to Cairo a colored Russian of Asian origin to make certain commitments to Africa and Asia supposedly for economic aid on a brother-to-brother basis. I suggest you send Americans of African origin, that is, arm me or some of my associates in whom the African leaders have confidence with a tangible exonomic and political commitment to be delivered at Accra in April. Mr. President, if you fail to do this I feel Africa will go the way of China and the rest of Asia. I have sent additional information under separate cover.

"Yours for a free Africa now,
"JAMES R. LAWSON,
"President, United African Nationalist Movement.
"NEW YORK CITY."

Gentlemen, the following is a documentation of many of the suggestions we have made to the Government of the United States of America during the past 7 years, and as you can readily see, it is always too little and too late.

We said in a telegram February 28, 1951:

"Re bill to send troops to defend Europe.

"Hon. TOM CONNALLY,
Chairman, Senate Foreign Relations Committee, United States Senate,
Washington, D. C.:

"Mr. Chairman, I would like to appear before your committee on behalf of the United African Nationalist Movement and myself. Our views are: No. 1, the European people will not fight; i. e., they surrendered to Nazi Germany and Fascist Italy in World War II and will surrender in world war III to communistic Russia more readily, etc.

"No. 2, we propose that the United States Government ally herself with the 500 million African people—those at home and those abroad (20 million in the United States). The industrial potential of Africa you know, etc.

"No. 3, we propose that in order to gain the confidence of the African peoples the United States Government make a commitment to the African nationalist leaders here and in Africa for the liberation of their homeland.

"Sir, if you arm the African under African leadership we will not only defend Africa but will defeat and destroy Communist Russia once and for all.

"JAMES R. LAWSON,
President, United African Nationalist Movement."

The following was submitted to the Honorable John Foster Dulles when he became Secretary of State Designate:

"SUBJECT: WHAT SHOULD THE U. S. A.'S POLICY TOWARD AFRICA BE?

"(Report on advisory committee meeting held Saturday, January 3, 1953, Hotel Theresa, 125th Street and 7th Avenue, New York City)

"We of the United African Nationalist Movement and other interested American citizens of African blood and descent are becoming increasingly alarmed at America's foreign policy toward Africa's fight for freedom versus colonialism. And we feel that our feelings represent the bulk of Afro-Americans that are giving thought to the problem.

"By her refusal to take sides in the U. N. America is aiding and abetting the colonial powers since she is continuing to give material aid to said powers who are undoubtedly using much of it to keep African colonies under their domination. Meanwhile, there appears to be a gradual but definite tendency by the American press to brand Africa's efforts toward liberation with the taint of communism.

"We know that Africans are fighting for the same freedom that America fought for in her own revolution against colonialism. We believe that Africa will eventually free herself from colonialism. We are certain that at the present time the African peoples are far from being Communist in their aim for freedom. However, we feel a genuine fear that America's present policy may drive them into the Communist's camp. We recognize the danger of communism, and we recognize our kinship with the people of Africa. We, whom America has already recognized as the group lease affected by communistic ideas and beliefs, do not intend to sit idly by and watch America turn Africa into another China, thus paving the way for another Korea or Indochina. The destiny of Africa will have its effect upon white peoples all over the globe, and may decide the fate of the world.

"After due consideration and discussion among ourselves, with other interested citizens and various African representatives, we have arrived at certain conclusions that prompt us to make the following suggestions concerning the United States' policy toward Africa.

"1. American policy toward nonwhite independent countries in Africa

"(a) Like other independent countries they must be armed against further aggression with aid through the front door by the United States rather than through the back door by the totalitarian countries.

"(b) Ethiopians are already receiving training in European military schools, yet America has offered no such program for Ethiopians in this country. This situation should be remedied and the required Presidential appointments to West Point and Annapolis should be tendered to deserving Ethiopians, Liberians, Egyptians, and Libyans. Young officers should be brought here for 15 weeks' training courses in all branches of military service

"(c) British troops should be removed from the reserved areas in Ethiopia by March 1, 1953, inasmuch as they may endanger peace and security in East Africa.

"(d) Invite the President of Liberia, King of Libya, Premier of Egypt, and the Emperor of Ethiopia to make state visits to the United States of America.

"2. American policy toward protectorates

"(a) An immediate plebescite should be carried out among the people of these territories, especially in Tunisia, Morocco, and Condominium of the Sudan, as to the type of government they wish and the United States should recognize the decision and the will of the people of these territories for the mutual benefit of all.

"3. American policy toward U. N. trust territories

"(a) As further insurance of a technical, social, and economic progress toward independence, a time limit (perhaps a 10-year plan) should be set with regular annual reports.

"4. American policy toward colonies

"(a) American sympathy should remain with all peoples who aspire toward self-government in their own land or territory.

"(b) Expropriation of lands by colonial powers should be discouraged immediately.

"(c) American arms should be refused to those who are using them on Africans aspiring for their freedom.

"(d) America must remind herself and others that there is no support of colonialism in the U. N. Charter which recognizes the goal of government of the people by the people and for the people.

"5. American policy toward the so-called Union of South Africa

"(a) Break diplomatic relations with and stop all aid to the present Nazi-like regime in that country.

"6. American diplomatic policy toward Africa

"(a) America should assign Afro-Americans to ambassadorial and counselor posts in countries whose population consists of a predominance of black peoples, not only in Africa but in other areas such as the Caribbean. (Not one of the 30 Americans working in Ethiopia is of African descent.)

"7. American aid on the point 4 program

"(a) America should investigate and follow up every American dollar (collected from all groups in America) appropriated to underdeveloped countries. (Not one of the 67 Americans working in Ethiopia under point 4 is of African descent. The same is true of Egypt.)

"(b) One American of African blood and descent should be included in a 3-man commission to investigate these appropriations.

"JAMES R. LAWSON,
Chairman.
"JAMES LEAGUE, *Secretary."*

The following suggestions were made to the Senate Foreign Relations Committee, 85th Congress, Special Committee To Study the Foreign Aid Program:

"STATEMENT OF JAMES R. LAWSON, PRESIDENT, UNITED AFRICAN NATIONALIST MOVEMENT, 2090 SEVENTH AVENUE, NEW YORK, N. Y.

"Foreword

"A little more than one-third of the population of Africa is now free and Africa owes much of that freedom to the influence of America.

"The sympathetic attitude the United States is showing toward the countries in Africa that have attained their independence is very encouraging to us.

"However, we hasten to give the warning that there still exists the other two-thirds of Africa. Two-thirds still in ferment as was China and Korea and as the shadow of Russia once hovered over China and Korea, that shadow now hovers over Africa and Madagascar.

"There still exist countries like Kenya, and South Africa. To forget countries like these out of deference to Europe could cost us the continent of Africa as it did the continent of Asia.

"While we sympathize with America's dilemma due, no doubt, to cultural and racial ties to Europe, we see much further than that.

"We see the world observing that dilemma to be due to race prejudice, observing America attempting to rationalize on some kind of balance between the natural aspirations for freedom and the evilness of colonialism, as in Kenya.

"America must wake up to the fact that the majority of the nonwhite races of the world are not rationalizing on this subject. They see colonialism as evil and the desire for freedom as good. We cannot be so much percent for evil and so much percent for good. If we are not completely for good, we are against it. That is the way we are being judged.

"It is not enough for America to give verbal sanctions to some who are free and at the same time ignore the remainder who are not free. It is not enough to rap Britain and France on the wrists in a good-natured manner now and then concerning this matter. It is not enough to disagree with the colonists on the one hand and to give them the guns to maintain their colonial empire on the other.

"Meanwhile, Russia is extending its sphere of influence from the east coast to the west coast. She has raised her legation to an embassy in Addis Ababa and sent various cultural missions to the Ethiopian populace while the United States talks and debates. Russia has sent emissaries to Liberia and other newly freed countries while the United States talks and debates. Russia is getting ready to send an ambassador to Ghana while the United States talks and debates.

"In the light of Egypt, it is quite evident that Russia does more than talk and debate. Who knows what tangible aid is being given or is in the offering from Russia and who can blams needy countries for accepting it if it is not forthcoming from the democratic country from the west who merely talks and debates? These countries realize they must sink or swim in a world advancing at incredible speed. Countries that do not move fast enough will be lost. They have no alternative but to use whatever means at their command and to accept whatever aid is offered, no matter from whom. Egypt and Israel have proved to be no exception.

"America is notoriously a poor competitor in the diplomatic field of winning friends among the nonwhite peoples. Due, we suspect, to feelings of racial superiority by American emissaries who cannot resist bragging about bathtubs, radios, television, refrigerators, etc. Neither can they resist 'putting on the dog.' All this in the midst of people who are looking for a means to pull themselves up. To such people all this braggadocio seems to stem from bigots not friends. It is becoming quite evident that America does not understand other races of people fighting for freedom. This has been exhibited several times in countries like China, Indochina, and Korea. Russia, apparently, does.

"If this trend continues we will lose the next war by default. The rest of the countries will fall like ripe plums, if Russia succeeds in lining up all the countries containing most of the world's raw materials and manpower.

"We believe that at this very point the United States is fighting for its life.

"Now is the time for America to pull out all the stops, to stand up and be counted. As we have stated in our original message, America was the first country really and truly based upon the fundamental aspirations of mankind to be free. Fundamentally America was the country to be patterned after. America was once the hope of all freedom-desiring countries. Now we hope that it is not too late to wrest the lead from Russia.

"We must hasten to give aid and grants to the struggling peoples of Africa at least equal to that we have given and are giving to Europe which does not appreciate it half as much as Africa will.

"Russia has extended its sphere of influence from the East Coast of Africa to the West Coast.

"It is not enough for America to give verbal sanctions to African freedom and debate concerning it in the White House. The world, including Hungary, is tired of talk. The type of assistance offered by Russia is a formidable challenge to the offerings of a vacillating democracy.

"If America tries to compete with Russia culturally by using the type of propaganda attack she used in China, Korea, India, Arabia, etc., she is doomed to failure. The average American, especially of the Caucasian race, does not understand the darker peoples' fight for freedom from colonial rule. This has been exhibited time and time again. The graves of America's good intentions are being dug all over the world.

"America cannot use white representatives nor even black represenatives who are close to the white way of thinking. America must send representatives to Africa who understand Africans' likes and dislikes, and their hatred for colonial rule. There is only one type of American who can fill this bill—those of African descent who have been fighting for Africa's redemption since the times of Marcus Garvey. We do not mean pseudo-organizations but the bona fide ones who actively took Ethiopia's side in her war with Italy, who took the side of Kenya in her fight for liberation without any tint of communism or hatred for America in their ranks. Organizations which are recognized by these countries as fighting for the overthrow of colonialism.

"Just as important in this competition between Russia and the United States is military aid.

"National Aspirations of the African People

"Invite the President of Egypt, King of Libya, Bey of Tunis, King of Morocco, Premier of the Sudan, and the Premier of Ghana to make state visits to the United States of America.

"United States Policy Toward U. N. Trust Territories

"As further insurance of technical, social, and economic progress toward independence, a time limit (perhaps a 5-year plan) should be set.

"United States of America policy toward colonies

"(a) American sympathy should remain with all peoples who aspire toward self-government in their own land or territory.

"(b) Expropriation of lands by colonial powers must be ended immediately.

"(c) American arms should be refused to those who are using them on Africans fighting for their freedom and independence.

"(d) America must remind herself and others that there is no support of colonialism in the U. N. Charter which recognizes the goal of government of the people by the people and for the people.

"United States policy toward the so-called Union of South Africa

"(a) Break diplomatic relations with and stop all aid to and trade with, as long as the present Nazi-like regime in that country remains in power.

"United States diplomatic policy toward Africa

"(a) America should assign Afro-Americans to ambassadorial and consular posts in countries whose population consists predominately of African peoples, not only in Africa but in other areas such as the Caribbean.

"(b) The United States should appoint an American of African descent Assistant Secretary of State for African Affairs.

"We know that the timetable of liberation for the combined African nationalist movement call for all of Africa to be free and independent with the reins of government in the hands of the indigenous Africans by 1965.

"Economic and military aid, and industrial development

"Public health, education, communications, transportation, roadbuilding, and technical know-how—

"Like other independent countries they must be armed against further aggression with aid through the front door by the United States rather than through the back door by the totalitarian countries. Through loans and grants of $10 billion in a 5-year development and defense program for Africa, at a rate of $2 billion per year for 5 years.

"We recommend the following amounts annually:

	"Millions
"Egypt	$200
Sudan	200
Ethiopia	200
Morocco	200
Libya	100
Liberia	100
Tunisia	100
Ghana	100
Total	1,200

"We recommend that the following amounts annually go to the following countries as soon as they gain their freedom and independence which we hope will be shortly:

	"Millions
"Nigeria	$200
Madagascar	100
Tanganyika	100
Algeria	100
Uganda	100
Sierra Leone	50
Senegal	50
Kenya	100
Total	800

"Special Participation of Afro-American Businessmen

"We further recommend that a special $1 billion fund be set up to finance small business in Liberia, West Africa, as a kind of pilot project—where small business such as the African Lumber and Home Building Co., Inc., can borrow money for expansion in Liberia and/or the Pyramid Trading Co., Inc., could borrow money for small-business operations in Liberia, Prima Cola Bottling Co., and the African Development Corp.

"These companies and several others owned by Americans of African descent could help make Liberia the showcase of American aid and know-how for the other African countries. They will doubt the United States sincerity as long as they see that we have done almost nothing to help Liberia. There is no need to send truckdrivers to Liberia or Ethiopia at $25 per day when there are plenty of truckdrivers just as good to be had at from $1 to $5 per day. This is not only a waste of United States taxpayers' money but Liberia and Ethiopia have to pay this money back with interest. These are the strings that many countries do not want attached to United States aid."

Gentlemen sirs, I am available to answer any questions.

St. Patrick's Day Address by the Very Reverend Charles H. McKenna

EXTENSION OF REMARKS
OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. FOGARTY. Mr. Speaker, while St. Patrick's Day is gone and past, its memory lingers on. Particularly for those of us who were privileged to hear the remarks delivered by the Very Reverend Charles H. McKenna, O. P., at the 58th annual dinner of the Society of the Friendly Sons of Saint Patrick at Providence, R. I., on the evening of March 17.

A distinguished educator and noted lecturer, Father McKenna is a graduate of the Catholic University of America with the degree of doctor of philosophy. He also holds an earned degree of bachelor of literature from Oxford University in England. Father McKenna's talents range to many fields. While a member of the faculty of my own Providence College, where he also occupied the office of chaplain to the student body, he conceived and caused the erection of a magnificent grotto shrine as a memorial to those men of Providence College who offered their lives for their country in World War II. Today it is truly a landmark in my State.

Father McKenna is now prior of St. Stephens Dominican House of Studies at Dover, Mass. All the members of the Friendly Sons were extremely pleased to have him return to Providence and deliver his memorable address. Mr. Speaker, under leave to extend my remarks I include Father McKenna's excellent St. Patrick's speech.

Weeks before the 17th of March, the clarion call for celebration can be heard in every country of the world where Irishmen have settled and been permitted the free pursuit of happiness. In this celebration they are never alone. They are joined by friends and neighbors of every racial origin, by the Italians and the Poles, by the Germans and the French, by the Orientals and the Occidentals—all want to share in the "wearin' of the green" and to glory in the joy of St. Patrick's Day. This is natural, for the Irishman has many gifts—and admittedly a few failings—he has certain qualities of character that endear him to some and estrange him to others, but none will question his genuine sincerity and stoutness of heart. These gifts, combined with an inhate humor have won him many friends wherever he has wandered. And all unite with him in commemorating the feast of the patron saint of Ireland.

In fact, St. Patrick is dear not only to Irishmen, but to all men of good will—to those who revere heroic sanctity, unfaltering faith in God, purposefulness and idealism, unbounded charity and dogged achievement. His gentle love for all the people of God, coupled with a stern denunciation of evil wherever found, his complete dependence upon Divine Providence, his burning enthusiasm in toil—all make him one of the great figures in an era of many Christian heroes.

Winston Churchill, in a book written about two decades ago, made the statement that one of the marks of a great man is that he so ordered the affairs of his own day that the course of future events was greatly influenced by what he did. Certainly no man has left a more enduring impression upon the history of Western civilization than Patrick, slave and saint of the Emerald Isle.

The spread of Christian belief, the development of learning, the growth of culture, not only received a tremendous impetus from St. Patrick, but even today, centuries after his death, the distinct stamp of his holy influence is still apparent. The truth which he preached has persisted as the greatest heritage of the Irish nation. So firmly did it take root in the very soil of the land, so forcibly and so continuously did it flow in the very bloodstream of its people, that neither the ravages of time nor the hatreds of war, neither the trials of prolonged persecution nor the destruction of churches, has been able to destroy it, or even to weaken it. Centuries of struggle and suppression and suffering have merely fanned the flames of faith so that they burned brighter and consumed even those who sought to extinguish that faith. While out of smoldering ruins rose new and bigger churches.

Such is the history of the Irish nation in its efforts to preserve the truth which Patrick taught, preached and lived. Few are the nations in all the Christian world which can boast of such a record of fidelity. Somehow I want to recall the words of the Book of Job, in the 14th chapter: "A tree hath hope; if it be cut, it groweth green again, and the boughs thereof sprout. If its roots be old in the earth, and its stock be dead in the dust; at the scent of water it shall spring forth leaves, as when it was first planted." These words have a particular significance when applied to the life and the work of St. Patrick, when applied to the faith of the Irish people.

Ireland is a country, like Spain, Portugal, Italy, where heresy never found even a brief haven. Other peoples have had their apostles and have followed them for a time, but then faltered in the moment of persecution. But the seeds of faith planted by St. Patrick and watered by the blood of countless martyrs were so firmly rooted that no power, however strong, has been able to destroy that faith. Today the whole Catholic world is profoundly indebted to Ireland not only for having preserved the faith at home, but also for having brought it to others. Missionaries, men and women, have carried the message of the Gospel across the oceans and over desert lands.

The intense love of God that had been instilled in them in the days of their childhood compelled them to seek out the pagan and the infidel no matter what the hazards of the journey nor the personal sacrifice involved. Not only missionaries, but wherever the loyal sons and daughters of Ireland went they carried the truth in their hearts and soon the example of a daily Christian life won many new souls to God. The Irish emigrants have been the strong nucleus of the Catholic Church in every land where they settled. If we praise St. Patrick, it is because he was God's instrument in history and the benefactor of all mankind. He, himself, was the humblest of creatures, but what he did personally and through the people that have been scattered by sacred chaff throughout the world, has merited the commendation of men of every race and creed in every age. Much as the world likes to pursue its purely materialistic aims, it is nevertheless forced to recognize and to pay tribute to the genuine worth, the defiant persistency, the ennobling influence of spiritual ideals. May the present generation of Irishmen throughout the world continue to shed lustre on the name and the labor of Patrick by continued faithfulness to these ideals.

It is an admitted fact that wherever Christianity has spread, there developed along with it a civilizing culture and a learning that brightened and comforted the lives of men. And if Irishmen are noted for their Catholicity, then they have an equal claim to fame in the intellectual world. For long before the great universities of continental Europe had begun, the Emerald Isle had achieved an outstanding record for scholarship. In fact, the continental universities owed their foundations in no small degree to Irish learning and professors who emigrated from Ireland. The classic tradition which had become moribund elsewhere was preserved and enhanced under the influence of him who toiled only with the cross and for the cross. Ireland became the leader in the intellectual world. The Renaissance began in Ireland 700 years before it was known in Italy. Ireland became, by universal consent, the Isle of Saints and Scholars—the proudest title ever given to any land or people.

Undoubtedly there is no quality quite so universally appreciated as courage—not the daring or fearlessness of aimless adventure but that sincerity of heart and persistency which clings to righteousness in spite of hardships. Certainly St. Patrick was a man of courage and conviction. No sooner had had he been consecreated bishop than he set out for the very land where once he had been held captive. He faced enemies of every type, his former owners, the Druid priests whose religion he was supplanting by Christianity. He was intolerant of evil and he expelled the serpents of superstition. The world admires bravery; we decorate our soldiers and sailors who have fought valiantly. One of the qualities that has helped to make Patrick enduring great was his heroic courage and daring.

As we assemble here once again to celebrate the feast of St. Patrick, let us turn toward him not only in praise for the glory of the past. Patrick is also a symbol for the needs of the world today.

1. We need men animated by faith in God and the eternal principles of justice and righteousness. We live in an era which puts too much emphasis on materialism and the pursuit of wordly comforts for their own sake. We are witnesses to the worldwide attack on sacred truth by the satanist enemy of communism. Religion and democracy are challenged: Religion, because it thwarts the development of atheistic communism. A man can never be a real Communist according to Soviet standards and at the same time believe in God. True democracy is challenged as its name is used to disguise the absolutism of dictatorship that openly stalks forth from the Kremlin under the false label of democracy. Therefore we need to preserve our faith in the Almighty.

2. We need, also, today men who will keep faith with each other and have respect for the dignity of man as a creature of God with all the human rights that flow from his spiritual nature. We need men who reverence true scholarship and who believe in absolute principles and will suffer for them.

3. We need men today, too, who—both in public and private life—have a loyalty to the ideals and the traditions that inspired the founders of our own Nation and that have helped since to keep it great.

The principles proclaimed by St. Patrick, if practiced today, will make us individually better Americans, will make our country a better and a happier place to live, because our lives will be lived in the aura of eternal truth which Ireland has never lost.

Education

EXTENSION OF REMARKS
OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1958

Mr. BYRD. Mr. Speaker, under previous leave to extend my remarks I wish to include a statement which I submitted this morning to the Subcommittee on Special Education. The statement is as follows:

Mr. Chairman, I deeply appreciate this opportunity to express my views to your subcommittee, and I know of no more important subject that can be given careful study by the Congress than that of education. On one occasion Aristotle was asked how much educated men were superior to uneducated men. "As much," said he, "as the living are to the dead." Yet, some 150,000 young Americans this year, last year, and the year before did not go on to pursue a college education just because of financial difficulties. One hundred and fifty thousand students out of the top echelon of their classes in high school did not go on to study in college, just because of a lack of means to pay. Each time I think of the Russian sputniks I am prone to wonder how many of those students who did not go to college 10 years ago for the same reason would now be available to help our country, in a time of desperate shortage of scientists and engineers, to win the race for outer space.

Two years ago I was in Africa, the Middle East, and in Asia, and each time I recall my visit to the Asian-African world, where America's vital interests are increasingly concerned, I am appalled once again by the fact that only a handful of Americans can talk the language of the peoples of those two great continents, to say nothing of European languages. It is important to be able to converse in other languages if we are to hope to transmit and exchange the ideas of freemen with the peoples of captive countries. Yet, too few American students today are preparing, through language studies and scientific studies, to meet the challenges that will confront America in the immediate years ahead.

It is no longer mere idle speculation that man may someday reach the moon. We have now crossed another threshhold into the age of space flight. The first Russian satellite was an important technological breakthrough that provided a warning to us to provide enough scientists and technicians of sufficient quality to enable us to regain and hold world leadership in the technological race or else lose our liberties and freedoms forever.

The backward peasant nation that was the Soviet Union 30 years ago has raised itself to a high level of technological accomplishment, even though it may have been at great cost in human suffering. Today, Soviet missiles and rockets face us, to say nothing of a vast fleet of missile-equipped submarines and huge standing armies. America is confronted with a shrewd and ruthless mortal enemy, Soviet Russia, a country under the leadership of atheistic men whose announced objective is the complete mastery of the world, men who are merciless, men who are ambitious, men who will stop at nothing to achieve their goal.

Nikita Khrushchev has boasted that the Soviets will be supreme in nuclear power, in consumer-goods production, in cultural activities, in agricultural production, in education. "We will bury you," he has boldly and arrogantly stated to us.

It is time we realized that the Communists are waging all-out war upon us and that we are locked in a gigantic and momentous struggle which will demand every resource of our intelligence and our spirit if we are to survive. We are in a one-game world series, and we cannot afford to lose any more innings. The Russian sputniks and our own satellites are signs in the sky that the race between the Communist world and the free world has entered a new, a deeper, a more profound dimension. And this race is to the swift; this battle is to the strong. To effectively compete in this contest, there must be a fundamental change in American attitude toward the intellectuals, the scholars in our midst.

America needs more eggheads and fewer fatheads. It was Soviet eggheads who got the sputniks off the ground, and it will be American eggheads who get our Nation off the ground if we but give them the support they need. Frankly, I am on an egghead search. I am looking for more scientists and engineers, more mathematicians and technicians.

Not all eggheads are geniuses. Not all eggheads are potential scientists and engineers. An egghead is simply a thinking, reflecting person, who may well have a strong streak of creativity in him or her. The basic hallmarks are a concern primarily with ideas, a restless inquiring mind, a dedication to something higher and outside himself. Some are hard boiled and some are soft boiled, but we need them all, and it is time that the American people and our United States Government decided to make it possible for a far higher percentage of young potential scholars to move into positions of leadership.

We must have more teachers, and we must have better teachers. That means higher teachers' salaries, so that a teacher can afford to work at only one job, so that he or she can afford to take further training during the summer months. An average salary of $4,420 is unthinkably low. Only about half of the chemistry and biology teacher graduates in 1956 actually went into the teaching profession. Industry's higher salaries are appealing to the teachers, particularly to science and mathematics teachers.

Last fall at Chicago, at a conference of more than a thousand educators and laymen interested in education, the point was made repeatedly that high-school students are capable of handling much more solid intellectual fare than many are now receiving. The quality and the intensity of our higher education can be rather sharply increased by changes in the curricula. This is imperative when we think of the degree the Russian high-school graduate is being force-fed with scientific education.

The other day I learned this from the United States Office of Education's specialist in Soviet education:

"The emphasis on science in Soviet schools contrasts sharply with the situation in the United States. Whereas each of the more than 1 million Soviet students graduating from secondary schools last June had taken 5 years of chemistry, 5 of biology, 10 of mathematics—including algebra, geometry, and trigonometry—less than one-third of a total of approximately the same number of our American high-school graduates had taken as much as a single year in chemistry."

That is only a fraction of the story. In the Soviet Union the school week is 6 days, not 5. The school hours are longer. Study at home is more exacting. Examinations are more severe. A Russian child learns biology in grade 4, foreign languages in grade 5, physics and algebra and geometry in grade 6. Grade 7 teaches chemistry. Astronomy and calculus are taught in grade 10. This Russian data surely demonstrates that many American high-school students could take a considerably richer diet of education, with a strong seasoning of the physical sciences.

What can the Federal Government do to help in this gigantic national effort which our people must make to provide the yeast of opportunity for the gifted young people among us?

First of all, we need a really intensive scholarship program administered on the basis of merit and need. I have introduced a bill to provide 50,000 such scholarships for the fiscal year beginning July 1, 1959, and during each of the 5 succeeding fiscal years. Persons awarded scholarships under my bill shall be paid $1,000 during each academic year of the scholarship's duration.

Each State would be allotted the number of such scholarships which bears the same ratio to the total number of such scholarships being allotted as its population between the ages of 18 and 21, both inclusive, bears to the total population of all the States between such ages. Any State desiring to participate in the scholarship program may do so by establishing, through its State educational agency a State commission on scholarships and student loans, and by submitting to the United States Commissioner of Education a State plan which provides for the determination and selection, in accordance with my bill, of individuals entitled to and qualifying for such scholarships. The Federal Government would pay the administrative expenses of the State commissions.

In the same bill, I have proposed a long-term low-interest loan program for college students, such loans to be made up to a maximum of $1,000 to any one student in any academic year beginning July 1, 1959, and for each of the succeeding 5 fiscal years. The bill would authorize the appropriation of $40 million annually for this purpose over the 6 fiscal years embraced by the program. Loans would be made on the basis of need and scholastic ability and for the purpose of pursuing a course of study in engineering or leading to a degree with a major concentration in academic work in a science, mathematics, or modern foreign language.

The bill provides that any college graduate who enters Government service in the scientific and engineering or related fields or who enters the teaching profession upon graduation may write off his loan, 20 percent of the loan being forgiven for each year he or she remains in the required profession. This is an incentive that will keep many young people from taking the jump out of teaching in those first years of typic-
out of teaching in those first years of typically low teaching salaries.

My bill would also authorize appropriations for the acquisition of science teaching facilities for institutions of higher education to carry out the program. The appropriation of $75 million annually would be authorized for the purpose of making payments to teachers for advanced study in summer sessions offered by institutions of higher education, and an appropriation of $25 million annually would be authorized for the purpose of making payments to teachers for advanced study in extension courses.

Moreover, 1,500 graduate fellowships would be awarded annually for periods of study not in excess of 3 academic years in the fields of mathematics, science, engineering, and modern foreign languages.

Congressional citations would also be presented by the Commissioner of Education to high-school graduates for outstanding scholastic achievement.

Federal control of education would be prohibited under my bill.

Mr. Chairman, we must do our best to find our potential leaders in science and industry. We need techicians, we need diplomats, we need engineers and scientists, we need young people who can speak other languages, men

and women who can probe the atom as well as the vast outer reaches of the universe. I shall do my best to provide our young people with the opportunity they deserve and which our Nation's own vital self-interest demands—the opportunity to develop their talents and faculties through higher education. The discovery of a single genius can upset the military balance of power. The same discovery can contribute more to man's prosperity than the discovery of some vast new body of iron ore. The discovery of a single scientific genius may mean the difference in freedom and slavery, peace and war.

Mr. Chairman, if this free civilization of which the United States is the most formidable part should fail to survive the menace that now confronts it, the historians of the future will point to the tragedy of education in the United States as having been our Achilles' heel.

Sputnik has dramatized our sorry condition. I submit, then, that we must rededicate ourselves to the cause of freedom through education, freedom for our generation now and freedom for posterity. Freedom and survival for the United States and those who want to be free everywhere. I trust that the Congress will act to insure this freedom.

Education in the United States has become the neglected stepchild of American progress. Not only education from the standpoint of financial support, but education from the standpoint of substantive content. Our system of education has been so developed that it has been possible to go through grammar school, through high school, and through college, and emerge in a state of utter educational mediocrity. It is an educational system that has flaunted as an ideal, as if it were a religion, not the exceptional man, not talent, certainly not genius. It has flaunted the chap who knew how to make friends and influence people. It has not been what one knows that matters, or what one has achieved, or could achieve. There has been a consequent breakdown of discipline that has corroded the home and debased authority. The handwriting is on the wall. We must act now lest in the end we are weighed in the balance and, like Belshazzar, found wanting.

Mr. Chairman, I wish to compliment you and others of your subcommittee. In conducting hearings on this important subject you are paving the way for legislation which cannot be excelled in its importance to our country's welfare and security. I want to commend you upon the forthright and courageous position you have always taken in this matter, and I am supremely confident that your continuing interest in so vital a subject will direct you and your subcommittee and the full committee to reach an ultimate solution to the grave problems which confront us in the field of education. The very survival, not only of our free educational system but also of our liberties and freedoms as Americans is in the balance. I urge you to continue in your quest for the facts which will enable you to report legislation eventually to the Congress for action whereby the means may be provided to promising students throughout the land to enable them to go on to higher education and to prepare them for the type of leadership so greatly needed if ours is to continue to be the land of the free. I trust that your subcommittee will look favorably upon the provisions included in my own bill, H. R. 11776, but, in any event, it is my greatest desire that legislation be devised which will meet the needs and accomplish the objectives I have sought to achieve. You are in the position to know what legislation is best. I am grateful for the opportunity to submit my views. Action is the order of the day.

Ike's Broken Faith

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. DORN of South Carolina. Mr. Speaker, recently while testifying before the House Ways and Means Committee, I stated that proponents of the Trade Agreements Act were being aided by a propaganda program designed to sell slogans instead of facts. I call the attention of this House to an excellent editorial appearing in the March 31 issue of the Standard-Times, New Bedford, Mass.:

IKE'S BROKEN FAITH

President Eisenhower demands that the American people put presssure on their Senators and Congressmen to force them to pass his so-called foreign-trade program, a proposed renewal of the Recriprocal Trade Act for 5 years.

The slogan department of the White House has produced a clever cluster of catch-phrases of the type the President favors more and moreto decorate his public utterances.

None of these slogans represents either reason or fact.

Here are two of the slogans coined for Ike's televised address to the American people Thursday night:

Refusal to renew the Recriprocal Trade Act as proposed by Eisenhower would be "returning to the law of the jungle in trade relations between nations."

World trade makes jobs for American workers. "At a time of slack in the economy like the present, these jobs should not be placed in jeopardy by crippling our trade program."

Both of these wordbusters are phony and fraudulent.

Far from creating jobs in the country, the Reciprocal Trade Act, renewed under great pressure from Ike 3 years ago, has destroyed jobs. Indeed, it has come near to destroying the entire textile industry and other industries denied adequate protection against cheap imports from low-wage foreign countries.

The collapse of the textile industry as a direct result of Eisenhower's unsound trade policies may have triggered the very depression he now seeks to end by the passage of a similar, or worse, Reciprocal Trade Act.

A review of the circumstances under which the Reciprocal Trade Act was approved by Congress 3 years ago is in order.

Eisenhower rescued his reciprocal trade program from impending defeat in the House of Representatives by sending the now famous "Dear Joe" letter to Republican Minority Leader JOE MARTIN on February 17, 1955.

"No American industry will be placed in jeopardy by the administration of this measure," the President solemnly promised JOE MARTIN and his colleagues on Capitol Hill.

It is ironic tragedy that MARTIN'S 14th Massachusetts District is among the areas hardest hit by textile industry losses resulting from the Reciprocal Trade Act.

Not only has the President broken faith with Congress and the American people, but he has violated the spirit of his own reciprocal trade program enacted 3 years ago.

The 1955 law contains a peril-point provision whereby industries endangered by foreign imports may appeal to the Tariff Commission for relief.

Many such appeals have been made, but Tariff Commission recommendations for higher duties on imports have repeatedly been vetoed by the President.

Eisenhower's reciprocal trade program, in 1958 as in 1955, is based on the proposition that certain American industries—such as the textile industry—are expendable and may be destroyed to help industries in foreign countries, and perhaps some industries in the United States engaged in foreign trade.

In other words, the Reciprocal Trade Act is designed to take away the jobs and livelihood of hundreds of thousands of American workers of the President's own choosing, in order to benefit industries in foreign countries and possibly some workers in the United States.

The people should reject Ike's highly sloganized appeal to pressure Members of Congress into extending the Reciprocal Trade Act, against their own judgment and the best interests of their own section, and despite their sorry experience of the past.

Nationwide School Construction Program as Antirecession Measure

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 25, 1958

Mrs. DWYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Frederick L. Hipp, executive secretary of the New Jersey Education Association. Mr. Hipp's suggestion, that large-scale school construction should be considered in any antirecession program, is one that deserves our early and earnest attention:

NEW JERSEY EDUCATION ASSOCIATION,
Trenton, N. J., March 26, 1958.

Hon. FLORENCE P. DWYER,
House Office Building,
Washington, D. C.

DEAR CONGRESSWOMAN DWYER: The New Jersey Education Association respectfully suggests that Congress consider a nationwide school construction program as an antirecession measure. Specifically we would like to call attention to S. 3311 sponsored by Senators MURRAY, COOPER, MORSE, MCNAMARA, LANGER, MAGNUSON, HENNINGS, and NEUBERGER as a possible pump-primer for prosperity. This bill—identical with H. R. 10763—would provide approximately a billion dollars in 1958–59 for school improvement, including construction.

The need for additional school buildings is nationwide. It has been thoroughly developed in congressional hearings over the past 3 years. Perhaps the present recession would not have occurred at all if the school construction bills had not failed of passage by 30 votes in 1956 and by a narrower margin last year.

Schools will have to be built in any case. Elementary and high school enrollments across the Nation are increasing over a million pupils a year. In New Jersey we anticipate 250,000 more pupils in the next 5 years. We are also facing tremendous problems in expanding our public colleges to meet rapidly growing needs.

There seems to be general sentiment that Federal money spent for large scale construction at the present time would help end the recession, and Congress has shown

some disposition to speed up the Federal highway program and boost Federal housing projects. The school construction needs have been just as carefully studied and just as clearly established. We believe that a speedup program on school construction now would provide the schools we need and would serve as effectively as house or highway building to halt the recession.

Our case is that the schools are needed and will have to be built anyway. If there is disposition to vote Federal funds for some kind of construction to meet the recession, why not build schools?

Sincerely yours,

FREDERICK L. HIPP,
Executive Secretary.

George J. Dufek

EXTENSION OF REMARKS
OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. SAYLOR. Mr. Speaker, one of the Nation's most devoted citizens is Rear Adm. George J. Dufek, who is in command of Task Force 43 of the United States Navy.

Admiral Dufek has been in charge of Operation Deep Freeze, our operation in the Antarctica, during the International Geophysical Year, 1957–58.

It was my good fortune to take my naval training duty last fall in the Antarctia under Admiral Dufek and to personally observe the tremendous task he is doing, not only in the Antarctica, but also as a goodwill ambassador of our country in New Zealand.

Under unanimous concent I include in the Appendix of the RECORD, text of a letter addressed to Dr. James E. Mooney from Rear Adm. George J. Dufek, with reference to the completion of Operation Deep Freeze III, together with congratulatory messages from the Chief of Naval Operations and commander of the Atlantic Fleet to the commander, Task Force 43.

OPERATION DEEP FREEZE,
TASK FORCE 43,
March 4, 1958.

DR. JAMES E. MOONEY,
Special Assistant, United States Antarctic Projects Officer, 718 Jackson Place NW., Washington, D. C.

DEAR DR. MOONEY: Thank you very much for your letter of February 24. It is always good to hear from you as you have such wonderful news to forward. I must congratulate you on all the fine things you have done to present our post-IGY program.

I expect to land at Anacostia, District of Columbia, on the 12th of April. We are in the final wrapup of Operation Deep Freeze III now. Nearly all of our operations are completed, except for the final turnaround of the U. S. S. *Glacier*. She is now returning to the Antarctic for the final sweep of Little America, McMurdo, and Hallett. We have picked up about a hundred of the summer personnel and returned them to New Zealand and the Continental United States. We have had a successful year and I am very grateful that for the first time we have not had any loss of life.

I am very pleased that Dr. Fuchs and Sir Edmund Hillary have successfully completed their trans-Antarctic expedition. They are now at Scott Base and will be brought out by H. M. N. Z. S. *Endeavor*. I feel that I should remain here in New Zealand for the present to make arrangements for next year. There are certain renegotiations to make regarding office space, occupation of our naval aircraft at Wigram and facilities for the Air Force at Weedons and Harwood.

We are very fortunate, indeed to have Mr. Francis Russell, our American Ambassador, here. He is very well liked and is doing an excellent job. Our relationship with the New Zealand Government continues on a very friendly basis. There is a high spirit of cooperation all the way through from the top down to the expedition people, so I feel I should remain here to make these last minute arrangements, plus getting together with Dr. Fuchs and Sir Edmund Hillary and the people who will continue operations in the Antarctic.

Sincerely,

GEORGE J. DUFEK.

FEBRUARY 21, 1958.

TO ADM. GEORGE J. DUFEK,
United States Navy:

The officers and men of the United States Atlantic Fleet join me in extending warmest congratulations to all hands of Task Force 43 for setting another record of superb accomplishment despite extreme difficulties and most hazardous operating conditions. I have watched your activities with great interest. Your efforts in Antarctica constitute a major contribution to science and should assure the success of the IGY. Your achievements reflect great credit on the United States Navy and your can-do spirit has been a source of much pride to your teammates in the Atlantic Fleet. Best wishes and well done.

ADM. JERAULD WRIGHT,
United States Navy.

FEBRUARY 23, 1958.

TO ADM. GEORGE J. DUFEK,
United States Navy:

As operation Deep Freeze III draws to a close, I send my heartiest congratulations to you and to the officers and men of your task force for the outstandnig manner in which all hands have supported our Nation's IGY program in the antarctic. Working under the most extreme difficulties and handicaps, your operations were consistently ahead of schedule. The perseverance and resourcefulness displayed in overcoming adverse weather conditions, material failures, and ship damage, was in keeping with the highest tradition of our country and its armed services. I wish you all a safe and happy homecoming.

ARLEIGH BURKE,
Chief of Naval Operations.

The logistic support for our farflung International Geophysical Year activities provided by the Department of Defense, is among the greatest achievements in the history of polar exploration. Under the able leadership of Rear Adm. George J. Dufek, commanding officer, Task Force 43:

Operation Deep Freeze I, 1955–56; Operation Deep Freeze II, 1956–57; Operation Deep Freeze III, 1957–58, have successfully established and supplied the six United States scientific stations, including one operated jointly with New Zealand, in addition to the United States Naval operational base at McMurdo Sound.

OPERATION DEEP FREEZE, III, 1957–58

Deep Freeze III executed a plan utilizing minimum forces to resupply the stations established in the antarctic during Deep Freeze I and II in support of the United States National Committee for the International Geophysical Year.

The basic mission was to resupply the established stations, replace wornout equipment, perform supplementary construction, and to transport the relief scientific and naval personnel to the antarctic, and to return the relieved personnel to the continental United States.

In order to provide the required air support for this operation, Navy long-range aircraft arrived at Wigram Aerodrome, and USAF cargo aircraft arrived at Harewood Field, Christchurch, New Zealand, prior to September 15, 1957. A United States Navy destroyer escort was stationed as picket midway between New Zealand and the antarctic to provide weather data, communications guard and homer navigational facilities. A Navy icebreaker provided surface search and rescue potential in the event of a plane crash on sea ice.

On October 1, 1957, aircraft of the Navy and USAF commenced lifting cargo and personnel into the Antarctic from New Zealand. Upon arrival at McMurdo Sound ice airstrip, the personnel for the outlying stations at Little America, Byrd, Hallet, and South Pole were delivered by Navy aircraft to destination.

When the fly-in of cargo was completed from New Zealand, Globemasters of the USAF 53d Troop Carrier Squadron commenced the resupply of South Pole Station and Byrd Station, by airdrop. The resupply by airdrop of the above stations amounting to over 700 tons was completed on schedule and the personnel relieved and returned to the continental United States prior to Christmas.

In addition 2 round-trip tractor trains, consisting of seven 35-ton D-8 tractors, each pulling two 20-ton sledges, supplied Byrd Station with some 300 tons of cargo from the Little America Base. Total resupply logistic operation for the 1957–58 season required transport to Antartica of approximately 30,000 tons of equipment and supplies, and 700,000 gallons of bulk petroleum.

Ship units of Task Force 43 commenced surface resupply operations of the coastal stations at the beginning of the navigational season in December 1957. Resupply of all stations was completed on schedule by February 1, 1958.

Air operations experienced a number of forced landings at various points en route South Pole and Byrd Stations, but all aircraft were subsequently repaired under extreme conditions and continued to operate in support of the assigned mission.

The U. S. S. *Atka* (AGB–3) suffered one broken propeller blade. The U. S. S. *Glacier* suffered 2 broken blades and 2 cracked, which were subsequently repaired in drydock in Wellington, New Zealand. The *Atka* is scheduled for repairs in the next few days.

The U. S. S. *Burton Island* (AGB–1) is en route to assist the Japanese ship *Soya Maru* penetrate the heavy pack ice in the vicinity of the Japanese station on the Prince Olav coast.

Scientific projects carried out aboard United States Navy vessels and still in progress include oceanography, cosmic ray, rockoon exploration of the upper atmosphere, and meteorology.

Admiral Dufek made the first solid-ground landing in the history of the Antarctic continent on January 31, 1958. The landing was made on a newly prepared strip of beach at Marble Point in the Cape Bernacchi area. The Navy is currently conducting a 2-year survey to determine the feasibility of the Marble Point area as a possible site for a major, year-round, solid-earth airfield. We had opportunity of viewing this area on November 25/and comment elsewhere on the significance of a landing strip here.

Operation Deep Freeze I cost $9,124,000, 3 lives, and extensive ship damage from ice. Operation Deep Freeze II cost $22 million and 6 lives. The total loss in lives has been 9 since 1954; 1 in helicopter crash in 1954; 2 through the ice in 1955–56; 4 in plane crash, 1 through the ice, 1 in helicopter crash. Considering the magnitude of the task, this is

a splendid record, and is comparable with that of any undertaking of 3,500 men, year after year, involving some 35 aircraft and 12 support ships that are at sea 5 to 6 months.

Address of Hon. T. A. Thompson, of Louisiana

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 13, 1958

Mr. WILLIS. Mr. Speaker, Congressman T. A. THOMPSON of Louisiana and I have been working closely together for the sweetpotato growers of our State. Congressman THOMPSON was honored recently by being invited to address the annual Sweet Potato Association meeting which was held in St. Francisville, La. The speech made by Congressman THOMPSON seemed most timely and this speech, followed by his efforts in Washington for the sweetpotato farmers, is further evidence of his interest in developing a better economy for our small farmers.

Mr. Speaker, I commend the text of his speech to the membership of the House.

The address follows:

Being here with you today is a disinct honor and pleasure. I do have the distinction, however, of being the person at this meeting who knows probably less about sweet potatoes than anyone here. I do know of the many problems facing the industry—I know of the problems of the past, too, and I know of the inspired manner in which you, the farmers, the processors and the marketers, have faced up to these problems and we have all seen the results of your efforts. Your work has done more to keep the small farmers in business in our areas than any other one thing I can think of.

Back when you first began the development of the Louisiana sweetpotato program, you had no way of knowing that a badly managed cotton program would allow the traditional cotton farmers of the South to lose thousands of acres of their plantings to Western States. You had no way of knowing that Mr. Benson would allow the traditional rice farmers of our State to be placed in jeopardy by continuing price supports and not controlling acreages thereby allowing those who had lost cotton acres in other States to immediately go into rice. Yet, the organization you started has been a dramatic thing.

I was with State government for 18 years prior to being sent to Washington and my duties then took me into every department of our State. I took particular interest then in the department of agriculture. I well remember the great work done by the late great commissioner of agriculture, the Honorable W. E. Anderson, and at that time his State entomologist, Sid McGrory, who did such a great job and later filled the high position of commissioner. His interest in our farmers was evidenced then, as it is today by his presence here.

You were beset then by just about everything that could have caused the program to be abandoned—sweet potato weevil—government quarantines, lack of sufficient funds for research and development—lack of industry regulations—and lack of enlightened marketing.

How well do I remember the battles we had to secure funds for the sweet potato weevil programs. I was handling State budgets then, so I know. And, finally, through understanding legislatures, we were spending more in Louisiana on the program than all of the other poatto-growing States combined.

Our research program was augmented and soon, through the inspired work of Dr. Julian Miller, we were to have the finest product of any State. I have learned that only recently the cause of cork has been ascertained and will soon be a problem of the past.

The one thing that stands out in my thinking, however, is the fact that producers themselves have paid their own way toward the accomplishment of marketing, advertisement, and self-regulation. The fact that no potato from Louisiana is marketed unless it meets rigid standards of your own making is something to be proud of. Has this been impressive to the consumer? Considering that Louisiana yams represent 40 percent of the Nation's consumption, how can you conclude otherwise?

I have always had great confidence in a good public relations program. I believe that 90 percent of the failures in business is due to the lack of good public relations—considering, of course, that the operators are otherwise qualified. You have done a tremendous job of letting the public know of our yams, both by advertising and by the annual excursions where Louisianians and our beautiful yam queens have received acclaim. And I want to thank the association—and especially my good friend, Joe Arceneaux—for making it possible for me to bring our yam to the attention of the folks in Washington.

From the letters I received I know that others were impressed. You should have seen Washington's most eligible bachelor, when, as an accommodation to him, I named a "Miss Yam for a Day in Washington." I think he was more impressed with the beauty of Miss Fran Anderson than by the yam mask she wore, because he didn't kiss her at all until we removed the mask.

Vice President NIXON was no less gracious. It's amazing how few closed doors there are to a pretty girl.

In addition to the 2 tons of yams given away that day, yams were served in every restaurant on Capitol Hill as a side dish even to hamburgers. I do hope the little excursion was worth the efforts you went to, to make it possible.

When I think of our National Government and its wide scope of activities, I'm reminded of the age-old story of "cabbages and kings." Our present-day Government has its finger in everything—so, perhaps, I could speak today of "Potatoes and Things."

Certainly, we in Louisiana, we of America, have made progress over the years in many fields. This progress has meant—by and large—a higher standard of living, better schools, better medical facilities, better everything. But, if we are not careful, if we lose our sense of values as to what makes America fundamentally a Nation of strong people, the entire development might become one of progress against happiness. We should never only look at the "across the board" benefits of progress. The average may be up, but it may be that because it is up some segment of our population is suffering. When average earnings are up, average costs go up. What about the small farmer—his costs go up just as high as do the costs for industrial workers, but his income has not kept pace. The small-business man is in the same boat.

In recent years I have heard it said by high Government officials that if a farmer is too small to keep pace, let him leave the farm—and many have been forced to leave. There were more bankruptcy proceedings last year than in any year since the 30's. From too many high places in our Government today we hear—big business, big farmers, economic units, big everything. They have even been closing down, or trying to close down, small post offices. What these people don't consider is, that the bigness of this Nation, the traditional success of our Government, is entirely due to a lot of little people. Little people who have maintained the faith of our Founding Fathers of a free life in the pursuit of happiness. All they want from government is enforcement of laws, protection in times of emergency, and a helping hand in times of distress.

High costs today are directly attributable to big subsidies to big business and international politics—much of it at the expense of those little people who can share only in these high costs.

America has been made great since the days of the minute men by their having common meeting places—places where news could be disseminated—where ideas could be disseminated—where ideas could be exchanged—communities where homes could plant roots and the development of inherent loyalty can be nurtured.

Take away the small post offices, such as Mr. Summerfield has been trying to do. Then you take away the common meeting place, you take away the bulletin board—and, in many instances, you take away the identity of the community. The train no longer stops. Neighbors no longer see each other daily. You no longer live in Turkey Creek, or Chicot, or Baines—you now are one of the residents of Highway 145 and must, unless you can drive 30 miles, catch the post office when it goes by. Some savings in money—yes—but what is the cost in the fundamental strength of America which stems from the small community system?

When small farmers are forced to leave the farm, how much do we lose? First, you lose the wholesome atmosphere of a healthy, happy family who lives there, not because of wealth to be attained, but because of a way of life. You lose those hardy, courageous, independent, thinking individuals from whence nearly all of our great leaders have sprung. You lose in money, too. Send the small farmer into town. He must reside where his resources will allow him to. He must accept the most menial jobs until he is trained—that is, if he is fortunate enough to get work at all. No more 4-H Club work for the children; no more chores to keep them occupied, so they may acquire a healthy outlook on life. The streets are their playground; idle minds and bodies create delinquency. The cost to you—check your welfare costs—one-tenth of the costs for welfare payments to a family of six in the city could maintain a happy and productive family on a small farm.

Where else do you lose? If one large farmer now handles crops formerly raised by 10 families—the crossroads store sells one pair of shoes where it formerly sold 10; small service stations, feed mills, in fact, the entire small country community shrinks to nothing—and, as often as not, the farm is now operated by absentee landlords so the profits made by the so-called "economic unit goes to a depository far away from the land from which it was wrenched.

Now, I do not mean that I am against a farm being an economic unit. Far from it—I have seen families reared on 40- to 50-acre farms—I have seen such small farm families send several children through college with little or no assistance from without. Our whole system of research and development and agriculture education has been founded for the purpose of developing means of gleaning more and more production from our lands, while at the same time conserving our soil's resources.

Our county agents have done banner jobs in their work with small farmers. Our home demonstration agents were not trained to visit mammoth farming operations, but have

devoted their time and efforts to assisting the smaller families in becoming more and more self-sustaining—how to raise their standard of living without the expenditure of their cash money. These wonderful workers teach everything from furniture upholstering to the making of clothes, to canning, and many other things that would otherwise dip into the small earnings from cash crops.

Certainly those of us who set up these programs did not share, with Mr. Benson, the theory that small farmers must leave the farm. Let us help the small farmer to become self-sustaining and thereby be classed as an economic unit. You, as an association, are doing your share to bring this about.

I hope that your work will inspire others to follow suit. You know—experience is a great teacher—why do some people forget so easily? Do you remember when in the early days of the ERA and the CWA, how thousands of small farmers left the farms and moved into the cities and towns in order to be eligible for $12-a-week checks or grocery orders? Then, following this, the rural-rehabilitation program had to be started to get those thousands of small farmers and their families back to a stable life—I wonder how many millions were spent on that project. The Government thought it so important then for these people to return to the farm that they purchased, for cash, a mule, seed, tools, and, in some cases, bought the farm and farmhouse. We cannot allow this to happen again.

The strength of our community system, of our small farmers and our small business will determine our strength in the event of a national emergency. Anyone desiring a quiet existence did badly to be born in this 20th century, what with nuclear fission and fusion, space satellites, intercontinental missiles, and the growing cancer of Russian idealogy, we can see no peace even though we may avert outright war.

I have no doubt that our scientists are well qualified to continue to lead in scientific discovery and development. Certainly the Russians launched the first satellite—that was because our leaders failed to realize the value of such a project in world opinion or public relations. We really slipped, and Russia stole the ball—we have regained some world prestige by the launching of the Explorer.

Now we cannot relax. We must prove to the world our leadership, not by bragging of the destructive power of the H-bomb, but by convincing the people of the world that these discoveries can be used to benefit free peoples everywhere.

If confidence is to be built up in America, over the world, it will be by the positive approach in selling democracy—by feeding the hungry (our surplusses could be used for this), by assuring friends of support in times of danger. But not by reaching for the pocketbook each time we face a problem. You can't inspire the will for freedom and democracy by payments of cash.

Remember the Republican slogan of 6 years ago—"Trade Not Aid"—I wonder what has happened to that one. Mr. Dulles seems to think now that charity begins abroad—and after all the discussion of lobbies for our natural gas bill and the subsequent veto, our President has now hired the Nation's best, Mr. Eric Johnston, of Hollywood, to lobby the Americans into pressuring their Congressmen to vote for the giveaway.

Surely we should help our neighbors, but not to the extent that we bleed ourselves white to do it. Not to build highways in Arabia while our people drown for the lack of levees; not to train farmers of foreign lands to grow rice when our farmers starve because of acreage reductions due to the loss of foreign markets.

President Eisenhower told us one day that if we should seek only to arm and create weapons for war and not protect and develop our own natural resources, that we would enter an age of peril. We are still waiting for the administration to place this piece of philosophy into effect. Only this week I saw for the first time the rivers and harbors and flood control bill treated as a partisan measure, with all the Republicans in the House voting against it.

So, you see when I mentioned "Cabbages and Kings" and "Potatoes and Things," I couldn't be far wrong in saying they are related. Certainly, we should worry about and work toward the friendship of King Saud, but not to the exclusion of help to our farmers. We should strive to keep the Suez Canal open to world traffic, but not to the extent of cost that precludes the dredging of the Calcasieu River where our own ships go aground.

You can no more force the people of Cambodia to accept a way of life to which they are not accustomed by the expenditure of funds than the Supreme Court can force its philosophy upon us of the South by the use of troops.

Every major problem can be broken down to small problems—if you solve the small ones, there will be no large ones to defeat you. That is true of our State and Nation. It is true of your efforts in the development of our sweet potato economy. Certainly, you will continue to have problems. I can only hope our Government can approach its problems with the same commonsense and perseverance as you have faced yours.

American Progress in the Space Age

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 31, 1958

Mr. KEATING. Mr. Speaker, the President has recommended a sound and balanced blueprint for American progress in the space age. I especially applaud the emphasis on both military and peaceful development of outer space and the stress on the need for cooperation with our friends in this great effort.

The National Advisory Committee for Aeronautics is the logical agency to take civilian responsibility in space. Due to its experience in the field and the fact it is already an operating unit, the changeover to its new duties can be achieved with a minimum of delay and confusion and a maximum of efficiency and cohesion.

It is implicit that the head of the new National Aeronautics and Space Agency will be a civilian. It is my firm conviction the Director should have the equivalent of Cabinet status and should share in the formulation of policy at the highest level. The enormity of the challenge and the tremendous importance of pushing forward rapidly to the frontiers of space make it essential that our leader in this effort be a member of the President's inner circle of advisers.

Mr. Speaker, editorials from the New York Times and Washington Post today have commended the course recommended by the President. Under leave previously granted, I insert them at this point in the RECORD.

The editorials follow:

MEETING THE SPACE AGE

With three American earth satellites circling the globe and the Soviets at work on new and bigger sputniks, President Eisenhower has taken commendable action to keep the United States abreast of the rest of the world in the exploration of that new dimension—outer or cosmic space. He called upon Congress yesterday in a special message to create a National Aeronautics and Space Agency to take over and administer in an imaginative and well-conceived program all present and future space penetration and research projects except the purely military ones dealing with outer space rockets and missiles.

As proposed by the President, the new agency would be primarily a civilian organization for civilian and scientific space technology, designed to expand human knowledge of our earth, our solar system and our universe, improve space vehicles for observation and experimentation, and in cooperation with other nations promote the use of outer space for peaceful purposes. It would operate under a civilian director appointed by the President and would be assisted by a board composed of eminent experts in science, engineering, technology, education, and public affairs, recruited from both the present Government agencies active in these fields and from the outside. For this purpose it would be given authority and financial support that would enable it to attract talent through adequate compensation.

At the same time the agency would also work in close cooperation with the Defense Department, do some of that Department's research work to enable it to take full advantage of the military potential of outer space and in general give due regard to the military factors involved. At least one member of the board would be appointed from the Defense Department to assure close liaison and avoid the delay, duplication, and waste that attended our Vanguard project.

In general, therefore, the National Aeronautics and Space Agency would be a counpart of the Atomic Energy Commission, and since the Atomic Energy Commission has been effective in dealing with both civilian and military aspects of atomic energy there is every reason to expect that the new agency would be equally successful. Meanwhile, pending the creation of the new agency, projects already underway will go ahead full steam.

The President's proposal is clearly a step in the right direction and Congress can be expected to respond with quick action on it.

SPACE DOWN TO EARTH

President Eisenhower's plan for civilian direction of American space exploration is both farsighted and eminently practical. Because of its wide experience in related research, the National Advisory Committee for Aeronautics is the logical nucleus of a new National Aeronautics and Space Agency. Under the President's proposal this civilian Agency would preside over all domestic aeronautical and space science activities except those of a strictly military nature. It also would perform some research for the military establishment in the fashion of the present NACA.

This is a much more sensible arrangement than one which would place such direction in the Pentagon or would assign space exploration to the Atomic Energy Commission because of the promise of nuclear fuels. Apart from missile development and surveillance satellites, the present military interest in space exploration is limited. In any event, the challenging opportunities in space should not be dominated by military considerations. Present explorations under military direction—which are largely civilian in practical composition—can of course be continued until the new Agency takes over. Moreover, the Agency can quickly avail itself

of nuclear fuels when they become available.

From the scope of his message based upon the report of Dr. James R. Killian, Mr. Eisenhower clearly assigns the project great importance. Wisely he would bring to the National Aeronautics and Space Board (which would assist the operating Agency) not only top representatives of the Government, but also private citizens of "distinguished achievement" in science, education and public affairs. Also wisely, he calls for salaries roughly comparable to private scales for employees of the Agency itself.

We trust that the Senate and House, which have established their own study committees, will give early and sympathetic attention to the President's recommendations in this exciting area. Prompt approval of a civilian American program will give this country additional arguments in seeking broader United Nations supervision of all space activities.

Why the Reciprocal Trade Agreements Program Should Not Be Extended

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 28, 1958

Mr. REED. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Bronson Trevor, on behalf of the American Coalition of Patriotic Societies, on why the Reciprocal Trade Agreements program should not be extended, before the Committee on Ways and Means of the House of Representatives, March 17, 1958:

The American Coalition of Patriotic Societies at its annual convention held on January 30, 1958, by resolution reaffirmed its opposition to the reciprocal trade agreements program as expressed in a resolution passed at its annual convention held on January 13, 1955, which reads as follows:

"REGULATION OF FOREIGN COMMERCE

"Whereas the reciprocal trade agreements program represents an unwarranted encroachment of the executive branch of our Government upon the legislative responsibility conferred upon Congress by the Constitution of the United States; and

"Whereas as a result of reduction of tariffs under the reciprocal trade agreements program various industries important to our healthy economy and strong national defense have been injured or forced out of business with consequent injury and loss of jobs by the American workingman: Therefore be it

"*Resolved*, That the American Coalition of Patriotic Societies in annual convention assembled urges Congress to allow the 1934 Trade Agreements Act (Reciprocal Trade Agreements Act) to expire June 12, 1955, and upon its expiration, the Congress should resume its constitutional responsibility of regulating foreign commerce through its agent, the Tariff Commission."

The growing number of unemployed in the United States should cause us to examine with care the legislation to extend the reciprocal trade agreements program. Congress has been supplied with much evidence, according to U. S. News & World Report for March 7, 1958, that thousands of American workers have been thrown out of employment by foreign imports.

President Eisenhower in his message to Congress has argued that these imports were necessary "to provide foreign nations the opportunity to earn the dollars to pay for the goods we sell." This argument is so basic to the whole legislation that it is important to see the incompleteness of its reasoning because there are other ways in which the money can be spent.

With data obtained from the Economic Almanac, 1958, we find that from 1947 through 1956 inclusive, the United States put in foreign hands by spending on imports of goods and services, unilateral transfers, capital investment abroad and the purchase of gold, over $19 billion more than the world spent on our exports of goods and services and on unilateral transfers. The $19 billion went to build up foreign balances, on investments in this country and in the purchase of gold. Is it any wonder that in the 2 years from 1954 to 1956, foreign assets and investments in the United States jumped from a total of $26.8 billion to $31.6 billion? Obviously there is something wrong with legislation which in 10 years allowed over $19 billion, that in theory would be spent on our exports, to be diverted to the stock market and other channels. The Federal Reserve Bulletin for April 1950, pointed out that even during the so-called dollar shortage in 1948 and 1949, foreign investments in the United States, some of them secret, increased by $1.9 billion and $0.9 billion respectively.

The New York Times of January 2, 1955, in a special dispatch from Geneva reported the following: "Flight of capital to United States continues—GATT studies indicates it is a basic cause of chronic dollar crises abroad. * * * The policy implications of these new studies, some of which are based on new data, are substantial and highly controversial. Indeed, they contain so much dynamite that it is highly unlikely the study will ever be published in an official paper. * * * The studies also throw considerable doubt on the thesis that lowering the American tariff is essential to the establishment of better balance in world trade."

The United States because it is a great capital-creating Nation does not need investment here by foreigners of money obtained by them because of our purchases of imports. Until we stop the diversion of this money from the legitimate function of paying for our exports we should expect our unemployment to increase.

This legislation is said to be necessary to meet the threat of the European economic community in creating a common market. It will do nothing of the kind. The common market consists of France, West Germany, Italy, Belgium, the Netherlands, and Luxembourg. Our present duties on imports from these countries were lowered in exchange for concessions on duties on our exports to them. The tariff duties of the common market could consist of the highest duty charged by any of the 6 nations so that in 5 cases out of 6 our exports could face a higher duty and yet, for some unfathomable reason our Government does not plan to avail itself of the provisions of the GATT agreement to the effect that when a country cancels a concession each other country which is a party to the agreement may cancel a concession also. The ultimate effect is obviously going to be that our duties will be lower while foreign duties in many instances may be higher than now.

Business Week, of February 22, 1958, in discussing the auto industry says "Right off the bat, the common market and free trade area mean the European market for United States built passenger cars is almost gone."

Another misconception of the reciprocal trade agreements program is that American industry will always try to safeguard the employment of labor in its American plants, by asking for tariff protection. This is not necessarily so because, in the auto industry, for example, there are foreign plants now, according to Business Week of February 22, 1958, which are as low-cost efficient producers as any company in the United States. General Motors, Ford, American Motors, and Studebaker-Packard are now importing cars from abroad and Chrysler is anxious to do likewise. Business Week (February 22, 1958) says, "With the tide running heavily against exports from the United States and toward production abroad, one Detroit executive has been heard to say: 'Before I retire, I hope to see my company producing as many units abroad as in the United States.'"

The President says that the reciprocal trade agreements program is necessary to meet the economic offensive of the Soviet Union. It is a fact, however, that this legislation will not make our exports sufficiently cheap as the prices of our goods are determined by commercial and not by political considerations. When we do subsidize our exports there are immediate adverse repercussions from other exporting nations. Therefore, any benefit must be confined to goods which we might import, rather than to let them go to the Soviet Union. In this instance also, however, the Soviet Union can outbid us when diplomacy dictates such a course. The money to pay for these imports into the Soviet Union could come from the sale of their gold. Although definite figures are not available, Samuel Montagu & Co., a leading British bullion dealer, according to the Northern Miner of February 27, 1958, has estimated that gold is produced in the Soviet Union at the rate of 17 million ounces annually, which would be worth $595 million a year. We must not forget that the value of gold is largely dependent upon the willingness of the Government of the United States to buy gold in unlimited amounts from no matter what source of production. As long as our country stands ready to supply the Soviet Union with an amount of dollars limited only by the size of the letter's gold reserve, it is futile for us to expect to compete successfully with that nation in the arena of economic warfare.

Under the circumstances we do not believe that the arguments are valid in favor of the passage of the bill extending the Reciprocal Trade Agreements program and the American Coalition of Patriotic Societies opposes such action.

Speed for Air National Guard Facilities

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 13, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I would like to remind the Members that on March 21, 1958 I wrote to Hon. Donald H. Quarles, Deputy Secretary of Defense, concerning the withholding of $10.2 million of fiscal year 1958 appropriated funds from the Air Natoinal Guard for its facility construction program. The text of my letter appears in the CONGRESSIONAL RECORD of March 25, 1958.

In my letter I pointed out that the Congress had appropriated the $10.2 million to be used by the Air National Guard for the construction of Reserve

facilities and that despite requests by the Air Guard for an allocation of these funds so that contracts could be let during this fiscal year the Department of Defense was refusing to apportion the funds and intended to transfer them to the MATS Working Capital Fund.

Inasmuch as several Members had spoken to me about the need for funds by the Air National Guard and other Reserve components for the continued construction of Reserve facilities, I am very happy to state that in a letter received from the Deputy Secretary of Defense, dated April 1, 1958, I am informed that the $10.2 million has now been released and will be available to the Air Guard during this fiscal year. The projects being proposed as additions to the Air National Guard construction program for fiscal year 1958 have been forwarded to the Armed Services Committee and we are attempting to expedite approval of these projects so that work can proceed at the earliest possible time.

Address of O. R. Strackbein, Chairman, the Nation-Wide Committee on Import-Export Policy

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. HAYS of Ohio. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address of O. R. Strackbein, chairman of the Nation-Wide Committee on Import-Export Policy given at the general meeting in Washington, D. C., March 27, 1958:

ADDRESS OF O. R. STRACKBEIN, CHAIRMAN, THE NATION-WIDE COMMITTEE ON IMPORT-EXPORT POLICY, GENERAL MEETING, WASHINGTON, D. C., MARCH 27, 1958

We are meeting today under the shadow of the over-arching power of the State hand in hand with the assemblage elsewhere in this city of those who presume to speak for the national interest.

Ranged against us are the President, the Vice President, members of the Cabinet, heads of national organizations, gigantic business interests, most of the great metropolitan press and news magazines with circulation that run into tens of millions, the great TV and radio chains, scores of big names, internationalists, heavy thinkers—a panoply of visible power so great that, contemplating it, we should be duly cowed, overawed and silenced.

We should disperse and leave the stage to those who are drawn together by the common bond of advertised unselfishness, devotion to the national interest and the peace of the world.

Who are we, who are besmeared with the selfishness of local interests scattered far across the land, but nowhere gigantic, unable to rise above the greed of the man who wants to hold his job, the businessman who wants to stay in business, the farmer who wants to reap a living from the soil he tills or the miner who is so self-centered that he wants to dig coal in the depth of the earth, or ores from subterranean beds or the gambler who draws oils from the ground or fish from the sea—who are we to presume to hold a meeting in Washington under the very brows of those who are so nobly dedicated and who have the power, the voice and the means to display their noble dedication in front-page headlines, over the loudspeakers, and through other media of mass circulation that proclaim their fervor for keeping the public informed, without fear or favor, in virtue-dripping editorials?

Obviously, we should be overwhelmed and humbled before such a brilliant array of selfless idealists who has surely never tasted the arrogance of power or used its pointed lance to subdue a wayward opposition.

It matters not that we may voice the sentiments of the fisherman of New England and the western coast, the coal miners of the mountains of West Virginia and Pennsylvania, the makers of hats, gloves, and glassware, and pottery; or growers of wool and beef, fruits, nuts, and vegetables; or the owners of dairy herds and creameries. We count for little. We do not have the huge oil companies on our side, or the wheat growers and flour millers who though protected by the tightest of import restrictions are among the noblest free traders of them all; nor the big steel operators whom you will also see on the side of the angels; and the vast and now somewhat nervous automobile industry and the shipping lines and shipbuilders who, by the by, know something about Government subsidies.

No. With us are the small toolmarkers, the growers of mushrooms, the vintners, the cloth makers, the producers of ladies handbags, clocks and watches, rope and twine, and hardwood plywood manufacturers, those who make bicycles and motorcycles, carpets and rugs, pins and screws, nuts and bolts. But of what worth are these little selfish people?

Are they not shiftless and inefficient if they cannot successfully sell their wares against the outpourings offered from abroad at prices that can only come from wages that are so low that many of our unselfish opponents are running overseas to hire on the spot those who are willing to work for so little? And who can blame these unselfish enterprisers if they want to ship the product of these lowly paid workers to this country and reap a few handsome dollars in profit?

I ask you, how selfish can you be if you ask that something be done to narrow the handicap that so handsomely favors the noble believers in freer trade? Is it not time that we consider the national interest?

If we speak for the makers of tile, scientific balances, binoculars, laboratory equipment, matches, needles, umbrella frame makers, assorted chemicals, lace, fluorspar, tung oil and wallpaper, should that so embolden us that we should presume to stand against the majesty of the bureaucratic economists who man and have long manned the free-trade bastions of our State and Commerce Departments and wherever else in the maze of the executive domain these bastions have been erected?

Surely we are presumptuous to mount a challenge when the coffers of the Treasury are open to the pamphleteers of the State Department and the propagandists of the Commerce Department to spend freely in the promotion of the ideas and philosophies of the great unselfish groups that, well, if they incidentally make some hundreds of millions of dollars out of their export and import activities and foreign investments, do so in behalf of a noble cause. After all, they do have to eat. Even high idealism has a stomach.

The powers centered in the executive strongholds are surely above question when they have shown themselves strong enough to ignore the Congress as they go about their international negotiations and diplomatic maneuvers.

How can we bring ourselves to challenge so deeply entrenched a crew?

To be sure, in Washington we lack the palaces and balconies that elsewhere in the world in other years marked the close association of the goverment with private organizations for the subjugation of opposition; but we do see today the working of such an association. We see the shaping of a monolithic power, flexing its muscles, with the idea of intimidation, of overwhelming and squeezing out the opposition.

Well, shall be bend the knee and bow out?

Shall we recognize the totalitarian force of foreign relations, to be enthroned over the people in the far reaches of this country who have only the Members of Congress to speak for them?

Shall the Congressman bow out to the diplomat? Is the Congressman obsolete?

On the other hand, is the diplomat a messenger of wisdom who understands better than do our elected representatives the needs of our industries and our economy? Does the foreign diplomat foresee and better express the aspirations of our people than does the Congressman? If not, why should he then have a greater voice in regulating our foreign commerce than the Members of Congress?

Does the State Department voice the sentiment of the people, east, west, north, and south? If not, while the Members of Congress do—is that an explanation of the Department's impatience with or disdain of Congress?

Is that why the State Department or its ready and eager servant, the Department of Commerce, so bitterly opposes the return to Congress of its constitutional function to regulate the foreign commerce of this country?

Why the executive should be so stubbornly opposed to the exercise by Congress of its legitimate authority would be a mystery but for the fact that the unselfish and dedicated souls who seek only to do good in a big way sometimes become so obsessed with their nobility of purpose that they cannot abide opposition; and therefore seek the power necessary to make their policies stick.

And that is where Congress gets in the way. No one Congress can properly bind a future Congress against a change of course if that is what the electorate calls for. Yet such binding is the very heart of the State Department's quest. It is not that the State Department cannot foresee the need of change in direction from time to time; it is that it wants itself to be the one who calls the turn and the direction. That is why it wants Congress out of the way.

So this is the issue.

We are witnessing today an association between the vast power of the Government and very powerful private organizations; both dedicated to the proposition that they know better than the Congress what is good for the country. The meeting is underway right now in the Nation's Capital.

And by heavens they are going to show the country who is who, by wielding the great powers of communication that they have at their beck and call and that they will withhold from us.

They will get the front-page headlines, the editorials, the radio and television time, for they have mounted a spectacle. We here are to be snowed under and buried in oblivion. Is that the American system the State Department wants to export to other parts of the world, or is this a State Department import from abroad?

And now let us go about our business unintimidated and unawed, with full faith in the good sense of the American people when they are properly informed.

American National Red Cross Work and Services in California Blesses Californians and Meets Great Emergencies in California, Also

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 26, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I am pleased to present herewith a letter to me dated February 5, 1958, from Mr. Sheldon C. Williamson, director, Field Service, Pacific Area, including to my attention a report concerning the Red Cross activities in California for the fiscal year 1956–57.

The letter follows:

THE AMERICAN NATIONAL RED CROSS,
PACIFIC AREA,
San Francisco, Calif., February 5, 1958.

DEAR SIR: As an elected official representing the people of the State of California, you will be interested in the attached report concerning Red Cross activities in California for the fiscal year 1956–1957.

Perhaps you are not aware that the American Red Cross is the largest, single, private agency operating in the State of California. For this reason, we are sharing the report with you and other selected state officials.

Should you have questions or comments concerning this report, we would welcome your remarks.

Sincerely,
SHELDON C. WILLIAMSON,
Director, Field Service.

RED CROSS PROGRAMS IN CALIFORNIA—1956–57

The work of the American Red Cross in California in the past year was conducted through 127 chapters and primarily by volunteers.

The needs of servicemen and their families continued to be a primary concern of the Red Cross. Military personnel were provided personal assistance, recreation, and morale-building services by Red Cross staff assigned to offices at 36 military installations and 9 military hospitals in California. Red Cross workers on duty with servicemen in the State gave assistance in 162,133 cases resulting from family crises created by illness, accident, death, financial, and other emergencies, and many routine welfare problems. At the same time, Red Cross chapter workers gave help to servicemen and their families in 51,587 similar situations. Together, field staff and chapter workers made loans and grants to servicemen or their families amounting to $3,272,405. Many of the problems handled both at military installations and in chapters do not require financial help but do require counseling, guidance, and emergency communications.

Red Cross volunteers served more than 12,000 patients at the nine Veterans' Administration hospitals, assisting hospitals staffs with recreation, social service, treatment, and rehabilitation programs. Red Cross representatives at the Veterans' Administration regional offices in San Francisco and Los Angeles assisted 6,981 veterans or their survivors in obtaining Government benefits to which they were entitled, and chapter workers gave help to 8,762 veterans or surviving dependents, besides those served in VA hospitals.

The Red Cross expended $51,202 to provide emergency food, clothing, shelter, and medical and nursing care for the victims of 11 apartment-house, hotel, and forest fires, 1 earthquake, and 1 flash flood and to help 147 families reestablish their homes and livelihoods after these disasters. Since the end of the fiscal year, there have been 3 additional disasters in which Red Cross help amounting to $2,845 was extended to 15 families suffering losses—a fire in San Rafael at the end of July, the Mount Washington forest fire in southern California early in August, and a hotel fire in Fresno at the end of August.

Through the Red Cross regional blood centers in Los Angeles and San Jose, 158,745 pints of blood were provided for patients in 196 civilian hospitals in the State, and 10,849 pints were collected for civil-defense stockpiling. A substantial quantity of gamma globulin, a blood derivative, was provided by the Red Cross for distribution through the California State Health Department, and additional quantities of gamma globulin and two other blood derivatives, serum albumin and fibrinogen, also were distributed free of charge by the Red Cross to physicians and hospitals for use in saving lives and fighting disease.

Red Cross volunteers served in 11 of the State's mental hospitals, taking to patients recreational and hobby activities to help them to faster recovery, and assisting hospital staffs in therapy programs.

California communities were made safer and healthier through the training of 76,552 persons in Red Cross first aid, 139,040 in water safety and boating skills, and 15,756 in care of the sick and injured and mother and baby care.

Through the Junior Red Cross, 2,128,427 young people in 3,822 schools in California learned the ideals of the Red Cross and put them into practical use through a wide variety of community, national, and international service projects which were interwoven into regular classwork.

Teamsters' Union and Labor-Management Negotiations

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 20, 1958

Mr. O'KONSKI. Mr. Speaker, a few weeks ago I expressed myself on the question of labor-management stability and how essential it was to the economic well-being of our country. In the course of these remarks, I had occasion to speak about the relations between Montgomery Ward and the teamsters' union.

I should like, if I may put in the RECORD some of the things I have discovered about the battle the teamsters' union has had in its dealings with this company. It is a story of a fierce and persistent struggle, dating back to 1939 when the teamsters forced the company to sign the first contract after strikes which lasted 10 long months.

In each and every instance since that time the teamsters have won recognition only after they have forced upon the company, National Labor Relations Board conducted elections which showed that the employees wanted them to serve as collective bargaining agents. Never once has thec ompany willingly conceded that the teamsters' union was the rightful agent until an election, conducted by the NLRB, so certified. And even today, the company will deal with the teamsters for employees only in those areas or stores where certification has been established beyond any doubt by an election. This demonstrates rather conclusively that there is no collusion between Montgomery Ward and the teamsters' union.

My study of the situation brought to light facts about the Montgomery Ward-teamster union relationship which I feel are truly reflective of the hard bargaining which is necessary to deal with this company. In the contract negotiations of 1957, a settlement was arrived at only after a strike had been authorized and financial support pledged by the international union. The negotiations extended from March until mid-July, with top officials of the Federal Mediation and Conciliation Service participating actively in the discussions after mid-May and using their vast experience and good offices to break the stalemate and avoid a disastrous strike.

It seems to me that this one case history, involving 4½ months of negotiations, bespeaks the company's attitude in unmistakable terms. It hardly gives credence to the widely circulated charge that Teamster General President James R. Hoffa can walk into the office of Montgomery Ward President John A. Barr and come out a couple of hours later with a signed contract.

My study has satisfied me that Ward officials recognized the teamsters were becoming impatient and that, since authorization had been granted by the international union for a strike, the company feared the economic consequences. So Ward found it expedient to settle on the best possible terms. This agreement on the fundamental issues did not constitute a so-called master contract but became a pattern for the drafting and signing of individual contracts between the company's mail-order houses, warehouses, and stores and the local union having jurisdiction.

It is my understanding that Montgomery Ward and the teamsters are about to start negotiating a new agreement to replace the one in force which expires on May 31. For that reason I would like the RECORD to show what I have discovered to be the facts surrounding the relationship between the parties concerned.

Statement of Northern Textile Association Regarding Extension of President's Authority To Enter Into Trade Agreements

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement of the Northern Textile Association, 80 Federal Street, Boston, Mass., before the House

Ways and Means Committee on March 20, 1958:

STATEMENT OF NORTHERN TEXTILE ASSOCIATION BEFORE THE COMMITTEE ON WAYS AND MEANS, HOUSE OF REPRESENTATIVES, REGARDING EXTENSION OF THE PRESIDENT'S AUTHORITY TO ENTER INTO TRADE AGREEMENTS

My name is William F. Sullivan. I am secretary of the Northern Textile Association, an organization which represents cotton, synthetic, and wool textile mills located primarily in New England.

Textile mill products is still a relatively important industry in New England, employing about 133,000 workers. The industry is located in each of our six States and constitutes the principal or sole source of manufacturing wages in many communities. Studies have shown that even before the present recession displaced textile workers have difficulty securing other employment. Two hundred and fourteen thousand persons are employed in the apparel and textile industries, which is more than any single industry in the area.

The problems of the textile industry in New England today are the same as those which beset the textile industry nationally. Although New England mills are somewhat more sensitive when depression conditions exist in the industry, recent liquidations and current unemployment are not occasioned by the shift of the industry elsewhere or other regional characteristics, but are due to causes common to the whole industry.

SUMMARY STATEMENT OF POSITION

We oppose extension of the Trade Agreements Act in its present form, or in the form proposed in H. R. 10368, for the following reasons:

1. Duties on textiles have already been reduced to a level which does not afford adequate protection to employment and investment in the industry, and hence no further reductions should be contemplated.

2. Present duties being too low, the act does not provide adequate means and guaranties for the establishment of adequate tariffs and quotas where necessary.

3. The act does not provide the necessary means for working out voluntary quota arrangements with other countries, or for the enforcing of such quotas.

The textile industry has been hurt by a number of Government policies, including the Trade Agreements Act as it has been administered. The peril-point and escape-clause provisions of the act have not been carried out in a manner to prevent or correct such injury, and there is no reason to believe that the situation will improve if the same or similar legislation is continued.

ECONOMIC CONDITIONS

There are today in the textile industry in the United States 345,000 less people employed than in 1950. In New England 140,000 jobs have been lost. It is estimated that in New England alone, since the beginning of 1949, over 205 mills have closed their doors permanently.

In the woolen and worsted branch of the industry, one-half of the production and employment remain in New England, but employment in the industry in the United States declined by 61 percent between 1947 and 1956. Mill closings and short time have continued during 1957 and 1958. Capacity in this branch of the industry has declined accordingly, looms by over 50 percent, woolen spindles by 47 percent, and worsted spindles by 56 percent between 1949 and December 1956.

In the cotton textile industry, spindles in place in the United States have declined by 2.7 million since 1947, and of the 21 million spindles in place today, 1.3 million are idle.

In 1949, 1.5 billion yards, or 15 percent of the production of cotton textiles for domestic use, were exported. Since then exports have declined to one-half billion yards annually. The industry has therefore lost a market for approximately 10 percent of its production. During the same period, imports of cotton textiles have risen from nominal amounts until they absorb approximately 3 percent of the domestic market for cotton textiles. This loss of a market of approximately 13 percent has had serious effects on this branch of the industry.

Although the decline in the woolen-worsted branch of the industry has several causes, increasing imports of wool textile goods during this period have greatly aggravated the depression.

JAPANESE COTTON GOODS QUOTAS

The establishment of quotas on Japanese cotton goods exports to the United States in January of 1957 was a recognition by the Japanese and the United States Governments of the need for quantitative limitations on Japanese imports of such goods into this country. The Japanese quotas established separate ceilings for 23 categories of cotton goods in order to prevent the kind of import concentrations which cause unemployment and liquidations. This arrangement has undoubtedly saved many mills from liquidation.

This quota arrangement developed certain important principles which might well be included in legislation. Most notable are: (a) quotas are established for categories of goods geared to domestic production, and (b) the plan is comprehensive in the sense that it covers all items of cotton goods from yarn to apparel and other finished items.

The arrangement has certain limitations which should be taken into account. In the first place, it applies only to Japan and affords no protection against imports from other countries. It is also voluntary, and it is probable that other countries would not adopt a similar approach. Even if they did, the total amount of imports would be too large for our domestic industry.

The arrangement does not cover textiles other than cotton goods, and hence wool and synthetic textiles are afforded no protection by it.

The Japanese arrangement being voluntary, if Japan decides to change the arrangement, the United States could not hold her to it. Even so long as the Japanese leave the arrangement in effect, the United States has no means of enforcing it or even working with Japan to enforce the arrangement. An example of this is the fact that the Japanese established export quotas on velveteens of 5 million yards in 1956 and 2.5 million yards in 1957. Nevertheless, Japanese velveteens in the amount of 6 million yards were landed in this country in 1956, and 3.3 million yards in 1957, an excess of 21 percent and 52 percent respectively. The principal American producer of velveteen has, as a consequence, been forced to close down and 1,200 more textile workers are without jobs. Similarly, in 1957 1.9 million dozen handkerchiefs of Japanese origin were imported, whereas the quota is 1.2 million dozen. Although Japan has atempted to control these exports, the United States is powerless to enforce the quota in this country against transshipments or other abuses.

Legislation should provide for the unilateral establishment of comprehensive quota arrangements by the United States, with adequate police powers.

WOOL TEXTILE IMPORT CONCENTRATIONS

When the Japanese cotton goods quota arrangement was first announced by the assistant to the President in 1956, he stated that:

"I should like to suggest that in broader aspect, this arrangement is expressive of policies already stated, and prophetic of Federal action most certainly to ensue in similar exigencies. Under these circumstances, the reluctance of manufacturers to expand and modernize, and the reticence of investment houses to arrange financial facilities should be dispelled. To repeat, we shall not permit the Government to stand idly by while industries wither and job opportunities are destroyed."

Nothing has been done about a similar situation which exists in the wool textile industry.

Although the establishment of a tariff quota on wool textile imports in excess of 14.2 million pounds annually is also a recognition that duties on woolens are too low, it is a wholly inadequate remedy for the needs of the domestic industry.

An industry which has been halved in size since the end of World War II, and which continues to be plagued with liquidations, unemployment and short time, should not be subjected to the pressure of substantial imports and the price pressure of imported goods manufactured at costs far below United States standards. The price depression is aggravated by the fact that a number of countries are competing against each other in the American market. Prices are therefore reduced to a level satisfactory to the lowest-cost foreign producer.

The wool tariff quota fails to make any provision whatsoever against the concentration of imports in different categories of fabrics. Under this arrangement all of the 14.2 million pounds of wool fabrics can be concentrated in one or a few types of goods. Imports of woolen goods tend to concentrate in the higher quality goods which are relatively light in weight and contain a relatively greater proportion of labor. For example, imports during the first 6 months of 1957 of woolen and worsted fabrics weighing not over 6 ounces per square yard amounted to over 33 percent of the total domestic production of such fabrics. In other categories of high-quality woolen fabrics, industry sources estimate that imports equal as high as 60 percent of United States production of such fabrics. It is our firm belief, and numerous mill witnesses have testified before the Committee for Reciprocity Information, that many mills have been forced to liquidate because of this type of competition.

Furthermore, the wool-fabric-tariff quota does not apply to yarns, blankets, wool apparel, or other wool products. In other words, many of the matters which were covered in the Japanese quota arrangement are left untouched by the rather crude and inadequate wool tariff quota.

Legislation which makes it possible to use the best features of both of these arrangements would be of value to our mills.

I have taken these two examples in order to call attention not only to their shortcomings but also to the principles of quantitative limitations which they contain. We urge legislation which will implement such principles.

CONCLUSION

A surplus of textiles and textile capacity exists in this country, and present Government policies should be oriented toward helping the industry to maintain all present markets and acquire additional markets for its surplus commodities. There is adequate precedent for such an approach in the case of other surplus commodities. The burden of lost textile markets at home and abroad falls upon the unemployed, their communities and stockholders.

We respectfully urge that foreign trade legislation be designed to prevent further invasion of the United States textile market, with particular reference to import concentrations.

Specifically, the Tariff Commission or some similar body responsible to the Congress, should be empowered and directed to increase duties and establish quotas promptly

where damage to domestic products exists or is threatened. No duties should be reduced unless approved by the Tariff Commission publicly in advance. Commission decisions should be final.

STATEMENT OF BOARD OF DIRECTORS OF THE NORTHERN TEXTILE ASSOCIATION

The President has proposed a program to stimulate private production and employment to combat the present recession. He condemns the wholesale distribution of the people's moneys in dubious activities under Federal direction.

The textile industry in this country has been suffering from a severe depression brought on, in large measure, by shrinking export markets and increased imports of foreign goods. Employment in the industry industry in the United States has declined by 344,000 jobs since 1950, and 80,000 jobs since January, 1 year ago. Short time, layoffs, financial losses and liquidations continue to beset the industry.

Federal policies should be guided toward maintaining employment of the 900,000 employees in this industry in this country instead of jeopardizing their jobs by the encouraging of foreign production. Unemployment compensation increases may alleviate some of the hardship but not cure the cause of this unemployment. Payments from the State are no substitute for wages earned.

For the past 10 years the distribution of American money in activities which stimulate the growth of foreign textile mills and subsidize their activities in world and United States markets, has led to the loss of American markets abroad and at home. Production which would provide thousands of jobs in textiles and apparel has been channeled into the hands of foreign mills with the help of United States Government financing of textile machinery and raw materials. United States funds in the amount of $88 million were spent last year for the purchase of foreign textiles. United States funds in the amount of $110 million have been used to supply machinery to foreign mills; and United States funds in the amount of $1,300,000,000 have been used to finance foreign mills with cotton at prices lower than those permitted to American mills.

Simultaneously tariffs on textile goods have been reduced, imports have increased and American workers and fabrics have been displaced.

Millions of spindles and thousands of looms in place in our mills are idle or operating only part time. Federal programs of subsidizing increased foreign textile production create worldwide surpluses, aggrevate the problem of surplus textile products in this country and lead to greater unemployment and idleness.

We subscribe to a program which will stimulate private production and employment in the United States textile industry and condemn the wholesale distribution of Government funds for dubious activities in a manner harmful to our industry. To that end we urge the immediate application of the following measures:

1. Textiles financed or purchased with United States funds be procured from American mills.

2. A substantial portion of all raw cotton exports financed or supported by Government programs henceforth be in the form of textiles.

3. A countervailing duty equal to the difference between the cost of cotton to American mills and foreign mills be applied to all imports.

4. Total imports of textiles not be permitted to increase further, and existing concentrations of textile imports, with particular reference to woolen goods, be corrected. Legislation be enacted which will prevent such concentrations from developing in the future, and provide adequate, prompt, and sure methods of limiting imports which cause unemployment and liquidations.

Guam Legislature Commends Interior and Defense Secretaries

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. SAYLOR. Mr. Speaker, while certain of our offshore areas appear to be suffering from growing pains it is encouraging to note that on Guam, where organic legislation was enacted only 7½ years ago, the people are not only assuming the responsibilities of citizenship in the American tradition but are displaying a notable degree of political maturity. During these few years they have made remarkable progress economically, socially, and politically within the framework of our American democratic system. They have brought about a close working relationship between the military and civilian authorities on Guam without jeopardizing military security and self-government.

This happy state of affairs is an outgrowth of responsible leadership on the part of the civilian leaders and the military commands in this important offshore area. It is only fitting that we recognize these men who are playing a commendable role in their respective responsibilities; Hon. Richard Barrett Lowe, Governor of Guam, Hon. A. B. Won Pat, speaker of the Guam Legislature, Rear Adm. W. B. Ammon, United States Navy, commander naval forces, Marianas, and Maj. Gen. Charles W. Schott, United States Air Force, commander, 3d Air Division, Strategic Air Command.

As evidence of the highly satisfactory relationship and spirit of cooperation between the Armed Forces on Guam and the people of the Territory, I would like to point out the constructive remarks of the speaker of the Guam Legislature on the occasion of their legislative session, January 11, 1958, and the resolutions adopted by the legislature which, under unanimous consent, I include in the RECORD.

INTRODUCTORY REMARKS OF SPEAKER A. B. WON PAT UPON COMMENCEMENT GUAM LEGISLATURE, AGANA, JANUARY 11, 1958

We are pleased to again welcome His Excellency, the Governor of Guam, on the occasion of his second annual message to the people of Guam.

This is the beginning of a new legislative year which marks the 8th year of self-government for our people and we may expect the year ahead to be fraught with many challenging and perplexing problems, the solutions to which will require the highest degree of statesmanship.

While the issues which we will be called upon to decide are local in character, they are nevertheless interwoven in the fabric of the national interest and affairs.

As citizens of the United States, our first responsibility must always be subordinated to those of the Federal Government. In this we share a common obligation with our fellow citizens in other States and Territories of the United States.

However, while we recognize our obligation to the Nation, we cannot ignore the immediate and pressing problems facing the people of Guam. Such matters as improvement of business conditions, the expansion of power and water facilities, the completion of our capital improvement programs, the advancement of our educational system, greater measure of self-government through representation in the National Congress, and the improvement of employment and housing conditions for the people, must all receive our careful and continued attention.

To the attainment of these objectives, we, as representatives of the people of Guam, commit ourselves to work with the administration and with the military commands within the province of our legislative prerogative and responsibility.

I am sure that the message that we are about to hear from the Governor contemplates the realization of our common responsibility.

I now present to you the Honorable Richard Barrett Lowe, Governor of Guam.

Resolution 282

Resolution relative to expressing the appreciation of the people of Guam to the military services of the United States for their extensive defense establishments within the Territory, and emphasizing the continued desire and interest in welcoming even more extensive military utilization of this Territory

Be it resolved by the Legislature of the Territory of Guam:

Whereas in other areas of the world wherein the United States has established extensive military facilities as part of the global battle to defend the free world, dissatisfaction and annoyance over the necessary changes and imbalances attendant upon such establishments have been expressed by the people of such areas; and

Whereas the United States Armed Forces have in this Territory also established large and extensive military facilities which have by their very size and complexity necessarily caused changes and deviations from a normal civilian economy for Guam; and

Whereas despite such initial strains, the people of this Territory have been enormously benefited by the opportunities provided for employment in connection with such military bases and in addition have appreciated the knowledge that such bases are playing a vital role in protecting the American and democratic system; and

Whereas the highly satisfactory relationship existing between the Armed Forces on Guam and the people of the Territory demonstrated convincingly the ability of the American system of representative government, even when operating in comparatively small areas to handle with dispatch and fairness the problems and difficulties large military establishments bring about: Now, therefore, be it

Resolved, That the Fourth Guam Legislature does hereby on behalf of the people of Guam express to the Armed Forces of the United States sincere gratitude and appreciation for the extensive military establishments within the Territory which play such an important part in the economic well-being of this island; and be it further

Resolved, That the Fourth Guam Legislature on behalf of the people of Guam does hereby extend a wholehearted invitation to the defense agencies of the United States to establish additional military and related facilities on Guam as such are required in the continuing defense effort necessitated by the cold war; and be it further

Resolved, That such invitation be extended in the comforting knowledge that the demo-

cratic process, whose practices and procedures are now routine in this, the newest American Territory, assures meaningful and successful cooperation by the people of Guam with the efforts of our Armed Forces in such further establishment of defense facilities on Guam, which guarantees the absence of the ill will and dissatisfaction expressed in other areas wherein the American Constitution does not, as it does here, hold full sway; and be it further

Resolved, That the speaker certify to and the legislative secretary attest the adoption hereof and that copies of the same be thereafter transmitted to the Honorable Dwight D. Eisenhower, Commander in Chief, United States Armed Forces; the Honorable Richard Nixon, President of the House of Senate; the Honorable Neil McElroy, Secretary of Defense of the United States; the Honorable Thomas S. Gates, Jr., Secretary of the Navy; the Honorable Sam Rayburn, Speaker of the House of Representatives; Rear Adm. W. B. Ammon, United States Navy, commander, naval forces Marianas; Maj. Gen. Charles W. Schott, commander, 3d Air Division, Strategic Air Command; Lt. Col. Victor Gray, United States Army, 809th Engineering Battalion, and to the Honorable Richard Barrett Lowe, Governor of Guam.

Resolution 212

Resolution relative to expressing the appreciation and gratitude of the people of Guam to the Armed Forces of the United States for the invaluable aid and assistance rendered to the people of this Territory upon the occasion of Typhoon Lola

Be it resolved by the Legislature of the Territory of Guam:

Whereas, as part of the services rendered by the Armed Forces, the inhabitants of this Territory were given ample warning of the advent of Typhoon Lola together with frequent reports as to its progress, permitting maximum opportunity for security and protection and resulting in a minimum of loss and injury; and

Whereas the Armed Forces provided shelter for local citizens in military typhoon shelters such as at the naval hospital, provided for the issuance of emergency food rations, aided in the furnishing of building materials for the repair of damaged homes and, in addition, repaired at a very early date the damage to the Inarajan-Merizo Road permitting access to this portion of the Territory at a time when other facilities would have been wholly inadequate to cope with the situation; and

Whereas all of the assistance and contributions of the military forces to the welfare and safety of the people of Guam was accomplished in an orderly and prompt fashion with a maximum of consideration for the feelings and individual problems of the people involved: Now, therefore, be it

Resolved, That the Fourth Guam Legislature does hereby on behalf of the people of Guam express to the commanding officers of the Armed Forces of the United States on Guam, gratitude and appreciation for their magnificent contribution to the welfare and safety of the civilian population in Guam during and subsequent to the advent of Typhoon Lola; and be it further

Resolved, That this most recent contribution of the Armed Forces in Guam further emphasizes the major role which the military forces play in the well-being of the people of this Territory, as well as the defense of the United States; and be it further

Resolved, That the speaker and legislative secretary suitably engross copies of this resolution and cause the same to be transmitted to the Honorable Dwight D. Eisenhower, Commander in Chief of the Armed Forces of the United States; the Honorable Neil McElroy, Secretary of Defense of the United States; Hon. Fred A. Seaton, Secretary of the Interior of the United States; Rear Adm. W. B. Ammon, United States Navy, commander, naval forces, Marianas; Maj. Gen. Charles W. Schott, commander, 3d Air Division, Strategic Air Command; Col. Gilbert F. Friederich, commander, 3960th Air Base Group; Lt. Col. Victor Gray, United States Army, 809th Engineering Battalion, and to the Honorable Richard Barrett Lowe, Governor of Guam.

Resolution 211

Resolution relative to expressing the appreciation and gratitude of the people of Guam to the Honorable Fred A. Seaton, Secretary of the Interior of the United States, for his sympathetic approach to and understanding of the problems of this Territory

Be it resolved by the Legislature of the Territory of Guam:

Whereas the Honorable Fred A. Seaton, Secretary of the Interior of the United States, visited Guam in August of 1957, and gave untiringly of his time and attention to the problems presented to him by this legislature and other groups interested in the welfare of Guam; and

Whereas the visit of Secretary Seaton was marked by his kindly patience and consideration for the difficulties facing this Territory and, in spite of an extremely heavy schedule, time and attention was given to every person or group desiring to present matters to him for consideration; and

Whereas as a result of the visit of Secretary Seaton, a closer understanding has been reached between the people of Guam and the rseponsible agency of the United States Government concerned with Guam, which understanding has been supplemented by specific correspondence from the Secretary to this legislature in which he commented in detail upon efforts being made by the Department of the Interior to aid in the solution of some of the many problems presented to him: Now, therefore, be it

Resolved, That the Fourth Guam Legislature does hereby on behalf of the people of Guam express to the Honorable Fred A. Seaton gratitude and appreciation for the time, attention, and sympathetic understanding given to the problems of this Territory upon his recent visit to Guam and for his continuing interest in the welfare of this area, as well as for the many specific suggestions he has made for the solution of problems which are of vital concern to this newest Territory of the United States; and be it further

Resolved, That the speaker certify to and the legislative secretary attest the adoption hereof and that copies of the same be thereafter transmitted to the Honorable Fred A. Seaton, Secretary of the Interior of the United States, to the President of the United States, and to the Governor of Guam.

The Quality of Leadership

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1958

Mr. FEIGHAN. Mr. Speaker, last November, in the course of an inspection trip on behalf of the Committee on the Judiciary, I had the opportunity to visit and see firsthand the great work being done in the Noncommissioned Officers Academy of the Seventh United States Army in Germany. The Noncommissioned Officers Academy is under the command of Col. Richard J. Darnell. Colonel Murphy, deputy commander of the Noncommissioned Officers Academy, arranged for me to meet with the staff and faculty of the academy and to visit the classrooms during its active sessions. I was so impressed with the high quality of the staff and teachers at the academy and the enthusiasm shown by the noncommissioned men in attendance that I have prepared a summary of the highlights of the work being done at Munich, Germany.

Under leave previously granted, I insert this summary in the RECORD:

The Seventh United States Army Noncommissioned Officers Academy located in Munich, Germany, is one of the finest examples of a school for noncommissioned officers ever developed within the Army. The academy was originally established as the United States Constabulary NCO Academy due to a shortage of trained noncommissioned officers in the United States Constabulary. Lt. Gen. I. D. White, commanding general of the United States Constabulary, directed Brig. Gen. Bruce C. Clarke, commanding general, 2nd Constabulary Brigade, Jensen Barracks, Munich, Germany, to open a school for the purposes of training noncommissioned officers. The first class enrolled on October 17, 1949. The academy was redesignated the Seventh Army Noncommissioned Officers Academy on November 1, 1951, when Seventh Army absorbed the functions and facilities of the Constabulary.

The mission of the Seventh United States Army Noncommissioned Officers Academy is to develop within the noncommissioned officer:

1. An ability to recognize his responsibilities.
2. A willingness to assume his responsibilities.
3. The confidence to apply his technical knowledge.
4. The leadership techniques that apply to his office.
5. The high personal and professional standards that must be maintained.

The moment the student arrives he is directed toward understanding the meaning of that mission. The academy's main objective is to make noncommissioned officers aware of their responsibility and the noncommissioned officers' position in the United States Army. The job of the academy lies mainly in the area of refreshing and reevaluating those aspects of the noncommissioned officers' work that demand leadership and maturity. In essence, the academy receives a man who is already a noncommissioned officer and turns out a finished product who is a better man, a polished noncommissioned officer. The instruction at the academy is one of the finest types of professional instruction given by the Army, and it is important to mention, that for the most part, the instructors are noncommissioned officers. This exemplifies to the students the high degree of ability which can be attained by their own contemporaries. The staff and faculty of the academy, officer and enlisted, must maintain the highest military standards in order to set the example. The high standards demanded of the students, by the academy, in military appearance, conduct, and attitude are an integral part of the mission of the academy.

In addition to its primary mission as a school for noncommissioned officers in Europe, the academy has assumed an important position as an institution to be

modeled and evaluated. As in any educational institution the methods of instruction are closely scrutinized by visiting military and civilian representatives of various schools throughout Europe. The weekly list of visitors is a long one, and it includes all foreign countries and American officials who come to observe the academy in action. The academy's operation and method of instruction have been the foundation for armywide adoption, as evidenced in the recent publication of a Department of the Army regulation.

The impact of the academy's influence is evident throughout the United States Army in Europe. Since its establishment in October 1949 the academy has graduated enough men to supply the noncommissioned officers positions in more than 6 pentomic divisions. The many students who have returned to their units after completing the course at the academy have benefited these units by the wealth of knowledge and refreshed attitude attained at the academy.

The majority of the students have been from the Army; but there have also been students from the Navy, Air Force, and even the Women's Army Corps. Noncommissioned officer leadership knows no branch of service and this reemphasis of the principles of leadership is the basic philosophy of the mission of the Seventh United States Army Noncommissioned Officer Academy.

The Late George Harris Collingwood

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 17, 1958

Mr. MACK of Washington. Mr. Speaker, Mr. George Harris Collingwood, one of the ablest and most faithful servants of the Federal Government, died yesterday at his home here in the Capital City.

Mr. Collingwood at the time of his death was head of the Natural Resources Section, Legislative Service of the Library of Congress. He was a scholar, a historian, and one of the best informed men in the Nation on its natural resources. He was always obliging, cheerful, and helpful to the Members of Congress who sought information from him. In addition to all this, he was a very courteous, kindly, and lovable American gentleman.

I am certain that many of the beneficial provisions in conservation and natural resources legislation enacted by the Congress in recent years are the result of information Mr. Collingwood supplied to Members of Congress and its committees from the wealth of his experience and his constant research.

The whole country is better and will be better for centuries to come because of his contribution to the legislation of his country.

As one Member of Congress I take this brief time to express my gratitude for the many times Mr. Collingwood has been helpful to me and to express my high esteem of his merits and his character.

America is a better Nation because of his having served it.

Mr. Collingwood was born in Fayetteville, Ark. He was educated at Michigan State College and Muenchener Universitaet, where he studied forest practices in Germany, Switzerland, and Austria.

After being stationed for 2 years as a ranger in the Apache National Forest, Ariz., Mr. Collingwood went to Cornell University in 1916 as professor of forestry at the New York State College of Agriculture. As a teacher, he introduced important new procedures for forest demonstration areas in cultivated farm lands, and took a leading part in forest planting programs.

He came to Washington in 1923 to become extension forester in the Agriculture Department, and was an active exponent of forestry education in American colleges.

Mr. Collingwood served as head of the Forest Conservation Division of the National Lumber Manufacturers Association from 1940 to 1946, and was the author of the association's industry program. He later served as an agriculture expert on the Hoover Commission for executive department reorganization, and was a forestry consultant to the United States Chamber of Commerce.

In recent years Mr. Collingwood had devoted his time to research and writing on conservation problems. He was the author of several books in his field, and was a member of the Advisory Council of the National Arboretum, the Society of American Foresters, the American Forestry Association, and a Fellow of the American Association for the Advancement of Science.

Arcadia's Doing Fine

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. HILLINGS. Mr. Speaker, there has been much talk of the current economic situation, resulting in too much pessimism and not enough optimism.

There is no point in talking our way into a depression, as some seem to be doing these days.

So it is encouraging when reports come in detailing economic stability, as is the case with my home city of Arcadia, Calif.

There is no pessimism in Arcadia, only optimism for the economic future.

This is a healthy approach that develops confidence in our economy.

The Arcadia Tribune of March 27, 1958, published an article demonstrating the stability of the city's economy and expressing confidence in the future.

The article follows:

Any way you look at it, business is good in Arcadia, according to figures just compiled by the Arcadia Chamber of Commerce.

Totals just released by the State board of equalization in Sacramento reveal that taxable retail sales here were nearly 8 percent higher for the last 9 months of 1957 than they were for the same period of 1956. Total taxable retail sales here from April 1, 1957, to December 31, 1957, were $32,553,594, compared with $30,178,635 for the comparable period of 1956.

Reflecting the general slowdown in sales toward the end of the year were taxable retail sales of $11,709,800 for the last quarter of 1957, compared with $11,769,253 for the last quarter of 1956.

SWIMMING POOLS

Reflecting good times here are local figures indicating that the number of swimming pools in town rose from 1,245 on June 30, 1957, to 1,369 today. Forty permits have been issued since January 1.

Business license receipts to January 31, 1958, totaled $61,056.20, compared to $58,762.67 for the same 7 months of the previous fiscal year. These figures reflect the growth of Arcadia business firms as the licenses are based on the number of employees in each firm.

Further indications of good times are the attendance and parimutuel figures at Santa Anita's 1958 meeting just closed. They indicate a 3.15 percent increase in attendance and 5.12 percent increase in parimutuels. This means a similar increase in attendance taxes for the city of Arcadia.

BANK DEPOSITS UP

Bank deposits in Arcadia increased more than $2 million in 1957 over 1956, and up-to-date figures to March 18, 1958, indicate a rise of an additional one million since January 1. It was pointed out that this sensational rise in deposits came at a time when it is normal for these funds to be reduced because of tax payments and other expenses.

Arcadia is one of the few cities in southern California where the sales tax estimates have not been scaled downward as a result of increased unemployment reports.

Added to these figures is the announcement of a $5,500,000 shopping center to be built at Santa Anita and Live Oak.

ENCOURAGING PICTURE

"This is a most encouraging picture insofar as the economy of Arcadia is concerned," stated I. Verl Funk, bank manager and president of the chamber of commerce.

"Insofar as the Los Angeles Basin is concerned," he continued, "undoubtedly we are going through a period of adjustment or a reevaluation of the economy that probably is long overdue. Anyway you look at it, these facts show that Arcadia has a healthy business climate. They prove that business is good in Arcadia."

The Telephone Tax

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks, I wish to call your attention to a very interesting article which recently appeared in the employees' magazine of the Chesapeake & Potomac Telephone Co. I believe the article makes a good case for the telephone user. The article, entitled "Our Customers' Telephone Bills Could Be 10 Percent Lower If—," is as follows:

Do your friends and neighbors ever complain to you about the size of their telephone bill?

If so, you can tell them that their telephone is still one of the biggest bargains in their family budget, that it has gone up in price less than most things they buy.

But you can also point out that their bill is 10 percent higher than it would otherwise be, because of the Federal excise tax.

Telephone excise taxes were first levied during World War I to raise Government revenue and to free circuits for war-essential calls. The tax was repealed in 1924. Then, in 1932, during the depression, the tax was reintroduced, and 10 years later increased and broadened to meet the needs of World War II. Three years ago it was reduced, but today, 11 years after the end of the war, the tax is still on the books.

Excise taxes are usually applied to such luxury items as furs, jewelry, and cosmetics. As a matter of policy, no essential service should be so taxed. And we're sure the public considers telephone service a necessity, not a luxury.

Telephone service is the only household utility subject to excise taxes today. There is no such tax on water, gas, or electricity. Our customers, therefore, are asked to pay an unfair share of Federal revenue.

The public carries a heavy burden of telephone taxes, with the excise tax added on top. In 1956, for example, the amount a Bell System customer paid for telephone service included, on the average, $49.25 for taxes. Of this amount, more than $14 was for Federal excise taxes. To put it another way, out of every dollar the customer paid for service, 28 cents went for taxes.

Our customers stand to reap the benefits if the excise tax were repealed.

We know it costs money to run the country. But when the time comes that taxes can be reduced, we think the excise tax on telephone service should be among the first to get attention.

Vice Presidential Duties

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. FRELINGHUYSEN. Mr. Speaker, last December I urged that Vice President NIXON be given direct responsibility for speeding up our missiles program. It still seems to me that some sharing of the backbreaking burdens of the Presidency might be considered. In this connection, I should like to include an article by Mr. James Reston, in the New York Times of April 3, in which he makes some telling observations on this subject:

VICE PRESIDENTIAL DUTIES

(By James Reston)

WASHINGTON, April 2.—President Eisenhower was in good form today.

He arrived at his news conference spouting from the Bible about the glories of spring, and stayed late at his desk for a series of conferences, including an unscheduled 50-minute session with Vice President RICHARD M. NIXON. This back-door call by the Vice President, announced later by James C. Hagerty, the White House press secretary, was particularly interesting because the President had told reporters earlier in the day that he could not give Mr. NIXON any major administrative job in the executive branch of the Government.

Nobody would say whether this had been discussed, but it is no secret that Mr. NIXON has wanted new executive responsibilities, and some officials have been hoping that the Vice President would be used to help plan and administer the administration's much-criticized psychological warfare effort. The background of this is as follows:

The President told a questioner at today's news conference that the Vice President had constitutional duties to perform as president of the Senate. He added, therefore, that "it would be impossible" to give Mr. NIXON specified duties within the executive branch of the Government.

WALLACE'S TASK RECALLED

As a matter of fact, the Vice President now has administrative duties in the executive branch of the Government. He is chairman of the President's Committee on Government Contracts, and while these duties are not very important, they are in keeping with other Vice Presidential executive responsibilities of the past.

On July 30, 1941, President Roosevelt established what was called the Economic Defense Board (renamed after Pearl Harbor the Board of Economic Warfare) and appointed Vice President Henry A. Wallace as its chairman.

The other members of the board, under Executive Order 8839, were the heads of the Departments of State, Treasury, War, Justice, Navy, Agriculture, and Commerce. They were to give "advice and assistance" to the chairman, but it was clearly stipulated that Mr. Wallace was "authorized to make final decision when necessary to expedite the work of the board."

Thus Vice President Wallace, during the third Roosevelt administration, served as executive aid to the President in one important field of policy that cut across the responsibilities of various departments and, in this field, every Cabinet member and many of the heads of the independent agencies of the Government were directly under the authority of the Vice President.

NEVER AN ADMINISTRATOR

Mr. NIXON never had any such tall ambitions, but he is acutely conscious of one flaw in the theory that he has been carefully prepared for the duties of the Presidency. This is that he has never spent a day in his life in the administration of important executive policy in any Federal, State, or municipal job.

He has been a Representative and a Senator. He has presided over the National Security Council in the absence of President Eisenhower. He has taken on innumerable ceremonial jobs for the President.

But he has never had any experience in administering policy, in the hard and critical task of seeing that policies are carried through, which is one of the vital responsibilities of any chief executive.

Last year William H. Jackson, of Princeton, N. J., then assistant to the President for psychological warfare, came to the conclusion that one of the grave weaknesses in this administration was that nobody had both time and authority to see that the recommendations of the National Security Council and the decisions of the President were effectively carried out by the various departments and embassies.

DULLES OPPOSED PLAN

He recommended to the President that Mr. NIXON be made chairman of the Operations Coordinating Board, whose job it is to see that Presidential decisions, recommended by the Security Council, are closely and quickly followed.

The President, seemed sympathetic to the idea at the time. But Secretary of State John Foster Dulles, who has never forgotten the trouble Secretary of State Robert Lansing, his uncle, had with Col. Edward M. House, White House aide to President Woodrow Wilson, opposed it and it was dropped.

Recently a similar idea was revived. When it became apparent that the Soviet Union was often scoring heavily against the United States in the fields of propaganda and psychological warfare some officials discussed the possibility of bringing the Vice President downtown to serve as Chairman of the Planning Board of the National Security Council, a job now filled by Robert Cutler, a Boston novelist and banker.

This was the background of today's question to the President about Mr. NIXON, but General Eisenhower torpedoed it, apparently without knowledge of previous experiments in giving excessive responsibility to a Vice President.

WHY THE EMPHATIC NEGATIVE?

Accordingly, there was a tendency here today to speculate about why the President had given such an emphatic negative.

He has clearly wanted to prepare the Vice President for any eventuality. He has published a state paper to make it easier for Mr. NIXON to assume the duties of the Presidency temporarily, during any severe Presidential disability. He has given him many peripheral and ceremonial jobs, but he holds back from giving him the kind of experience that Mr. NIXON needs the most.

Why? One theory is that the President simply has not realized this important gap in the Vice President's background. Another is that the President and his White House staff are slightly miffed at the Vice President for speaking out on his own in the last 6 months, sometimes in ways somewhat different from the official line.

Last month, Mr. NIXON told the press that he preferred a tax cut to large Federal public-works programs and remarked:

"That is my position, but I don't say it is or is not the administration's position."

Earlier, when some of the administration leaders were minimizing the Soviet earth satellites (the assistant to the President, Sherman Adams, called it an "outer-space basketball game"), Mr. NIXON publicly took a much more serious view of the Moscow challenge.

More recently, he has been disturbed by the loss of the political and psychological initiative to the Soviets. He has not hesitated to say that this aspect of United States operations overseas, conceded by both the President and Mr. Dulles to be unsatisfactory, was the weakest link in the administration's chain.

It is probably too much to say that he is being punished for his independence, but the fact remains. There is an important job of psychological planning to be done. The President admits as much. Mr. Dulles would like to do it; but the President, for one reason or another, is showing very little interest in giving him the assignment.

National Park Service

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. SAYLOR. Mr. Speaker, most every day, the Members of Congress receive protests from their constituents citing examples of waste in Government.

The leading exponent of economy in Government is the Honorable HARRY E.

BYRD, senior Senator of the State of Virginia. Several days ago, during a hearing, Senator BYRD called attention to an example of real economy in Government and his statement has been editorialized by the Progress Index of Petersburg, Va.

The editorial follows:

A REAL COMPLIMENT

If only because of the attention commanded by waste and extravagance in the Government, stories of the other kind ought not to go unnoticed.

An example is Senator BYRD's comment on the National Park Service. The Senator, and his authority in such matters is not likely to be questioned, says he has never found a nonessential expenditure in a National Park Service budget. Rather, he says, there is not another agency in the Federal Government which can be counted on to get $1.20 value out of every appropriated $1.

The National Park Service is the agency within the Department of Interior which operates scenic and historical parks throughout the Nation. Its recreational and educational services to the Nation are vast, and these services promise to become more important as time goes on.

Senator BYRD's complimentary comment is one which is supported by less informed observations of the Service and the areas which it administers. Other agencies of the Government might well study an organization which could make out a plausible case for unrestrained spending but declines to do so. Evidently it has established a tradition which stands it in good stead.

What Part Will I Play As a Citizen?

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. HENDERSON. Mr. Speaker, I am proud that one of the winners of the American Legion essay contest this year is a resident of the 15th Congressional District of Ohio. Miss Elaine McCullough, daughter of Mr. and Mrs. E. A. McCullough, of 604 Sixth Street, Marietta, Ohio, has written what I believe to be a most interesting essay. Miss McCullough is 15 years old and a sophomore at St. Mary's Parochial School in Marietta. Her essay is typical of the feelings which many of our young people possess as they evaluate their place in our society and their responsibility as citizens of the United States.

I am pleased to recommend Miss McCullough's statement to the Congress. It is as follows:

WHAT PART WILL I PLAY AS A CITIZEN?

"See that basket? See that rim? Come on, Cawley, drop it in." You yell this until your throat is sore. He just has to make this shot good. Yes, right now basketball, swimming, dancing, and pop music are tops on my list, too. I am just a sophomore, but in a few years these musts of a teen-age life will gradually fade into the responsibilities of adulthood. I'll still have to keep the Ten Commandments, but my duty to God and to my country will change somewhat. I'll have to earn a living, vote on the first Tuesday following the first Monday in November every 4 years, and I'll have to bear my share of the responsibility of keeping our Nation a Republic.

All of this may sound fairly easy, but it will be a full-time job. And then I'll have to pay taxes. Hmm, not so easy. But when I realize that tax money is what keeps our highways smooth, our streets clean, our parks beautiful, and our country secure, then it seems a small price to pay for rights and privileges which are priceless.

Voting will not be easy either. It will require a little more effort than merely pushing a button as I do now to select a tune on the jukebox. It will take some consideration on my part to know just which lever to pull on the voting machine or which person's name to mark an X beside. Perhaps Mr. Alhorn would make a good President, but Mr. Linely just might be better. And I think that biology questions are hard?

Now that the shock of sputnik on Americans has somewhat ceased, Government officials are beginning to be quite concerned about educational problems. In this field it will not be necessary for me to wait several years to do my bit. I've never before thought of it in this way, but part of my job of being a good citizen can be taken care of here and now. I can get the maximum benefit out of my high-school studies and plan to go to college later on. If I go to college I just might loosen the screw that would send one of our satellites soaring around the world. I could be another Paul Revere and fly my private helicopter out to Bakersfield, Calif., to warn its citizens of flying enemy missiles. The wires just might be down, you know.

I'll probably never do anything quite so dramatic for our country's welfare. But perhaps my little actions, my kindnesses, my everyday duties, and my prayers won't really harm anyone. By the time I have reached 21 I'll probably know what my vocation is and how I am going to use it. In whatever field God wants me, I hope that there will be enough love for God and the United States in me to do my job well.

Recession in Politics

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mr. HILLINGS. Mr. Speaker, in the March 24, 1958, issue of Life magazine is a very timely editorial on our current economic situation.

This analysis should be of interest to all of us, for it pinpoints the approaches taken by both poltical parties in periods of economic recession.

The editorial, which speaks for itself, follows:

In a timely nonaggression pact, Speaker RAYBURN and Secretary of the Treasury Anderson have agreed that neither will sponsor a tax cut without notifying the other. Their pact buys time for sober thought about the recession, which unemployment has made a major political issue.

It should be a political issue but not of the frantic auction variety seen to date. The Democrats are trying to reenact their role of the 1930's as the party against "Hooverism." To avoid the Hoover label, 18 Republican Senators have accepted Democratic leadership on at least one public-works proposal; and even Vice President NIXON has staked out a Republican claim on a tax cut. What are they so scared of? There is not the slightest taint of "Hooverism" on the Eisenhower policy and Republicans will not make votes for themselves by acting as though there were. But there is an honest difference between the Eisenhower and the Democrats' recession policies and the voters deserve some help in having it coherently exemplified.

The difference is this: the Democrats tend to prescribe spending itself as a remedy, while the Republicans must know what the spending is for. While the Democrats seem to be there "fustest with the mostest" remedies, the Republicans must keep one eye on the future of the economy as a whole. Eisenhower said in 1956 that the Republicans are the party of the future. How he handles the slump will be a good test of his words. And it can determine whether the slump is to be followed by another healthy boom or by a really dangerous bust.

One of those taxi drivers who make so much business opinion recently told a fare that the recession was willfully caused by rich people and politicians. He reasoned that, since a recession can be cured, its very existence proves it was planned. His conclusion was that Uncle Sugar need only press lever A, raise spout B, pour a million cupfuls of seedless raisins down funnel C and—hey, presto, the boom resumes. Whether this view be widely held or not, no responsible Republican should espouse it. There are right and wrong remedies, the choice depending on which symptom you want to alleviate. The New Deal did a lot of good things to the United States economy in the 1930's, but the cure of unemployment was not one of them (only the war did that). The Eisenhower administration has already taken strong measures against this recession; and if more are called for, their particular purpose should be kept clearly in view. The chief treatment areas are three.

1. Consumption: Retail sales remain slightly ahead of last year. There has certainly been no panicky buyers' strike. The closer to the ultimate consumer—for example, in department stores—the better is business likely to be. The big exception is new automobiles and the exception to that is low-priced cars. Consumers still have plenty of buying power for any manufacturer who rediscovers pricing and selling.

Advocates of a quick tax cut, like Senator DOUGLAS, argue it would give the economy a jolt by putting money in consumers' pockets. The trouble is that pockets is where most of it would probably stay. A tax cut for its sake has considerably less justification today than the comparable proposal, semiseriously advanced by some New Dealers in the 1930's, to drop dollars from airplanes across the land.

2. Investment: Here is the weakest front. Corporate outlays for new plant and equipment will be down from $37 billion last year to $32 billion in 1958, according to latest estimates. Unless this drop is offset by other expenditures the recession may deepen; and only when capital investment stabilizes or rises again will a firm basis be laid for the next boom.

As for offsets: the administration has already committed itself to enough new Federal expenditures to make up most or all of the difference. The rate of defense spending (thanks to sputnik) will soon be twice as high as it was in the last 6 months of 1957. Public works spending will also be speeded up; so will government aid to housing and urban redevelopment; so will the Federal highway program. These speedups, mostly initiated by the administration, are being given additional gunning by congressional Democrats, who seem more willing than Republicans to ignore the size of the deficit.

As for the next investment boom: a survey of 165 large-corporation executives (to be published in the April Fortune) discloses an astonishing bullishness about long-term propects. A quick tax jolt would not stimulate this bullishness; on the contrary, it might make some businessmen fear the Government had lost its mind. What would stimulate long-term-profit prospects, and therefore another corporate investment boom, would be a serious effort at basic reform of the Federal tax structure. Certainly any tax bill ought to be carefully considered for its long- as well as short-term effects.

3. Unemployment: This is the chief reason for trying to end the recession. It is therefore vital to distinguish between measures that relieve unemployment and those that don't.

Among those that don't are the freeze in agricultural price-supports which the Senate passed last week on the demagogic plea that it was antirecession legislation. This freeze will increase the deficit, but the deficit by itself will not create a single job.

Among measures that do relieve unemployment are Eisenhower's plan to prolong State unemployment insurance payments. But to create new jobs a fourth ingredient must be added to the men, money, and materials that constitute any job. This fourth ingredient is ideas.

The idea of building a post office, school, dam, missile, or anything else useful or salable creates jobs. Thus the Government alleviates unemployment when it starts new projects of this useful kind or redirects old ones toward surplus-labor areas. But you cannot get good job-creating ideas out of a government just by forcing deficits on it. When you try, the Government's idea-men are apt to wind up handing around WPA rakes and shovels. The present level of unemployment is serious enough, but it is not that serious. Its real cure will be a resumed expansion in private business, which alone can keep 68 million men and women at useful work.

Thus if the Republicans are really the party of the future, they will not let the immediate unemployment problem distract them from that of our long-term economic health. The Democrats will see to it that the unemployed are currently vocal; but who if not the Republicans will represent their future, which is bound up with that of the economy as a whole? A policy of squanderation now will revive inflation without curing this recession and thus make the next one worse. If the Democrats wish to go to the voters in 1958 with such a policy, the Republicans will be well advised to fight them on that ground, win or lose. For more will be at stake in 1960, by which time the Republicans, the unemployed, and the Nation will all need another boom. We can be earning it now.

Statement of Hon. Florence P. Dwyer, of New Jersey, Before House Ways and Means Committee, in Support of H. R. 11543, To Provide for Temporary Additional Unemployment Compensation

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1958

Mrs. DWYER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the text of my statement prepared for the House Ways and Means Committee in support of my bill, H. R. 11543, to extend temporarily the duration of unemployment compensation benefits:

Mr. Chairman and members of the committee, the chief question now before this committee seems to be, "Is the rate of exhaustion of unemployment compensation benefits at the present time and in the immediate future of such magnitude as to require emergency action by the Congress?"

Not 3 or 4 months from now, not next year—but now?

In my own view, the answer is "Yes." And this is the reason I introduced the bill, H. R. 11543, which is one of several bills presently being considered by you.

Unless I am badly mistaken, this view is also shared by an impressive number of leading Members of Congress of both parties—including several members of this committee—and by the President of the United States and his Secretary of Labor.

If this view is accepted by the majority of this committee, then the problem becomes, Which proposal now under study, or which amalgam of proposals, promises the most effective and quickest relief of this emergency need?

Again, relief not 3 or 4 months from now, not next year, but relief now?

I respectfully suggest, Mr. Chairman, that H. R. 11543 can assure the required relief now—before unnecessary further suffering is permitted, and before the downward cyclical effect of benefit exhaustion takes full effect and further depresses the economy.

My bill will provide, through Federal-State-agreement, for an additional 13 weeks of benefits for those people whose benefit rights, under their own State system, have been exhausted this year. Payments will be in the amount the family was receiving when the workers benefit rights were exhausted. Similar relief is provided for Korean veterans who have exhausted their unemployment compensation benefits. Unemployed railroad workers will also be given an additional 65 days of benefits if they have exhausted their payment-rights this year. This temporary emergency program would run for a 1-year period. It would be financed solely by the Federal Government either by grants to the State unemployment agency or, where no agreement is in effect in the State, through a Federal agency.

The need for such legislation is clearly evident. As Secretary Mitchell testified on the first day of your hearings, "In January and February of this year, 292,500 workers exhausted their regular benefits. It is estimated that a total of 2.3 million workers will exhaust their benefits in calendar year 1958 despite the fact that the potential duration of benefits is now longer than it ever was."

In my own State of New Jersey, the number of workers exhausting their benefits has reached a weekly average in excess of 2,500 as of the middle of March. At that time, nearly 40,000 unemployed workers had used up completely their eligibility for benefits—approximately 1 out of every 4 of the nearly 160,000 claimants for unemployment compensation. The estimated total unemployment as of mid-March in New Jersey was 222,000.

The seriousness of the present unemployment situation is further pointed up by the evidence reported in Tuesday's Washington Post that the administration is actively considering a Federal grant-in-aid program for unemployment assistance for those not receiving insurance benefits. There is no such Federal-aid program at present. And in many States no local program is authorized to assist unemployed who either exhaust their regular unemployment compensation benefits or who were not covered by the system.

In New Jersey, the sharp increase in the number of persons receiving general public assistance, excluding child welfare, old age, disability, and blind cases, indicates the increasing burden on public resources resulting from the rising rate of unemployment compensation exhaustions. As of February 1958, more than 40,000 persons were receiving general public assistance—an increase of 13.9 percent over the preceding month and a rise of 63.9 percent over February 1957.

My bill is substantially the same as the administration's bill except for the fact that it provides that the cost of these supplementary benefits will be borne by the Federal Government in the form of grants, rather than by the States in the form of repayable loans or increased employer tax. The duration of the additional payments will be 13 weeks, instead of 50 percent of the individual's duration under his State program.

In a sense, I believe that this method better carries out the purpose expressed in President Eisenhower's recent message to Congress, which emphasized the plight of the workers and their families who have exhausted their benefits. He stated at that time:

"I believe that these workers and their families should be enabled temporarily to receive weekly benefits for a longer period than is now in effect so that in the current economic situation they and their families can obtain a greater measure of security."

My bill is designed to provide emergency payments of adequate duration, on an equal basis, to the unemployed worker, even though his State may not have conformed to the President's recommendations as to duration of benefits. This, it seems to me, is the only equitable solution. For we should not compound the distress of a worker in a State with benefits of short duration by restricting him to equally short Federal emergency benefits. The 13 weeks of additional benefits in my bill is more realistic, in my view, than variable periods provided by H. R. 11679 which, Secretary Mitchell has estimated, will provide an average of only 7½ weeks of additional benefits.

On the other hand my bill, like the administration bill, retains for the States the important responsibility and prerogative of determining the amount of weekly benefits. Unlike H. R. 11326 and H. R. 11327, the bills of your distinguished chairman and the majority leader, my proposal would not have the effect of increasing benefits, in some cases, in a very haphazard manner. The requirement in the Mills-McCormack bills that the rate of extended benefits will be an amount equal to 50 percent of the individual's average weekly wage (with a limitation that such benefits shall not exceed two-thirds of the average weekly wage earned by employees within the particular State) produces some extremely anomalous situations.

For example, some States with so-called variable duration now provide that short attachment to the labor market, as measured either in earnings or in time, gives only short entitlement to benefits. In many States, a bare attachment to the labor market allows benefits for only 5 or 6 weeks. Progressively longer labor market attachment gives correspondingly longer duration up to the point where what is described as "substantial attachment" provides the maximum duration allowed in the State law. Thus many short-duration claimants, it has been pointed out, would receive more benefits per week than those who were regularly employed and eligible for the State's maximum duration of benefits. As a result, a worker might be eligible for $35 per week for 10 weeks, and then receive $40 to $50 for the next 16 weeks—the period covered by the Mills-McCormack proposal. In contrast, the steady worker would continue to

receive only $35 per week for the entire 26 weeks of his State duration and could receive the higher rate only after his unemployment continued beyond the 26 weeks.

It should be made very clear that my proposal is temporary and deals only with an emergency situation. For I am convinced that the States will continue to improve their systems within the traditional patterns toward the goals set forth by President Eisenhower and our Secretary of Labor, James P. Mitchell. These objectives, as you well know, call for an increase in the State's maximum dollar payments to the great majority of unemployed workers so that they will equal at least half of their regular earnings, and for a uniform duration period of 26 weeks. Moreover, I suggest that, for such emergency legislation, a Federal grant is more appropriate than a loan inasmuch as a grant will not mortgage the reserves and tax resources of State plans in the future so as to make the liberalizations which the President has recommended practically impossible of fulfillment.

I believe that my bill combines two very important objectives. It will deal effectively with the emergency unemployment situation which now confronts us. But it does not alter the basic structural relationships of our State-Federal unemployment compensation system so that further cooperative progress can be made. H. R. 11543 does not, in any way, change the standards that the States have set in their laws with respect to weekly benefit amounts, eligibility, or disqualifications. Furthermore, there will not be the possibility of employers bearing the full cost of these emergency payments through increased taxes which, in themselves, may have a depressing effect upon the dynamic nature of our economy.

These are important considerations, I believe, especially at this time and in this emergency situation. Legislation, like several of the bills now before this committee, which would involve such structural changes in the present Federal-State unemployment compensation system would also involve the requirement of implementing legislation by the States.

This will take time, a great deal more time than we can afford to take without also taking interim action extending unemployment benefits.

I will readily concede, Mr. Chairman, that there are serious weaknesses in the existing system—weaknesses recognized by leading economists and Government officials, from the President on down, of both parties. These shortcomings include: insufficient coverage, inadequate benefit levels, too brief a period of eligibility, and arbitrary disqualifications.

Clearly, we require a far more comprehensive and uniform Federal-State unemployment compensation system; with provision for more realistic payments and durations of benefits—both in justice to workingmen and women and as a means of securing greater stability in our national economy.

But, as I have indicated, to correct these inadequacies will require State legislation in addition to the Federal legislation you are considering. This would be true even if all the States' legislatures were presently in session and if there was unanimous agreement about the need for and kind of reform which is needed. Neither of these conditions exists.

By all means, let the Congress begin immediately to review and revise the present unemployment compensation system. But let us not fool ourselves into thinking that such comprehensive action will solve the immediately pressing problem of extending benefits for those unemployed who have exhausted and will shortly exhaust their regular benefits.

There are two distinct and different problems here. Congress must face both of them. But let us not confuse them and thereby fail to meet the emergency need that faces us right now.

Thank you very much for your cooperation and consideration. I commend my bill, H. R. 11543, to your earnest study and to your sense of urgency.

Mrs. Emma Grace Fulkerson, Illinois State Mother of 1958

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. GRAY. Mr. Speaker, it is with great pride that I announce to the House and to the people of this country that one of my constituents, Mrs. Emma Grace Fulkerson, of Carbondale, Ill., has been selected as the Illinois State mother of 1958. A judging committee considered many extremely outstanding nominees from all parts of Illinois and made this very commendable choice for State mother. The American mother's committee was inaugurated in 1933 as a committee of the Golden Rule Foundation. The objective of the mothers committee is to develop and strengthen the moral and spiritual fiber of the American home. Mrs. Fulkerson has such an outstanding record of devotion to her community, State, and Nation that I take pleasure in printing herein a biographical sketch of her and some of the facts surrounding her selection:

Mrs. Emma Grace Fulkerson (Mrs. Elbert), (60) 610 West Cherry Street, Carbondale, Ill., has been chosen 1958 State mother by a jury of judges of the Illinois Mothers Association of the American Mothers Committee, Inc., at the home of the State chairman, Mrs. A. E. Seymour, Virden, Ill., on March 19.

The Dames Club of Southern Illinois University, an organization on campus, composed of wives of students and married female students, made the successful presentation of Mrs. Fulkerson, who is their sponsor and adviser. These young women, many of whom are also mothers, feel their adviser has all the qualities and characteristics of what a good mother should be. Mrs. Fulkerson has encouraged the interests of the group in educational, cultural, religious and civic affairs, as well as in homemaking. Even though she does not drive a car herself, she has never missed one of these meetings; her genuine interest and concern for these young women has won their complete confidence.

Emma Grace Fulkerson and her husband, Prof. Elbert Fulkerson, have raised a family of 6 outstanding children, 3 sons and 3 daughters. Dr. Elbert Glen Fulkerson, oldest son, is coordinator of secondary education at San Diego State College, San Diego, Calif. He served in the Navy 5 years during World War II, 3 years in the Pacific theater, and when honorably discharged had achieved the rank of lieutenant junior grade. Mrs. Merle Fulkerson Guthrie, oldest daughter, has her master's degree and is a teacher in Belleville Township High School and Junior College, Belleville, Ill. Dr. Delbert Ray Fulkerson, a research mathematician for Rand Corp., a nonprofit organization, was first lieutenant and meteorologist in the Army Air Corps during World War II. He also has night classes in the University of California at Los Angeles. Mrs. Juanita Fulkerson Todd, a resident of Des Plaines, Ill., teaches in Niles Township School, Skokie. Her unusual record of highest awards throughout her academic career at Southern Illinois University, where she also received her master's degree, was in keeping with the family reputation. Mrs. Grace Fulkerson Weshinskey is also a graduate of Southern Illinois University, where she was president of the student council, editor of the school paper and associate editor of the yearbook. She taught school and is a resident of Carbondale. Richard, at 16, is a high school junior "straight A" student. He excels in debate, chorus, trombone and, as an Explorer Scout, attended last year's national jamboree at Valley Forge. Both sons in California have children and Mrs. Weshinskey has one child.

Of this exceptional family, four of the children were graduated from high school as valedictorians of their classes, and the other with scholastic honors. Three of them were graduated from Southern Illinois University with high honors, and the other two from the same university with highest honors in their classes. Four of the children helped pay their way through college by working part time. Extracurricular activities claimed much of their time and interest, such as athletics, journalism, debating, choral work, social, and honorary organizations and school plays. At the same time, they all attended Sunday school and church regularly. Presently, most of them are still very active in church work.

Prof. Elbert Fulkerson teaches mathematics at Southern Illinois University, where he is also secretary to the faculty. He has been awarded a life membership in the National Educational Association for faithful performance of duty. Presently, secretary of the Carbondale United Fund, he was one of its organizers. He is an elder in the Presbyterian Church, a member of the American Association of University Professors, president of Southern Illinois Historical Society and member of teacher groups of mathematicians and scientists and of the board of directors of the Student Christian Foundation at Southern Illinois University. He is author of several articles published in professional magazines.

Mrs. Fulkerson taught in a rural school of White County, where she had been valedictorian of the eighth grade graduating class, when that was a county program. Service on the Williamson County Health Committee and as a volunteer nurse's aid at Holden Memorial Hospital, Carbondale, has claimed a good share of her time. For 31 years the Carbondale Women's Club has been supported by her membership and service in offices and chairmanships. At one time she was president of the Carterville Woman's Club, the Williamson County Federation of Women's Clubs and was organizer and sponsor of the Carterville Junior Woman's Club. She has served the PTA in executive capacities, as well as the Home Bureau. Her husband's position provides her eligibility to membership in Southern Illinois University's Women's Club.

Our chosen State mother has been an active member of various churches and Sunday schools throughout her lifetime. At present, she has a variety of responsibilities in the local Presbyterian Church. Her pastor says: "She has been diligent and faithful in her church work, serving as president of the Church Women's Association, teacher of the women's Bible class and in many other capacities."

As the civic or government reference, the mayor of Carbondale, Hon. John I. Wright, writes of the high esteem in which the Fulkerson family is held and deems it an honor to recommend Mrs. Fulkerson to the Illinois Mothers Association judging committee.

A colleague of Professor Fulkerson supplies the educational reference for Mrs. Fulkerson. Having had four of the prime results of her motherhood in his classes, he made the following comments upon the family qualities: "Among these are a sense of responsibility, integrity, and personal discipline. Respect is another quality steadily developed in this family. The Fulkerson children have never been obsequious or without proper critical evaluation of persons and institutions, but they have also never been too careless, conceited, or blasé to give evidence of honest respect where it is due. Other major virtues, one may be sure, were rigorously instilled at home: Religion, honesty, industry, friendliness, and ethical propriety generally. The result has been a family of children quite unusual in terms of achievement and public regard."

As the mother in this remarkable family, Mrs. Fulkerson has been friend, companion, confidant, comforter, counselor, and inspiration to her children. Even when afflicted with a serious illness herself, she did not succumb to self-pity, but maintained her cheerful, courageous spirit so that she became an example to all who know her, that life can be lived victoriously in spite of any misfortunes.

The maintaining of a superior home and family unity upon the limits of a modest income was not always easy. However, within the limits of the family income Mrs. Fulkerson has always managed to create a home atmosphere of warm, attractive comfort for her family where they might welcome their guests.

Wisely, while her children were growing up, Mrs. Fulkerson devoted herself to them, her husband and her home. Yet, giving themselves to the community is a family precept well exemplified by this mother who has proved to be a leader of exceptional capacity and effectiveness and who has revealed repeatedly the background of distinguished parenthood which makes success for children so much easier than without it.

Presentation of the citation of the American Mothers Committee will be made at a public-awards ceremony, April 13, in Carbondale. Mrs. Fulkerson will be the State's candidate for American mother.

ILLINOIS MOTHERS ASSOCIATION JURY OF JUDGES

Mrs. E. J. Heckel, Downers Grove, president, Illinois Federation of Women's Clubs.

Mrs. E. D. McGuire, Makanda, immediate past president, Illinois Home Bureau Federation.

Mrs. Charles H. Woods, Lincoln, governor, Illinois Sons and Daughters of Pilgrims, also 1955 Illinois State mother.

Mrs. E. J. D'Aboy, Springfield, president, Illinois Mission Society of Baptist Women.

Mrs. Ben Michaels, Assumption, president, Springfield Diocesan Council of Catholic Women.

Mrs. M. D. Clinton, Virden, president, southern Illinois division, Brethren Women.

Mrs. Hobart Blair, Virden, State secretary, Illinois Council of Church Women.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Address by Governor McKeldin in Commemoration of 215th Anniversary of Birth of Thomas Jefferson

EXTENSION OF REMARKS
OF

HON. J. GLENN BEALL
OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, April 14, 1958

Mr. BEALL. Mr. President, yesterday at the Jefferson Memorial in Washington the Honorable Theodore R. McKeldin, Governor of Maryland, delivered an address in commemoration of the 215th anniversary of the birth of Thomas Jefferson. Thomas Jefferson was specifically the founder of the Democratic political party, was the author of so many of our important public documents, and was without peer as a statesman.

I think that Governor McKeldin's remarks yesterday constitute a complete statement of the public service of Thomas Jefferson and, as such, automatically becomes a great tribute to his memory.

I ask unanimous consent that his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF THEODORE R. MCKELDIN, GOVERNOR OF MARYLAND, AT THE ANNUAL COMMEMORATION OF THE 215TH ANNIVERSARY OF THE BIRTH OF THOMAS JEFFERSON

The immortality of Thomas Jefferson rests upon the fact that he knew values. This may seem a peculiar thing to say of a man who was among the most successful of world statesmen, but the proof of it is inscribed upon his tomb. Governor of Virginia, Minister to France, Secretary of State, twice elected President of the United States, negotiator who doubled the size of the country, and founder of a great political party, he ignored all these achievements in writing his own epitaph. He preferred to be remembered as the author of the Declaration of Independence and the Virginia statute of religious freedom and father of the University of Virginia.

Historians, philosophers and politicians have been puzzled by that epitaph ever since and some have seen in it the final display of Jefferson's almost pathological dislike of being conspicuous. But it is precisely the contrary; Jefferson wished to make conspicuous those things that he regarded as his own accomplishments.

He has been governor and President, but every man in public life knows that chance plays a large part in every election, and, of course, the efforts of the candidate's friends play a still larger part. He had been Minister to France by appointment of Congress, and Secretary of State by appointment of President Washington. He was able to make the Louisiana purchase because the fortune of war had put Napoleon in a mood to sell. He founded a political party because the necessities of the moment forced such action upon him.

But the Declaration, the statute, and the university all represented tasks that he assumed of his own free will and that he carried through, not unaided to be sure, but in the manner that he, none other, saw fit to do them. Franklin and John Adams changed a word or two in the Declaration; John Harvie actually introduced the bill for religious freedom; and many others, including as oddly assorted characters as Madison and Du Pont de Nemours, assisted with the university. But men agreed then, and have agreed since, that the driving force in all three was Thomas Jefferson.

Yet not one of these was in any sense an original idea. As regards the Declaration, we have Jefferson's own written testimony that he sought diligently to avoid putting any original idea into the document. It was his endeavor to put into words the things that all liberty-loving men of the time accepted, not to express any new thought of his own. The statute of religious freedom also had a long ancestry, going through the charter of Maryland and the Mayflower compact, to generations of European thinkers and writers. As for the idea of a university, it was certainly as old as Plato's academy, and it is probable that something of the sort existed in China long before Plato was born.

Nevertheless the contribution that Thomas Jefferson made to American statecraft is acknowledged to be among the most important made by any individual. Here would seem to be a paradox: A man who disclaimed any originality for his most famous work, yet became in his lifetime and has since remained in memory one of the most eminent leaders and inspirers of a great nation. How can a man be a magnificent leader if he has no originality?

But it isn't a paradox. There is no puzzle in it at all if we bear in mind that the very essence of successful leadership is an accurate sense of values. The man who knows, apparently instinctively, what is really worthwhile and what has only a surface glitter, the man who never mistakes polished brass for fine gold, is a man whom the people can safely follow. And because there are so few of his kind he will always seem to be highly original, although his basic philosophy is actually as old as truth itself.

Thomas Jefferson knew that in his time two great tasks lay before the American people: the exploitation and development of a continent and the exploitation and development of the theory of political liberty. Both were practically virgin fields, although both had been partially explored for centuries. A great many of Jefferson's contemporaries had eyes only for the continent, and he did not neglect it; he sent Lewis and Clark across its whole extent and by that act became the first to inform the American people of what they really had.

But not for one moment did he fall into the error of believing that taking possession of the continent was the more important task. His sense of values told him that for Americans to learn how to govern themselves successfully was more important than overrunning North America. The continent was, indeed, a storehouse of almost limitless treasure; but the field of political liberty was a storehouse of absolutely limitless treasure. The values that are gained through liberty are, it is true, values of the mind and spirit, not those of the market place. But for that very reason they have the value of immortality, they will outlast silver and gold, they cannot be corrupted by moth or rust, nor can thieves break through and steal them.

"I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man," he said, and in the three things by which he wished to be remembered he kept that oath. The Declaration of Independence attacked the tyranny over the mind of man exercised by the King or England; the statute of religious freedom attacked the tyranny exercised by bigotry; the university attacked the tyranny exercised by ignorance. To be an implacable foe of tyranny over the mind is a greater thing than to hold any office whatsoever, up to and including the Presidency of the United States.

It took a great man to see that truth, but once seen and proclaimed, it becomes the inspiration of all succeeding generations. For at any one time only 1 many out of 170 million can be President of the United States; but there is none so humble that he cannot, if he will, be a relentless foe of tyranny over the mind. Yet to the extent that a man stands up and fights for freedom, to that extent he shares the greatness of Thomas Jefferson.

So we return to him again and again. It has been nearly a century and a quarter since his heart ceased to beat, but he remains a living presence in this Republic. The grave at Monticello does not contain him, and this marble cenotaph is not his shrine. The living Jefferson abides in the hearts of his fellow Americans, and whenever and wherever one American heart leaps at the thought of freedom, there Jefferson is in action again.

This place is dedicated to his memory, but it is not really a monument to Jefferson. It is a monument to the eternal war against every form of tyranny over the mind of man, and it carries his name only because he fought that war so well. His services to the country as diplomat and statesman were distinguished and we acknowledge them with gratitude. But his sense of values was correct. All that he did in statecraft and diplomacy will pass into oblivion long before we forget that he wrote the Declaration of Independence and the statute of religious freedom and founded the University of Virginia.

The man who devotes his thought and energy to the things that abide is the man whose name abides and who comes as close to immortality as a human being can come. Since nothing that has entered the heart of man is more persistent than his longing to be free, the man who can identify his name with that yearning has secured a place in history that will endure while the love of liberty endures.

The existence of this place turns our thoughts to these things. Hence to come here should be, and I am sure is to all of us a refreshment and a renewal of our faith in the value of things that eye hath not seen, nor ear heard, but that are more enduring than wealth, more desirable than power, because their touch lays upon our common clay the lustre of the immortal.

Through Jefferson we pay tribute to all that has made our country great; and the mere payment of that tribute has its effect

upon ourselves. It lifts us a little higher above the level of the brute and a little closer to the ideal. I can think of no more fitting close to an address of this kind than to quote those unforgettable words that are as true today as they were when Pericles addressed them to the Athenians: "I have paid the required tribute, in obedience to the law, making use of such fitting words as I had. * * * For where the rewards of virtue are greatest, there the noblest citizens are enlisted in the service of the state."

Acute Water Shortage Threatens Many Areas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, April 14, 1958

Mr. JOHNSON of Texas. Mr. President, the fear of a serious water shortage is very real—and completely justified—in many sections of the United States.

As the Austin Statesman, one of our great Texas newspapers, pointed out in a recent editorial, unless adequate action is taken to meet this problem every phase of the Nation's economic life will be adversely affected.

The Statesman editorial outlines the scope of the problem and tells of efforts to meet it.

I ask unanimous consent that the text of this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ACUTE WATER SHORTAGE IN WATER-SHORT AREAS SEEN IN 15 YEARS

Texas, with a rapidly increasing population, a rapidly increasing industrial complex requiring large quantities of water, a huge livestock as well as agricultural industry, passed through 7 years of the worst drought in Texas' history.

Conditions which brought this protracted drought now seem changed, but Texans are not yet too sure, despite abundant rainfall in the last 2 years, whether the drought has been broken or whether this rainfall is a temporary intermission.

Last year Texas voters ratified a $200 million State bond issue for purposes of supply and conservation and storage, this money to operate as a revolving fund to remedy water deficit conditions prevalent during periods of scant rainfall. Not much has been heard recently on the progress of this program, beyond the fact that it is in the "works."

But the water problem is not alone that of Texas. In 15 years, say Congressmen from water-short areas, there will be an acute water shortage. Senator CLINTON P. ANDERSON, New Mexico Democrat, says "there is a feeling that not a cussed thing" has been done for the past 3 years on a research program begun 6 years ago by the Department of the Interior.

He has introduced a resolution to authorize the Department of the Interior to construct a full-scale, $10 million demonstration plant to convert salt water into fresh water. Senator FRANCIS CASE, South Dakota Republican, would provide the same amount to build two pilot plants—one to convert sea water to fresh and another on the northern Great Plains to treat brackish water.

Meanwhile the Department of the Interior has announced that the United States will build its largest water conversion plant yet in the Virgin Islands. It will turn more than 200,000 gallons of sea water into fresh water every day.

Behind the renewed congressional activity on water conversion is the fear of a serious water crisis. Agriculture and industry have consumed ever-increasing quantities of water and in some areas there never was a great supply. As the population grows water requirements and usage increase drastically. An adequate program to halt the runoff of water to the sea in times of abundance for conserved used in times of lack of rainfall has yet to be undertaken.

The great problem of water, as growth of the States populationwise and in industry which uses vast quantities in washing processes, not only is to find effective measures for water retention but in the course of the next few years to be able to fill the gap with water from cheap conversion processes.

Senator ANDERSON says the atomic bomb would have required 75 years for development if there had not been a desperate sense of urgency, but there is now the same urgency with regard to adequate water supplies to meet the requirements of a dynamically expanding nation and its economy, and all that has been done so far from the national standpoint is to put sat water conversion in a small pilot plant stage.

The time, many Congressmen feel, is to get the process out of the laboratory and into the field.

In periods of drought the problem of water in Texas is augmented by physical characteristics of the land which find every stream in Texas, from small to medium and large, coursing to the southeast or south to the Gulf of Mexico, losing annually many billions of gallons of water one day to be desperately needed.

The Senate Interior Committee now seems likely to come up with a bill to authorize construction of demonstration plants for seashore areas, including the coastal States fronting on the Gulf of Mexico, southern California, which with other parts of that State has been in the throes of record-making floods, New York-New England States, and inland areas of the great plains and Southwest.

Where there is no water there is little life, no real opportunity for development. The climax of the water problem will be reached in only a few more years, and unless steps are taken to meet it every phase of the Nation's economic life will be adversely affected.

Restore Authority to REA

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 17, 1958

Mr. PRICE. Mr. Speaker, I have received from the Southwestern Electric Cooperative, Inc., of Greenville, Ill., a resolution calling for the reestablishment of the Rural Electrification Administration to its original status as an independent agency. The rural electric cooperatives have been vital elements in farm and rural progress. The cooperatives are concerned that partisan politics will impede their continued service and progress.

The resolution follows:

Whereas the Rural Electrification Administration as originally established was an independent agency; and

Whereas the original intent of the Congress was that it be a nonpartisan agency, as it so states in the act and as indicated by the term of the "Administrator"; and

Whereas the act states the Administrator shall approve loans; and

Whereas if REA is to continue under the jurisdiction of a politically appointed member of the Cabinet there is grave danger to the generation and transmission lending program of REA: Therefore be it

Resolved, That we, the board of trustees of the Southwestern Electric Cooperative, Inc., do this 3d day of March 1958 urge the Congress to take action to restore to the Rural Electrification Administration Administrator the same authority that he exercised before the Reorganization Act of 1953; be it further

Resolved, That the State Association of Illinois Electric Cooperatives further urge such action by the Congress.

EDWARD OPPER,
President.
N. E. WELLS,
Secretary.

Prizewinning Speeches in Minnesota 4-H Radio Speaking Contest

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 14, 1958

Mr. HUMPHREY. Mr. President, this year as in previous years the Minnesota State 4-H Radio Speaking Contest has been completed with awards going to two outstanding speakers. The stated question for the speeches was "Our country's most important problem—What can I do about it?"

Once more I want to pay tribute to Mr. Leonard Harkness, the State 4-H Club leader, and to Mr. Sam Scheine, the executive director of the Minnesota Jewish Council, for their excellent efforts in organizing and financing the State contest.

I ask unanimous consent that the text of the speech by the first place winner, Mr. Darrol Bussler, McLeod County, be printed in the Appendix of the RECORD. I also ask unanimous consent that the text of the speech of the second place winner, Mr. Deann Chamberlain, Swift County, Minn., be printed in the Appendix of the RECORD.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

OUR COUNTRY'S MOST IMPORTANT PROBLEM—WHAT CAN I DO ABOUT IT?

(By Darrol Bussler, McLeod County, first-place winner of Minnesota 4-H radio speaking contest)

This moment, if you were to go down on Main Street, United States of America, and ask 50 average people the question, "What is our country's most important problem?" you would probably get 50 different answers; all of which could be correct. For our country has many great problems—problems of world affairs, church problems, problems of the people themselves, just to name a few. And yet when we think for a moment,

all of these problems threaten one of our greatest treasures—that treasure is democracy. I think this is our country's greatest problem—the threats to democracy.

I believe there are three main threats to our way of life. The first threat is the church. Oh, no, not the church itself, but it's the people who do not attend church or a house of worship that are threatening our democracy. For our country needs people of strong moral and religious training. One of my teachers once told me our body's aren't worth a nickel, but it's the spirit within us that makes us what we are. So my first threat is the threat of people not attending church.

The second threat to democracy is world affairs. There are disputes over boundaries, fights for more land, food, and wealth. Struggles to have the greatest power in missiles and rockets. And of course, there is the constant rise of communism which is like a lion seeking what it may devour.

The people themselves are a threat to our Government. It is surprising how little interest people take in their community or schools. You can especially see this when there are jobs to be done in Red Cross, March of Dimes, elections for school boards and community officeholders.

These are what I believe to be the three threats to democracy, therefore, the question arises, "What can I do about it?"

My answer is very commonplace. Approximately a year ago, we received in our mail an envelope which contained some stamps. I looked at one of these stamps and here was a solution to the threats to democracy. This was the Disabled American Veterans' stamp. For those of you who do not remember the features of this stamp, I will review them. On the stamp are two figures—a turkey and a disabled veteran. Between the two figures are the words—we're thankful to be Americans. I will give my interpretations of each of these, and when I'm completed you will have my answer to the question, "What can I do about our country's greatest problem?"

The first figure is the turkey. This figure represents one of the greatest holidays in a democracy—namely Thanksgiving. A day representing one of the many freedoms enjoyed—religious freedom. I can help stop the first threat of people not attending church regularly, by encouraging, and most of all setting an example, so that others will want to participate in young people's organizations, Sunday school, choir, and so forth.

The second figure is the disabled veteran. This figures symbolizes the many thousands who have given their lives and limbs for the love of their way of life. At times, people in a democracy may take opposite sides as in elections, social and community ideas. But when their Government is threatened, they band together as one and fight to the finish for their precious heritage. Wars have been won, wars will be fought if necessary and won, but only as long as each individual does his part in that great play of American democracy no matter how small the part may be. In a democracy, it's the individual that counts. It's the individual that is important and equal. For democracy is like a giant wheel with 170,000 spokes. Since I am an individual in my country, I, too, can fight for my country to keep world affairs from threatening our democracy.

The words on the stamp—we're thankful to be Americans—shows our thankfulness in many ways. We only have to turn on the radio, TV, or look at any newspaper to prove this. Not too long ago, funds were started for a policeman who was shot down to death in the line of duty. Stones like this show that Americans and people in a democracy are thankful. I can help stop the third threat—that of the people themselves, by assisting in community service projects, and community organizations.

Yes, through the ideas of this simple little stamp, we can stop the threats to our democracy.

Now let's take a good look at the word problem—take out the first and last three letters and we have left the word rob. If we do not stop these threats, we will be robbed of our freedoms, joys and happiness. So now let's take this stamp and its ideas to help stop the threats to democracy.

Our Country's Most Important Problem Today—What Can I Do About It?

(By Deann Chamberlain, Swift County, second place winner of Minnesota 4–H radio speaking contest)

Do these headlines sound familiar to you? "Three Teen-Agers Arrested for Armed Robbery"; "Man Fatally Beaten by Teen-Age Mob"; "Teen-Age Gang War Kills 1 and Injures 3"; "Teen-Age Crime Hits an All-Time Peak."

These headlines came from our newspapers—they concern our town and towns within a few miles of us. No doubt you have read each of them; you have heard them on your news broadcasts; you have seen your TV newscasters shake his head over each of them too many times. Quite possibly you know that juvenile crime has reached an all-time peak. You know that not enough is being done to prevent, correct, and punish these juvenile criminals who live in our towns, who threaten us. As a teen-ager I am shocked by the cruelty, thoughtlessness, and lawlessness of teen-agers. I am vitally interested in what can be done to prevent, correct, and solve these problems. Teen-agers must work with their parents and community now to avert national tragedies. Let us consider thoughtfully the possible causes of and solutions to this problem.

When I use the term "juvenile criminals," I define juvenile to mean the age group from 12 to 18 years. I use the term "criminals" rather than "delinquents" because some of our juveniles are no longer pranksters, but are involved in serious crimes, crimes such as theft, assault, cruel murders, and dope peddling. Why, why do some teen-agers commit such crimes?

Juvenile crime is not a situation that can be attributed to any one cause. It is a problem whose causes are many and varied.

Too many of the modern American homes are no longer the hub of the family, but have been reduced to the status of restaurants and hotels. In such homes, houses would be a better term—there is no feeling of togetherness. The mother and father are both working to provide their family with material things; too often these things become a substitute for true love. What does junior really want? A new car, or an understanding relationship with his mother and father? Many parents think that material things are what we teen-agers want, but what we want is love. We want to be accepted by our parents as well as by others, particularly by our own age group.

Many parents are not aware that their youngsters are the carbon copy of themselves. You parents of teen-agers set the social patterns. Science has made life as easy as possible for us, yet even with all the modern conveniences we have, there are chores to be done. Just how many teen-agers have definite chores to do when they get home from school? Not many, I'm afraid, and the ones who do not have responsibilities are most often the ones who get into trouble.

What can we law-abiding teen-agers do about those among us who have given us our bad reputation? Are we to sit back and watch the 20th-century parents and grandparents shake their heads and say, 'What's the matter with the kids of today?" We, the youth of America, can get on our feet and fight to overcome this problem. We can outnumber and overpower the few who are misguided and lead them back to a normal, happy life.

We must help to stop juvenile crime. We often feel that adults fail to see our point of view, but often, we don't see other teen-agers' point of view. If we, who have the good fortune of a healthy home life, accepted the misled teen-agers, took them into our hearts, helped them to feel that they belong, perhaps they could become leaders and good citizens of tomorrow. It is our job, as well as the job of adults, to see that they can reach this goal.

Have we gone out of our way to invite other teen-agers into community clubs, dances, and school activities, or anything under special guidance? These are constructive, worthwhile ways for teen-agers to learn by doing and ways to keep too busy to think of lawlessness. Too often those who fail to get recognition in school or at home, demand recognition by appearing in the headlines as a criminal.

It seems to me there has been a general weakening of authority and respect for authority. We know that teen-agers should be firmly and consistently disciplined at home. Stricter discipline by parents is needed and we teen-agers agree. We don't often admit it, but we do want discipline.

As we have shown before, we need closer family ties, with sympathetic, understanding, devoted parents. Families can make themselves stronger by doing things together. For example, having a family hour every evening and going to church together. We will become too busy and too happy to have time for delinquency.

We have reviewed the facts—weak home discipline, lack of family life, disinterested contemporaries which have accelerated the greatest wave of juvenile crime in history. We have discussed some of the possible solutions—stricter discipline, more unified family life, good example by parents, and a helping hand extended by us teen-agers. Putting possible solutions into practice lies in the hands of all of us. It takes all of us—not just parents, spiritual directors, police officers, and teachers—but we teen-agers as well.

We have much to do before we, the youth of America, can stand on our feet together and say, "Look, America, look at us and be proud."

Let's start today.

Business of the Passport Division of the State Department

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, April 14, 1958

Mr. KUCHEL. Mr. President, it is interesting to Members of Congress and to American people generally to view the manner in which Miss Frances Knight, with marked efficiency, conducts the business of the United States Passport Division of the State Department.

Earlier this month Mr. Ray Henle, a prominent newscaster, made some comments on the business of the Passport Division, as indicating perhaps some reason to feel that here is one business which is improving in this country, and that is the business of travel overseas. While a little more than half a million

passports were issued last year—564,000, to be exact—it is estimated that this year 690,000 will be issued.

I ask unanimous consent that the text of the comments which Mr. Henle made be printed in the Appendix of the RECORD.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

BUSINESS UP IN PASSPORT DIVISION

THREE STAR EXTRA

(By Ray Henle)

There may be some segments of the American people which are feeling the business recession. Certainly a number of industrial areas are. But in one important field a very significant barometer of business shows there is no effect whatever from any adverse business situation. That field is the field of international travel.

The head of the United States Passport Division, Miss Frances G. Knight, has her hand closely on the business barometer as it affects travel. Miss Knight says, "My figures show that only the industrial areas of Michigan, Rhode Island, Wisconsin, and Oklahoma so far this fiscal year are applying for fewer passports than last year."

Generally in the United States, the forecast for this year is that 690,000 passports will be issued. This is an increase over last year when 564,000 passports were issued.

The passport business is like mercury. Whenever anything serious happens in the world, passport applications fall off. There is no such falling off now, regardless of recession talk.

Travelers are rubbing their eyes these days when they apply for passports or extensions. Instead of sometimes long delays, passports now are issued within a matter of days. Upwards of three thousand passports are issued daily. It's done by one of the most efficient operations to be found anywhere in the Government.

So far as travel to Europe is concerned, this seems to be the era of the common man. The occupations most listed by the overseas travelers are student, clerk-secretary, teacher, salesman, and lots of average workers going back to visit in the old country. Twenty-eight percent of the passports go to housewives.

The number of persons who say in their applications that they will travel by ship decreased more than 8 percent over 1956, while the number listing air travel increased on some lines as high as 36 percent. Another significant change is in the increase in travel by persons under 20 years of age. It was 35 percent. Compared to only 6 percent increase among travelers from 30 to 50 years old.

One interesting fact, those dreadful passport pictures travelers used to have in their passports are going fast. For two reasons: Miss Knight, the passport director, has sent out word, give the photographer a big smile and have color photos taken, if you wish to do so. The combination of the big smile and natural coloring has improved greatly the pictures our travelers must flash to customs and immigration men and all and sundry foreigners who must see them. The new style photos are good American propaganda.

Taxing Teachers

EXTENSION OF REMARKS

OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, April 14, 1958

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief editorial entitled "Taxing Teachers," from the Commercial Appeal, an outstanding Memphis, Tenn., newspaper.

This timely comment refers to recent action taken by the Treasury Department in liberalizing its regulations to assure the deductibility of schoolteachers' continuing educational expenses for income-tax purposes.

This action by the Department has corrected a longstanding injustice in the interpretation of our tax laws. It is in line with legislative proposals introduced by myself and other Members of the Congress to accomplish this result.

As pointed out in the editorial, our teachers need this relief primarily, but the ultimate beneficiaries will be our schoolchildren.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TAXING TEACHERS

The Treasury Department has come to the financial aid of teachers, without the necessity for Congress to reform the law.

Expenses for obtaining further education will be deductible income for tax returns and the benefits are available for educational expenses as far back as January 1, 1954, for those who act quickly. More time is available to obtain adjustments reaching backward to 1955.

Teachers, like members of the professions of medicine and engineering, improve their services by returning to school and by studying the changes developed since they last attended classes. It is appropriate for teachers to have the same consideration in tax payments as the other professions.

Both the need for better teachers and the need of more income to hold the best teachers will be partially answered by this Treasury Department ruling. However, this is probably as far as rulings can go in tax reform for teachers. Advocates of more income for teachers by the income-tax method are likely to have to return to the plan for special action by Congress.

A little more salary to spend because of a little less for the income-tax collector has public support largely because of needs of teachers. It would have even more support if it was more generally remembered that schoolchildren are the real beneficiaries when their teachers benefit.

Congress Should Control Appropriations

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, April 14, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Congress Should Control," from the April 7, 1958, issue of the Augusta (Ga.) Chronicle.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS SHOULD CONTROL

Senator RICHARD B. RUSSELL, long one of the most powerful and influential congressional leaders in military affairs, is justifiably wary of President Eisenhower's proposal for reorganizing the Pentagon.

The Georgia Senator, who is chairman of the Senate Armed Services Committee, apparently is not going to be a party to any plan which would snatch the military purse strings from Congress.

Commenting on the proposal, Senator RUSSELL said:

"I shall not favor any legislation that would destroy the identity of our Armed Forces. Any further expression of opinion on the President's plan must await the receipt of the detailed legislation spelling out the means and methods and powers that he desires."

Congress certainly is not going to surrender its control over defense funds and just appropriate lump sums to the Secretary of Defense to distribute among the services as he sees fit, RUSSELL declared.

The Senator's cautious attitude is easily understandable.

In the recent past, Congress has surrendered too many of its powers and prerogatives, and it makes for an unwholesome—even a dangerous—situation when too much of this power is centralized in the executive branch of the Government.

As Senator RUSSELL says, the Secretary of Defense already has the adequate authority to properly administer the Department of Defense.

No doubt, President Eisenhower's intentions are entirely honest in proposing the Pentagon reorganization with an eye to bringing about a more closely knit operation of our military services.

Still, it is not wise to remove the control of the military too far from Congress. While it is the duty of the Defense Secretary to administer military affairs, and with the President establish policy, he should always be answerable to Congress. The legislative body should have the final word—certainly where finances are concerned.

We certainly shouldn't like to have a ruling military clique in this country. Such would be entirely foreign to the American way of life.

William P. Rogers, Attorney General of the United States

EXTENSION OF REMARKS

OF

HON. HENRY DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, April 14, 1958

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article describing the background and capabilities of Attorney General William P. Rogers.

The article, written by Anthony Lewis, appeared in the magazine section of the New York Times of Sunday, April 6. I urge my colleagues to read this article, written by an outstanding member of the Times staff, who has covered Washington legal activities for many years.

I believe this article gives a penetrating insight into the career of a capable Cabinet member who exemplifies a high type of leadership.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CLOSEUP OF OUR LAWYER IN CHIEF

(By Anthony Lewis)

WASHINGTON.—In a recent appearance at the National Press Club the newest member of the Eisenhower Cabinet, Attorney General William P. Rogers, was asked a dozen

questions about his job and then a hooker about his good friend RICHARD M. NIXON—"How many votes will NIXON have on the first ballot at the 1960 Republican convention?"

Rogers said the question reminded him of a story: At Senate hearings on the nomination of John Marshall Harlan to the Supreme Court, a small man with a hearing aid kept trying to testify. Finally, at the end of the third and last day, he was led forward. "Do you solemnly swear * * *?" the committee chairman asked. No answer. The oath was read again, louder. Still no answer. As the chairman's exasperation penetrated, the would-be witness shook his head and said: "Senator, I've been here 3 days and my batteries are dead."

When the laughter died down, Rogers went on:

"I just want to say that as long as I hold this job, my batteries are going to be dead to questions like that."

The episode throws light on a significant man. Rogers is important not only because he is a member of the Cabinet; among the close advisers of the President he is the closest to the Vice President—officially and personally. In a Nixon administration, Rogers would be even closer than he is at present to the center of American political power.

Now Rogers has come to the forefront of the news as the chief architect and salesman of the administration's important plans for clarifying the succession to the Presidency. Rogers was drafted by Mr. Eisenhower to explain the private understanding on turning his duties over to Vice President NIXON in the event of illness, and it has been Rogers who has pressed Congress for a constitutional amendment to solve the long-term problem of succession.

Questions about his relationships with the Vice President are, therefore, inevitable. But Washington is persuaded that Rogers means it when he says he will take no active part in partisan activity, for Vice President NIXON or anyone else, while he is in the Cabinet. The feeling is that Rogers wants to be known as a good Attorney General, and above all wants to avoid the impression of partisanship which marred the record of his predecessor, Herbert Brownell, Jr.

The most obvious fact about the press club performance is Rogers' ability to charm a tough audience. Even critics say ruefully that he is about the hardest man in Washington to resist these days. It is a fair guess, too, that Rogers had his battery story ready for a NIXON question. Preparation is nine points of the law for a trial lawyer—preparation including knowledge of the audience as well as of the facts. Rogers is, above all, a trial lawyer.

William Pierce Rogers was born in Norfolk, N. Y., an upstate town with a population of about 1,500. He went through college (Colgate) and law school (Cornell) on scholarships, then went briefly with a Wall Street law firm. In 1938 he got a job as assistant to the district attorney of New York County, Thomas E. Dewey. Before he left to join the Navy in 1942, he had tried something like 1,000 cases and learned the flexible, extroverted art of the trial lawyer.

Rogers came to Washington in 1947 as counsel to a Senate committee investigating wartime procurement scandals and "5 percenters," among other things. He won praise for fair procedures, and he stayed on when the Republican 80th Congress was succeeded by the Democratic 81st Congress. He left in 1950 to join a private law firm here. He was so little interested in politics at the time that he gave up what most Washington operators treasure—voting residence in his home State. He says he couldn't afford to pay taxes in New York and in his new home, Maryland.

He got into politics at the top. When the Eisenhower-Taft fight for the Republican nomination developed in 1952, Rogers walked into Eisenhower headquarters at a Washington hotel and volunteered his services. He was sent to New York to meet Brownell and put to work on what turned out to be the determining factor in the fight—the seating of contested delegations at the convention. Rogers was the tactician who got onto the Nation's television sets and front pages the Eisenhower charge of a Taft "steal" of delegates, and it was the promotion of this charge that eventually routed Senator Taft.

During the 1952 convention Rogers renewed his casual friendship with a member of the credentials committee, Senator RICHARD M. NIXON. They had met in connection with NIXON's work as a member of the House Committee on Un-American Activities, when the then Congressman asked Rogers' legal advice on the Hiss-Chambers affair. (Rogers told him to push ahead.) Their common interests (golf, for example) and closeness in age (NIXON is a few months older) had thrown them together.

At the end of the 1952 convention Rogers was asked to come along on the Vice Presidential train and help set things up. Before long that train was the focus of the campaign. With disclosure of the expense fund maintained by California supporters for NIXON, several advisers deserted his cause and began talking about substituting another candidate. Rogers counseled standing fast. He handled communications with the Eisenhower advisers—Brownell, Sherman Adams, and others. And he helped arrange the television speech that recaptured for NIXON the good opinion of the President and public.

The intimate Nixon-Rogers relationship dates from that time. Its closeness would be difficult to exaggerate. The two men relax together and work together. In a typical evening at home the Attorney General is likely to be called to the telephone 2 or 3 times to talk to "DICK." When President Eisenhower suffered the first of his three serious illnesses—his heart attack in 1955—NIXON's immediate reaction was to drive to the Rogers' home. He stayed late into the night discussing the constitutional and political outlook.

As Deputy Attorney General during the first 5 years of the Eisenhower administration, Rogers was primarily known by the public as a friend of the Vice President. But when he succeeded Brownell last fall, at the unusually youthful age of 44, his status inevitably changed. The public image of an Attorney General must be formed primarily by his performance in a job of unusual responsibility.

In a government dominated by lawyers—a fact noted by every foreign observer of American politics since de Tocqueville—the Attorney General is the lawyer in chief. That is a shorthand measure of the importance of the job.

Broadly speaking, the Attorney General's responsibilities fall into two categories. First, and most important, he is the principal legal adviser to the President and to the other Cabinet members. The White House and all the departments have their own lawyers, but on any important matter the Attorney General is consulted. He may be asked for written opinions, which are published as the official legal position of the executive branch.

Second, the Attorney General is the lawyer for the United States in court. With some minor exceptions, the Justice Department represents the Federal Government in all court proceedings, both criminal prosecutions and civil actions, in which the Government may be the suer or the sued. And since almost any political problem may end up in the courts in this country—from civil rights to tidelands—the role of the Government's lawyer is substantial.

In addition, the Justice Department has its own not insignificant investigative arm, the Federal Buerau of Investigation. It runs all Federal prisons and decides when prisoners shall be paroled. Its Immigration and Naturalization Service has vast powers over aliens. And, finally, the Attorney General is the main link between the executive and judicial branches of Government, in part through his status as chief adviser to the President on judicial nominations.

In an interview recently Rogers sketched the work that comes across his desk in a typical day. Nominations, judicial and otherwise, are a staple. There are calls from other Cabinet members—the Secretary of State, say to discuss the return of German assets, or the Secretary of the Interior, to discuss some problem of water rights in the West. There are such delicate questions as when to authorize, and when to announce, an FBI inquiry into corruption charges against members of the Federal Communications Commission.

A difficult factor in the work of the Justice Department is its relationships with the agencies it represents.

"We don't always agree with our clients," Rogers says, "and it isn't like private practice. We don't necessarily accept their views.

"I don't want to give the impression that the clients' wishes are not fully considered, but they are not the only consideration. In private practice the lawyer's job is to represent one person or firm. Here we represent not one agency but the United States. If we think the best interests of the United States are served one way, that's it—no matter whether the particular agency agrees."

This requirement that the Justice Department look at the broad interests of the United States frequently finds it at odds with one agency or another. The best-known recent example was the Department's refusal to defend in the Supreme Court the legality of an Army policy of giving less-than-honorable security discharges to draftees because of activities before induction. The Supreme Court held the practice unauthorized by law.

How well is Rogers carrying out the varied responsibilities of his new job? Opinions, of course, differ.

No one denies that he is an extraordinarily skillful tactician. As Deputy Attorney General, for example, his primary responsibilities were appointments and congressional relations—a spiny pair that won most of his predecessors the enmity of bar associations for being too political, or of Senators for not being political enough. Rogers kept both sides extremely happy. He gave the American Bar Association the new duty of passing on the qualifications of all potential judicial nominees. He charmed Senators by being friendly, available, persuasive—by being superb on the little niceties that don't matter, as one observer put it.

Something of the same qualities that have made Rogers a favorite with Congress have endeared him to the press. He is available, he gives straight answers, he says plainly that he cannot answer when he cannot.

There are those who feel that Rogers is primarily, and too narrowly, a tactician. These critics say that he is a success in personal and public relations precisely because he lacks the reserve, the impatience with petty distractions and minor niceties, and the intellectuality of the typical Wall Street lawyer—Brownell, for example. But, they argue, these are qualities an Attorney General should have. They say that the quick mind, the ready smile, and the tactical mastery that make a natural prosecutor will not substitute for the intellectual toughness needed of an Attorney General.

These critics say, for example, that with all his awkwardness in public relations, Brownell was a demanding supervisor of day-to-day work in the Justice Department, and stood up strongly against political pressures from the White House and the Capitol. They cite his insistence on bringing up several controversial antitrust suits and his action just

before leaving office in rejecting Texas' claim to undersea oil rights more than 3 miles off the Gulf of Mexico shore. These observers fear that Rogers will not face up to the tough decisions but will follow the course of least political resistance.

"Rogers," say one critic, "obeys the Washington rule: 'Always avoid a fight if you can.' He's a master of the lily-pad operation."

The most specific charge in this direction is that during the Communist-hunting days early in the Eisenhower administration, Rogers resisted efforts to ameliorate the Government security program, taking what was seen as a politically advantageous line of toughness. There is well-supported speculation, for example, that he helped block a proposal inside the Department to abandon the Attorney General's subversive list.

On the other hand, an official who was a prominent victim of the late Senator McCarthy says Rogers was helpful during that period.

"From the start Rogers privately called Joe a charlatan, a demagog, and an S. O. B.," this man recalls. "He was never fooled. I'm not saying he went out on any limb, but he always would talk to me and he never knifed me in the back."

Rogers himself denies that he ever identified himself with one school or another on the Communist issue inside the Justice Department. He says: "I don't feel that I've been one way or the other. And I don't think it helps to generalize about what is liberal. I have tried to be reasonable and realistic about the Communist issue."

One observer with an excellent vantage point thinks Rogers has changed in the past year, especially since he became Attorney General. This observer, drawing a parallel with NIXON, thinks that Rogers started 5 years ago with no real political views, no principle except what seemed expedient in the short run, but that he has come around to believe in supporting what is best for the country in the long view.

The battle over civil-rights legislation last year was an important test, this observer believes. Rogers was in charge of the administration's position, and he held out against heavy pressure until he got a bill that he thought would work. A more recent indication of Rogers' frame of mind may have been his decision to go ahead with a criminal antitrust suit against the Radio Corporation of America. Several past administrations, Republican and Democratic, had considered but shied away from this controversial step.

Many more difficult decisions will face Rogers as Attorney General. To name just one area, there are powerful pressures in Congress and the States to reverse a number of recent Supreme Court rulings. The question raised by those skeptical of Rogers is whether he will stand for principle when to do so may seem really damaging politically. The prevailing opinion here is that he will risk the political damage and make the hard decisions, on the theory that in the long run this is the wiser course for his administration, his party, and himself.

Tax-Cut Delay Criticized

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, April 14, 1958

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written to the editor of the New York Times by Eugene V. Rostow, dean of the Law School of Yale University. The letter, which appeared in the New York Times of Sunday, April 13, 1958, criticizes the delay in enacting a tax cut.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TAX-CUT DELAY CRITICIZED—RESTORATION OF FULL EMPLOYMENT IS DECLARED NEEDED TO REVERSE TREND

(The writer of the following letter is dean of the Law School of Yale University.)

To the EDITOR OF THE NEW YORK TIMES:

The delay of the administration, and of the Democratic leadership in Congress, in proposing and passing a tax cut violates the policy of the Employment Act of 1946.

That vital statute declares the continuing responsibility of Government to use all its plans, functions and resources for the purpose of creating and maintaining conditions of maximum employment, in ways which promote the system of free competitive private enterprise.

The recessions of 1948–49 and of 1953–54 were not significantly different in quality from that which began last summer. In both those instances prompt tax cuts, building up small but significant Government cash deficits, were among the most important and effective of the devices used to reverse the downward trend before it had gained much momentum and to initiate strong recovery movements which proved to be the seedbed of growth.

These seems to be a curious belief prevalent in Washington that it would be healthier and sounder for the country if the recession could be stopped, and slow recovery begun, by governmental action other than that of deficit financing. Monetary policy is, of course, a powerful weapon, and it should be seriously used. So are selective subsidies, such as those for housing, which have been thrown into action.

USES FOR EASED MONEY

But monetary policy has been paralyzed by the failure of the administration to establish vigorous programs for eliminating waste and encouraging a high and sustained rate of economic growth. Unless output expands more rapidly than it has during the past few years, monetary ease can quickly lead to renewed price inflation.

Under these circumstances there is nothing to be gained, and much to be lost through further delay in cutting taxes. Many have said that we should have larger programs of aid to education, urban renewal and health. They are right.

But such programs cannot result in increased spending for current output until next year or later. It is now estimated that increased defense spending will not quite balance presently forecast cuts in private investment spending. The volume of spending can be promptly increased only by a tax cut.

We must bury surviving traces of the view that occasional deficits are unsound methods of stimulating recovery. There is no sin in prudent recourse to a governmental deficit in periods of recession, when only the Government is in a position to lean against the prevailing wind. During the last decade the Federal Government operated at a significant cash surplus, in which the surpluses of President Truman's administrations overbalanced the deficits of President Eisenhower's.

COST-PRICE RATIO

Some voices from Washington have echoed the old and pious hope that a little recession might be a good thing, in shaking down prices and improving the cost-price ratio. This is a dangerous illusion.

Such readjustments could not reasonably be expected even in a model world of pure and perfect competition. They cannot be expected at all in the world we live in, where steel prices hold firm even though only 80 percent of capacity is used, and strong unions blindly seek wage increases despite unemployment of almost 15 percent in their industries.

Full employment at stable or even slowly falling prices should be our goal of policy, as Senator BUSH and Professor Burns have rightly stressed. That goal can be achieved, however, only if we make programs to stimulate growth a central part of our full-employment arsenal. Until that is done we had better restore full employment promptly by cutting taxes, or we may find ourselves in a depression of such magnitude as to require very large deficits, and great and totally unnecessary national and international suffering, before high levels of employment could be achieved again.

Such ineptness could demoralize the Western World and threaten the hard-won fruits of the Marshall plan and the very great economic achievements of France, Great Britain, Germany, and Italy. And it would prolong and deepen the present suffering of our own unemployed people—a needless and futile ordeal which serves no national purpose.

EUGENE V. ROSTOW.
NEW HAVEN, CONN., *April 8, 1958.*

Kill With Kindness

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, April 14, 1958

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very timely editorial appearing in the Hutchinson News of March 15, 1958, entitled "Kill With Kindness."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KILL WITH KINDNESS

Congress continues on its way to killing the farmer with kindness.

In a misguided effort to protect agriculture, the Senate has passed a bill which would prevent any reduction in existing support prices or acreage allotments. The effect can only be to make the economic future of agriculture all the more insecure.

The measure is almost a directive to farmers to add to existing surpluses. It would guarantee farmers a profitable price for an excess production because more acreage is authorized than markets justify.

It would safeguard farm income for 1 more year, but it will increase the pressure by urban constituents of nonfarm State Congressmen to cut to ribbons the present level of farm aid spending.

Senator ELLENDER, of Louisiana, chairman of the Agricultural Committee, led the fight for this farm freeze bill. He describes it as a topgap emergency measure which will hold until Congress has time to pass a new long-range farm program. That is so much hogwash.

Since about 1922 Congress almost annually has been passing agricultural-aid legislation of various ranges. The ratio has been 3 stopgap for every 1 long-term. But no later than 2 years after the passage of every long-range program its shortcomings are so apparent that another stopgap measure has to be rushed through to prevent conditions from becoming chaotic.

This most recent farm-aid action is but another inconclusive chapter in the same old sad story.

This Congress Has Done Nothing To Alleviate Unemployment in the Nation's 149 Distressed Areas

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. VAN ZANDT. Mr. Speaker, amidst all the furor over unemployment in the United States, the absence by this 85th Congress in taking action on distressed area legislation stands out as gross neglect of the welfare of thousands upon thousands of the American people who reside in some 149 labor-surplus areas.

Since 1955 when I introduced the first distressed-area legislation in Congress, I have constantly called attention to the plight of the unemployed in these distressed areas and pleaded for congressional action. Since 1955 many of my colleagues have joined in the appeal for positive action in alleviating the distress of unemployment in labor-surplus areas.

Mr. Speaker, at the present time there are over 40 bills pending in the Senate and House designed to provide Federal aid to labor-surplus areas. Hearings have been held in and out of Washington with the result that several hundred witnesses account for over 3,000 pages of printed testimony confirming the need for immediate action.

Mr. Speaker, I am trying to emphasize that committees of this Congress have a wealth of information on distressed areas, yet no action has been taken.

Many of us who represent distressed areas have pleaded without success for over a year for action on these bills, which have been pigeonholed in committees of this Congress.

Mr. Speaker, President Eisenhower has asked this Congress for distressed area legislation and stands ready to sign into law a reasonable bill.

On March 11, 1958, when he appeared before the AFL–CIO economic conference in Washington, D. C., Secretary of Labor James P. Mitchell had this to say regarding distressed area legislation:

> Congress has had before it for 2 years now an area development bill designed to help communities with high and persistent unemployment. Maybe this bill does not meet with everyone's approval. Maybe it could be improved. The fact is Congress has done nothing about it.

At the same conference, AFL–CIO President George Meany, the Nation's outstanding and most highly respected labor leader, after scolding the Eisenhower administration for what he termed "shortsightedness" relative to today's economic crisis had this to say about the laxity of Congress to deal with the unemployment situation:

> The people on Capitol Hill must share the blame too. There is no excuse for the delay in the Congress.

Continuing he said in referring to labor-surplus areas:

> How about improving the lot of the chronically distressed cities—and remember that figure is growing every day that this recession lasts.

Mr. Speaker, the 85th Congress has been indicted from all quarters for its utter neglect of labor-surplus areas where unemployment has been chronic for many years and has been the nucleus for the increased unemployment we have today.

It has been authoritatively stated that if the unemployment in the chronically distressed areas could be alleviated, our unemployment problem would be reduced by 50 percent.

This is borne out by the fact that approximately 62.5 million persons are employed and 5.2 million idle.

By comparison, during the month of February 1957, over 63 million Americans enjoyed full-time employment with approximately 3 million out of work. With a civilian labor force of 68 million, this means that in good times we had about 4.7 percent of the civilian labor force unemployed.

During March 1958 with 5.2 million unemployed, the present recession reveals an average of 7.4 percent of the civilian labor force out of work or an increase in the last 12 months of about 2.7 percent in our unemployment figures.

While it is true that the present unemployment is higher than at any other time since 1941, the closest approach was in 1949–50 with 4.8 million unemployed in February 1950. The Korean war in 1950 turned the tide of unemployment and ended the 1949–50 recession in the same manner that the 1938 depression ended with the advent of World War II. In February 1939 after 7 years of "pump priming," a total of 10.5 million were unemployed, or 19.5 percent of the civilian labor force.

A recent survey of the unemployment situation reveals that it tends to be concentrated heavily in relatively few States and in a few industries such as the railroad, coal, steel, automobile, and allied industries. However, in many other industries, the furloughing of employees has been relatively light.

In short, the survey reveals that not all industries are affected by unemployment and that actually in some fields people are being hired.

Keeping in mind that we have had for several years 149 chronic labor-surplus areas and that these so-called pockets of unemployment prevailed during alltime high employment of well over 60 million people, it is logical to conclude that Federal aid to these chronically distressed areas is the key to providing a solution to the current unemployment problem resulting from 5.2 million jobless persons.

The communities and States have helped, but to do an effective and a complete job Federal aid is needed without further delay.

The residents of the 149 distressed areas certified by the United States Department of Labor as labor-surplus areas have done a magnificent job themselves in trying to accomplish their own economic salvation. Practically every community has an alert and highly energetic area development committee or organization eager to aid in every possible manner to attract new industry to the area. It is with the thought of diversifying the industrial life of the community that the best means is found for cushioning the devastating effects of mass employment.

As a result these area development committees have raised funds locally to the extent that they have scraped the bottom of the barrel. They have had splendid cooperation from area banks in financing the drive to rehabilitate the economy of their respective areas. But banking institutions, too, are hemmed in by State and national banking laws, thus limiting the extent of their assistance, regardless of how laudable the objective may be.

The various States have also extended a helping hand, but in the end the job is of such vast proportions that only Federal aid to these chronic labor surplus areas will insure success of the determined drive to rehabilitate the economy, thus relieving the plight of the unemployed.

Mr. Speaker, in a sincere effort to end the fruitless discussion and the resultant confusion that surrounds distressed area legislation, I call attention to my bill, H. R. 6975, which is a compromise between the administration bill and the Douglas-Spence bill.

The Van Zandt bill, H. R. 6975, is heralded by many as a realistic approach in providing a solution to the deadlock that exists in the enactment of a program to provide Federal aid for chronically distressed and labor surplus areas.

H. R. 6975 retains many of the features of the administration bill and the Douglas-Spence bill. It is regarded as a sane and sensible compromise and should serve as a reasonable and realistic basis for perfecting a legislative measure acceptable to all shades of opinion.

It is my belief that my bill, H. R. 6975, constitutes a genuine compromise between the administration bill, S. 1433, and the Douglas bill, S. 964.

Mr. Speaker, I have repeatedly stated that I have no pride of authorship regarding distressed area legislation. The time has arrived for the 85th Congress to stop quibbling over details and to unite in providing Federal aid for chronically distressed areas.

At this moment nearly 15 percent of the civilian labor force in my congressional district in central Pennsylvania is unemployed. I know that many of my colleagues have a higher rate of unemployment in their congressional districts. Therefore, I plead in behalf of the unemployed in labor surplus areas that this 85th Congress assume its responsibility by immediately approving legislation that will alleviate the misery of chronic unemployment throughout the Nation.

The Meaning of the Sputnik

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mrs. GREEN of Oregon. Mr. Speaker, Brig. Gen. Hugh B. Hester, who retired from the Army in 1951 after 34 years of military service, has written a timely and very thought-provoking article entitled "The Meaning of the Sputnik." This appeared as a guest editorial in the November 16, 1957, issue of the Saturday Review, and I would commend it to the attention of my colleagues. As a preface to this article I include a letter from J. Lawton Collins, Chief of Staff, United States Army, written to General Hester upon the occasion of his retirement. I ask unanimous consent to include this letter and the article in the CONGRESSIONAL RECORD.

The letter and article follow:

UNITED STATES ARMY,
THE CHIEF OF STAFF,
November 23, 1951.

Brig. Gen. HUGH B. HESTER,
United States Army (Retired).

DEAR GENERAL HESTER: Now that you have retired from the Army after 34 years of faithful and valuable service to the Nation, I want to express to you in some measure my deep appreciation for all you have done and my warm good wishes for the future.

Your personal contributions during your long career have been in keeping with our highest military traditions, and although it is not possible here to mention all of the positions of responsibility you have filled so capably, I do want to note some of your posts of trusts. We were indeed fortunate to have had an officer of your ability to serve in so many important posts in the Office of the Quartermaster General, including that of Deputy Chief Quartermaster, here in Washington just prior to and during the early days of World War II.

Written into your record are the accounts of your distinguished service in various important staff and command positions in the Supply Service, Southwest Pacific Area. Your subsequent assignment as Chief of the Food and Agriculture Branch of the Economics Division in the Office of Military Government of Germany was but further evidence of the Army's faith and confidence in you. For your performance of these duties, you won not only our own admiration but that of our allies as well.

Later, as military attaché in Australia, your forceful initiative and broad experience were again particularly valuable. Throughout these and your more recent assignment as commanding general of the Philadelphia Quartermaster Depot, you continued to display the thorough professional knowledge and untiring devotion to duty which have always characterized your career. As you review your splendid record, you may well take pride in the achievements which it represents, and I congratulate you upon it.

May you find in your retirement an abundance of happiness and the continued success which you so richly deserve.

Sincerely yours,

J. LAWTON COLLINS.

THE MEANING OF THE SPUTNIK
(By Brig. Gen. Hugh B. Hester)

What are some of the real reasons for our falling behind the Russians in the race of history?

First, we have propagandized ourselves into believing that nothing significant could be produced by the Communist system—that all observable advances in the Soviet have been the result of espionage or luck. Every competent student of the Soviet Union, of course, has known that this was not true.

Second, under the guise of security needs we have woven a curtain of conformity at the cost of driving many of our outstanding scientists and technologists from Government service and preventing others from joining. While the case of Dr. Robert Oppenheimer is the most celebrated, it is by no means an isolated one.

The third important reason for our lag is organizational. Hitler was confronted with the same problem and failed to solve it. The defense unification act simply failed to unify. Instead of merging the old War and Navy Departments into a single Department of Defense as planned, the present unification act actually provides for 4 Secretaries (Defense, Army, Navy, and Air Force) instead of the 2 (War and Navy) before its enactment. It also provides for 5 Chiefs of Staff: (Chairman of the Joint Chiefs of Staff, a Chief of Staff each for the Army, Navy, Air Force, and the Commandant of the Marine Corps) instead of 2 (Army and Navy) earlier.

The most important reason of all for our reverses, however, is probably the kind of thinking which believes that all progress, including scientific, must be achieved through jungle competition. This philosophy has dominated both the Truman and Eisenhower administrations. It is difficult to see how any greater expenditure of funds would have produced greater results under this competitive system. It is not difficult at all, however, to see how the pooling of all our available scientific knowledge and know-how in a major cooperative effort might have produced more favorable results earlier and at greatly reduced costs. Certainly interservice rivalry and business competition have produced less favorable results at greatly increased costs. And it might prove useful to ask why the military services were concerned with the missile or satellite programs at all, other than to set forth the operational characteristics of the missiles required and the quantities of each necessary for defense.

The President was obviously correct when he asserted that sputtering sputnik had not reduced our national security one iota. Knowledge of a thing in itself never increases its danger. What he failed to point out was that the United States had no security before sputnik began to sputter and that the Soviet Union has had none before or since. And what is more, the United States crash program now demanded by all the propaganda medium will add exactly zero to this nonexistent world security, though it may of course be useful in getting the American exploration-of-space program out of the bureaucratic dumps where it now so disgracefully reposes. But putting aside for the moment the marvelous and revolutionary challenge of this new dimension in man's enterprise, and limiting our discussion entirely to the weapon potential of these new gadgets, can we not understand that what the scientists of one polar power can and do produce now, the others can and will produce soon?

An intensification of the arms race is not what is required now to increase our security. The history of all arms races between great powers proves this, for they have always led to war. This one will prove no exception, but it will be different in that the whole of Western civilization will be destroyed instead of only partially as before. For the first time in human history, the farms and factories, homes, schools, and churches and all people everywhere will be in the front line if war comes again. Secretary of State John Foster Dulles was stating only a half-truth when he said at his Washington press conference, October 16, that the Soviet Union would have "no privileged sanctuary" in any war with Turkey. He should have added, neither will the United States, Europe, or North Africa, for they too will have no place to hide. This is the real meaning of sputtering sputnik to us and men everywhere.

It no longer serves any useful purpose to debate who or what started the cold war; or why, when, or where it was initiated. It is an evil thing and must be liquidated. It should be permissible, also, to declare that expressions such as "balance of power," "positions of strength," and "power politics" have lost all rational meaning. They are anachronisms in the A and H age and must be discarded.

As possible useful contributions to a new approach, the following suggestions are presented. First, the President should resume discussions with the top leaders of the great powers. The United Nations headquarters offers the proper place for such a meeting, with the President of the United States in the role of host.

Second, the United States should promote instead of oppose the universalization of the United Nations. At this great forum all voices should be heard, not just those nations we or any other people may temporarily approve.

Third, the United States Government should discard its pious attitude about recognition of those regimes actually in control of the instruments of power in other countries. Whether the leaders of any nation, great or small, meet or fail to meet in their official conduct high standards of personal probity is largely a matter of who keeps the scorecards.

Fourth, the United States should sponsor and support a vast economic development program under the auspices of the United Nations in order to eliminate the worst features of poverty now smothering freedom in many lands. It is believed this could be accomplished at much less cost than with unilateral aid, now largely military in character.

Finally, the United States should assume leadership of negotiations designed to remove restrictions on international trade and travel. There is certainly no longer any valid evidence to support the thesis that restrictions on trade with Communist countries have retarded, or will in the future delay, their scientific and technical progress. But there is ample evidence to support the belief that these restrictions have increased the poverty of the world's masses and the burdens of those nations we would convince of the superiority of the capitalist system.

It is worth repeating over and over again, I believe, that the real enemies of man are poverty, ignorance, and bigotry; that wars and preparations for war increase these; and that totalitarianism in whatever form is more often than not the symptom rather than the cause of man's maladies. The persistent sputtering of sputnik merely reemphasizes the importance of and necessity for man's continuous search for permanent peace, the grand design of which must ever remain a federation of the world and a parliament of man.

Canadian Conservatism

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. RHODES of Pennsylvania. Mr. Speaker, there is much about the recent

Canadian election that the people of the United States have not been told.

It is for that reason, Mr. Speaker, that I ask permission to include with my remarks the following informative article from the current issue of the New Republic:

CANADIAN CONSERVATION

Canada's population is about 16.5 million, a tenth of the United States. Its recession is serious. Here is how it is meeting the crisis. It started deficit financing immediately. Since last September it has pumped $300 million into low-cost housing loans (the equivalent of $3 billion in the United States on the 1:10 population ratio. It has pledged $67 million in new Federal grants to the provinces ,United States equivalent, $670 million). It has cut the auto excise tax from 10 percent to 7.5 percent (the United States auto excise is unchanged at 10 percent). It has also increased old age and veterans' pensions, and cut personal income taxes $146 million (United States equivalent, $1.46 billion). That's tax-cutting, and it's just started. Washington's next move is even more vital to Canada than Ottawa's. "What makes it worse is," Business Week quotes a Toronto economist as saying, "Americans are characteristically too late in using monetary and fiscal remedies to end a recession."

As to the Canadian election, you know that the Conservatives won a landslide—209 seats in Commons out of a possible 265. The title Conservative is ironic, although it is true that businessmen generally supported Diefenbaker (in the hope of higher tariffs against the United States). But the calibration of the world's political parties is way to the left of America's (the most conservative democracy on earth). A Canadian Conservative is a radical New Dealer in the United States idom. Here are some things which the new Canadian Tory Party backs: maintain Canadas present government-run businesses—Dominion radio, ship lines, railroads and the like; radically increased government intervention in other private enterprise—more government support for farms, fisheries, small business, hydroelectric and steam plants; broaden and extend social welfare services, including the new hospital insurance; and now a great northern expansion program. No wonder few United States newspapers like to discuss what's going on in the great neighborhood to the north.

A Bigger National Debt Won't Make Us Richer

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, April 14, 1958

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial from the March 22, 1958, issue of the Saturday Evening Post, entitled "A Bigger National Debt Won't Make Us Richer."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BIGGER NATIONAL DEBT WON'T MAKE US RICHER

Judging by all the clamor in and out of Congress, you might suppose that deficit financing is a laboratory-tested remedy for our economic aches and pains. Yet nothing in the record of the New Deal experiments along this line can be cited to justify the belief that unbalanced budgets create prosperity.

Only last November a congressional joint committee held hearings on Federal expenditure policy for economic growth and stability. One of the panelists invited to testify was Dr. Paul B. Trescott, of Kenyon College, a specialist in the history of Federal fiscal policy. His figures are interesting.

Beginning with 1931 and ending with 1940, we had 10 straight deficits in our annual budgets. Over the same period, the proportion of the labor force which was unemployed started with 16 percent—this January, by comparison, showed less than 7 percent—and ended at 15 percent. In between, the unemployed average rose as high as 25 percent in 1933 and was never lower than 12 percent (1937).

The highest prewar budget was in the fiscal year ending June 30, 1940, when we spent $9,600,000,000. This, of course, looks like chickenfeed today, so it is possible to argue that deficit financing was not tried on the grandiose Keynesian scale.

During the war, from 1942 to 1945, inclusive, the budget averaged $88 billion per year. That sum included the staggering costs of the war. With those items omitted, today's budget is not far behind.

While it is true that unemployment vanished after 1942 and was replaced by a labor scarcity, it is also true that the needs of the armed services withdrew, at one time or another, a total of 14 million people from the civilian labor force. War conditions hardly made an accurate test of the theory. Still, the spending was enormous, and the deficits were immense, so the temptation is to find a link between prodigal expenditures and a boom.

A few other figures may suggest caution. During a shooting war, it would be necessary to spend whatever is needed to insure victory, without regard to ordinary prudent considerations of the value of balanced budgets. This can stimulate a false prosperity, the kind once referred to as "fool's gold" by F. D. Roosevelt. But it also results in price inflation, with all its sad effects on people with fixed or rleatively stabilized incomes.

The War of 1812 brought about a rise of 50 percent in wholesale-price levels; the Civil War boosted the same index 100 percent; World War I accounted for a 60-percent increase, and World War II, in spite of much tighter controls, saw a 35-percent increase.

All these facts are a matter of record. The advocates of deficit financing ought to warn the people that they are offering a temporary painkiller which has disagreeable aftereffects.

Future Farmers Fear Results of Cut in Dairy Prices

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 14, 1958

Mr. PROXMIRE. Mr. President, just before the recess I received a resolution from a fine group of young farm people in Columbia County, the Future Farmers Club of Poynette High School. These young, prospective farmers are understandably concerned and dismayed by the decline in prices their parents have been receiving for milk during the past several years.

One of the greatest strengths of the American way of life is the opportunity it has offered to young people like these to become independent farm owner operators. That is the career these young people want to choose for themselves. But they see their hopes being chiseled away as farm prices are weakened further and further.

Mr. President, I think it is appropriate, indeed, to listen for awhile to our youth—who must like with the decisions we will make today—in regard to legislation that so gravely concerns the entire future of dairying. I ask unanimous consent that the resolution I have received from these future farmers be printed in the Appendix of the RECORD, so that other Members of Congress can benefit from this prophetic voice of our Nation's future.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

The Honorable WILLIAM PROXMIRE,
United States Senate,
Washington, D. C.

DEAR SIR: We, the future farmers of Columbia County, are opposed to Benson's plan of lowering milk prices. In order for us to keep on producing milk we must receive the same amount or more of money for our milk. We are small farmers that depend on selling milk for a living.

We want Benson to limit the production of milk coming from large dairies. Then the surplus would decrease and the small farmer would profit.

We feel lowering the milk prices would not be the fairest answer to this problem. But cutting production of large dairies would still give them some profit. The small farmer would also profit, not too much more, but there would always be more if this plan worked out.

Sincerely yours,
MARILYN MCQUEEN,
LOUISE STOLTENBERG,
MARY MCFARLANE,
JEROME PETERSON,
DOUGLAS WAUGH,
WESLEY BLACK,
Poynette High School, Poynette, Wis.

Presidents Versus the King's English

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. REED. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from This Week magazine:

PRESIDENTS VERSUS THE KING'S ENGLISH

(By Bergen Evans)

When President Eisenhower used the word "finalize" in his state of the Union message, it set off a clamor among grammarians, both professional and amateur, from coast to coast.

Columnists, editorial writers, and teachers pounced on the uniucky word, labeling it "nonexistent," "hideous," "atrocious," and "meaningless."

The vehemence of these attacks probably surprised the President. The word "finalized" has been in daily use in business and Government offices of this country for a number of years. And in this era of the

organization man, when few people make important decisions wholly by themselves, it serves a useful purpose beyond such words as "finish," "complete," or "conclude."

President Eisenhower can take comfort from the fact that he is merely the latest in a long line of United States Presidents whose grammar has enraged the purists.

Just after the Revolution, for example, Englishmen loved to poke fun at the leaders of the new Nation. In 1787, Thomas Jefferson drew a blast from "The European Magazine and London Review" for his use of the word "belittle" in his "Notes on the State of Virginia."

"What an expression," shuddered the Review. "It may be an elegant one in Virginia, and even perfectly intelligible; but for our part, all we can do is to guess at its meaning. For shame, Mr. Jefferson."

Were Jefferson around today, he'd be pleased to find his word in excellent repute on both sides of the Atlantic.

Andrew Jackson was the first President to bring the language of the common man into the White House. His blunt colloquialisms sent the literary purists of his day into wails of protest.

Among the many linquistic crimes ascribed to Jackson was the origination of the slang expression "O. K." This was alleged by political enemies to be Jackson's benighted abbreviation for "oll korrect." Actually, Jackson was thoroughly literate and an excellent stylist. In The American Language, H. L. Mencken traces "O. K." to at least nine other sources, including the Choctaw Indian word "oke hoke" signifying "Yes, it is."

MAN OF GOOD CHEER

Lincoln attracted almost as much bitter protest, especially during the early days of his tenure, when he was addicted to such pronunciations as "cheer" for "chair," and "seegar" for "cigar." As he became more aware of the harsh scrutiny accorded his every utterance, he became more cautious.

It was Theodore Roosevelt who made the President's English a subject of almost universal attention. Among the words and phrases he is credited with either coining or foisting on the public are "malefactors of great wealth," "weasel words," "pussyfooter," "square deal," "lunatic fringe," and "muckraker." In 1904 he lost the English-teacher vote by writing Yale's Thomas R. Lounsbury that he approved of the split infinitive.

Even so conscientious a purist as Woodrow Wilson was taken to task for his use of such phrases as "we must get a move on," "that is going some," and his pronounciation of "ornery" for "ordinary."

Warren G. Harding, whose grammar regularly inspired blasts from H. L. Mencken, advocated the return of the country to a condition of "normalcy"—a word not then present in Wester's. But P. S., it's there now.

Though the word "normalcy" flourished even before Harding was born, the legend persists that it sprang full grown from his nomination speech.

Harding was also roasted by Mencken for his use of the "one-he" combination (as in "one does as he wishes"), but this time the President was immediately vindicated: a group of 29 philologians took a vote on the usage. Twenty-two found it acceptable English.

THE LANGUAGE PROSPERS

Despite purists' moans, a presidential impurity of speech becomes less offensive by the very fact that he used it. Like Harding's "normalcy," Eisenhower's "finalize" is dictionary bound—it's already in the below-the-line section of Webster's Unabridged.

The best course is to let the purists howl. They have been grousing throughout our history while about them the language has prospered—often with an assist from the President.

A Policy for America

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 14, 1958

Mr. HUMPHREY. Mr. President, Mr. Abbott K. Hamilton, of Salisbury, Conn., formerly Director of the Office of Industrial Resources, ICA, has recently delivered an address entitled "A Policy for America: Destruction, Survival, or Creation?"

I am impressed with much of what Mr. Hamilton has to say, and I ask unanimous consent that excerpts from his address be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

A POLICY FOR AMERICA: DESTRUCTION, SURVIVAL, OR CREATION?

(Address by Abbott K. Hamilton)

The Soviet Communist state has been in existence for over 40 years and during that time its threat to western civilization has been increasing with ever-growing strength. Its victories and conquests of peoples are numerous and well known to us all. During this same period of time we have witnessed the decline in world leadership and influence and strength of such important representatives of our western civilization as Holland, Germany, France, and Great Britain.

This change has happened so gradually during our busy and preoccupied lives that in reality we are not fully conscious of the great change in world conditions that has taken place in this relatively short span of time. And this change will continue without any substantial interruption unless we and our Government leaders view what has happened in its proper perspective, determine the cause and then develop a positive program for dealing with the situation.

Russia's success and extension of influence has been due either to the soundness and appeal of the Communist ideology, and its strength and ability to promote that ideology throughout the world or, on the other hand, Russia's conquests have been due to the failure on the part of the free world to adequately and aggressively lead from its natural strength to promote the spiritual, moral, and economic values to which it is dedicated and by which we are attempting to live.

Addressing myself to these two alternatives, I am convinced that no nation of peoples, now under the dominance or control of Russia, sought that position or embraced communism because they were impressed with that ideology or because of what it had to offer. On the contrary, communism's success is, in some instances, because it has been imposed on peoples through force and in others it has been accepted by a people because they were not happy with their then existing way of life and no other alternative had been offered to them. In other words, a vacuum existed and Russia moved in. We did not.

Why are we having trouble in the Middle East, Russia's latest area of penetration? Why is Egypt leaning towards communism? The answer lies in the fact that another vacuum existed and Russia has capitalized on the destitution of the Egyptian people and the personal ambitions of Nasser. Don't overlook the fact that the miserable state in which the people of Egypt exist is after many years of intimate association with the free Western world. Senator HUMPHREY, after his return last year from Egypt, said and I quote: "As an American, the one thing that struck me most was the abject poverty of the masses of people who live in the old Cairo areas. It was a really shocking and touching experience for me. I drove through those areas and walked through some of the streets, and to see God's children in such misery, in such poverty, and at times, in such filth was almost more than one could stand." The people of Egypt feel that they have not benefited from their affiliation with the West and conclude they have nothing to lose and everything to gain by playing with Russia. The unhappy state of mind of the people is the most important reason for Egypt's pro-Communist leaning because if the circumstances of the people were really improving through a long-term constructive program, which we are best qualified to carry out, Nasser and Russia will be powerless.

Here is a case, typical of other areas in the world, where, because of substandard conditions, Russia, with offensive strategy, conquers another nation. The vacuum existed, the ground was fertile, the people unhappy; we were inept and so Russia moved in.

This prompts me to pose the question: Why is the United States losing in its conflicts with Russia when America is the most powerful Nation in the world and the creator and possessor of those things which the vast majority of millions throughout the world seek, and I refer, of course, to certain spiritual and material values. Some of the answers are as follows:

1. Because of our great power and material strength we have become over-confident.

2. The great mass of our people have become more conscious of our rights and privileges than of our obligations and responsibilities.

3. Because this country has never experienced the physical destruction of war, we still can't comprehend the almost complete destruction of our cities and casualties of 40 million people in the first 12 hours of a nuclear attack.

4. Our people and our Government still feel that most problems, in foreign fields, can be solved by spending our dollars instead of applying vigorously our ability and knowledge. This country was made strong and that which we have inherited was created by people of courage and ability without dollars, without wealth. The spirit and determination of the early pioneers who created, let, moved forward, and thought positively are the factors which built the foundation of the great country which is ours today.

These are some of the reasons for Russia's victories but the title of the subject which we are discussing tonight is: "What United States Economic Policy for Survival." Webster defines the word "survival" as "one that survives or remains after others of its kind have disappeared." The word "survive" is "to remain alive, to continue to exist." This definition reminds me of statements made by many of Government leaders from both political parties who, when speaking on foreign policy, etc., emphasize the importance of the defense of our country and the security of this Nation. The word "secure" means "to free from care, fear, doubt, or anxiety—to make carefree or overconfident." These words are being correctly used and illustrate quite accurately the negative thinking of this Nation and some of its leaders on the problems and opportunities that face us today. We are a rich Nation and people and want to hold on to what we have. We are thinking in terms of "protecting" instead of "creating." In contrast, the men and women who founded our Nation had nothing and, with determination, moved for-

ward to create and develop much of what we enjoy today.

The thinking of many of our young people seeking jobs, after graduating from school and college, place greater emphasis on security and less on opportunity. By these examples I have tried to describe the lack of positive thinking that prevails in this country and its effect on the foreign policy of our Nation.

On the other hand, Russia, an underdeveloped and backward nation as recently as the end of World War I, has, under the dominance of ruthless leaders, moved forward to attain that which it did not have. It has not subscribed to the policy of defense because it had nothing to defend in strength. However these were the things it wanted and could only obtain by a positive, affirmative policy. Russia has been consistent in following such a policy even though its methods and objectives have been condemned by the free world. In spite of great lack of developed material strength, Russia, by remaining constantly on the offensive, has made very great strides forward in a short space of time.

At times our method for combating the Russian menace has been to preach or predict the overthrow of communism from within, to constantly describe Russia as weak and therefore to minimize our danger. As late as only a few months ago, Secretary Dulles, in a meeting with congressional leaders, emphasized the internal weakness of Russia because they only had 100,000 cars on the road compared to our over 50 million. A wise antagonist will always overestimate his adversary's strength and accordingly be prepared, but the road to sure defeat is to minimize the power of your opposition.

On March 2 on television, Dr. Edward Teller of nuclear fame and father of the hydrogen bomb said that in the technical and scientific field after World War II in 1945 we were far ahead of Russia. Presently, he said, Russia has caught up to us and at the rate we are both going, Russia will be far ahead of us by 1970. In contrast to Mr. Dulles' statement, I subscribe to the implications of Dr. Teller's remarks.

In brief, I have tried to convey that the tenuous position we now find ourselves in vis-a-vis Russia, in spite of our greater material and spiritual strength, has been because of the offensive strategy of Russia as opposed to our philosophy of defense.

I am sure that most of us subscribe to the policy that we will never use our military might to start a war by launching an attack against another nation. Our military strength should be maintained at the highest level to deter attack and, should attack come, to conquer the military arm of our adversary. Indispensable as it may be for the maintenance of peace, however, there is nothing creative or productive in the military arm of our Nation when considering its primary purpose, and it is the creative and productive strength of this Nation which must be brought to bear on the vast problems which face us and the rest of the world, not in order to just survive, as the title of our subject calls for, but in order that this Nation and all other nations in the world may start now to create and develop spiritual and material values greater by far than anything the world has accomplished to the middle of the 20th century. We must not set our highest standards at present levels. To do so is but to defend. We must recognize that the world is still in its spiritual and economic infancy and that our future horizons are vast and broad and that the opportunities for progress in the future are far greater than the steps which the human race has taken to date. Vision, confidence, ability, and leadership are what are required, and America has all of these qualities, to bring to bear on the condition in which the world finds itself in the year 1958.

When developing a program or cure one must first diagnose the disease. While our problem is twofold, spiritual and economic, not feeling qualified in the first category I shall attempt to address myself to the economic phase.

The root of the trouble in the world today is economic. It is the underdeveloped state in which hundreds of millions of people all over the world find themselves with respect to health, education, and the basic economic facts of life. They are rising up, seeking freedom and independence and a better way of life. And therein lies our greatest strength. Our economy is the strongest the world has ever seen. It was created and continues to be expanded by men and women of experience and competence and the time has come when a positive program should be formulated to bring to bear on these economic conditions in the world the ability and inherent pioneering strength of the people who have helped to make this country the power it is today, and the leader it must be tomorrow.

Our present foreign aid operation in no way qualifies for such a program. Its ineffectiveness in dealing with the heart of the world's economic problem is due to:

1. The extremely limited scope of the policy controlling that operation.

2. The unqualified management in charge.

3. The excessive reliance on dollars appropriated and spent rather than on results obtained.

4. The adherence to Government procedure at the expense of substance. In this connection, may I say that the success and accomplishments of such a world economic operation are controlled in direct ratio to the extent to which experienced management and skilled personnel are responsible for and participate in its execution. Dollars are merely one of the important tools required by qualified management for the proper execution of such an undertaking.

Instead, my proposal is as follows:

1. I recommend that under the leadership of the United States a world economic offensive should be instituted, limited in no way as to time and having as its objective the development of the world's resources accompanied by a continuing rise in the standard of living of the world's population. As to time I am thinking in terms of 100 years.

2. The major role of the United States Government will be to give leadership to such a policy and to create the proper investment climate in foreign lands.

3. Because of the importance of this policy to world peace and world development, the responsibility for its operation should be placed under the authority of a new cabinet position, Secretary for World Economic Development.

4. The overall policy controlling such an operation will recognize at the outset that its continuing success and expansion will have a twofold purpose: (a) the gradual elimination of substandard conditions throughout the world which will result in the defeat of communism and (b) through a marked increase in world trade, a dynamic rise to new plateaus in the American economy. Our export business in 1957 was 21 billion with imports of 13 billion. A proper comprehension of the world development which I am urging should contemplate, as a realistic objective for our foreign trade, a figure of 200 billion in exports and 130 billion of imports, 10 times the present figure. In this connection, bear in mind that the constructive development of the world will harness or create new consumers to the extent of over 1 billion people.

5. While the American Government will give the leadership for this policy, the major responsibility for its execution will be borne by the various segments of our economy comprising industry, agriculture, private capital, the field of education and the medical profession.

6. The successful execution of such a vast operation requires strict adherence to the sound economic policies by which all successful business is conducted.

7. Only to the extent that private interests in these fields cannot operate or carry the responsibility will Government participate or assume the responsibility, and then only if sound economic standards are met.

8. American leadership of such a far-reaching and dynamic policy shall encourage any and all nations to participate subject to their adhering to the basic objectives and standards. In this connection, I submit that even in Russia, as the health, education and economic standards rise so will the fealty to communism decline.

9. The organization comprising the office of the Secretary for World Economic Development, including the secretary himself, shall be composed of men and women qualified by education and long time successful experience and therefore drawn from the specific fields involved and at the highest levels.

Bear in mind, as we are now going, we face world annihilation. We are now in a greater emergency than we were in the midst of World War II. This factor and the great benefits to be derived for American business and agriculture will guarantee the active support and participation of all private interests in our economy.

10. We are now in a business recession; our standing in the world has suffered a marked decline since World War II; Russia's influence has spread. For these three reasons and in order to dramatically emphasize to the maximum the far-reaching significance of such a policy, the President, with the approval of Congress, should call to Washington several hundred of the country's top leaders from all segments of our economy in order to inform them and therefore the rest of the world of this country's decision and the part that the fields of health, education, agriculture, industry, and private capital must play in the execution of this vast program.

Such a meeting will have an immediate and electrifying effect on our own economy and our standing in the world. It will be the first step to be taken to wrest the initiative from the Soviet.

In closing, may I say that this country has never failed when called upon to do a job. The people of America will rise as high as leadership requires.

The job is big but the opportunity to move ahead and not just survive is greater. Let us hope that leadership in this country, and it must come from this country, is as great in vision, courage, and ability as the challenge and opportunity demands.

Remedies for Education: Respect for Excellence

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1958

Mr. UDALL. Mr. Speaker, a few days ago Adlai Stevenson delivered an address to the United Parents Associations on the problems confronting our educational system. With unusual eloquence and insight, Mr. Stevenson placed his

finger squarely on the crux of the problem.

The main body of this speech was adapted as an article which appeared in the April 6 issue of the New York Times Sunday magazine. Needless to say, I commend it to our colleagues.

The article follows:

DUAL EDUCATION PROBLEM: SCHOOL AND HOME

(By Adlai E. Stevenson)

Our national self-esteem has recently received some rude shocks. We had been living in what has been called the illusion of American omnipotence. Suddenly realizing that it may not after all be universally true that my pop can lick your pop, we are reacting now with a mixture of wounded pride, jittery apprehension and frenzied determination to disprove the illusion.

Part of this determination centers on the launching pads at Cape Canaveral. There has been a sudden decision that our missile development is inadequate.

Part of it centers in the classrooms of our schools. There has been a sudden decision that our educational system is inadequate.

It is obvious, and not very gratifying, that these decisions result not from self-examination and self-criticism but from what has happened in Russia.

It is fashionable to say that the Russian educational system is better than ours. But is it true. They set out to do one job. They have done it. But education has for us a fundamentally different purpose and obligation, an infinitely harder task. Keeping up with the Russians would be for us the worst form of defeatism, of false emphasis, of idolatrous worship of irrelevant standards.

Russian sputniks will not help us answer the question of the quality of education we should seek. That kind of stimulus could at most spur us to an unbalanced effort to produce scientists, and scientists alone. It would not give us either the sustained popular pressure we need to secure educational progress or the basis for the judgments we must make about the quality of our teaching.

There is a much more searching set of questions we must ask ourselves.

Why is it that we only became fully aware of our schools' shortcomings when we were compelled to compare them with the educational system of a totalitarian dictatorship?

What became of our own standards?

What standards have led us to put the glossy frills and extras of our abundant way of life ahead of our children's education? And why have we put the no-shift automobile ahead of abolishing the 2-shift school.

Why is it that today, with more than 5 million men and women unemployed, with slack resources in steel, and with a crying need for tens of thousands of new schoolrooms, we aren't moving immediately to use these resources to fill these needs?

We don't lack the means. What's the matter?

There have been, I think, 2 difficulties.

One is that there has been no mobilization, no resounding, irresistible affirmation of our heartfelt desire for a better education for our children. This is the difficulty a democracy faces while a dictatorship does not, and it is the difficulty that consumers—who are essentially unorganized—always face in their competition with producers. We cannot easily translate into group action our decision to have the educational system we want and can pay for.

And the impact of the Soviet challenge may wear off, I fear. An upswing in our economy will return, and consumer pressure for a myriad of things, useful, useless, urgent, trivial, will return, too. Without profound change in national attitude schools and their needs will slide away again, down our national scale of priorities, behind the automobile and the refrigerator, recreation and travel, liquor and cosmetics, and behind even the recent horror in women's styles. We shall be back in the fantasy world spending more on advertising to the American people than on trying to educate them.

But the second difficulty is in a sense more basic, and one we must charge squarely to ourselves. The softness which has crept into our educational system is a reflection of something much broader, of a national complacency if you will, of a confusion of the priorities of the body, the mind and the spirit.

The imperative today, in my judgment, is that we reassert—so that every person in this country is not left in any doubt about it—every man and woman, every politician, yes, and every teacher and every child—our conviction that children's needs have first priority over all other civilian wants.

We have lacked, I fear, the deep inner conviction that education in its broadest sense unlocks the door of our future, and that it gives us the tools without which the pursuit of happiness becomes a hollow chasing after triviality, a mindless boredom relieved only by the stimulus of sensationalism or quenched with a tranquilizer pill.

A British writer recently defined this fragmented mass mind as one of sensation without commitment. And this behind the problems of school building and equipment, of classrooms and laboratories, of staffs adequately recruited and paid—this seems to me to be the deepest educational challenge of all.

In fact, I doubt whether we shall ever lick the physical problems of education until we have, as a Nation, recovered our sense of what the educational process has to be, and our respect for the disciplines and ardors which it entails. We need more than sputniks without and recessions within to provide a steady, enlightened pressure for better education.

So we must reassert our respect for the disciplines and orders that are part of what education really means.

And we must make it clear that the goal of education is to teach western man not just to survive but to triumph, not just to defend himself but to make man and the world what God intended them to be.

What are the elements of the dedicated purpose and the wise and searching faith which are essential to restore the true meaning of education in America?

I believe, in the first place, that we must recover the element of quality in our traditional pursuit of equality. We must not, in opening our schools to everyone, confuse the idea that all should have equal chance with the notion that all have equal endowments.

Nor is it healthy to discern a hint of privilege and pretension in those whose intellectual abilities are outstanding. Ideals of excellence are not unknown to us. Those who excel in sports, in the arts, in adventure, are accorded that rare pleasure of the human mind—the pleasure of admiration. We must now, I believe, extend this ideal of excellence and teach our young people, indeed sometimes ourselves, to respect, to relish what is in fact the rarest of all our national resources—mental capacity and intellectual grasp.

And pray let there be no more derision of the nonconformists; rather let them be encouraged to speak their minds, to criticize and question. The deprecation of intelligence, the ridicule of the intellectual, has been too often the stock in trade of demagogs and the easy fashion of our times. If the sputniks have helped in any measure toward change in this respect we may yet live to hail Khrushchev as an educational reformer. But the change will not last if it is merely external. Respect for excellence—an idea which we can confidently draw from our classical heritage of freedom—this respect we must learn for ourselves.

The next confusion I would point to is the confusion of the free with the free and easy. The men who founded this Republic sought to do away with the external disciplines of oppression. They did not for one moment believe in doing away with discipline as such. They believed rather in the power of inner discipline, of conscience and of rational restraint to replace the constraints of royal or class government.

It is dangerously easy to move imperceptibly from the ideal of free choice to the tyranny of the easy way out. "Let the child set his own pace" has a delusively democratic swing to it.

And too often, I think, the elective system permits the student to evade the subjects which will tax his powers. Those who would dedicate their choice to harder, tougher studies find themselves cut off from a gay, carefree group who are likely to regard the working student as different. The pressures around him won't sustain his decision to work. He is made to feel an outsider.

The tragedy of this lies precisely in its misunderstanding of true human fulfillment. There can be no real happiness without full commitment, no tasting of the deepest pleasures without the effort and the training needed to make oneself responsive to these higher delights. Students glimpse these truths in certain fields. No one makes the team without hard training. Yet often there is no steady pressure of conviction to show our students that, in every field of endeavor it is effort, responsibility, the commitment of mind and energy that bring with them comparable achievement and satisfactions.

There is much talk in the world today of the uncommitted peoples—meaning the masses of Asia and Africa who will not take sides. I sometimes wonder whether there are not more uncommitted people here in our very midst—people bound by no ideal, warmed by no vision, impelled by no ambition, strengthened by no discipline, and, alas, unlit by any joy.

If once more we could restore the link in our children's minds between the happiness that is their birthright and the ardor, disciples, and responsibility that must lie in its pursuit, I feel we should have remade the foundations upon which all true education rests. I do not believe all our physical programs for education, however essential, will have their true effect without this underlying change of heart.

We hear about adjusting to life. Of course. But what is life today? If this means a child's learning to live easily with the other members of his family and the rest of the people in the block, fitting smoothly into his environment, his church, feeling at ease with the people he sees from day to day, then I think we have drawn the circle dangerously small. For distance and time and space have shrunk; life is never again going to be a local island for any man or woman in the world.

Looking ahead for the long pull—not just to missiles and rockets—the American problem in education is to prepare citizens not merely to live in American society, but to live in an America caught up inextricably in an evolving world community, which, in turn, is seized by both technological and political revolution.

This means new dimensions for education. It means the training of innovators, not organization men, in both science and humanities. It means the understanding of other societies. And it means a deeper understanding of American history and society, not merely as a unique and treasured saga, but as part of universal experience. Instinctive knowledge of the round of American life as it is lived at home is not enough.

Yes, adjust children to life—to life in the world in which they live—a world where, among other things, the vast majority who are poor, the vast majority who are not white, the vast majority who are uneducated, are now demanding their birthrights as children equal in the sight of God.

The schools can't teach children all there is to know about the relationships of nations, about the intricacies of hard and easy money policies, about parity prices for farmers, and about the lethal mists that have been loosed upon the world. But the schools can do a very great deal to teach children that their own ideas are good and worth having and expressing, even in the face of disagreement.

Francis Bacon said a longtime ago: "What man will not alter for the better, time, the great innovator, will alter for the worse."

A society whose survival depends on innovation cannot rely on interdepartmental committees and consensus. It must train men and women to be able to formulate, privately and painfully, new ways of looking at things, who are also capable of standing by their insights, if necessary, against the current consensus.

Perhaps it is the easiest part of the problem to say what the ideals of education are or ought to be. There remains of course the obligation to implement them, to make it possible for the schools to try to live up to them.

I have not discussed here the new dimension of difficulty which is added by the current crisis of numbers in the schools. And yet I would insist a little that there is nothing here that we are not in a position to meet.

The urgency of our desire to export an article of American manufacture to the moon—important as that is—is no excuse for deleting and drastically reducing provisions in the national budget for support of education. The need has not diminished. It has grown.

It should be added that another and very different point of ways and means has come into recent prominence, partly because of its promise for meeting the problem of the overloaded teacher in the overcrowded classrooms—the fuller use of our teaching resources by means of the new audio and visual aids to education.

We are still in the infancy of the development of educational films, television, and the like. Badly used, even overused, they could result in the sterilization of education. But already there has been such progress made along these and related lines that the discriminating administrator and the resourceful teacher can now do a better job for more children in less time and at less cost than ever before.

There is no substitute, of course, for a good teacher. Yet, it is already clear that intelligent use of these remarkable visual materials in the classroom can greatly enrich and enliven instruction, and also release the teacher's fuller energies for the essential part of the teaching job.

I suggest, too, in connection with this problem, that we can make a virtue of necessity by relieving the teachers of some of the jobs they have taken over from parents, and which parents could do.

I taught my three boys to drive a car. I think they can do as much for my grandsons—and let their high-school teachers concentrate on some things that are more important, or, at least, harder to teach.

If our educational purposes are unclear, if the curriculum is chaotic and cluttered with distractions, if the teaching staffs are overburdened with indiscriminate responsibilities well beyond their reasonable capacity to carry, we must expect that our children will be educated for mediocrity instead of for something better.

What does it add up to? Basically, it is a matter, it seems to me, of redefining and of reasserting the fundamentals of our educational faith. Respect for intellectual excellence, the restoration of vigor and discipline to our ideas of study, curriculums which aim at strengthening intellectual fiber and stretching the powers of young minds, personal commitment, and responsibility—these are the preconditions of educational recovery in America today; and, I believe, they have always been the preconditions of happiness and sanity for the human race.

And just because this is so, I do not regard the task ahead of us as one confined to leaders and educators, to influental men and women, or those in the public eye. It is in the home that children first learn what to want and respect, what is important, what trivial, what worthy to be imitated and loved and admired. In the homes of all of us, then, let the recovery begin—in simple respect for work and effort, in delight in all manner of excellence, in trust and love of truth. These are the roots of education. They can grow in every home.

The Peril of Strontium 90

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mrs. GREEN of Oregon. Mr. Speaker, a recent letter to the editor in the Washington Post was of great interest to those of us who are vitally concerned about the effects of radioactive fallout on this and future generations. Mr. Selove, author of the article, is associate professor of physics at the University of Pennsylvania and former chairman of the Federation of American Scientists Radiation Hazards Committee. He was a member of the panel convened by the AEC on July 29, 1957, to make the best possible estimate of future strontium 90 levels in bone. I ask unanimous consent to include this letter from the April 9 issue of the Washington Post in the CONGRESSIONAL RECORD.

The letter follows:

THE PERIL OF STRONTIUM 90

The publication on April 4 of a report giving the accumulated fallout up to the end of 1957 points up again that the Atomic Energy Commission has consistently taken a highly optimistic attitude toward fallout effects.

According to the consensus of a panel convened by the AEC in July 1957 to make the best possible predictions of future strontium 90 levels in bone, the accumulated fallout due to those tests carried out before 1957 would give rise to average strontium 90 levels in young persons in the Northeastern United States over the next 20 years or so, of 1.5 to 10 strontium units. This range could not be narrowed further, because of uncertainties in required data.

The AEC has now reported a 50-percent increase in strontium 90 levels during 1957. There is as yet no data released on further fallout due to the concentrated series of tests by the U. S. S. R. in 1958, a series which included a number of large explosions. One may reasonably estimate that the corresponding expected average bone levels in Northeastern United States from all tests to the present will now lie in the range of perhaps 3 to 20 strontium units.

In estimating the effect of such levels, it is not correct to believe that there is a safe level. There is good reason to believe that even small doses of strontium 90 can cause leukemia or bone cancer, in proportion to the dose. In this case, it can be expected that an average concentration of 10 strontium units in a large population will produce one-tenth the number of cases of leukemia and bone cancer that would result from a level of 100 strontium units. In other words, there would be no sharp danger level—even small amounts would produce an effect.

It may be 20 years before the important questions concerning the amount and effects of strontium 90 fallout are answered. If the answers should all turn out to lie at the worse end of the present range of uncertainty, then from tests so far we can expect an increase of perhaps 5 percent in the present rate of leukemia and bone cancer, in the Northeast United States. This would mean an increase, in a population of 30 million of the rate of leukemia deaths, from about 2,000 a year to about 2,100 a year.

It is not difficult to see the genuine cause for alarm for groups of people as large as the entire Japanese nation, whose rice crop in 1956 was contaminated by large Russian test explosions to the point where the rice contained 30 times as high a strontium 90 concentration as milk in the northeastern United States, because that rice was developing and being harvested at a time of unusually heavy fallout.

The AEC has not emphasized the possible appreciable harm from the relatively heavy fallout produced by Russian tests. Our officials could hardly raise a furor over Russion-produced fallout when that fallout probably does not total more than the fallout produced by our own weapons-text explosions.

What about the future? "Dirty" weapons are the cheapest large weapons, and the most likely to be used. Large "dirty" weapons will be tested by each new nation entering the weapons race. If the worldwide weapons race is not stopped, we can expect to see each additional testing nation adding large amounts of contaminating fission products to the soil and food of other nations around the world, including our own.

Is our Government nevertheless going to persist in its reluctance to make an agreement to stop tests, on the ground that it wants to develop clean bombs, in fairness to its responsibilities to the American people and perhaps to humanity?

The effects of fallout are not the only nor the best reason for bringing the nuclear weapons testing program to a halt. But they are a powerful reason. The necessity for our development of nuclear weapons in past years would hardly be argued by anyone. But the point is in knowing when to stop.

W. SELOVE.

HAVERTOWN, PA.

Second Tax Exemption for the Working Student

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. MAGNUSON. Mr. Speaker, I should like to call the attention of my colleagues to a bill I have introduced today, H. R. 11891, which would provide a a second income tax exemption for a student who is working his way through college.

The additional exemption also would go to the married student.

This bill is designed to correct the inequity in the existing tax law under which two exemptions can be claimed on behalf of a students whose father is helping him through school—1 to the father and 1 to the student—but only 1 exemption is available to the self-supporting or married student.

This legislation was suggested to me by Lauren D. Rice, a student at Whitworth College, in Spokane, Wash. Rice, in a recent letter, pointed out the inequity which gives $1,200 in exemptions for the student whose parents are helping him, but only $600 to the student, like himself, who is working his way through college.

Rice said in his letter:

I feel very strongly that some provision should be made for those students who are putting themselves through college.

I agree with him.

Under the present law, a parent who is providing more than half the support for a child who is a student can claim an exemption for the student, and the student also can claim exemption for himself. My bill would leave this provision unchanged but provide that if the parent does not claim the exemption—that is, the student is not a dependent—the student taxpayer can claim the second exemption for himself.

If the student is single, or is married and files a separate return, he would claim two exemptions.

If the student is married and files a joint return with his husband or wife, the return would show 3 exemptions, 1 for the husband, 1 for the wife, and the additional student exemption.

If the student is married and files no return because he or she has no gross income, then the working spouse can claim the student exemption on her or his separate return.

My bill differs from other proposals which have been introduced to grant an additional tax exemption for students because the latter preserve the inequity in the dependency situation.

The President's Space Agency Proposal

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. KEATING. Mr. Speaker, I have today introduced the bill recommended by President Eisenhower to establish a civilian space agency. The terms of this bill provide that a civilian-directed National Aeronautics and Space Agency will be formed from the nucleus of the long-existing National Advisory Committee for Aeronautics. The new agency would guide all United States aeronautical and space activities except those of a strictly military nature.

The President's proposal provides a sound division of authority between the military and civilian parts of our outer space programs. While of course nothing must be done to interfere with military advances at this stage, it may be possible later to bring the military and civilian aspects together under even more centralized control than this bill provides.

But for the time being it is wise to retain Pentagon control of the military explorations of space and to turn the civilian effort over to an experienced and proven agency. I hope serious consideration will be accorded to giving the director of the civilian agency the equivalent of Cabinet status, so that his views will be accorded a full hearing at the highest level.

The race for space represents one of the great challenges before our Nation today. It must be pursued with determination and alacrity. This bill provides a reasonable, sound means for doing just that. It deserves speedy approval by Congress.

Pan-American Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. MULTER. Mr. Speaker, April 14 marks the 68th anniversary of the inter-American system. We have come to look upon 68 years, about the lifetime of a man, as a short span in the sweep of history. But as international organizations go, more than two-thirds of a century is indeed an existence record.

Our Western Hemisphere organization has much more to recommend it besides longevity. As we observe the havoc wreaked in other regions of the world by hostilities, prejudices and envy, we must rejoice at the effectiveness of our own unique system of international living. However, the contrast between the peace and cooperation which prevails on the inter-American scene with the antagonisms and rivalries in other parts of the world is by no means an inherent situation. American nations are subject to the same national ambitions and temptations that exist elsewhere on the globe. The occasional bloody outbursts in the past between sister republics in the Western Hemisphere prove that we do not enjoy some special immunity from mankind's failings.

With this in mind, the achievements of the Organization of American States in preserving peace and promoting the well-being of the hemisphere's inhabitants come into sharper focus. The fact of 21 countries, weak and strong alike, meeting as sovereign equals to iron out their differences and to cooperate for mutual benefits is an amazing innovation in international affairs. The willingness of the member States to permit OAS intervention to settle disputes peaceably is a most gratifying international development.

The anniversary of the Organization of American States is a time to recall with pardonable pride the unusual accomplishments of our inter-American regional system. It is a time for thankfulness that we in the New World have achieved a degree of international maturity not vouchsafed to more turbulent regions of the world. Above all, it is a time for rededication to Pan-American ideals and goals so that our remarkable regional organization may continue to flourish.

Capitol Cloakroom Broadcast of March 31, 1958, With Hon. Sam Rayburn as Guest

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the Capital Cloakroom program of March 31, 1958, with Speaker SAM RAYBURN as the guest, and Eric Sevareid as the interrogator, which program was carried over the CBS Radio Network. The producer of this program is Michael Marlow:

Mr. SEVAREID. His real friends around Washington and practically everybody in Texas call him Mr. SAM, familiarly, because he is a friendly man, not too familiarly because he is a man of natural dignity, and after all, a man of great power.

A writer once said of him, "SAM RAYBURN is one Texan who does not wear a 10-gallon hat, slaps no backs, and calls his cattle ranch a farm."

He has been Speaker of the House of Representatives longer than any man in our long political history. The first radio network interview Speaker RAYBURN ever consented to was on this same program Capital Cloakroom. The second one was also on this program. He is with us again, a proper observance we think for the 10th year of this program's existence. We are seated in the Speaker's private office. It is furnished in the commodious leather style of the old-fashioned.

The Speaker's roots go back a long way. The past has real meaning for him. The life of Robert E. Lee particularly has special meaning for him. The lessons of Lee's life are part of the basic nature and philosophy of SAM RAYBURN.

Mr. Speaker, I would like to ask you first one or two questions about yourself, and the first one is, why was the House and not the Senate always your goal?

Mr. RAYBURN. I was a member of the Texas Legislature when I was a very young man. I was elected speaker of the Texas Legislature 4 days after my 29th birthday. I went there wanting to be speaker. I wanted to be head of the house. I didn't know much and I just said often that God, ignorance, and desperation took care of me.

Then I came to the House and my ambition was in the House. I never had the slightest desire to be a Governor, or to be a United States Senator, and somebody asked me one day when I first thought I would like to be Speaker of the House of Representatives here, and I said, well, I was 8 or 9, or 10 years old, I don't think it was more than that, and I clung to that ambition, and I finally made it after many years, because when I came here there were a great many people far ahead of me, and I

wasn't jealous of them. I didn't envy them their positions, but I waited my time and it finally came.

Mr. SEVAREID. You came in Wilson's days; I remember it.

Mr. RAYBURN. I was sworn in in April, 1913, Woodrow Wilson's first administration.

Mr. SEVAREID. Well, speaking of your ambitions, it occurs to me then, Mr. Speaker, to ask you this. There have been times in various conventions when a number of your friends have wanted to nominate you for the presidential nomination. Have you ever had that kind of ambition?

Mr. RAYBURN. There was a time when I would have liked to have been President of the United States; of course, not now. But I always answer that by saying that I really never expected to be President of the United States, because I was born in the wrong section of the country and at the wrong time. I think that prejudice is fading, but it faded too late for me.

Mr. SEVAREID. Another personal question, Mr. SAM.

So far as I recollect, you have never traveled a great deal abroad. Your axis has been from Washington here back to Bonham. Why is that?

Mr. RAYBURN. Well, my father and mother had 11 children, 13 of us in the house, and then Uncle Jim came to live with us, and that made 14. The bigger the family the closer they get together, in my opinion, and those of us who are living now are just as close brothers and sisters as we were when we were fighting out on the little farm down there in north Texas.

I have led a bachelor's life all the time since I have been in Washington, and unless one of my sisters is here, why I am away from all my blood, and I am a disciple of the doctrine of my oldest brother who once said, "With me blood is thicker than water."

When I get away from here I don't want to go anywhere in the world except home to see my lovely country, to see what little possessions I have, and associate with my brothers and sisters and my other blood and old friends.

Mr. SEVEREID. I gather the soil of Texas with you is thicker than the soil of Europe or Asia.

Mr. RAYBURN. That is correct.

Mr. SEVAREID. Mr. Speaker, if you can remember it now, what would you say was the most difficult decision you ever had to make on that Speaker's rostrum?

Mr. RAYBURN. Well, now, I don't know, Mr. Sevareid, whether I would say this was the most difficult one, but this is the one that has attracted the most attention.

You see, when you have a roll call in the House of Representatives, the Speaker can declare the vote or not, and then they have—if it is a close vote, they have what they call a recapitulation, and unless the Speaker announces the vote, then men on the recapitulation can change their votes.

On August 12, 1941, when we were trying to extend the Selective Service Act and keep our Army up instead of having it taken apart when we were attacked at Pearl Harbor, the vote was 202—203 for the bill and 202 against it. I declared the vote, and that froze everybody exactly where they were, because I knew for my side we had a one majority, and I think there has been more comment about my action at that time than any one decision I have ever made.

Mr. SEVAREID. I remember that day.

Mr. RAYBURN. My rulings have been appealed from only twice, as I remember it, since I have been the Speaker, and they have got an insignificant number of votes to overrule any decision that I have ever made.

Mr. SEVAREID. You have never had one overruled?

Mr. RAYBURN. No.

Mr. SEVAREID. Mr. Speaker, you have watched a great many men, I suppose now thousands, come and go in the House of Representatives. You watched them from that high rostrum, that podium.

What kind of men really make the best and most useful Members of the House?

Mr. RAYBURN. It is here just like it is everywhere else. I just spoke to some school children a moment ago and told them this. There is not so much difference in the abilities of people, as a lot of people suppose. When one person has got common sense, he has got all the sense there is. It all depends on what they do with it.

And I told them, I said you must remember that the fellow at the next desk, in the next office, on the next farm, or the next factory, has as much ability as you have, and he is going to beat you if he works harder than you do.

Now I find very few people that come to the House of Representatives who are not men and women of capacity, and it all depends, just like the fellow starting out in life, as to what they do with that character and sense.

I said to our caucus here just awhile ago when this session of Congress began—I said, "I hope you will attend your committee meetings, because you have sought membership on those committees and it is your duty to go there and learn through the hearings and through the executive sessions what the bill means, and be able, when you come on the floor of the House to explain it to any inquiring Member."

I said also, "I urge you to be here for the opening of the House of Representatives because in the first 30 minutes you find out all that is going to be happening that day, and maybe, especially on Monday, you find out what is going to happen for the whole week. Therefore, if you are going to be a useful and knowing Member of the House of Representatives, you have got to attend your committees, you have got to learn what your bills are. Then you have got to come to the floor of the House and see the program enacted there."

Now a lot of people talk about studying the rules of the House. A man can read the rules of the House for 6 years, in my opinion, and know very little about them, for the simple reason they are complex. They have ben built up over 107 years and even before that, because Jefferson's Manual, a great deal of it, came from across the water.

But you have got to see the rules of the House put in practice, practiced, why a point of order is made, why it is overruled, why it is sustained, and all this and that and the other, and you see it in action.

And then I have advised them to go back the next day and pick up the record and read that debate or the arguments made, why a point of order should be sustained, or should not. That is the only way you are going to learn the rules of the House. And a Member must know a good deal about the rules of the House before he can manage a bill when it comes from his committee or a committee of which he is chairman.

Mr. SEVAREID. Mr. Speaker, some people have the idea that we have too many lawyers in Congress, that we ought to have more farmers, labor people, businessmen, teachers, writers, and so on. Do you have any feeling that way?

Mr. RAYBURN. No, it doesn't make a parcel of difference to me what profession the man or woman in the House of Representatives comes from, or is a member of, just so that they are the type I have been describing.

Mr. SEVAREID. Let me ask you a broader question bearing somewhat on this. Our traditional system elects people locally, all in the House from a local district; they are bound to local needs as well as national and international needs. Is this system meeting the tremendous global problems and responsibilities that seem to snow us all under?

Mr. RAYBURN. Well, I saw an editorial in the evening paper just a while ago, today. It said something about me, that I regarded my district more than I did the country.

Well, there couldn't be a greater cannard in the world than that, and it is a cannard about all the men and women in the House of Representatives.

Now you have got to be elected by somebody before you get here, and that is the constituency in your district, whether it is large or small, and some of them are small, some of them are large in population because since redistricting they have grown up.

But I find the membership in the House of Representatives just as patriotic a group of men and women that could be gathered in the world. Their first duty is to look after the small things and the large things in the districts that send them here, the districts that have given them the opportunity to demonstrate whether they can deal with the States or not.

But I find that on the broad questions that they do not look to their little district. They of course have some idea or want to have some idea about what their people think. But I think in the main, in an overwhelming majority of the cases the Members in the House of Representatives vote for what they think is the best interest of the country.

Mr. SEVAREID. Do they have really enough time, enough help, enough money to put their minds to these enormous world problems?

Mr. RAYBURN. I think so. When I came here we got $1,500 for clerk hire. I hired 1 person at $125 a month.

Well, the Government wasn't as big then as it is now. People didn't write letters like they do now. People didn't ask for favors like they do now, and all those things. But we have grown up now to the point where I feel that each Member of the House of Representatives has enough help in his office to transact his business. I know I do.

Mr. SEVAREID. You think the pay is sufficient?

Mr. RAYBURN. I do, since it has been raised the last time, I think it is sufficient pay. I think the average man can come here and live on this and raise his family.

What the trouble was a few years ago, the salary was so low a man with a family came here and got poorer and poorer every year he stayed.

Mr. SEVAREID. I know many who did in those days.

Mr. Speaker, you have a kind of a fierce loyalty to your political party. Many of us over the years have acquired the feeling that the differences between the Republican and Democratic parties have grown fewer and fewer. How do you see it? Do you see a basic difference?

Mr. RAYBURN. Well, I do of course or I wouldn't be a partisan, I wouldn't be a party man. The Democratic Party started out under Jefferson, the Republican Party started out under Hamilton.

Alexander Hamilton was a brilliant man, a brilliant young man of 30 years of age when he attended the constitutional convention in Philadelphia in 1787. He wasn't there a great deal of the time because the things that Franklin and Morris and Madison and people like that were doing about setting up Government didn't please him too well.

Now what we have always said was the difference between the Jeffersonian theory and the Hamilton theory was this, and I think that has lodgement in some Republicans now, I will not say all of them. That is the way to make the country prosperous; was to make those at the top very wealthy, and that wealth and those profits would trickle down to the ones below them.

Now that theory has been practiced a great many times, but it has never succeeded.

The Jeffersonian theory was, and it is our theory now, that you want to make the country prosperous, you make those at the base, the man on the farm, the man in the shop, make him prosperous enough to give him a buying power and then he will put everybody to work, because he buys things with the things that he makes.

Now that is one fundamental difference, and of course there is one fundamental difference between the Demacrats and the Republicans on the tariff. The tariffs got so high, they built such a wall around this country that we had to do something about it.

Since World War I we have become the greatest surplus-producing country in the world, and still are. Now money doesn't cross the oceans to balance the trade between country and country. It is surplus goods for surplus goods, and I think McKinley was credited with saying 60 years ago, "We cannot sell where we do not buy."

Then we came along to the Roosevelt administration and Cordell Hull was more responsible for it than anybody. With his help we set up the reciprocal trade arrangements.

Now there are many Republicans that never have voted for the extension or the putting into effect of reciprocal trade. Now we have got to have reciprocal trade. In other words, as an old friend of mine once said to me, he said, "You cannot be in the world and not of it."

If we do not have a reciprocal trade act, unless we have agreement with other countries as to how much tariff we are going to charge them and how much they are going to charge us, we are going to be out of the world as far as trade is concerned, in my opinion, and therefore we must, in my opinion, for the defense, for our foreign policy and all extend this reciprocal trade. We have a great many Republicans, as I say, who have never voted for it. They believe in building the walls around this country pretty high.

Now it has got to the point where the other fellow can build a wall just as high as we can and it will defeat trade, and if we stop trading with our allies and the people who have been trading with us, there is no place for them to go except to Russia or some country that might be unfriendly to us.

Mr. SEVAREID. Mr. Speaker, do you see any other basic differences between the parties?

Mr. RAYBURN. There has always been a great basic difference between the parties on the question of foreign trade. The Republicans have always believed in a tariff for protection. Now that might have been justified many years ago when we had infant industries in this country, but since we have the most giant ones in the world, since we are the greatest surplus-producing country in the world, we must trade with other countries.

Money doesn't cross the ocean to balance trade between country and country. It is surplus goods for surplus goods. If we don't take the surplus goods of other countries, then they can't take ours.

McKinley once said, I think it was nearly 60 years ago, he was the author of a great tariff bill and he said, "We cannot sell where we do not buy."

These tariff laws have built a wall around this country that is pretty hard for the surplus of other countries to get over. The Democratic position has been a reasonable tariff, or it was years ago for tariff revenue only. But after the enactment of the Smoot-Hawley Tariff Act, which is in effect now, except for that great statesman Cordell Hull brought in what is known now as reciprocal trade arrangements; that is where we sit down with the other countries of the earth and determine which tariff they can pay to get into this country and how much they are going to charge us. It has worked splendidly, and we have tremendous trade and commerce with all the nations of the world that are friendly to us especially.

Now we are up against it this year because that has got to be renewed, and, as an old friend of mine said one time, we cannot be in this world and not of it. And if we do not extend this Reciprocal Trade Act and keep up the kind of trade we have now, we will just be out of the world, as far as trade and commerce is concerned, and it would be the worst thing in the world that could happen to this country, in my opinion, because somebody will trade with these people and they will not have the walls around them that some of our people want built around us. That is one of the fundamentals, tariff and taxation is one of the fundamental questions that separate the two parties.

Mr. SEVAREID. Mr. Speaker, what about this session of Congress? Are they going to extend this Reciprocal Trade Act?

Mr. RAYBURN. Well, I hope so. I am going to do everything in the world I can about it. I understand the President is doing what he can. He made a speech down here the other night to a group that was nationally televised. I hope it has an effect in bringing in some support for this bill, and I believe it is going to pass, because I just think we cannot afford to fail to pass it.

Mr. SEVAREID. How about this session of Congress generally? What has been the progress? It usually starts very slow.

Mr. RAYBURN. I think we have had greater progress in this session of Congress up to Easter than any Congress I have served in in many years.

Mr. SEVAREID. That is quite a statement.

Mr. RAYBURN. I can read off to you what we have done up to now. We have passed, and in the President's hand, special defense construction bill, debt ceiling increase, price-support freeze on agriculture, which the President vetoed today, second supplemental appropriation, supplemental defense appropriation, supplemental Labor Department appropriation, Treasury and Post Office appropriations. Those are all law except the one that the President vetoed. The bills in conference, the postal pay increase bill; it probably won't get up before Easter; rivers and harbors authorization; we will probably adopt that conference report tomorrow; highway construction is in conference. When they will agree on that I don't know.

But then the House has completed the military pay increase, Small Business Administration, independent offices appropriation, Interior Department appropriaton, Labor, Health, Education, and Welfare appropriation, and the technical amendments to the Tariff Act.

And we will tomorrow or the next day pass the Agricultural Appropriation Act, and that will leave us just two big bills to pass, big appropriations; they will be public works and the Defense Department. Now, I don't know any session of Congress from January until April that has done a bigger job than that.

Mr. SEVAREID. That is a very considerable statement, considering the history of this, of the rate of progress.

Mr. RAYBURN. Usually we get started slowly.

Mr. SEVAREID. Yes.

Mr. RAYBURN. And don't get into high gear until after Easter.

Mr. SEVAREID. What about the great measures for combating this depression or recession? Are we doing enough? What ought we be doing?

Mr. RAYBURN. I don't know whether we are doing enough or not. We have taken the lead in that. I remember Senator JOHNSON introduced a resolution. Congressman McCORMACK, the majority leader of the House, introduced a resolution to try to unfreeze some of the money that is over in the Defense Department, and within a few days after that the Defense Department—and we passed the resolution through the House and through the Senate—they unfroze $450 million for installations in public works.

We have passed the rivers and harbors bill. We will probably adopt the conference report on that tomorrow or the next day. We have passed the housing bill that will build 200,000 houses and put 500,000 people to work, and housing can start faster than anything, and we have done some other things that I don't recall to my mind at the moment, but unemployment extension of benefits, we are going to take that up, have a hearing on it on the 29th. We will pass that and that will put money in the pockets of a lot of people.

So in these billions that we are making available, if they are wisely expended, it is going to give us a great lift.

Mr. SEVAREID. Do you have very firm personal feelings about a tax cut?

Mr. RAYBURN. I don't want a tax cut if we can avoid it. If we can't pull out of this thing without a tax cut, then I will be for it.

Mr. SEVAREID. And you would wait until when, summer?

Mr. RAYBURN. No; I don't think we can wait that long. I think we have got to make a determination of this in April or early May.

Mr. SEVAREID. That would be a problem for this session, however, to face.

Mr. RAYBURN. That would be a problem for this session; yes.

Mr. SEVAREID. You have seen this country go through a lot of economic changes, Mr. Speaker. Do you think there is any chance at all we could go into another really deep depression?

Mr. RAYBURN. If we hadn't taken the action that we have taken, I mean this Democratic Congress, and hadn't of done it hurriedly, I think we were on our way to a deep depression.

I have the faith to believe that we are going to put enough people to work, we are going to get enough people the buying power that in all probability in April or May or June we will reach the bottom of this thing and may start up. I am hoping that.

It doesn't make any difference to me what party gets the credit for it. I want to get out of this thing and to get out just as quickly as possible, because when people are unemployed, when they do not have the money to buy the things that are necessary for their livelihoods, they get in a bad humor, and I don't want to see our people in a bad humor.

Mr. SEVAREID. You have also seen this country commit itself in a thousand ways in a thousand places in the world as we have grown bigger and more responsible.

Do you think we have committed ourselves too far, in too many places? Can we do this job all around the world?

Mr. RAYBURN. Well, we have been doing it. I think the Marshall plan saved Western Europe from communism. You take a man sitting there under his vine and fig tree with nothing to do, his transportation is gone, his factory is down, his wife cold, emaciated, his children cold and hungry, he will vote for any kind of a change because he can't do worse than for him and his family to starve and freeze to death.

I think the point 4 program did a great thing, and I am still for carrying out this program. I am perfectly willing to vote for the $3,900,000,000 asked by the President, and whether he gets all of that or not, I hope we give him a substantial sum, and I think that we can carry this load, and if we can do it and make friends with it, it is going to be money well spent.

Now my interpretation of the situation in the world is that we have not made as many friends as we should have made, for the simple reason that it hasn't been properly handled.

Mr. SEVAREID. Do you think we are too negative, as a lot of critics say, about the Russians and their various proposals? Do you think we have got in a rut on these great questions?

Mr. RAYBURN. I said on December 3—and that has been awhile ago—that the Russians were beating us on propaganda. In my opinion, they have beaten us ever since. For us just to freeze and say "No," no summit unless we can get our way about everything, no this, no that, and the other, I think it is hurting our hope for peace, or hope for cooperation with the world, and especially—now Russia is a big country; it is the biggest except ourselves, I mean, as far as wealth and army and able to support itself. I think that the time is fast approaching when we have got to come to some kind of an agreement and understanding with Russia, if we go into a summit conference with them.

Mr. SEVAREID. Mr. Speaker, I gather it is your view then that the Russians have been outfacing us in propaganda and in psychological terms all around the world rather badly. Does this in your mind then lead you to the firm feeling that we are going to have a summit conference, that we ought to have one?

Mr. RAYBURN. Well, it has been my thought all the time that with Russia propagandizing the world and beating us in propaganda, I will say, because they put themselves up as the people who want to bring about peace, which we now doubt if they do—they have been beating us, and they are selling their produce to the world, to a very great extent, and it disturbs me very much.

I think we have ultimately got to have another summit conference, and the sooner we get an agreement with Russia on what we are talking about and to get at it, I think the best it will be for the United States of America.

We just cannot allow Russia to create the impression in the world, and a lot of people don't know us much better than they know the Russians, that they are the peace party and the peace people of the world, and they want to stop the ghastliness of war, and that this great western democracy is impeding that, and I think that impression is going out through the world, and I think the sooner we can get with the Russians and prepare for a summit conference, I think the better it will be for us and for all the free world.

Mr. SEVAREID. There is much in the news now about stopping the atomic tests. Two years ago your party candidate for President about this time of year proposed that we take the lead in stopping them. Have we now been put in a great hole in terms of propaganda by the Russian action?

Mr. RAYBURN. I have always thought that the explosion of these dangerous things should be stopped, if we could get the people of the world together on that who had these destructive instruments. And I remember very well Governor Stevenson saying that he would like to stop it, but he was misunderstood and they thought he wanted it done unilaterally. I do not think he had any such thing in his mind at all.

But I have thought for a long time that it wasn't doing the world any good to carry on this program of exploding these destructive things, and I am also fearful of what they might leave in the atmosphere and in the ground that would be dangerous to human beings.

Mr. SEVAREID. You are not taking a position, are you, Mr. Speaker, that we should not go ahead with our next series of tests this summer?

Mr. RAYBURN. I do not know. If Russia ceases to do this and we keep on, I think it is going to add to their propaganda value. I am fearful of that. But I am not a scientist and I am not an engineer, and I don't know just what we might develop if we carry this on. We might develop something that would be for peaceful uses. But I just say this: That on the talk of the summit and the talk of stopping the explosion of these bombs, Russia has beaten us on propaganda all around the world.

Mr. SEVAREID. To ask you one last question, Mr. Speaker, and to come to something that is very intimate and pressing, there has just been a debate in the House a few minutes ago about this, and that is the remodeling of the east front of the Capitol Building, for which you have been a protagonist and a great many people, including some architects around the country are very upset. What is your real reason for wanting to do this?

Mr. RAYBURN. Yes; they want to put it defacing the Capitol. They want to make, it was vandalism, and so forth. CLARENCE CANNON made a speech in the House the other day that was very interesting.

He said that when Thomas Jefferson came here to be inaugurated, he hitched his horse to a hitching post. He said some vandals had removed that hitching post. There in an inference, a historic inference around this Capitol, at one time some vandals took that down to make room for expansion of the east, the north, and the south fronts, and he said also there was a rail fence around part of the Capitol one time, and when Lincoln came here to be inaugurated as President, they knew he liked rails, and they took an exhibit to him and he said some vandals had taken that down and probably put it into ashes.

Now I think that the east front should be extended. I think I know from talking to the best engineers I know and the best experts that the east front of the Capitol is beginning to be a hazard.

I saw the other day two chunks of stone, that sandstone, that had fallen out of those columns, each one of them as big as each one of my fists. Well, now they deface the Capitol by going and filling up those holes with concrete and painting over it. Now if 35 coats of paint doesn't deface that sandstone that the east front of the Capitol is made out of, I don't see how you could deface it.

But for two reasons I think it is time for it to come down. Those beautiful pieces of cornice up there are falling off. They can't be replaced, and a lot of the impression goes out that this would be so far out that it would hide the Senate and House ends.

Well, this east front of the Capitol can be extended 32½ feet and yet be 40 feet inside of the distance out east of the east front of the Senate and of the House of Representatives.

I was talking to a very intelligent lady here a while back, and she was awfully opposed to defacing or removing it. I said, "Suppose it has got to come down. That is all the defacement you could do about it when you take it down. What is the difference then in building it out, extending out 32 feet or 32½ feet and making it exactly like it is now than to reestablish it where it is?"

She said, "Well, I had never thought about that."

We need the 54 rooms that that makes. Somebody said here last year, this is not a memorial. The Capitol of the United States is a workshop, and I wonder sometimes if we had had a Senate and a House wing of this Capitol, if the Senate with 96 Members had tried to crowd themselves into the old Supreme Court room, and 435 Members had tried to sit in this little rotunda out here where they used to have plenty of room when the House of Representatives was 100 Members, I wonder what they would have said about defacing the south end of the Capitol to put the House of Representatives here or what they would have said about defacing the north end of the Capitol to put the Senate end over there. And if we had paid any attention to the people in the past, had paid as much attention to these people that talk about defacement and vandalism, we wouldn't have had any place to work on the Hill.

Mr. SEVAREID. Well, my brief reading of history teaches me that SAM RAYBURN, of Texas, usually gets what he wants on this Capitol Hill. I suspect, Mr. Speaker, the east front will be changed. I want to thank you very much for taking this time on this anniversary program for Capitol Cloak Room. We are all highly honored. Thank you.

Mr. RAYBURN. Thank you.

Ike's Broken Faith

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1958

Mr. BAILEY. Mr. Speaker, I desire to call attention to an editorial which appeared in the Standard-Times, New Bedford, Mass., on March 31, 1958, depicting the false position of President Eisenhower in urging renewal of the Reciprocal Trade Agreements Act.

The editorial is a concise but forceful presentation of the facts involved in the problem now facing the Congress as to whether our trade policies are beneficial or harmful to the mass of American producers.

I urge my colleagues to read this editorial carefully. It should be the basis of facts you will need in making your decision on this quite controversial legislation.

The editorial follows:

IKE'S BROKEN FAITH

President Eisenhower demands that the American people put pressure on their Senators and Congressmen to force them to pass his so-called foreign trade program, a proposed renewal of the Reciprocal Trade Act for 5 years.

The slogan department of the White House has produced a clever cluster of catchphrases of the type the President favors more and more to decorate his public utterances.

None of these slogans represents either reason or fact.

Here are two of the slogans coined for Ike's televised address to the American people Thursday night:

Refusal to renew the Reciprocal Trade Act as proposed by Eisenhower would be "returning to the law of the jungle in trade relations between nations."

World trade makes jobs for American workers. "At a time of slack in the economy like the present, these jobs should not be placed in jeopardy by crippling our trade program."

Both of these "word busters" are phony and fraudulent.

Far from creating jobs in the country, the Reciprocal Trade Act, renewed under great pressure from Ike 3 years ago, has destroyed jobs. Indeed, it has come near to destroying the entire textile industry and other industries denied adequate protection against cheap imports from low-wage foreign countries.

The collapse of the textile industry as a direct result of Eisenhower's unsound trade

policies may have triggered the very depression he now seeks to end by the passage of a similar, or worse, reciprocal trade act.

A review of the circumstances under which the Reciprocal Trade Act was approved by Congress 3 years ago is in order.

Eisenhower rescued his reciprocal trade program from impending defeat in the House of Representatives by sending the now famous "Dear Joe" letter to Republican Manority Leader JOE MARTIN on February 17, 1955.

"No American industry will be placed in jeopardy by the administration of this measure," the President solemnly promised JOE MARTIN and his colleagues on Capitol Hill.

It is ironic tragedy that MARTIN's 14th Massachusetts District is among the areas hardest hit by textile-industry losses resulting from the Reciprocal Trade Act.

Not only has the President broken faith with Congress and the American people, but he has violated the spirit of his own reciprocal trade program enacted 3 years ago.

The 1955 law contains a peril-point provision whereby industries endangered by foreign imports may appeal to the Tariff Commission for relief.

Many such appeals have been made, but Tariff Commission recommendations for higher duties on imports have repeatedly been vetoed by the President.

Eisenhower's reciprocal trade program, in 1958 as in 1955, is based on the proposition that certain American industries—such as the textile industry—are expendable and may be destroyed to help industries in foreign countries, and perhaps some industries in the United States engaged in foreign trade.

In other words, the Reciprocal Trade Act is designed to take away the jobs and livelihood of hundreds of thousands of American workers of the President's own choosing, in order to benefit industries in foreign countries and possibly some workers in the United States.

The people should reject Ike's highly sloganized appeal to pressure members of Congress into extending the Reciprocal Trade Act, against their own judgment and the best interests of their own section, and despite their sorry experience of the past.

Tax Reductions

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. HOLLAND. Mr. Speaker, I wish to include in the RECORD a resolution enacted by the City Council of McKeesport, Pa., on March 21, 1958, requesting the President and the Members of Congress to consider an immediate reduction in the Federal income tax and other Federal taxes as a stimulus to business:

"Resolution 7713

"Resolution requesting the President and the Members of Congress earnestly to consider an immediate reduction in the Federal income tax and other Federal taxes as a stimulus to business

"*Resolved by the city of McKeesport, in council assembled,* That—

"Whereas residents of the city of McKeesport, a steel manufacturing center, have been adversely affected by a sharp drop in production of steel by reason of which their purchasing power has been considerably reduced; and

"Whereas in the opinion of city council, reduction in the Federal income tax and of other Federal taxes would increase purchasing power, result in improved business conditions and promote a rise in employment: Now, therefore, be it

"*Resolved,* That the President and the Members of Congress be and they are hereby requested earnestly to consider an immediate reduction in the Federal income tax and other Federal taxes as a stimulus to business not only in the city of McKeesport but throughout the United States; be it further

"*Resolved,* That a copy of this resolution be forwarded to Senator JOSEPH CLARK and to Senator EDWARD MARTIN, and to Congressman ELMER J. HOLLAND."

Given first and second reading March 21, 1958.

Passed finally in council this 21st day of March A. D. 1958.

Attest:

ANDREW J. JAKOMAS,
Mayor and President of Council.
THERESA C. STASHKO,
Clerk of Council.

I hereby certify that the foregoing is a true correct copy of a resolution of the city of McKeesport, Pa., and that the same went into effect the 21st day of March 1958.

Attest:

THERESA C. STASHKO,
City Clerk.

Resolution Urging Specific Steps To Improve United States Educational System

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Greater Wilkes-Barre Chamber of Commerce urging the Congress to take certain steps to improve the Nation's educational system:

Resolved, That the Greater Wilkes-Barre Chamber of Commerce recommend to and urge the Honorable JOSEPH S. CLARK and EDWARD MARTIN, United States Senators from Pennsylvania, and the Honorable DANIEL J. FLOOD, Member of the House of Representatives, from Luzerne County, Pa., to lend their influence and assistance so that legislation will be adopted by United States Congress directed towards:

1. Expansion of the national science program in the field of science to improve teacher training, the curriculums and teaching methods of science education, and including fellowships for scientific research.

2. The amendment of Federal tax laws to provide:

(a) Increased incentives for individuals, foundations, and corporations to increase their support for higher education.

(b) Deduction from gross taxable income by teachers of reasonable costs for costs for courses taken to increase their competence and professional position.

(c) Deduction from gross taxable income of a reasonable percentage of the costs, including tuition and fees, for or by persons attending colleges or universities (including junior or community colleges and institutes).

3. Continuation of the college housing-loan program with additional obligational authority and modifications, as recommended by the administration.

4. Establishment of a uniform policy requiring all executive agencies of the Federal Government to pay the full costs of research, military training or other services for which they contract with colleges and universities.

5. Continuation of the President's Committee on Scientists and Engineers to stimulate local, State and private action to improve science education and the use of scientific manpower.

Passed by unanimous vote of the board of directors of the Greater Wilkes-Barre Chamber of Commerce at the regular meeting of March 28, 1958.

EDMUND H. POGGI, JR.,
President.
J. MUIR CROSBY,
Executive Secretary.

Inflationary Effect of Tax Cut Doubted by Many Economists

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, April 14, 1958

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article which appeared in the New York Times of Sunday, April 13, 1958, entitled "Inflationary Effect of Tax Cut Doubted by Many Economists." The article criticizes the economic theories of the President and the Secretary of the Treasury.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INFLATIONARY EFFECT OF TAX CUT DOUBTED BY MANY ECONOMISTS

(By Edwin L. Dale, Jr.)

WASHINGTON, April 12.—Would a tax cut, and a resulting deficit in the budget of as much as $10 billion, be inflationary?

President Eisenhower and his Secretary of the Treasury, Robert B. Anderson, have no doubts that it would be. But some economists are not so sure.

Most economists would probably agree that, at the least, such a budget deficit would prevent some price reductions that otherwise would occur in a slump. But many doubt that a serious additional inflationary fillip would be given to the economy by a deficit in that range, incurred to stop a recession.

The belief that deficits are inflationary centers on an essentially monetary argument. The President used it at his last news conference.

A deficit, so this argument runs, involves large additional Government borrowing, and much of this borrowing inevitably will be from the banking system. Such borrowing has the effect of the printing press—adding to the total supply of money, both cash and bank deposits, in the economy.

Other things being equal, a big increase in the money supply tends to be inflationary. Even if there is no immediate upward surge of prices, a money cushion is provided to supply the financial base for a later inflation.

This argument is sometimes supplemented with the view that a tax cut, and the accompanying deficit, could start the economy up-

ward so rapidly as to generate the inflationary pressures always associated with a boom—pressures of excessive demand financed by the new additions to the money supply.

The economists who do not accept the inevitability of inflationary consequences of deficits make their point in a number of different ways. These are the main lines of thought:

First, on the money supply itself. The money supply grows or recedes in accordance with the total of borrowing from the banking system, not just Federal Government borrowing. Business in recent years has been running a far larger deficit than the Government.

In a recession, business borrowing and perhaps even personal borrowing, falls off, as it has already fallen off so far in the current recession. Thus, some of the money creation resulting from the Federal deficit just makes up for money creation that would properly occur in ordinary periods of noninflationary prosperity.

Obviously the magnitudes of the new Federal borrowing and the decline in borrowing by businesses and individuals are important. But the story is not all one way.

A counterpart to this argument is that the inflation resulting from an increase in the money supply is an inflation resulting from excessive demand. But the very definition of a recession is insufficiency of demand.

Pumping up demand now—by more Government spending and by permitting more private spending through a tax cut—would not be inflationary unless the increase were much greater than $10 billion. The deficiency in what the economy is currently buying compared to what it could produce without strain is probably at least $25 billion, according to this argument.

The argument assumes that some effort would be made even by higher taxes if necessary to combat inflationary pressures if they should emerge after recovery begins. The point it that there need be no immediate inflationary effect, and the longer-term effect can be offset at the time.

There is still another facet to this argument. Many economists hold that the main cause of our recent creeping inflation has not been excessive demand but an upward push from either labor costs or excessive prices charged by business insulated from normal competition, or both. The President's own economic report last January suggested that he accepted at least part of this argument.

According to this school, demand has actually been deficient for more than a year. Pumping up demand will not make any worse an inflation that is not demand caused anyway.

Some members of this school go on to argue that a big deficit, by restoring normal economic growth, might actually be anti-inflationary. This is because certain recent experience seems to show that the productivity of labor is higher during prosperity when the economy is working close to full blast. If productivity goes up, labor costs go down proportionately.

Finally, some economists, who accept the likelihood of some future inflationary consequences from the actions taken to fight the recession, believe that these consequences flow far more from the actions of the Federal Reserve System than from the state of the Government's budget.

The real determinant of how much the money supply increases is the Federal Reserve, this school says. Its "easy money" policy is going to create a potentially inflationary "cushion" of added money supply in any event. The Treasury deficit need not make that cushion significantly larger.

Furthermore, this school argues, the best way to prevent a future inflation from resulting from antirecession actions is to have the Federal Reserve resort promptly to a tighter money policy once recovery begins. Theoretically at least, the Federal Reserve could "squeeze out" of the economy most of the extra money that the antirecession actions had pumped in.

Here again, the key point is that there need be no long-term inflationary consequeces of a big deficit, providing the Government acts wisely after growth is resumed.

Some economists point to the fact that there was a budget deficit of $9,450 million in the 1953 fiscal year and that the following 3 years showed the greatest price stability of the postwar period. They hasten to admit that some special factors were involved and that this experience does not prove anything, but they think the evidence is of some value.

And so it goes. The arguments, of course, are complicated and somewhat abstruse. But the layman can safely conclude, at the least, that the case is not all one sided.

United States-Russian Cultural Exchanges

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 14, 1958

A DRAMATIC EXAMPLE OF UNITED STATES-RUSSIAN CULTURAL EXCHANGE—AMERICAN PIANIST WINS IN SOVIET COMPETITION

Mr. WILEY. Mr. President, on this opening day of the baseball season, it might not be amiss to turn our attention to another type of competition. I refer to the competition between East and West in the field of culture.

THREE ARTICLES ON PIANIST, DANCE, MOVIES

This morning's New York Times contains, side by side, three interesting articles which vividly illuminate this competition. The first is a front-page story describing the acclaim in Moscow for a 23-year-old young American, Louisiana-born and Texas-raised, who triumphed over 48 other contestants in an international piano competition, based upon the works of the great Soviet composer Peter Ilyitch Tchaikovsky. Apparently this 23-year-old pianist, Van Cliburn, has taken Moscow by storm. Naturally, we are most gratified that an American performer has won in such difficult competition.

ENDING SOVIET DISTORTION ABOUT OUR MATERIALISM

We are not so naive as to think that the fact that one American has triumphed in this field will disabuse the Russian people of the misrepresentations which they have so long heard as to our alleged lack of interest in culture. Unfortunately, many Russians may still think of us as cultural barbarians. But this type of proof to the contrary, based upon Mr. Cliburn's triumph, cannot help doing good.

SENDING PERFORMERS, NOT BOMBS, TO MOSCOW

This incident demonstrates a truth to the Russian people; namely, that the only type of guided missile, so to speak, we ever want to send to Moscow is the human missiles who will go straight to the hearts of the Russian people. I mean the masters of the keyboard, of art, of literature, or of drama.

The only type of so-called guided missiles we would like to see come back from Russia are great performers like Gilels and others who will bring about the noise of American cheers, and not of tears and suffering.

A second article in the morning New York Times concerns the dramatic opening performance tonight of the first full-scale dance organization to visit this country from the Soviet Union. This is the famous Moiseyev dance company, which opens tonight at the Metropolitan Opera, and which has already been met by eager enthusiasm in New York, as it will be met in Washington and in other leading cities.

The third is a most important article based upon an address which was delivered last night by Ambassador Henry Cabot Lodge before the annual Milestone award dinner of the Screen Producers Guild.

LET SOVIETS SEE THE BEST OF UNITED STATES MOVIES

In his address, Ambassador Lodge frankly stated that the Soviet Union is now challenged to fulfill the letter and the spirit of the East-West cultural agreement which was signed last January.

Russia specifically can prove her good intentions by welcoming to her country the best of American motion pictures; films which display an accurate picture of the American way of life, and not the distortions which, unfortunately, for so long have been disseminated to the peoples of the U. S. S. R. This is a fact which Mr. Eric Johnston, head of the Motion Picture Association of America, has likewise long pointed out to Russian movie negotiators.

These three news stories, taken together, constitute, I believe, a most significant commentary on cultural exchange.

THE THREE PHASES OF EXCHANGE

In the first, we see the exchange being carried out successfully inside the Soviet Union.

In the second, we see the exchange about to be carried out successfully inside the United States. I may say, incidentally, that the Philadelphia Symphony Orchestra will reciprocate the visit of the Moiseyev Dance Co. here.

But the third story illustrates the long way we still have to go in order to make two-way exchange a true reality.

We are confident that Ambassador William Lacy and his staff on East-West contacts at the State Department will be doing their very best, at the highest possible level, to uphold our end of the bargain, so to speak. We hope that the Soviets will do theirs, so that the January agreement will be fully carried out.

In this instance, as in so many other instances, it is deeds, not words, that count.

I send to the desk the texts of the New York Times articles, and a related Times editorial. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the New York Times of April 14, 1958]

AMERICAN, 23, IS VICTOR IN MOSCOW PIANO CONTEST

(By Max Frankel)

Moscow, Monday, April 14.—Van Cliburn a 23-year-old American, has won the first prize in the Soviet Union's international Tchaikovsky piano competition. Mr. Cliburn, a southerner who lives in New York, triumphed in what had been regarded as a contest of extemely high standards over three young Soviet pianists and one from Communist China. The awards were voted late last night by a panel of 16 jurors, including 6 leading Soviet musicians. Their choice clearly coincided with that of the Moscow public. Muscovites had wildly cheered Mr. Cliburn's performance in the finals Friday night. Daniel Pollack, another 23-year-old American from Los Angeles, was awarded eighth place. He actually ranks ninth among the nine finalists because there was a tie for second place.

Cowinners of the second prize were Liu Shi-kun, an 18-year-old student at the Chinese Central Conservatory, and Lev Vlasenko, a 29-year-old native of Tiflis, Georgia, in the Soviet Union.

The final standings will not be formally announced until noon today. But they became an open secret about 2 a. m., when the top winners were summoned to the Moscow Conservatory to make color films of the program. There Mr. Cliburn quickly became the center of attention and a number of contest officials had word of the results.

The chairman of the jury was Emil Gilels, the Soviet pianist who toured the United States earlier this year. Last Friday night, after Mr. Cliburn's performance of Rachmaninoff's Third Piano Concerto, Mr. Gilels and others filed backstage to embrace the young American.

Also on the jury were Dmitri Kabalevsky, Soviet composer, who had written a rondo for the final please, and Svyateslav Richter, a well-known Soviet pianist.

Mr. Cliburn, who was born in Louisiana and whose family lives in Kilgore, Tex., is a tall, lanky, boyish-looking young man. He attained his first moments of serenity shortly after the results became known. Still playing for the cameras at the conservatory at 3 a. m., he seemed to have conquered all the dizzying excitement that had possessed him throughout the contest.

WEARY SYMPHONY PLAYERS

All around him were the weary members of the Moscow Symphony Orchestra. Since Thursday they had played 3 hours each morning to rehearse the contestants and from 3 to 4½ hours in the evenings for the actual performances. Yesterday they had started at 9 a. m. They accompanied Messrs. Pollack and Liu in rehearsal and for the contest's last concert in the evening.

Then began the filming, which promised to continue until dawn. Out front was a full house of spectators, similarly incapable of tiring of Tchaikovsky's Piano Concerto No. 1, which had been the major required work for all nine finalists.

The enthusiasm of performers and audience this morning was the most dramatic but certainly not the only indication of the stir that this competition has caused here. Every newspaper has been billing it for weeks. Mr. Cliburn's name has been on tens of thousands of lips in the last week and a ticket for his Friday performance was taken as a sign of standing and influence in the community.

In the opinion of most observers, now confirmed by the jury, Mr. Cliburn did not let his public down. He played wtih exacting technique but with great lyricism, especially in the Rachmaninoff. Dr. Mark Schubart, dean of the Juilliard School of Music, who was here to watch his students in competition, rated Mr. Cliburn's Rachmaninoff rendition as outstanding. Mr. Pollack also is a graduate of Juilliard.

TWENTY-FIVE-THOUSAND-RUBLE PRIZE

Mr. Cliburn will receive a gold medal and 25,000 rubles in cash ($2,500 at the tourist exchange rate). The other cash awards scale down to 5,000 rubles for the eighth prize for Mr. Pollack.

Mr. Cliburn also will have to give a solo recital on Friday and will perform at two concerts with other winners. In addition, he has had many offers for recordings and appearances throughout the country. Mr. Pollack also will make some recordings.

Third place was awarded to Naum Shtarkman of the Soviet Union. The other winners were:

Fourth, Eduard Miansarov, Soviet Union; fifth, Milena Mollova, Bulgaria; Sixth, Nadia Gedda-nova of France; seventh, Toioaki Matsuura of Japan.

Mr. Pollack had received polite applause. He seemed a bit disappointed by his final performance.

"Thank God it's over" he said backstage. "I feel like sleeping for 20 years."

[From the New York Times of April 14, 1958]

RUSSIAN DANCERS REHEARSE AT MET—TROUPE GIVES BREATHTAKING PREVIEW FOR MEMBERS OF OPERA AND OTHERS

(By Lawrence Fellows)

Moiseyev Dance Company of Moscow left its first American audience gasping for breath yesterday at the Metropolitan Opera. And the troupe of folk dancers doesn't open there officially until 8 o'clock tonight.

Thirty-six members of the Metropolitan Opera Ballet had filtered quietly into the darkened house to watch the company of 100 men and women rehearsing passages that stem from their own folklore. The Met's dancers were leaving on tour last night and, it was explained, might "never have another chance to see the Russians."

Before long, as many more persons had made their way into the audience. All of them had very important reasons for being there. Whatever their reasons, they were quickly taken in by the vigor and enthusiasm of the Russian dangers.

In wild, jubilant dances the men hurled themselves across the stage and leaped fairly to the drops above. One American dancer mumbled:

"They're just rehearsing. They're just rehearsing."

GOOD DIET AND HEART

Asked what they eat to get their strength, one of the Russian girls answered simply:

"They eat everything. But it's not that. It's the heart of the Russian people."

Rehearsing The Dance of the Tartars from Kazan, the girls flirted effectively and the men responded with more leaps and bounds and the famous prisyadka, where they seem to sit and kick, but don't sit. They ended with an ease and charm that led another girl to explain almost as simply:

"It's the heart of the Russian people. The boys like to make fun and they try to show off. Each one says: 'Look at me. Look how strong I am, how brave I am. Choose me and not the others.'"

IMPRESSIONS VOICED

The dancers could concentrate only briefly on other aspects of their 3-week stay at the Met and the 10-week tour of the United States and Canada. But there were these observations:

Americans are warm and generous.

New York's billboards make their heads ache.

People shouldn't have to pay to cross a bridge, and especially not twice just to go to the airport and return.

The cultural-exchange program, under which they came and the Philadelphia Orchestra will go to Russia, will improve mutual understanding.

The stage at the Met is full of holes.

But much more exciting was the action on stage. They turned repeatedly to shout: "Khoroshi prizhok," good jump; "Ochen khorosho," very good.

The Moiseyev company, the first full-scale dance organization to visit this country from the Soviet Union, will open with an advance sale of approximately $300,000. It will be seen in 12 numbers created by Igor Moiseyev, based on the folk vocabulary of the various peoples who make up the Soviet Union. The same program presented under the aegis of S. Hurok will be given at all performances.

[From the New York Times of April 14, 1958]

LODGE PRESCRIBES FILMS FOR SOVIET—AS PEACE STEP, HE CALLS ON MOSCOW TO SHOW MOVIES DEPICTING TRUE UNITED STATES LIFE

BEVERLY HILLS, CALIF., April 13.—Henry Cabot Lodge challenged the Soviet Union tonight to take a step for peace by permitting the Russian people to see Hollywood movies that did not distort American life.

"The world is waiting to see whether the cultural exchange agreement signed in Washington last January is going to be allowed to make friends for America inside Russia," the United States representative to the United Nations declared.

Mr. Lodge spoke before 1,000 film and civic leaders at the annual Milestone award dinner of the Screen Producers Guild. Spyros P. Skouras, president of Twentieth Century-Fox, was guest of honor as the 1957 recipient of the award for outstanding contributions to motion-picture development.

NEGOTIATIONS GOING ON

A Soviet delegation recently arrived in Washington to assist in cultural negotiations. No formal report has been made on progress toward an agreement on the selection of movies the Russians might wish to acquire, or terms for their sale or lease. The exchange agreement between the two countries left open the conditions for business transactions.

"The first signs from the Soviet side are far from encouraging," Mr. Lodge said. He quoted the late Mike Todd as having said:

"The U. S. S. R. wants any American-made film that shows American life at its worst. It will show anything that depicts Americans as hoodlums or morons."

Mr. Lodge said the producer made the statement this year after having returned from his second visit to the Soviet Union. Mr. Todd was killed March 22 in a plane crash.

CHARGES VILIFICATION

Mr. Lodge continued: "America should say this to the Soviet leaders: 'Let us show your people how Americans really live. For years you have been carrying on a systematic, wholesale campaign of vilification against America. If you really want to relax tensions, let your people see the best American movies. We challenge you to make this one step for peace.'"

While the United States and the Soviet Union seem to be in a deadlock in terms of military security, Mr. Lodge warned, the struggle between communism and freedom does not end there.

He said motion pictures and other forms of communication that protected the image of America abroad could make important contributions toward creating a community of independent nations which understand each other and respect each other regardless of all the differences in their ways of life.

In this respect, he said, the motion picture industry can do things which are beyond the power of a free government. This is an inspiring challenge for Hollywood, he added.

"Yet, greater still, is the challenge of reaching the minds of the people behind the Iron Curtain, where American films are practically excluded and where 200 million people have been systematically misinformed about us by their leaders in an effort to make our whole way of life look bad as the Communist dogma says it ought to look," Mr. Lodge declared.

He paid tribute to Mr. Skouras, who came to this country as an immigrant from Greece, as a wise and splendid citizen. He called him a film leader who understood the responsibility that goes with great influence.

[From the New York Times]

THE ARTS AS BRIDGES

The music lovers of Moscow are an exacting lot. To win their admiration and affection an artist has to near the top in his field. It is particularly pleasant, therefor, to learn that a young American pianist, Van Cliburn, has taken Moscow by storm. He has won the International Tchaikovsky piano competition as well as the hearts of his Moscovite auditors.

Something similar will happen tonight in our own city, we suspect, when the Moiseyev Dance Company opens its 3-week engagement at the Metropolitan Opera House. An enviable reputation precedes this company, whose repertoire is based upon Russian folk dances, a form of art whose lively and colorful nature has long been world-famous. We hope and expect that the Moiseyev dancers will win applause here as deservedly as has Mr. Cliburn in the Soviet capital.

It has long been all too evident that bridges of friendship and understanding need to be built between the Soviet and American peoples. So far as politics are concerned, we seem unfortunately to be still far from such bridge building. But events such as Mr. Cliburn's appearance in Moscow and the Moiseyev dancers' performances here remind us that the arts give us alternative means of promoting such understanding. The Soviet citizens who applauded Mr. Cliburn in Moscow cheered him for his piano playing, and by so doing implicitly paid tribute to American culture. Those Americans visiting the Metropolitan tonight will be doing the same for the culture of the Soviet people.

We need many more such artistic bridges, and it is the great merit of the recently concluded Soviet-American exchange agreement that it promises to further significantly such reciprocal visits. The more such exchanges there are, the better.

Resolution by the American Car & Foundry on Unemployment and the Need for Government Contracts

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the Berwick, Pa., Borough Council on the current unemployment situation and the need for Government contracts for the American Car & Foundry Co. which is located in Berwick:

BERWICK, PA., *April 3, 1958.*

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D. C.

DEAR SIR: The Berwick Council at their meeting held March 17, 1958 discussed the situation caused by unemployment conditions and the following resolution was adopted:

"Whereas the American Car & Foundry industry is the only heavy industry within a 30-mile radius of Berwick and this industry is now suffering from a severe decline in business and is forced to layoff approximately 50 percent of its normal working force of a normal employment of between 2,500 and 3,000 people; and

"Whereas this great number of unemployed will seriously affect the economy of several communities and we, the members of the borough council are fully aware of the possible hardships that may be endured by these unemployed: Be it

"*Resolved*, That we, the members of the council of the Borough of Berwick on the basis of the record of production of the Berwick AFC and its employees, during peacetime and through two world wars, respectfully solicit your aid in helping Berwick and the surrounding communities get their measure of aid through defense contracts now being let to distressed areas; and be it further

"*Resolved*, That the ACF in Berwick with their exemplary record in defense production and economy in the past, and with the facilities to immediately go into production upon receipt of orders thus furnishing employment to many people, we will appreciate any consideration and assistance you may be able to render the people of this area."

Respectfully submitted.

D. WM. ARNDT,
Secretary, Berwick Borough Council.

Harry S. Truman

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news item which appeared in the April 12, 1958, issue of the Washington (D. C.) Daily News:

(By Milton Berliner)

Salty Harry S. Truman was even saltier than usual as he worked his way through the first day of a 4-day visit to Washington.

From the moment he stepped down yesterday from the New Haven, Conn., train out into the cold drizzle until his final public appearance of the day, he answered questions freely, offered opinions copiously and spoke frankly and calmly about some of the things that used to get his dander up.

ONE REGRET

For example, about firing Gen. Douglas MacArthur from the Far East Command.

"I have only one regret about that," the former President told the Reciprocity Club at a Mayflower luncheon. "That I didn't do it sooner and that's the God's truth."

Mr. Truman spoke at the luncheon upon invitation of an old friend, Barse Stonebraker, a past president of the club.

"I said one day last May to Harry Truman," Mr. Stonebraker explained in introducing the guest of honor: "'Will you do it?' And he said, 'You're damn right I will.'"

Mr. Truman laughed and blushed a bit.

When Mr. Truman got up, he recalled that he first knew Mr. Stonebraker as a livestock commission man back in Kansas City about 40 years ago.

"And that's where he got the bull," Mr. Truman said.

Then he turned to Herbert M. Pasewalk, club president who had spoken earlier, and said: "You've had some cow pasture experience yourself."

Mr. Truman talked a bit about foreign policy and how the President alone is responsible for it.

"When the President negotiates a treaty," he said, "he gets the advice and consent of the Senate. And sometimes he gets a hell of a lot of advice and not much consent."

He recalled the trouble he had with a Russian Ambassador who telephoned an hour or two before a White House dinner to say he couldn't come.

Mr. Truman said that this upset the whole complicated seating arrangement and a State Department official came to him and asked him what he should tell the Russian Ambassador.

"'Tell the s. o. b. to go to hell and that we didn't want him in the first place,'" Mr. Truman said he told the official.

EAST FRONT

The former President launched into crackling defense of the project extending the east front of the Capitol.

"That old building is just about to fall down," he said.

He warned that "some old Senator who has had too much lunch" will walk through the Capitol one day and start the collapse.

IDENTIFICATION

Later in the day, Mr. Truman received a a Universal Travelcard.

The presentation was made because several weeks ago when he checked out of the Mayflower and wanted to sign the bill, the cashier, Miss Edith Holmes, failed to recognize him.

"I'm sorry, sir, but you must have a credit card," she told him.

Political Recession

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the Reading (Pa.) New Era:

POLITICAL RECESSION

Anyone who says the current recession is the result of natural causes unrelated to politics is not too astute a thinker.

Of course the recession is political.

Numerous spokesmen for the administration repeatedly declared that interest rates were being raised arbitrarily to halt inflation. The very inspiration of the tight-money policy and curtailment of national defense spending was political.

Now, once again, when more than 5 million unemployed are crying for jobs, Eisenhower says, "Go slow." Why? Because business forces who can see no further than their nose are afraid that any concessions to the people in the form of improved unemployment compensation or tax cuts may ultimately affect the profits of business.

In short, a controlling clique of the big business world is willing to ride out the recession from a position of economic strength which will enable them to drive some competitors out of business and make the long-term future especially rosy for the survivors.

The Eisenhower business administration is still calling the Nation's shots from a business point of view. Until someone in Wash-

ington formulates policy based on helping the consumer to get spending money in his pocket, all the gaff from the administration will be little more than hot air.

This is a political recession and the way it looks now, only politics in November will reverse the trend.

Hell's Canyon Dam

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 14, 1958

Mr. PROXMIRE. Mr. President, the Barron County Electric Cooperative is one of the finest REA co-ops in Wisconsin. It has distinguished itself as the pioneering electric cooperative. The Barron County organization is, I believe, the largest in membership of the cooperatives in Wisconsin. One of its most distinguished members, and its former president, Mr. John E. Olson, is now serving as president of the Dairyland Power Cooperative, which is the world's largest rural electric cooperative, producing and transmitting electrical energy to some 75,000 rural users in four States. Mr. Willis Jerome, present president of the Barron co-op, is a distinguished leader in the State rural electrification movement. Manager Otis G. Berger has established a record of efficient and competent operation which is the envy of the Nation.

Mr. President, this fine cooperative recently held its annual meeting at Barron, Wis. The farmer-owners who attended the meeting expressed themselves on two matters which I should like to bring to the attention of the Congress. I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD the two resolutions adopted by the Barron County Electric Cooperative.

There being no objection, the resolutions were ordered to be printed in the Appendix, as follows:

BUILD HELLS CANYON DAM

The steady increase in unemployment in our Nation today; the continuing need for more and more low-cost electric power for defense emergencies facing our Nation; the ever-increasing need of Midwest farmers for low-cost fertilizer; the protection and preservation of our natural resources, are all matters of vital concern to the farmers and the farm-supported communities of Barron and adjacent counties.

Therefore, we, the members of Barron County Electric Cooperative, assembled in annual meeting in the city of Barron on March 19, 1958, stand together in supporting the full development of our river basins, including Federal construction of the high dam at Hells Canyon on the Snake River; that its great electric power generation potential, and complete capacities be utilized without excessive profit toll to private interests, and without endangering through partial and restricted use of major power site the continuing and crucial need for electric energy in abundance.

OPPOSE ENDING REA PROGRAM

The tremendous progress of rural electrification in America during the past decade has been made through the direct efforts of rural electric cooperatives, or by their stimulation of effort on the part of an industry that showed little desire to serve rural America prior to the advent of the Rural Electrification Administration, as an agency of our Federal Government.

Under the original policies and provisions of the Rural Electrification Act, the electrification of our Nation's farms has increased from 10.9 percent in 1935 to approximately 94 percent today. This vast achievement on the part of rural electric cooperatives has been attended by far-reaching benefits into the channels of labor and industry, at no cost to our Government. Under the prevailing policies and provisions of the Rural Electrification Act, our Federal Treasury has also been benefited by an accumulation of profit, realized from loan funds, at interest rates paid by rural electric cooperatives, approximately $53 million over the cost of such loan funds to our Federal Treasury. Thus, since 1935, the interest rate paid by rural electric cooperatives on their loan funds have been sufficient to sustain the REA program without Federal subsidy, or without cost to the American taxpayer.

Therefore, we the members of Barron County Electric Cooperative, assembled in annual meeting in the city of Barron on March 19, 1958, reject the proposals of the administration in Washington to jeopardize the economic position of our cooperative and deter its continuing progress, by substituting policies and provisions of the Rural Electrification Act of 1935, that would subject our future need for loan funds to the manipulations of private sources for adequate and dependable financing.

We further request that this resolution be submitted to Senators WILEY and PROXMIRE, Congressman LESTER JOHNSON, in Washington, that they may know our membership opposition to Senate bill 2427, and House bill 8714, both bills designated to cripple or destroy the Rural Electrification Act as it now governs our Congress and the Rural Electrification Administration.

A Sound Antirecession Step—An Accelerated Highway Construction Program

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. DONOHUE. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the statement I recently submitted before the House Public Works Committee in support of H. R. 11418, which I introduced, and similar measures:

STATEMENT OF HON. HAROLD D. DONOHUE, A MEMBER OF CONGRESS FROM MASSACHUSETTS, BEFORE THE HOUSE COMMITTEE ON PUBLIC WORKS, MARCH 25, 1958, IN SUPPORT OF H. R. 11418

Mr. Chairman, I am grateful for the opportunity of appearing before this distinguished committee in support of my bill, H. R. 11418, which is identical to H. R. 10422, introduced by the chairman of your committee, Hon. CHARLES A. BUCKLEY, a Member of Congress from New York.

H. R. 11418 would compensate each State that has had a toll road incorporated into the Interstate System by providing equivalent mileage for said State. This equivalent mileage would be designated as part of the Interstate System and would thus become eligible for 90-percent Federal aid.

Under my bill, those States which were forward-looking enough to prepare plans, finance, and construct needed highways before the Federal-Aid Highway Act of 1956 became law, would be properly compensated. Instead of being penalized for their progressive attitude, these States would be given this additional mileage to replace the mileage incorporated into the Interstate System. I might point out that this equivalent mileage would be given to the States only when the States initiate the request for the mileage.

I believe that this additional mileage would provide another form of public works construction which would be a stimulus and a shot in the arm to the economy of the States wherein these roads would be constructed. The local areas where the highways would be laid out would receive an opportunity not only for the increased circulation of money but, in addition, the impetus of additional employment by the creation of new jobs that this work would necessitate.

From the Clay report through the Federal-Aid Highway Act of 1956, Congress has recognized the principle that in some form or another there should be an equitable reimbursement to those States whose State-constructed mileage was taken away when the Interstate System was created. There have been a number of proposals put forward as to reimbursement; and a report has been filed by the Secretary of Commerce pursuant to section 114 of the Federal-Aid Highway Act of 1956.

I have studied this matter carefully and, in my opinion, the increased mileage which this bill provides would in the long run be the most beneficial and the best form of reimbursement that the States would receive.

I thank you for the opportunity of appearing before this committee and trust that this bill will receive favorable consideration by the committee.

Extension of GI Business Loan Guaranty Program

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mr. KNUTSON. Mr. Speaker, the passage of Public Law No. 85-364 included extension of the GI business loan guaranty. I am very much in favor of this program and under leave to extend my remarks in the RECORD, I insert the following letter from Mr. Paul G. Couvrette, of Thief River Falls, Minn., who gives very excellent reasons for continuing the program:

THIEF RIVER FALLS, MINN., *April 7, 1958.*
Congresswoman COYA KNUTSON,
Washington, D. C.

DEAR MRS. KNUTSON: As a former serviceman in World War II, I am writing in protest to the Goverment's bringing to a close the GI business loan guaranty, which I understand expires July 25, 1958.

Many veterans up until the present time have not needed to make use of this aid. However, due to changing times and conditions, it could prove to be, not only a nice cushion, but a great aid in starting one into a business, without which it might prove to be utterly impossible to get financial aid to do so.

Why the bill should ever expire I cannot understand. We never know when or what is apt to turn up and having this to rely on can make possible the attaining of a goal or the grasping of a long waited for opportunity.

Each loan, as you know, is always thoroughly screened and the applicant must be qualified by experience and know-how and have a reasonable chance to succeed before it is ever approved. So why take away such a big help for your veterans, merely because of a time on the calendar.

We must protect the small farmer and businessman. They are the backbone of our country. Our present system is giving everything to the big fellow and standing idly by watching numberless people lose their businesses and farms because there is no one to stand up and fight for them. Where better can he turn than to his government, whom he served so well and, as in many of our cases, gave up our business cheerfully to serve when we were needed?

Kindly give this your special consideration and effort. I am sure it will be greatly appreciated by all the services and no doubt greatly influence their voting.

I would appreciate hearing from you regarding what is being done to preserve this priceless help and also learn of your views on the matter.

Very truly yours,

PAUL G. COUVRETTE.

The Creation of a Coal Research and Development Commission Will Stimulate the Production and Conservation of Coal Thus Relieving Some of the Unemployment in the Coal-Producing Areas of the Nation

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. VAN ZANDT. Mr. Speaker, this morning I appeared before the Mines and Mining Subcommittee of the House Committee on Interior and Insular Affairs in behalf of my bill, H. R. 9593, designed to encourage and stimulate the production and conservation of coal through the creation of a Coal Research and Development Commission. The statement follows:

STATEMENT BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, APRIL 14, 1958, BEFORE THE MINING SUBCOMMITTEE OF THE HOUSE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS, IN SUPPORT OF H. R. 9593

Mr. Chairman, I appreciate the opportunity of appearing before your subcommittee in behalf of my bill, H. R. 9593, designed to encourage and stimulate the production and conservation of coal through the creation of a Coal Research and Development Commission.

As many of you know, I represent a bituminous-coal area in the heart of Pennsylvania where a depressed economy has existed for years because of decreased demand for coal.

Since the close of World War II, except for a brief recess brought about by the Korean war, unemployment has plagued my congressional district. At this moment 15 percent of a 90,500 labor market is unemployed mainly due to the loss of our eastern seaboard coal markets and its effect on the coal and railroad industry.

In Clearfield County, which is among the 3 counties in my congressional district, 20 percent of the population of the county is living on public assistance and surplus commodities; while in my 3-county area, 13 percent is living on public-assistance benefits and surplus-food commodities.

As you can see the situation is extremely serious and presents a compelling problem.

One of the legislative approaches that I have made to bolster the sagging economy of the central Pennsylvania area is through distressed area legislation, and at the moment there are 40 bills pending before the House Banking and Currency Committee providing economic assistance to these areas. It is my hope that 1 of these 40 bills will be enacted into law during this 85th Congress.

Another legislative approach I am making to bolster the sagging economy in Pennsylvania is through H. R. 9593, now before this subcommittee. This bill, which was introduced in August 1957 will encourage and stimulate the production and conservation of coal in the United States through research and development by creating a Coal Research and Development Commission.

Such a commission would in effect give our coal-producing regions a greater opportunity for lifting themselves out of the economic doldrums that have persisted for the greater part of the period since the conclusion of World War II. While there is no question about the need for a distressed area program for the present and the immediate future, over the long run a research and development plan for the coal industry as provided in H. R. 9593 would lessen the burden placed on Federal and State budgets.

Mr. Chairman, let us take a look at the current situation in the central Pennsylvania coal industry. While final figures are not yet available, there is no disputing the fact that central Pennsylvania's bituminous coal production in 1957 decreased from nearly 58 million tons in 1948 to 36 million tons or nearly 40 percent. A further deficit of several million tons is expected for the year of 1958.

From the standpoint of employment we had nearly 49,000 persons employed in the coal industry in the central Pennsylvania area as compared to 22,600 as of December 31, 1957. These figures represent a drop of nearly 45 percent. From this information you can readily understand why my district is classified as a labor surplus area and has been for years.

One of the obvious reasons for restricted demand for our coal is the unabated waves of residual oil that sweep into our east coast markets. For almost a decade I have been insisting that a law is needed to check this unfair competitive practice, and we who represent coal States have enjoyed a measure of consolation in the administration's voluntary program for ebbing the flow of crude oil and products from alien petroleum fields and refineries. The assurance required for safeguarding the domestic fuel producer and our American workman cannot be guaranteed, however, until a legislative barrier is set up as may be provided through a quota limitation when the request for extension of the reciprocal trade agreements is considered by Congress.

Wherever corrective steps may be taken in this regard by the 85th Congress, the necessity for a Coal Research Commission will remain. The fuel upon which we place dependence for America's economy and security of the generations ahead must be ready for immediate delivery when called upon.

Mr. Chairman, the research program as provided for in my bill, H. R. 9593, will not only assist in increasing coal production and coal utilization but will provide also for improvement in transportation methods. This is borne out by the fact that teams of railroad management and labor have indicated accord in the approach undertaken in H. R. 9593, as have the great industrial fuel consumers of our Nation.

Members of the House and Senate have an opportunity through the creation of a Coal Research Commission to erect a monument to the progressive attitude of the 85th Congress. Therefore, enactment of this bill into law will symbolize the determination of this legislative body in guaranteeing the availability of energy resources for this period of international crisis and for the years and centuries beyond our own lifetime.

Mr. Chairman, I should like to lay aside any pride of authorship as far as this type of legislation is concerned. My plea here today is that a bill may be perfected and enacted into law that will bring into being a Coal Research and Development Commission.

Information in the hands of our Government and this subcommittee is replete with evidence of the need for a Commission to formulate and execute an overall research program for the coal industry.

In addition, I firmly believe that the fruits of this Commission will restore coal to its economic prominence in this country and in doing so alleviate many of the ills of unemployment in the coalfields of our Nation.

Frankly, this legislation is desperately needed by the coal industry and the coal areas of the Nation.

Aid for Distressed Areas Urged

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Jenkins Township-Yatesville, Pa., School District urging aid be given to distressed economic areas, particularly those located in the anthracite coal region:

Whereas the Jenkins Township, Yatesville Borough School District is located in Wyoming Valley and is in the heart of the anthracite coalfields; and

Whereas the taxes derived from the assessment of anthracite coal has been the main source of revenue for the aforementioned school district; and

Whereas the depletion of anthracite coal deposits have materially reduced the income of said school district; and

Whereas many of its residents have been forced by unemployment to leave said district to seek employment elsewhere; and

Whereas the conditions aforementioned have caused said school district to be placed among those classified as distressed; and

Whereas said school district and its residents are in need of State and Federal aid; and

Whereas the Honorable Daniel J. Flood, Senator Joseph Clark, and Governor Leader have introduced, or are in process of introducing, legislation designed to aid distressed areas: Be it

Resolved by the Jenkins Township, Yatesville Borough School District, and it is hereby resolved by the authority of the same as follows, That Hon. George Leader, Governor

of Pennsylvania; Hon. Daniel Flood, Congressman from Luzerne County; and Hon. Joseph Clark, United States Senator, be immediately contacted and their aid solicited to support the bills introduced in the Congress of the United States and in the House of Representatives and Senate of the Commonwealth of Pennsylvania, designed to aid distressed areas, particularly those located in the anthracite coalfields and to do everything in their power, whether by legislation or otherwise, to bring relief to these areas as soon as possible.

SARA COYNE JORDAN,
President.
WALTER BECHTAHL,
Secretary.

No Prohibition—Back Door or Otherwise

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 31, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address I delivered before Labor's Committee To Celebrate the 25th Anniversary of Repeal, at the Hotel Commodore, New York City, April 7, 1958.

The address follows:

NO PROHIBITION—BACK DOOR OR OTHERWISE

(Address by Representative EMANUEL CELLER)

If the chemise or sack dress is here to stay, then shudder we must. I am told by some very vocal sociologists and psychiatrists that the chemise or loose bag dress is really an expression of nostalgic yearning for the Flaming Twenties. If this be so, we are a doomed people. When I see a woman with one of the square dresses, I expect her to do the Charleston—the dance of the prohibition days.

Is there a connection between high prices and high skirts, no waistline and economic bust, the glorified sack and prohibition? There may be something it it, after all.

Aside from the chemise—and what can the helpless male do before the onslaught of fashion?—there is a serious question we must face. Are we taxing ourselves into prohibition?

On beer there is a Federal tax of $6 per barrel and a State tax of $3 on the same barrel. The retailer pays $28.50 for a barrel, and thus one-third of his cost is tax. This cost is passed on to the consumer.

Hard liquor pays the prohibitive tax of $10.50 on a proof gallon. As you know, it was increased from $9 as a temporary measure during the war. But taxes, once put on, like a tattoo are almost impossible to remove.

And what has been the result? A gift to the moonshiners, without their even having to answer the $64,000 question or sending in a slightly used bottle cap. What actually has been accomplished is the encouragement of the bootleggers and hootch runners to get into business, while the legitimate interests are inclined to curtail theirs.

Last year, Federal officers cooperating with State agencies, seized, 11,820 illegal stills, and it is estimated that an additional 3,000 stills were seized by State authorities working independently of Federal investigators.

There are people who are under the impression that all the moonshine activities are hidden in the hillbilly country; that the moonshine activities are unorganized and carried on by bearded old men and barefoot boys on Tobacco Road, with only a flintlock with which to bar the revenuers. The truth is that we find such stills here in the heart of a city like New York. The market is here, the opportunities are here. Moonshining is big business—organized big business—operating from such sites as empty factory buildings, disused garages, condemned tenements, and the like.

They sell to retailers, who pass on this poison to their customers. They sell cut-rate to bellhops, taxi drivers, and the hangers-on to be found in disreputable night spots.

Heavy taxation is their kindest friend, encouraging, aiding, and abetting illegality. The exorbitant, unreasonable taxation is money in the coffers for them—and death to their victims. Only a short while ago we were treated to the tragic spectable of 24 people who died after having consumed a rot gut offered to them in place of legal, properly distilled, and properly inspected liquor.

An excessive tax is an open invitation for the gangster to enter. A reasonable tax which, in turn, would be passed on in savings to the consumer would offer little incentive for the unsavory to pick up where the tax man left off.

Nor would the Government lose with a reasonable tax. The cost of enforcing legal manufacture and distribution of liquor alone makes up the deficiency, not to speak of the increased revenue from personal and corporate taxes that would result from the increased sale of legal liquor. Bad liquor, like bad money, chases away the good. Consumption does not decrease. The traffic follows the cheaper cost.

Let there be instigated a genuine move to cut these taxes and you can be sure that the greatest howls of all will come, not from the prohibitionists, as might be expected, but from the crafty, the greedy, the racketeer who has profited most by the unreasonable, unreasoning liquor tax.

Let me read to you what Thomas Jefferson wrote to a friend on December 12, 1818:

"I rejoice, as a moralist, at the prospect of a reduction of the duties on wine. It is an error to view a tax on that liquor as merely a tax on the rich. Prohibition of its use to the middling class is condemnation of them to poison whisky."

But then, of course, we still have with us the prohibitionists, those self-righteous, self-deluding people who have learned nothing and forgotten all from the prohibition era. Churchill had it right. When he was approached by prohibitionists, he said, "I've taken more out of alcohol than alcohol has taken out of me." I remember a temperance orator holding up to his audience a glass of whisky and dropping into it an angle worm. He said, "See how the worm squirms, suffers, and dies. That is what alcohol will also do to you. Now to change the illustration, I take a pail of beer in one hand and a pail of water in the other and bring both pails to a hard-working donkey toiling in the fields. Which will he drink? The answer of course, is 'the water'." Then the temperance man asked the audience "Why?" and with one accord the audience shouted, "Because he is a jackass." Maybe it's time to start the movie camera again and reel off the days of bathtub gin, of murky speakeasies, of gangland killings over the division of territories, the hijacking, and the general contempt for law and order that pervaded that period. Maybe it's time again to recall the hip-pocket flask, the initiation rites of the young into that illegal, ill-starred world. Maybe it's time to remember the new-made millionaire fattening on the corpse of decency and lawfulness; the rum-runners, the doused lights, the sneaky opening and shutting of doors, the hypocrisy, and the soul sickness that the noble experiment left in its wake.

Never in the history of our Nation were we closer to degradation. We ran wild. Were we not then—all of us—a little mad? and, yes, even suicidal?

But the prohibitionists are still prohibitioning, and all their mouthings are "don'ts." Don't advertise beer and liquor. Don't serve liquor on airplanes. Don't advertise whisky over the radio or television. Don't sell liquor here, there, everywhere. Don't trust man's disciplines. In short, let's all behave as if we were weak, foolish, criminal, insatiable, intemperate, all wrapped up in cellophane to protect us from our own sense and sensibility.

In the year 388 A.D., some 1,600 years ago, a wise man said:

"If you say, 'Would there were no wine' because of the drunkards, then you must say, going on by degrees, 'Would there were no steel' because of the murderers, 'Would there were no night,' because of the thieves, 'Would there were no light,' because of the informers, and 'Would there were no women,' because of adultery."

The perennial prohibitionist is like the perennial censor: Only he is qualified to tell us what is good for us. Substitute his judgment, his taste, his wishes, for our own—and all will be well.

Discipline begins with yourself always, and not with the next fellow.

I speak strongly because I fear me that the time of fear and indecision lend themselves to the delusion that there is a panacea, that there is a cure-all that can be swallowed in one gulp, and then all will be well. This is the kind of thinking to which the prohibitionist is addicted.

How securely the prohibitionist is now hemmed in by good sense, we do not know. He'll get out if he can. He'll get out if we let him.

We are here to celebrate the 25th anniversary of the repeal of prohibition. Actually, we are celebrating the return of good sense, the return to law and order, the return to self-respect, the return to rationality. The "noble experiment" is one of the greatest insults this Nation had to endure, and its horrible consequences are, in part, still with us. There ought to be a law against laws like that.

In closing, I want to strike one note of pride. New York and its environs is today the greatest brewing center in the country, outproducing even famed Milwaukee. If we can't have good hitting baseball teams in New York, we can, at least, have good beer.

Conlon in Tribute to Irish Martyrs

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting article by a noted scholar of Irish history, Mr. William J. Conlon, 23 Breed Street, Lynn, Mass., which appeared in the Lynn Telegram-News, Lynn, Mass., on April 6, 1958.

The article follows:

CONLON IN TRIBUTE TO IRISH MARTYRS

(William J. Conlon of 23 Breed Street, noted scholar of Irish history and a native of Belfast, Ireland, today pays tribute to the martyrs of Easter Week 1916 in Ireland, the 42d anniversary of which is observed today.)

EASTER MARTYRS

As an Irishman born in Belfast and raised there to an age where I had to suffer and fight for my Catholic faith and for my native land's cause that was there denied, I would be happy to pay my humble tribute to the brave political martyrs of 1916 who, under God, were largely responsible for the present partial freedom Ireland now enjoys in which she controls in great measure the public properties and governmental branches that God intended every nation to enjoy within the borders of her own lands.

Who were some of these revolutionary leaders of 1916? Were they what the public press, especially in England, would have us to believe: Wild, restless insurgents, recklessly taking things into their own irreverent hands? No, indeed. They were especially in their representatives, men of calm and cultured pursuits.

There was Sir Roger Casement, knighted by the British for his consular service to them, a tall, gaunt figure with a pale, careworn face, a dark, full beard, eyes tired, but restless, feverishly glowing when animated with his passion for justice, dreamy and distant when he was silent. He was an Ulster Protestant who was converted to the one true faith shortly before he died. There was Eion MacNeill, professor of early and medieval Irish history in the National University in Dublin. There was Tom Clark, a family man, 58 years old, gray haired and spectacled. He was the son of an English soldier, but his mother was Irish.

There was Thomas MacDonagh, a gentle teacher of English literature at the National University, Dublin, and a tenderhearted poet. There was Joseph Mary Plunkett, dreamer and mystic, writer and poet, whose father was director of the National Museum of Ireland and a papal count, made so by Pope St. Pius X. There was Eamont Ceannt, a Dublin clerk, a family man and one of the then living authorities on the language and culture of Ireland. There was James Connolly, 46, a married man with a family, who had the trained knowledge of men and life that comes only to the fearless and astute poor. And there was Padraic Pearse, 36, unmarried, and calm, and beautiful with a controlled power of selfless resolution to make his country free. His mother was Irish, but his father was an Englishman who set up home in Dublin, in the humble trade of a monument mason.

PADRAIC PEARSE: WRITER AND EDUCATOR

The leader of this Irish Revolution, Padraic Pearse, whose title was Commandant General of the Army of the Irish Republic and President of the Provisional Government, was as gifted and as refined in culture as a man could be. Yet, when he spoke, even in the pouring rain at a meeting in open air, he held his thousands of hearers under the power of his idealistic integrity. All his life he suffered, as any real man must suffer, from the knowledge that his country was a slave state under the heel of the clever and propagandising English.

In Ireland, England controlled everything: the post offices, the railroads, the banks, hotels, all government offices, education, trade, army, navy—all. He vowed as a boy that this sinful and long maintained injustice would come to an end. And it would come to an end in the only way such error can come to an end: by the shedding of blood; his own blood which he vowed he would pay and did pay, though he might have to do it alone. As he said himself, "As it took the blood of Jesus, true God and true Man, to redeem the world, so it would take the blood of Irishmen to redeem Ireland from her enslaver."

Yet was this man Padraic Pearse, a man of cultured parts. He set on foot a movement that brought back, in a new way, the native Irish language that England destroyed in Ireland. He talked and wrote in Irish until he became fluent, and learned. He built himself a cottage on the west coast of Ireland, in the seacoast small town of Rosmuck, and there he learned the metaphor of the centuries of spoken Irish where best it can be learned, as he himself says, listening to mothers speaking to their babies and children.

"Since the wise men have not spoken I speak, who am only a fool * * *" was his humble and fierce way of beginning his life of public oratory. The work he intended to do, and did do, is presented to us to read in that touching and pure epic, a play he wrote called The Singer.

To bring back Irish culture and traditions, he took the practical step in 1908 of founding near Dublin his own boys' school called St. Edna's. He knew, as any man with sense knows, that boys and girls should be educated in separate schools, and in many respects in separate ways. I wish to God every educator in America, especially teachers in the lower grades of school, would read his wisdom of education taken from the wisdom of the antique world. A clear mind, in reading his plans and practice, can readily see that along the lines he pointed out and went is the solution of our present chaos and delinquency in American education. Most of what he had to say on education is found in his booklet, "The Murder Machine" in which he tells how England had managed, by her system of education in Ireland, to murder the growth and flower of Irish souls.

Padraic Pearse told his own Irish people that the system of education devised and forced upon the Irish in Ireland by their English oppressors was a black degradation of Irish children. This forced education turned out, or aimed to turn out, Irishmen who were marketable things. Not thoughtful men and women. The English conceived this system of education for Ireland because they thought it useful to their own English ends. This English system should have, by right, aimed to draw forth the students it repressed, it should have inspired, it shed; it should have hardened, it enervated. It taught something, but it formed no character.

Padraic Pearse called this English-invented system of education "the murder machine." He spoke of it as a vast, complicated, far-reaching multitude of arms carrying out mysterious and long-drawn processes of shaping and molding. It ground night and day. It obeyed immutable and predestined laws. It was as devoid of understanding, of sympathy, of imagination as any other piece of machinery that performs an appointed task. Into it fed all the raw material of Ireland. What could be fashioned grew into the English civil service. What could not be fashioned was relegated to the limbo of a bruised and shapeless thing called waste.

Padraic Pearse raged in fury against the code of morals taught in the English system of education—the mean code of the counting-houses. He wrote, "Every education must be said to fail which does not bring to the child two things: an inspiration and a certain hardening. No dream is more foolish than the dream of some sentimentalists that the reign of force is past, that the world's ancient law of unending strife has been repealed, that henceforth the first duty of every man is to be dapper. The first duty of every man is to be good and to be strong. We want again the starkness of the antique world. There will be battles silent and terrible, or loud and catastrophic, while the earth and the heavens last, and woe to him who flinches when his enemy compasses him about."

PADRAIC PEARSE: THE SOLDIER

From 1914 to 1916 the plan of the Irish Republican Brotherhood was mapped out in careful and complete form. It was a plan of uprising and revolution. England was at war with a formidable foe, the Germany of the Kaiser. The opportunity was at hand. Though there was no betrayal of the secret plans, as the day set for the blow at England drew near the leaders knew that the uprising could not meet with material success, and that it was to be a spiritual victory attaining its end by the loss of the battles and the shedding of blood. The few and poorly armed would go anyhow, despite certain failure and death. But Padraic Pearse knew, and the other brave leaders knew, that this blundering and feeble blow at English tyranny would take fire from its very failure and awaken the world to a sympathy and admiration and moral support that would result in the most tremendous gain for Irish freedom since perfidious Albion first pressed the robber's foot on Irish soil.

Padraic Pearse taught his pupils that no man can live finely and nobly who hoards life too jealously. He taught them that only those are at peace with God who are at war with the powers of darkness. He believed that teaching was a priestlike vocation, stressing the old Irish word for a teacher: a fosterer, one who fathers the growth of the minds and hearts of his children, his pupils. Padraic Pearse warned of grave mistakes: "Instead of endeavoring to raise themselves to the level of their pupils (the moral, emotional and imaginative level) teachers incline to bring their pupils down to theirs. Instead of a vision of ultimate truth, many teachers substitute the mean philosophy of this world. So many teachers either never treat of the One Book God wrote, the Holy Bible (and they are content to submit to a system that relegates this one Book to an obscure and vague book among the works of men), or else they treat of this God-written work to destroy the eternal fullness of its message and its meaning. How can teachers face God at the hour of their death never having told their students of the necessity and glory or Mary, God's own virgin mother, or never having told their open-hearted intellectual children where God can be found and had: in the blessed sacrament of the altars, truly present but hidden there.

Padraic Pearse yearned for freedom, especially in education, as a parched man yearns for water. "Our English-conceived and controlled educational system in Ireland needs the divine breath that moves through free peoples," he wrote in 1914, "a breath that no man of Ireland has felt in his nostrils for so many centuries, the breath that once blew through our streets and kindled, as wine kindles, the hearts of those who truly teach and learn."

There seems to be a parallel between this uprising of Irishmen at Easter 1916—doomed to failure and death—and the much larger and more evidently religious uprisings called The Crusades. These nine Crusades—coming at planned intervals from 1095 to 1272—were what the worldly prudent would call foolhardy and wastefully hazardous military exploits doomed to failure. Yet are they written into history, and into the Books of Heaven, for the glory they won that is not of this world. Hundreds of thousands of Christian men left all to march their humble and suffering ways to redeem the Holy Land from the possession of the infidels who believed neither in Christ as God nor in Mary as God's Virgin Mother. "God wills it," was their marching cry; and on and on they tramped in almost certain foreknowledge of the doom that awaited their sacrifice. Yet is their glory remembered, even in the writings as such a writer as Baimes. "Numberless nations arise," says the great historian about the Catholic Crusades "they march across deserts, bury themselves in unacquainted countries, expose themselves to all the rigors of climate and seasons—to deliver a tomb. Grand and immortal movement, where hundreds of na-

tions advance to certain death, not in pursuit of miserable self-interest, not to find an abode in milder and more fertile countries, not for earthly advantages, but inspired only by a jealous desire to possess the tomb of Him who expired on a cross for the salvation of the human race. When compared with this, what becomes of the lofty deeds of the Greeks chanted by Homer? Greece arises to avenge an injured husband: Europe to redeem the spulchre of God."

Easter Monday 1916 was a holiday in Ireland. All was sunny and quiet.

The Irish volunteers, those who were going through with the uprising despite failure of the full plan, were on the march. In Dublin the volunteers there assembled at their various stations. A party of them, hundreds strong, marched along O'Connell street at noon. The Metropolitan Dublin Police, suspecting nothing, cleared the way for them. Such parades were not unusual in Ireland. The marching men halted before the English-controlled and English-owned General Post Office. At a word of command, revolvers in hand, they rushed into the building and took up their quarters there. The tricolor of the flag of the Irish Republic was raised on the Post Office flagstaff. The Dublin police, being unarmed, withdrew. The English military, under General John Maxwell, was called out. It took some days before the English soldiers could capture the Post Office from the insurgents; and even then it was accomplished mainly by the English setting the building on fire and burning it down. Many lives were lost on both sides. The Irish leaders surrendered and were all shot without trial and their bodies buried in lime. Among these was the Commandant-General of the Irish group, Padraic Pearse.

CONCLUSION

Padraic Pearse has done his work. No soldier was ever more sure of his purpose nor of the death that he must die. All his life he schooled himself to this one, this seemingly wasted sacrifice of his life for his country. No one could swerve him from his appointed task. He steeled himself against the call of his heart for a loved wife and children and a home.

"Naked I saw thee, O beauty of beauties, but I blinded my eyes for fear I should fail," he wrote of his own heart. He feared that wife or friends too close to him might distract him from the giving of his all for the freedom of Ireland.

I would like to close this encomium of a hero with a few observations. No man whoever lived was less a hypocrite than Padraic Pearse. No man could be more gentle by nature, more loving of children, more admiring of women. The one word that suits him best to describe the whole of his life from the cradle to the grave was soldier.

Anyone who takes a plane from America and lands at Shannon Airport in this year of Our Lord 1958 will sense immediately that he has arrived in a country alive with a newfound freedom and life. For this new spirit of liberty that Ireland now knows all free men can thank Padriac Pearse and his fellow heroes for the blood they shed to bring the wondrous glory on. But the task is not yet done. As long as the six northern counties of Ireland are kept severed from their own people by the direct and deliberate military power of the English usurper, the ghosts of Padraic Pearse and his brave army will haunt the dreams of all free men in all the corners of the free earth. Make no mistake about it: England is forcing the hand of true Irishmen in the old land, and if England will not yield to national justice in the calm and ordered ways of peace, then Irish blood will once more be shed to bring the cause of Padraic Pearse and of Ireland to the full circle of its Godwilled fruit of all Ireland free.

How Padraic Pearse would have scoffed at the spirit of the modern times when we, as Holy Scripture says we will be, are ruled by the effeminate; and by the effeminate I mean what Holy Scripture means: The weak, the passive, the compromising—those who live in the flabby spirit of the unbrave. Such comfortable and odious effeminacy is evidenced everywhere, even in a weekly run by the Jesuits called America. As a sample of what such a periodical can dish out to the youth of our land, I give this one example out of a possible thousand. Treating of a book published by the MacMillan Co. called (God save the mark) "The Greatness of Oliver Cromwell," the editor of America allows the reviewer to say in the March 28, 1958, issue: "The hero (Oliver Cromwell) is not likely to be acknowledged even by those who read this admirable book." That is the language of the effeminate, the kind of language that Padraic Pearse would rise in fierce anger against because he was a man.

One more word and I am through. Padraic Pearse had one favorite passage from Holy Scripture which he quoted frequently. It was the theme song of his brief 36 years. The passage is taken from the Holy Gospel of our Lord and Saviour Jesus Christ according to St. Luke, the 11th chapter, verses 21, 22, and 23:

"When a strong man armed keepeth his court, those things are in peace which he possesseth.

"But if a stronger than he come upon him, and overcome him; he will take away all his armor wherein he trusted, and will distribute his spoils.

"He that is not with me is against me; and he that gathereth not with me, scattereth."

May the brave, pure soul of Padraic Pearse and all the souls of the faithful departed through the mercy of God and Mary rest forever in peace. Amen.

WILLIAM J. CONLON.

LYNN, MASS.

United States Cockroach Exhibit

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1958

Mr. GROSS. Mr. Speaker, the following news item from a recent issue of the Washington (D. C.) Daily News is inserted in the RECORD for the information of Members of Congress and in the hope that someone will explain why cockroaches—American variety—should be exhibited at an international fair:

UNITED STATES COCKROACH EXHIBIT ASSURED FOR BRUSSELS FAIR

The United States will exhibit 36 cockroaches at the Brussels World Fair after all.

The exhibit, prepared by the National Science Foundation as part of a display of United States scientific progress, was shipped to Brussels by boat several weeks ago.

But the cockroaches arrived in no condition to be displayed. In fact, they had all been squashed.

(Science Foundation officials suspect some seaman with little appreciation of science stepped on them.)

When Dr. Thomas O. Jones, assistant chief of National Science Foundation's office of scientific information, learned of the fate of the cockroaches, he telephoned New York, San Francisco and finally Minneapolis to get a new exhibit.

Scientists at the University of Minnesota finally agreed to grow another batch of cockroaches.

Conditions in the German Educational System

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, April 14, 1958

Mr. PROXMIRE. Mr. President, I have received a thoughtful letter from Miss Lois A. Bottoni, a resident of Milwaukee, Wis., who is teaching in the American dependent school in Worms, Germany. She tells of some of the serious problems American teachers have in attempting to do a good job of teaching American children in the 180 schools we operate in Europe.

I know from my visit to Germany last fall, and my study of the German educational system compared with ours, how important it is that these schools be the show window of American democracy in Europe.

Mr. President, I ask unanimous consent that Miss Bottoni's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the Appendix of the RECORD, as follows:

WORMS ELEMENTARY SCHOOL,
APO-28, IN CARE OF POSTMASTER,
New York, N. Y., March 11, 1958.

Senator WILLIAM PROXMIRE,
United States Senate,
Washington, D. C.

DEAR SENATOR PROXMIRE: I am Lois Bottoni from Milwaukee. At present I am teaching in the American dependent school in Worms, Germany, which is one of about 180 schools in Europe. There are more than 80,000 American children attending overseas schools run by the American Government. These children of servicemen are certainly entitled to the same education that is available in the States, but unfortunately they are not receiving it, in many cases due to inadequate numbers of teachers, and inadequate facilities. At present 75 percent of the teachers leave the system after only 1 or 2 years. The educational loss is unbelievable, and the financial loss to the Government is no less great.

The Department of Defense conducted a survey and study of the schools in 1956, and they published a report which listed needed changes requiring legislation, but we haven't seen a bill resulting from that report. Congress has not had a chance to act.

We are not even paid as teachers are in the States. Unless we teach all the time, summer, Christmas, Easter, we may not get paid even our yearly salary. Teachers are given a GS-7 rating, equivalent to a rank of a sergeant or second lieutenant, but we cannot rise above that, regardless of education, degree, competence, or years of experience. How can the schools possibly have stability when the teachers feel so insecure that they dare not remain with the schools? Most of the schools start with a completely new faculty each year.

Here are some of the recommendations for legislative action, the result of a study by the Overseas Teachers Association (an NEA affiliate):

1. Establishment in Washington of a central office, headed by a civilian educator, wholly responsible for the Department of Defense.

2. One set of rules and regulations, with one interpretation, defining equal benefits

and responsibilities for all teachers, and not subject to variation by local authority.

3. A written contract for all professional employees. Contracts for 1 year.

4. Establishment of a single salary schedule based upon training and experience, quoting the salary to be earned during the school year. Suggested salary of first year teachers with bachelor's degree is $4,950, 11 annual increments of $250 each bringing the maximum salary to $7,700 for the 12th and succeeding years. Extra credit for advanced degrees.

We are constantly being visited by German school groups and educators and we are under constant comparison with our German counterparts. In Germany, where schools and education receive such respect, it behooves us to present the best possible picture of America through our schools and teachers.

As one of the voters from your State, I ask your utmost cooperation in bringing this matter before Congress.

Sincerely yours,

LOIS A. BOTTONI.

An Intelligent Plea for Fair Treatment of Our Accredited Private Business Schools, Their Teachers and Students

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1958

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include, for consideration by the Members, a substantial part of a most intelligently appealing letter, on behalf of our private-business schools, recently forwarded to me by Mrs. Dorothy L. Salter, the distinguished president and director of a private secretarial school in my home city.

The facts and contentions outlined by Mrs. Salter serve to remind us that the independent business schools have, indeed, contributed greatly to our national educational needs and are deserving of equitable treatment with colleges and universities in any Federal aid to education program.

I understand that representatives of the National Association and Council of Business Schools are planning to call on Members of Congress next week in connection with pending legislation, and I earnestly hope you will all be able to find the time to listen to them in accord with our responsibility of being fair to all segments of our American society.

The letter follows:

SALTER SECRETARIAL SCHOOL,
Worcester, Mass., March 17, 1958.

Hon. HAROLD D. DONOHUE,
House of Representatives,
Washington, D. C.

DEAR MR. DONOHUE: As the president of an independent business school serving the people of this area, I am greatly concerned about the wording of the various educational bills being introduced in the Congress of the United States. I note that these bills do not include the private schools in the matter of Federal aid.

I think I hardly need tell you of the role this type of school has played in helping thousands of young people, and some not so young, to go forth with a light step and a confident mien, capable of earning a good livelihood and making a real contribution to the sound business structure of our American way of life.

The Salter school has been in operation for over 20 years and has trained thousands of students who have gone forth to assume positions of trust and importance in communities both near and far. The private business schools of the United States train, according to reliable figures, more than 500,000 students a year. Certainly, such an important facet of education should not be overlooked in the consideration of bills dealing with education. Actually, our schools are community colleges which strain every effort to meet the needs of the people in a given area; and we do it without calling on a taxpayer to appropriate a single dollar in subsidies. In fact, we contribute to the tax coffers on every phase of operation and, so far, have kept our heads above water—though how we do it, I don't know, when the major colleges of the country are almost all operating in the red. How much longer we can hold out with the competition of unlimited public funds stacked against us is a serious matter.

My question then is, "Why have the business schools not been included in the various bills now under consideration?"

Graduation from a high school is as essential to entering a private business school as it is to entering an institution of higher learning. Why should there be any discrimination against allowing tax deductions for tuition payments to a student entering a college from one who enters a private business school? In fact, the need for such relief is more apparent for students attending our schools than institutions of higher learning. As a general rule, our students come from the lower income brackets where the cost of an education makes it difficult for families to pay. Certainly we must not only raise the standard of living in the upper segment of our population, but we must also bring up the standard of living for the lesser skilled persons, so that they too can enjoy prosperity. Any tax relief which would discriminate against students attending our institutions would be grossly unfair.

We note that there are bills to allow teachers to deduct costs for additional courses of instruction. What about the teachers in the business schools? We attempt to train our teachers and to raise the standards of our teachers as high as teachers in institutions of higher learning. Why should these teachers who perform a useful service for over half a million young people every year be discriminated against when they wish to take additional courses to do a better job? Remember that our schools train many secretaries and accountants. It is necessary for our teachers constantly to do a better job and thereby turn out a better product for the American businessman. Certainly any bill that would allow teachers to deduct for special courses should include all types of teachers.

Still another classification of bills deals with aid to institutions of higher learning for the teaching of scientific and engineering subjects. The Salter School belongs to the National Association and Council of Business Schools in Washington, D. C. This organization represents over 500 of the leading business colleges throughout the country and has been in existence for over 45 years. The association has had numerous discussions with engineers and scientists and we have found that in many cases there appears to be no shortage of engineers or scientists but they tell us that they do need trained secretarial personnel who understand technical terms, as well as technical aides. This would free them from some of the routine work which could better be done by skilled persons trained to help along their particular lines.

As a result of these discussions, the business school is now developing courses of instruction to train these people to meet the needs of the engineers and scientists. The private business school, because of its unique flexibility, is the only type of institution that can adjust its program to meet the present need for these lesser skilled personnel. We feel that in any legislation the role of the private business school should be considered.

Representatives of our association will be glad to call on you to outline in person what the business school field is doing in greater detail than in this letter. I am sure that after listening to them, you will be impressed with the contribution made by the independent business college. May I just call to your attention the fact that the private business schools under the World War II GI training program trained 3,500,000 veterans, as compared with 2,200,000 trained by the colleges and universities.

Respectfully yours,

Mrs. DOROTHY L. SALTER,
President.

Citizenship: A Two-Way Street

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

CITIZENSHIP: A TWO-WAY STREET

The United States Supreme Court has been hearing three cases which involve the power of the Federal Government to regulate issuance of passports for foreign travel.

Once again the cases concern Communists. And once again questioning from the bench reflects that strange state of mind in the present Court which has inflated to vast proportions the concept of "individual rights," while undermining that vital companion concept: individual responsibility.

Solicitor General J. Lee Rankin told the court: "Sometimes the interest of the individual has to give way to the interest of the whole community." To which Chief Justice Warren replied: "But does your right as a free American to travel have to give way?"

We do not presume to anticipate the judgment of the Court in these cases. But the public comment of the Chief Justice is illuminating because it follows the general line of recent Court reasoning which has leaned over backward to the point of somersault in favor of Communists, rapists, thugs, and murderers, while tying the hands of the Government in its efforts to combat crime and Communists and protect the rights of the vast law-abiding majority of the American people.

In these cases a major point is whether the Secretary of State may deny passports to Communists, to supporters of the Communist movement and to those who refuse to say whether they are Communists or not. When a defense attorney argued that the State Department had no right to halt travel by Communists, even Justice Frankfurter suggested that the State Department was entitled to answers to some questions.

Right there is the broad issue: whether citizenship is a two-way street; whether all of us have obligations—as well as "rights."

It is, of course, fantastic to argue, as a few have, that our Supreme Court is under

Communist influence. Even Chief Justice Warren, we are sure, shares our complete abhorrence of the Soviet system of tyranny and terror. No; what we are dealing with is something more subtle—and therefore more serious—because it is less easily understood by most people.

We are dealing with a biased viewpoint which goes to the other extreme from the Soviet system. In contrast to the rigid Communist discipline, it would virtually abolish discipline. Instead of making the State supreme and the individual nothing, it would make the individual supreme and the Government increasingly incapable of fulfilling its responsibilities.

Traditional American doctrine has followed a middle way—balancing the rights of the individual with those of the State, to the end of promoting the general welfare as the Constitution commands. The present Court has all but abandoned that middle position.

The middle way recognizes what one court has called a natural right to travel. It rejects dictatorial and arbitrary restrictions upon that right. But it also rejects the idea that the right is unlimited and unqualified, and that those who exercise it have no obligations to their country in so doing.

Measures have been offered in Congress to curb the power of the Supreme Court, since the Constitution limits the appellate jurisdiction of the Court to such regulations "as the Congress shall make." This newspaper opposes those measures. They are too extreme on their own account.

Yet there is no denying that the Supreme Court has fallen sharply in its enjoyment of public confidence. We would, however, prefer to see the Court provide its own remedy—through self-restraint, thus restoring those checks and balances which have kept our constitutional system healthy and strong. To that end, we would like to see the Court rediscover the fact that citizenship is a two-way street.

A Child's Heritage From Theodore Roosevelt

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. DEROUNIAN. Mr. Speaker, we remember Theodore Roosevelt as a statesman and as a soldier but the Cross Street School in Williston Park, N. Y., one of the fine schools in my congressional district, pays homage to him for his legacy to the youth of our country.

This is what the little children in the third grade of the Cross Street School have written about Theodore Roosevelt in their yearbook Cross Currents:

LETTERS OF T. R. ROOSEVELT TO HIS CHILDREN

Mr. Roosevelt wrote to his children very often. He liked to write to them when they were away at school. Then when he went away on trips he always told them about the animals he saw and often brought home a pet for them—one time a dog and another time a badger. In the margins of his letters, Mr. Roosevelt would draw pictures for his children to show what he was writing them. He always called them pet names in his letters, like "Dear Pussycat", "Dear Ethelkins," or "Dear Archie Boy." I think Mr. Roosevelt liked his children very much. You could tell that from the way he wrote his letters.

We took a trip to Sagamore Hill, Mr. Roosevelt's home on October 15, 1957. There were many old-time things there. We saw an old-fashioned telephone on the wall, an old-fashioned sewing machine in the nursery that you had to pump with your feet, and there were old-time carriages in a barn outside which horses used to pull. In one of his letters to his children, Mr. Roosevelt said his horses were afraid of the new machines which were the automobiles which were just beginning to be used.

There was a special room on the third floor of Sagamore Hill where Mr. Roosevelt kept his guns and swords. There was a shovel there which was used to dig for the first railroad, and the button Mr. Roosevelt pressed for the first train to start. There were all kinds of flags in this big room from all over the world, and many kings and famous people sent presents to Mr. Roosevelt when he was President.

Later we went to Teddy Roosevelt's grave and there we saw a stone where something he said was carved on it. He said, "Keep your eyes on the stars and keep your feet on the ground."

We talked about this and decided that Mr. Roosevelt meant that we must dream about things we would like to do someday, but we have to work hard to make the dreams come true.

And this is what their parents have to say:

THEODORE ROOSEVELT AND THE PTA

Your PTA is happy to have been invited to contribute a page to Cross Currents and since your theme this year is Theodore Roosevelt we offer you another interest of this very remarkable man.

Way back in 1897, a group known as the National Congress of Mothers was formed to work for the welfare of children and their right to protection and a healthly, happy home and an education. That national congress was the beginning of what you now know as the parent-teacher association or PTA and Theodore Roosevelt, then Governor of New York was one of its ardent supporters.

In 1899, he agreed to serve on the advisory council of the national congress and held the chairmanship from 1900 to his death in 1919. Later he explained his undeviating support of the organization saying, "I feel that your congress of mothers is the association for which I care most among all associations of either sex with which I have been brought into contact."

While he was President he arranged to invite representatives from every nation to attend the First International Conference in America on the Welfare of the Child, under the auspices of the National Congress of Mothers and Parent-Teacher Associations.

He also advocated the participation of the father saying, "Now and then the people forget that exactly as the mother must help the breadwinner by being a good housewife, so the father, in his turn must in every way back up the mother in helping to bring up the children." He would be glad to know that the PTA now has many men included in its 10,694,474 members.

Carlton Cadettes Visit Washington

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 25, 1958

Mr. THOMAS. Mr. Speaker, during the Easter recess it was my pleasure to entertain in Washington the senior members of the Carlton Cadettes of the Jefferson Davis High School, of Houston.

Forty-one members of this excellent marching group spent 4 days in Washington. It was my great honor to welcome them, and to manage a vist around the Capitol.

The young ladies also visited Mount Vernon, the Library of Congress, the Supreme Court, the Bureau of Engraving, the Federal Bureau of Investigation, and other places of historical interest in this area.

They were accompanied by two capable and charming sponsors, Mrs. Lorraine Nix and Miss Frances Newton.

Mr. Speaker, the growing practice of school groups throughout the country visiting the Nation's Capital is a wonderful thing. A visit to Washington gives to these young people a deeper appreciation of our Government and what it means to every citizen. The great buildings and monuments here are more than stone and mortar. They are living symbols of our great Government. I wish every school group in the country could have an opportunity of visiting Washington.

The young ladies who were a part of the Carlton Cadettes visiting Washington were: Mary Helen Adame, Michelle Beere, Elaine Blum, Sandra Bond, Vivian Brewer, Diane Camp, Edith Collings, Beverly Cox, Judy Dawson, Barbara Foster, Jo Ann Francis, Peggy Frantis, Jerri Glodfelty, Jane Hight, Sylvia Holder, Lee Ann Jett, Janet Kasper, Sandra Kreinop, LaJuan Krus, Sally McClung, Barbara McKeehan, Sharon Merchant, Nita Monkres, Betty Montgomery, Kay Moseley, Liz Nias, Carol Pettigrew, Joyce Robinson, Mary Ann Sands, Carol Schroder, Mignon Seymour, Simone Simon, Pat Smith, Wanda Speer, Barbara Spencer, Patsy Stewart, Lynn Taylor, Nancie Truss, Joy Walkinshaw, Ann Wilkerson, Margie Zarco.

Selling American Labor Abroad

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. NEAL. Mr. Speaker, another specific example of the unfavorable effects of our foreign trade policy as presently administered is clearly outlined in the following letter from one of the major industries that has for many years supported a large labor population in my community:

AMERICAN CAR
AND FOUNDRY DIVISION,
ACF INDUSTRIES, INC.,
Huntington, W. Va., March 31, 1958.

Hon. WILL E. NEAL,
House Office Building,
Washington, D. C.

DEAR SIR: I am writing on a subject of extreme importance to our company and to its employees.

In the billions of dollars of funds provided by the United States since 1950 for foreign aid—no inconsequential part of which has been used for the purchase of railway cars—our industry has not shared to any appreciable extent primarily as the result of price

advantages enjoyed by our foreign competitors.

The domestic car building industry currently is in a depressed state. In a 2-year period its backlog has dropped from 69,000 cars to 15,800 cars. During this period, workers employed by the industry have decreased approximately 50 percent. Our plant located at Huntington employs 1,200 workers and is already affected.

This places extreme importance upon the foreign business which involves the use of American dollars to purchase equipment. We believe that prompt action should be taken to reduce or halt foreign-aid purchases of railroad cars abroad and to build them in the United States.

It has come to our attention that legislation will very likely be introduced shortly amending the Mutual Security Act to provide that some substantial percentage of the dollar amount of such purchases of railroad freight and passenger cars be built in the United States.

The importance of such legislation to our company and its employees is, I believe, obvious. We earnestly urge that you give it your study and support.

Naturally, we should welcome the opportunity of supplying you with any information that you might desire in evaluating the need for action in the light of the desperate situation facing the American railroad car building industry.

Sincerely,

W. B. CHELLIS,
Works Manager.

Federal Support for Public Education

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mrs. KNUTSON. Mr. Speaker, on March 27 I asked permission to reprint an article from the St. Paul Dispatch by Robert Johnson on a statement by Dean Walter W. Cook, of the College of Education, University of Minnesota, on the subject of industry's stake in our educational system. Under unanimous consent, I insert Dean Cook's full remarks on which Mr. Johnson's article was based:

FEDERAL SUPPORT FOR PUBLIC EDUCATION

(By Walter W. Cook, dean, College of Education)

The American people are convinced, and have been throughout their history, that the quality of our educational system determines the future welfare of their children and the ultimate fate of our Nation. They also believe that our power to produce, our high standard of living, our rating as the first nation of the world, should be sufficient proof to all that the educational philosophy of this Nation has been sound.

The prime strength of our educational system has come from the determination of the people to make certain that their children have better educational opportunities than they themselves had enjoyed. The great strength of our educational system also comes from the millions of dedicated and inspired teachers who have worked their 50- and 60-hour weeks underpaid in all cases, and unappreciated in some. The support of public education has always been in the too little category, coming largely from small property owners through an outmoded property tax. Today, with over 25 percent of the population of this Nation in school, we spend less than 4 percent of our national income on our schools, including colleges and universities—a total of less than $13 billion.

We spent 2 billion more than this sum on smoking and drinking alone. We spent more than twice this sum on owner-operated automobiles.

The last Gallop poll to determine how the American public felt about Federal support for the public schools was reported in the Twin City papers on January 22, 1956. Sixty-seven percent of the votes were for Federal support. Now, who blocks Federal legislation of this type? The United States Chamber of Commerce and the National Association of Manufacturers are two of the top blockers. And these blockers have, thus far, been effective. The Federal support programs that have been introduced have been defeated. On March 22, 1958, the Twin City papers carried the notice that the NAM and the United States Chamber of Commerce opposed Federal scholarships for science education as neither necessary or desirable. It is doubtful that this reflects the opinion of the rank and file of businessmen.

Our Nation has a long history of Federal support for the public schools. The Federal Constitution leaves the control of education to the States and the States have delegated this control to local boards of education. The Federal Government created the common schools and the State universities by setting aside 2 sections of land in each township for the support of common schools and 2 townships of land in each State to found a university. Some States received more. Abraham Lincoln signed the first Land-Grant College Act to teach "such branches of learning as are related to agriculture and mechanic arts." Federal support for vocational education was inaugurated during World War I. Since that time there has been no basic Federal legislation in support of public education. We have built highways, homes, dams, electric powerplants, hospitals, and many other important things, but our fundamental institution—public education—has been neglected.

The avalanche of postwar babies is just passing into high school. Many communities have completely exhausted their local resources in building elementary schools. Within the next 8 years, high school and college enrollments will double. Less than half of the States have the financial resources to pay for the schools that they are going to need. Where are they going to get help?

We must continue our all-out local support, but if the Federal Government were to divert 4 percent of the national income into public education this would enable us to have really superior schools, it would still require only one-third of the amount we are now spending on defense, and less than one-third of what we are planning to spend on highways. Actually, the Federal Government now acts as a collection agency for the States in some cases. The highway program is a case in point; the Federal Government is in a better position, in some situations, to tax for them than is a local governmental unit. This is more economical; it is socially desirable; it is practical.

But the problem of education is more than an adequate plant. There are not enough teachers to do the job. The high-school teacher meets classes 5 hours a day plus study halls, homerooms, preparation for classes, setting up laboratory equipment, counseling, plus extra-curricular activities, reports, and paper work. The typical teacher meets from 150 to 250 pupils each day. The pupils turn in homework, problems in mathematics and science, essays, themes, reports. If we allow the teacher 1 minute to mark a paper, it is a 3 hour job; if papers take 5 minutes, it is a 15-hour job. Working a 50-hour week, the teacher still cannot have the satisfaction of a job well done.

A senior high-school pupil typically carries 4 subjects; he could very well carry 5, and many could carry 6. This would require at least 30 percent more teachers even if we maintained the 50-hour-per-week load. If we worked teachers no more than we should and pupils as much as we should, we would need 50 percent more teachers for our present enrollments.

If America is to have the type of educational system we should have, and as good as the people want their children to have, we will have to double our expenditures for public education in the next 10 years. It is as simple as this. The job can only be done if the Federal Government steps in and bears a share of the cost.

And the returns to the entire Nation will be great. Let me give a single illustration that isn't too well known. During the Korean war, only 1.3 percent of Minnesota recruits were rejected for intellectual incompetence. This was the best record for any State. The average for the Nation was 16 percent. But in 14 States, more than 20 percent were rejected, and in one State 56 percent of the recruits were sent home. We—all of us in the 48 States—are vitally concerned with the strength of this Nation. We are also concerned with the quality of education that is available for our children no matter where they are. Society as a whole—manufacturers as well as teachers as well as farmers—demands an increasingly large number of educated and trained citizens to provide the services and skills and goods that characterize our civilization.

Should Bomb Tests Be Continued?

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. DEROUNIAN. Mr. Speaker, arguments for and against the continued testing of nuclear bombs have been whirling around us and the following article, which appeared in the Long Island Daily Press on Friday, April 11, sets forth a view which certainly must be given every serious consideration:

MANY GOOD REASONS FOR UNITED STATES BOMB TESTS

(By Edgar Ansel Mowrer)

The Communist-conceived and pacifist-supported movement to ban further nuclear tests still seems to be growing.

Fanned by the horrendous warnings from many scientists, more and more sincere Americans are coming to believe that bomb testing by our Government is a sort of irresponsible fooling with race suicide.

There is of course no hope of convincing some of them that our administration is not risking race suicide. They want to believe that it is. But I am convinced that if most thoughtful Americans learned the facts, they would cease their protests and stand with Western leaders in the determination to continue testing a while longer. These facts are available to anyone who seeks them.

Here are some of the more important.

First, the American administration is convinced that it could, if it cose, set off new bombs under circumstances which would render detection all but impossible. Therefore, it believes the Russians could do the same.

There are three methods of detection: seismic (earth shocks), magnetic, and sound waves. An underground test leaves no detectable magnetic or sound traces. It does create seismic disturbances which can be registered at considerable distances. But such disturbances can be made so slight that, except to people informed in advance and watching for them, they cannot be distinguished from small earthquakes which are going on most of the time.

Therefore—our administration thinks—they cannot be surely detected. Hence, any agreement with the Soviets that does not provide for inspectors everywhere over the vast Soviet territories, could be violated with impunity by the Kremlin. When Moscow offers full inspection, that will be another story. So far it has not done so.

United States experts have other reasons, however, for wishing to continue nuclear testing a while longer.

One is, the real need for certain further information. For instance, what will be the effect of an H-bomb detonated by a rocket flying above the earth's atmosphere? The results will be important in case a struggle for outer space should ever develop—which is possible.

Another reason is taking some of the horror from nuclear weapons by making them "clean"—that is realtively free of the fallout danger.

Moreover, some American experts would favor our telling the Russians how to make clean bombs once we have them. They assume that even the Kremlin men would prefer to survive a nuclear war—and fallout is no respecter of persons.

So long as the United States has only "dirty" bombs the cynical Russians may figure that our humanitarian President and his generals would hesitate to give the order to use them, since their use would mean the deaths of millions of Russians as well as friendly allies in Russian-occupied capitals like Warsaw, Prague, etc. But once we have clean bombs, the homicidal effects will be limited pretty strictly to the targets. Therefore, American leaders will feel freer to retaliate against any sort of Communist attack—and thereby contribute greatly to the deterrent value of the weapons.

In short, for several compelling reasons, the United States administration seems justified in continuing the tests of nuclear weapons somewhat longer. And those who, for whatever reason, urge immediate stoppage are—consciously or unconsciously—working against the best interests of the United States and the other free peoples.

Don't Like Benson

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1958

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following editorial which appeared in the Record-Herald, of Indianola, Iowa, on Thursday, April 10, 1958, and which was a reprint of an article which appeared in the Winterset Madisonian of Winterset, Iowa:

DON'T LIKE BENSON

Moore and More in Winterset Madisonian—We don't like Benson. Federal Reserve Board figures show Iowa least hurt of any State in the current recession.

We don't like Benson. Madison County bank deposits are more than half a million ahead of last year.

We don't like Benson. Sales-tax figures show a gradual increase in purchases over the past 4 years in Madison County.

We don't like Benson. Last week 43 Hamp pigs sold at $29.60 per hundredweight. Six gilts brought $75 per head.

We don't like Benson. Fourteen steer calves brought $29.30 per hundredweight. Ten Whiteface cows brought $210 per head and steers topped at $38.50 in Chicago.

We don't like Benson. Depressions have always started with low farm prices.

What's the matter with Mr. Benson? He isn't being fair to us.

We need a whipping boy out here. We thought we had one, but we can't keep on this way. Please, Mr. Benson, do something.

Only 11 Weeks To Go

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 28, 1958

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the CONGRESSIONAL RECORD a grim reminder to those who feel there is no need for vigorous action to get America out of the present serious recession.

It is an article by the distinguished columnist, Mr. Joseph Alsop, which appeared in this morning's Washington (D. C.) Post and Times Herald, entitled "Only 11 Weeks To Go":

ONLY 11 WEEKS TO GO

(By Joseph Alsop)

DETROIT.—Here in this great capital of the limping motor industry, the Eisenhower administration's wait-and-see approach to the depression does not look very sensible.

If you want to be convinced, just drop in at UAW Local No. 3, across from the big, dingy old Dodge motor plant in Hamtramck. Then spend a day or so ringing the door bells of the endless rows of little 1- and 2-family houses inhabited by Dodge and other Chrysler Co. employees in Hamtramck and East Detroit. What you see in them is the cruel letdown of a vast army of industrial workers by the system they have been taught to trust implicitly.

The morning I went there, Pat Quinn, the president of the Dodge local, was leading a protest march of jobless auto workers to the State capital in Lansing. So all activity temporarily centered in the small office of "Big Pete" Telisky, the local's tall, sallow-faced, hot-tempered vice president.

I had hardly introduced myself when Richard, a still-young man who had been working for Dodge for 10 years as a crane and elevator-hoist operator, rather hesitantly entered to ask "Big Pete" if he knew "anywhere they were hirin'." "Big Pete" said bitterly: "Boy, you cant' buy a job in this damn town." Richard nodded disconsolately, as though this were the answer he expected.

It was a rough answer for him, all the same. His father, who worked for Dodge for a quarter century, had bought a house on time just before he died 5 years ago. In those days, both father and son were working, so the payments of $75 a month had been easy to carry. Richard had managed pretty well alone, too, when he was bringing home $80 a week. The car, the furniture, the washer and dryer, and television were all paid for, and he had kept his mother and younger brother fairly comfortable.

But now the little family's whole income was down to $42 a week of unemployment benefits. Those house payments took nearly half. Richard had "tried everything, even janitor." So had his 17-year-old brother, "but they ain't even hirin' boys in stores." And worst of all, "we only got another 11 weeks of benefits to go, and after that there'll be nothing but the welfare."

Richard was followed by sturdy old Charles, 15 years a torch welder, who "done all the show jobs for the company except 1 year." After Charles came Herman, the slow-spoken southerner, who was threatened with repossession of his car. The procession went on all morning, and all the men who came had the same essential problem.

All suddenly had their income cut in half, after 9 or 10 or 11 years of steady work on the same job. Like most of Detroit's other tens of thousands of jobless auto workers, all were now between 9 and 13 weeks away from the end of their unemployment benefits, when there would be no income at all. All had time payments to make, which they could hardly carry even now. Richard, indeed, was the luckiest, for no other man I saw had paid for everything except his house. The Detroit welfare department will at least try to help Richard keep his house, by offering the mortgage-holder the money allowed for relief recipients' rent.

Ringing doorbells along the gray streets, the story was again the same. Only here, it was grimmer and more poignant, for one actually saw the furniture and the washers and the cars and the homes that were in danger. One saw the children "who drink water now," and the harassed wives who "didn't know how they could manage much longer," and the men who seemed unable to overcome their surprise at being at home on a working day.

As time went on, one became obsessed by the thought of "the end of the 26 weeks" (of benefits), which all these people spoke of with a sort of defeated dread.

Maybe Congress will pass the bill adding another 13 weeks to the 26. Maybe automotive employment will pick up again, when the time for the new models comes in September. But even so, half the things these people have gained will be lost in the interval, because "we just can't meet the payments and feed the kids."

Then, if there are no jobs to be had when the benefit period ends, the whole pattern of life of all these people will simply fall into squalid ruin. And they stand, remember, for many hundreds of thousands of jobless industrial workers in scores of other cities besides Detroit.

Closeup of Our Foreign Aid Dilemma

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1958

Mr. UDALL. Mr. Speaker, it seems to to me there is a tendency in Congress to oversimplify and overgeneralize in discussing our foreign-aid policies. However, the realities do not correspond to any black or white pattern.

The real need, I believe, is for a constant reanalysis of these policies in the hope that we may wisely improve and

revise them to meet changing conditions.

A most penetrating analysis of our foreign-aid dilemma, written by Peggy and Pierre Streit, appeared as a lead article in the April 13 issue of the New York Times magazine. This article should be "must" reading for those who are seriously concerned about the future of our foreign-aid programs.

The article follows:

CLOSEUP OF THE FOREIGN AID DILEMMA

(By Peggy and Pierre Streit)

Many Americans, both in and out of government, have tended to look to the American foreign-aid program for a solution to major problems confronting the United States in the Middle East. They have seen in economic aid a means of bringing greater stability to pro-western governments of the area, thereby reinforcing the strength of the free world; and of satisfying the growing demands of the common man of the Middle East for a better life, thereby reducing his susceptibility to the blandishments of communism. In short, foreign aid has been seen as one way of serving the long-term interests both of the Middle East and of the United States.

Ten years of American assistance, however, do not seem to have brought these results. The Middle East is still in ferment. Despite millions of dollars the United States has spent in the area, governments the United States has backed are still insecure, the people the United States has tried to help are still destitute and restive. There is little doubt that in the past 10 years, American prestige in the area has been shaken and that Soviet penetration, both military and economic, has made headway. Why?

Possibly part of the answer to this perplexing and exceedingly complex question can be found by examining the American economic-aid program as it operates in a small Iranian village which we shall call Shahabad.

Shahabad is typical of many Iranian villages in appearance, in the subsistence level of its people and in the pattern of its economic life, for it is subject to an age-old feudal-like system by which the villagers, as tenant farmers, work land owned by a landlord in return for a percentage of the crop.

And Iran is typical of a number of countries of the Middle East: the bulk of its population is underfed, sick, and illiterate; the land is ruled by a few men who, to a large degree, represent neither the people nor the people's interests.

Five years ago, when an American technical-assistance program was begun in Shahabad its inhabitants were undernourished, dirty, illiterate, superstitious, and plagued by smallpox, dysentery, tuberculosis, venereal disease, and malaria. The peasants earned their meager diet, which consisted almost exclusively of bread and tea, as tenant farmers. Their landlord owned and managed their village and its affairs.

A primary objective of the aid team was to help the peasant improve his agricultural techniques and hence gain more food. Therefore, one of the first technical-assistance projects was the improvement of local crops. In 3 years, the use of an inexpensive insecticide wiped out an age-old wheat scourage and, as a result, the crop yield was more than doubled. In theory this would have seemed a sizable boon to the peasants. In fact, it was not, because of Shahabad's ancient land-tenure system.

Under the system, one-fifth of the crop is allotted to the man who owns the land; one-fifth to the man supplying seed; one-fifth to the man supplying water; one-fifth to the man supplying beasts of burden; one-fifth to the man supplying labor. In Shahabad, as in much of Iran, the impoverished villagers supplies only the labor, and hence receives only one-fifth of the land's fruits. His share of the yield doubled but it seemed ranklingly small alongside that of the landlord who, as supplier of land, seed, water, and beasts, received a doubled four-fifths share.

Another way in which American agricultural technicians sought to benefit the farmer directly was to teach him what any American farmer knows; that maintenance of the land, building of irrigation ditches, and leveling the earth are part of the vital job of making soil endure and produce. The Iranian farmer understood this but did nothing because in Shahabad, as in much of Iran, land is rotated by the landlord from farmer to farmer annually. Few men will find any incentive for long-range work in a field that another man tills the following season.

American aid technicians also tried to improve and increase the peasant's bread and tea diet by persuading him to cultivate small vegetable plots in his yard. In some villages this innovation was successful. But in Shahabad, the landlord refused to allow water to be used on vegetable beds, preferring to have it used on a cash crop from which he too could benefit.

What do these examples indicate? They indicate, among other things, that an assistance program that makes sense by western standards may not yield the expected results when applied to a society that has not reached the same level of social and political development. In Shahabad specifically, deep-rooted, long-range economic improvements will, to a substantial degree, be frustrated until there is social and political evolution in the system.

If this is so, it might be asked why American aid, know-how and influence should not be directed at changing this framework. Several major considerations inhibit such action. First, if the United States were to attempt to use its influence to change the system, it would expose itself to the charge of interference in the internal affairs of another country. This, the United States cannot do and has pledged itself not to do. It has no choice but to work with and through governments.

In Iran the question of exerting pressure or influence on the Government is particularly touchy because the Iranian parliament is composed largely of landlords. These are the very men who find it in their own interests to keep the Government to a large degree as it is and has been. They see little cause to change a traditional system under which they have prospered greatly.

There are notable and encouraging exceptions to this rule—men and ideas and forces working toward reform. The Shah of Iran and a few other dedicated and realistic members of the Government recognize the vital need for basic change and have tried to bring it about. But so far there is relatively little indication that most of the landlords care to follow suit. For them to do so, in fact, is tantamount—in their own eyes—to committing economic suicide.

Another factor militating against abrupt change is the position of the landlord in the village. As things now stand, he is vital to the welfare of the villagers, for he performs a multitude of functions which they, in their ignorance, cannot. He buys grain and markets produce. He keeps irrigation ditches open. He tells the peasants when to sow the wheat, water the crops or pick the cotton. He lends money. Until the Iranian economy and society evolve to the extent that they are able to provide such facilities as agricultural-extension aids, credit banks, cooperatives, and other services traditionally provided by the landlord—until the farmers are educated to perform the traditional landlord functions—the present semi-feudal system will have to remain.

A third factor that inhibits American intrusion in this problem is that Iran in particular and the Middle East in general are economically, strategically, and politically vital to the security interests of the United States and the free world. To risk sparking abrupt change in the social or political structure of the area could well foster instability, if not chaos. The Soviet Union would almost certainly gain from such instability, and the United States would consequently face grave threats to its security.

Because of the reluctance of the United States to use its influence to press for political and social reform in Iran, the technical-assistance program has tended to turn its emphasis to the noncontroversial fields of public health and education. In Shahabad, the success of the aid program in these fields has been impressive. In 5 years malaria has been all but eliminated. The number of schools in the vicinity has considerably increased, granting many peasants education they desperately want. Precious water in many areas is clean and available in quantity.

This is a heart-warming achievement. But the very success of these programs is causing many Americans misgivings about the future. For it is not difficult to see that improved health and education unaccompanied by improvement in social and political opportunity must inevitably build pressure for radical social reform. A sick man doesn't have the energy to protest against being heavily taxed or being obliged to turn over four-fifths of his crop to a landlord. A healthy man frequently does. An illiterate peasant doesn't know that some of the world's peasantry have overthrown their landlords. A literate peasant will soon find out.

Thus, not only are the regimes the United States is supporting going to face mounting internal opposition, but the United States, as backer of these regimes, will be viewed, and, in fact, is already being viewed, as the defender of reaction and repression. This at the same time that the Soviet Union has managed to associate itself with Egypt and Syria, which, in the eyes of many Middle Easterners, are the most dedicated to radical social reform.)

Increasingly village men with a limited degree of education are being thrown into contact with men with just a little more education. These are the semieducated interpreters, technicians, teachers, and students who pass through or work in the villages, and who have begun to drive home these points—all with a germ of truth—to the villagers.

First, that where the Americans have been working, some of the landlords have grown richer. Second, that since the Americans arrived, a Government composed largely of landlords and one that is feared and distrusted by the peasants, has grown stronger. And, third, that since the Americans arrived, the voice of the Tudeh Party, which is Communist supported and is one of the few voices that speaks, however dishonestly, for the destruction of the age-old social system, has been throttled.

Scores of conversations between these reporters and partly educated young Iranians can be summed up as follows:

"After the fall of Premier Mohammed Mossadegh, in 1953, the United States gave economic aid to Iran which kept the Government of the Shah from collapsing, and so helped keep Soviet influence out. We were glad because we don't like the Russians and we did like the Americans. We hoped then that you would use your influence to help bring the fundamental changes we want. But you haven't. The Iranian Government is stronger than ever and has done almost nothing that we can see to help the people. We hear that Iran is rich from oil revenues and that the Government has a 7-year plan that is going to help us. But we don't see any results from it. And we don't trust our Government enough to have much hope for the future."

A better-educated Iranian said:

"Some Americans try to explain to us the problems of the American Government. We understand that Iran is strategically located and that America feels it must be kept out of the Soviet orbit. We understand that Iranian oil is vital to the West. We understand that if Iran falls to Soviet influence your system of government and your standard of living and your rights and freedoms are in jeopardy. But what of us? We don't like the Russians, but if they moved in tomorrow our people couldn't be much worse off than they are now."

In other words, the overall picture held by many Iranians, and which is filtering down to the peasant, is frequently one that tends to convince him that America is really on the side of reaction and repression. It is a picture which cannot easily be altered by argument; by pointing out, for example, that though the landlord may enjoy short-term profits, the American technical assistance program can bring long-term benefits to the peasant; that when the Communists and their Tudeh followers agitate for radical reform, they seek to replace one system with another, equally, if not more, oppressive.

The difficulties facing the United States in the Middle East are not new. They were experienced by Great Britain before us and were summed up in the July 13, 1957, issue of The New Statesman:

"Until then (the Suez crisis), as the paramount power, Britain's primary interest was necessarily the maintenance of stability; and this meant that, however much Britain might wish to encourage political and economic reform in the states they patronized, in the last resort the preservation of the status quo—and hence the feudal regimes that constitute it—was more vital. Since November 1956, however, this regional burden has been shouldered by America. Henceforth the sheiks and kings, the landlords and merchants, will look to Washington for protection.

"What does this mean in practice? At present and for the foreseeable future, America will be tied to the ruling feudal cliques who constitute the only section of Arab society willing to cooperate with the West on the West's terms. * * * So long as the nationalists are oriented toward Russia, America will find itself unable to encourage a progressive evolution toward democrasy. Nationalism will become synonymous with communism, and America will be forced to accept the paradoxical task she assumed in the Far East; preserving freedom by permanent autocracy.

Is there a way out of the dilemma the United States has interited in the Middle East or must we be doomed to appear to side with reaction against the mounting cry for change and reform?

In seking an answer to this difficult question it is essential to keep in mind one fact previously mentioned: that in the Middle East economic development is intimately related to political and social development. The first cannot be effectively pursued without promoting the latter. Economic development without social and political development must tend to benefit the few, reinforce the status quo and prepare the ground for possible violent upheaval.

There is no doubt that Washington is keenly aware of the dangers inherent in a policy which excites the cry for reform while it actively strives to keep the lid clamped down. There is also no doubt about the limitations in trying to resolve this dilemma. But over a period of years—years of frequently bitter, though revealing, experience—some avenues of approach to the problems have been found.

For instance: Some United States officials (but by no means all) have recognized that more emphasis must be put on the type of technological development which will tend, automatically, to hasten peaceful social and political development. There are many examples of this; one is the agricultural cooperative. In cooperatives, men pool their resources and work together—a new concept to peasants who have lived an ever-man-for-himself existence for centuries. Through cooperatives they can obtain credit, they can sell their crops for better prices, they can buy machinery for their mutual use and benefit. More important, perhaps, they learn principles of democratic elections in choosing their co-op leaders; they learn to manage their own affairs; they learn self-confidence. In short, they learn many of the functions performed for centuries by their landlords, and hence help prepare themselves for the day when they can emancipate themselves gradually and peacefully.

The nature of the change the cooperative can bring is illustrated by an incident in a village served by one of the few American-initiated cooperatives in Iran. The landlord-appointed "mayor" of the small community had long refused to join the cooperative. Despite his dire predictions of failure, the organization prospered. The mayor then finally decided to join, convinced he could dominate its activities as he had always dominated village life.

At the first co-op meeting in which he participated, not only was he bypassed for high office, but the villagers voted down every proposal he presented. The American who told the story described (with considerable pleasure) the look of amazement on the mayor's face when he realized that the power which had long lain exclusively in his hands (as the agent of the landlord) had shifted, at least in part, to a heretofore disorganized and impotent group of peasants. The consternation of the mayor was matched by the amazement of the villagers as it dawned on them that their fate no longer rested exclusively with another man.

From that day on, the mayor showed a new respect for the peasants, a respect possibly born of a shrewd assessment of new realities, and the villagers displayed a new sense of unity, responsibility, and confidence.

It might be asked why a landlord would tolerate the development of cooperatives likely to challenge his status. The answer is that the landlord, as well as the peasant, benefits from them. Aside from helping to increase the production and profits of the land, the cooperatives reduce the landlord's financial risk in his agrarian holdings since they can often borrow independently; they free him of many headaches involved in supervising his holdings, and they reduce the frequently nefarious role of the landlord's agent in the village—a man who often engages in financial shenanigans detrimental to the interests of both the landlord and the villagers.

In short, the cooperative, though it might threaten the position of the landlord in the indefinite future, substantially helps him in the immediate present, and hence is tolerated, even encouraged by him.

Another approach to the problem of bringing social, political, and technological progress to Iran is through the enlightment of the landlords. Iranian landlords are certainly no more greedy and selfish than most men. They are the way they are because circumstances made them so. Generations of social and political instability—of periods when the whim of a king could wipe out their holdings or their lives, or when drought could devastate their crops—contributed strongly to the creation of a group that clings stubbornly to its gains, blind to the social handwriting on the wall.

If Iranian landlords can be shown as western capitalists have learned, that the prosperity of an employer frequently grows with the well-being and prosperity of his employees, a great step could be taken toward a solution of Iran's problems. Already in Iran a few (very few) landlords have agreed to such small but important reforms as leasing land to the farmer for an extended period, thus giving the tenant an incentive, hitherto absent, to fertilize and develop his property. The returns under the new system have been considerably greater for both farmer and landlord, and the landlord is now, slowly, seeing the possible benefit of other reforms.

Yet another example of how American economic and technological assistance can be broadened to include social ends lies in the fields of education. Traditional Iranian education has been predominantly urban directed—a pattern that prepares a man for hard-to-find civil-service type of a job in a big city. A new pattern of practical vocational education is evolving to help keep the villager peacefully and profitably occupied on the land where he is needed.

Placing increased emphasis on the development of cooperatives, campaigns to enlighten landlords, and new types of vocational-education programs are not cited here as offering sweeping answers to American foreign-aid problems in Iran or elsewhere in the Middle East. The problems are too complex for that.

Nor are these fields of activity cited without a realization that they are fraught with hazards of their own. It is a grim fact of life in the Middle East that the aspirations and desires of mankind, once aroused, may outstrip the ability of any group or any government to fulfill them. There is always the danger that villagers who have tasted the power the cooperative brings will not be content with just a little power.

The suggestions presented are given merely as avenues of approach to some of the dilemmas of the Middle East—ways in which the scope of the American aid program can be enlarged to include a vitally needed social and political content as well as an economic one.

Profound change is in progress in the area. The peasant is on the move, and no matter what anyone does, he will continue to move. His struggle, now beginning, parallels in many ways the struggle of Western man for dignity, for freedom from oppression and exploitation, for all those rights the West now tends to take such much for granted.

In some way America must associate itself with the aspirations of the common man of the Middle East. America must not allow itself to feel that siding with reaction is one of those deplorable but unavoidable facts of international life. A foreign-aid program that recognizes the need for social and political development as well as economic development, that seeks to promote both, hand in hand, is one of the few instruments the United States has to cope with some of the fundamental problems of Iran and other Middle East areas.

Which Way to Defense Strength?

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1958

Mrs. GREEN of Oregon. Mr. Speaker, there has recently been brought to my attention a most interesting analysis of the present defense situation throughout the world. This analysis by a retired commander in the British Navy deserves thoughtful study. Under unanimous consent, I include this article by

Sir Stephen King-Hall in full in the CONGRESSIONAL RECORD:

ARMIES ARE NOW OBSOLETE

(By Sir Stephen King-Hall)

It seems wholly wrong to assume without any investigation that what may broadly be called military power is the only way in which defense can be made effective.

Nor should we be impressed or unduly influenced by the fact that from the earliest known times to the present day, physical force and weapons from the spear to the atom bomb have been the outward and visible signs of defense.

VICTOR'S POSITION

Today it is generally recognized that a victorious war cannot be expected to pay a cash dividend. On the contrary the plain fact emerging from two world wars is that after a short period of material suffering the vanquished emerge in a stronger economic position than that of the victors. The victors find themselves in the absurd position, for reasons which appear to be directly in their own interests, of having to finance the recovery of the vanquished and the more complete the physical losses of the enemy the more up-to-date is the new economy which rises from the ashes of defeat. (The late Earl Lloyd George told us that he had come to the conclusion that it was a great mistake to win a total military victory.)

An interesting and recent example on a small scale of this phenomenon is to be seen in the experience of the Kikuyu tribe in Kenya. The other tribes are saying with a deal of reason: "Look at the money and effort which are being expended on social services, rehabilitation, etc., for the Kikuyu. Is it necessary to stage a Mau Mau rebellion in order to receive all these good things?"

An honest answer would be: "Not necessarily, but it might be helpful."

There is another relatively new factor in history which must be taken into account.

We seem to have reached a stage in military evolution in which resistance, both passive and active, of a civilian population which refuses to acknowledge defeat even though its professional forces have been defeated or because it had no conventional forces to be defeated is a new factor in war.

Gandhi's passive resistance campaign in India, the German passive resistance which defeated the French in the Ruhr in the 1920's; the Sinn Fein nationally supported terrorist campaign; the Israel victory over the British mandatory administration; the Algerian struggle; the EOKA movement in Cyprus; the resistance movement against the Nazis, all belong to the new development.

It seems to be of significance that all those civilian resistances were part of ideological struggles and illustrated the truth of the saying that one can do most things with bayonets except sit on them.

Tentative conclusions are as follows:

1. We aim to defend an idea.

2. There are some grounds for believing that an idea can prevail even when the opponents of the idea are physically superior and able to occupy the territory of those defending the idea.

3. In the modern world a military victory cannot produce an economic dividend. Still less can there be any profit in a military victory obtained by nuclear weapons.

DEFENSE BY EXTERMINATION

As mentioned above it is generally taken for granted that the basis of defense against aggression must be military force. We have, however, reached an unprecedented state of affairs in the evolution of destructive force through the invention of nuclear weapons.

They possess two characteristics which are novel.

The first is that their destructive capacity is so enormous that there is no practical physical meanse of defense against these weapons. This fact has been selfevident so far as the United Kingdom is concerned for several years, but is now officially accepted.

The second novel characteristic of these weapons is that each time one of them is tested there is an addition to the poliution of the earth's surface and atmosphere.

Although the whole subject of fallout and the strontium risk is a matter of scientific controversy, there is agreement that if tests were carried out over a long period on a large scale the human race would probably exterminate itself in preparing to defend itself.

The peculiar character of the nuclear weapon has given a very real meaning to the hallowed principle that all nations maintain defense forces for protection against aggression. In the prenuclear age it was always said that the purpose of armed forces was to prevent war, and there was some truth in the statement; but the use of the word "deterrent" and the idea it expresses is a product of the nuclear age. It is insufficiently appreciated that our defense strategy is now based on the belief or hope that an idea will be effective and the idea can be summarized as follows:

"Nuclear war would be mutual suicide. It is not rational to be suicidal. You—the aggressor—can destroy us but your own destruction will be practically coincidental."

The facts lead to the conclusion that the time-honored theory that defense against physical aggression must take the form of physical means has worn very thin and needs to be regarded with much suspicion.

Moreover, experience has shown that aggression by the Communist states can also be political, and since 1945 this form of aggression has been the most dangerous and insidious. Paragraph 27 of the white paper on defense writes about British responsibilities under the Baghdad Pact to prevent Communist encroachment and infiltration and goes on in the same paragraph to refer to bomber squadrons based in Cyprus capable of delivering nuclear weapons. The value of nuclear bombardments as a means of preventing, say, a Communist coup d'etat in Persia is not clear to this writer.

TOTAL DESTRUCTION

There is a theoretical or philosophic reason for doubting whether military force is any longer assuredly the best way to counter military aggression of a nuclear type. It is an established principle that to every form of attack there must exist a means of defense. We have now reached a stage in the development of the attack which enables total destruction to be achieved, and as it is physically impossible to put the whole of a modern social system 100 feet underground and turn the United Kingdom into a nation of troglodytes it might seem at first glance that the principle has broken down.

But is seems to have been forgotten that the principle does not say that the answer to an attack must be of the same order of things as the attack.

If the answer to a nuclear attack creating total destruction is merely to enlarge the area of destruction nothing of value has been achieved.

If, however, having reached the ne plus ultra of physical attack we are imaginative enough to realize that we have not simultaneously reached the frontiers of human thought we should have no difficulty in moving forward beyond the physical into the psychological.

THE DRIFT OF DISASTER

The object of the new strategy of defense is to change the minds of the men in the Kremlin.

To those that will at once raise the cry that this is asking the impossible the reply must be:

1. They are human beings who have for one reason or another changed their minds on several occasions since 1945.

2. Through the policy of the nuclear deterrent we hope—and some people believe—we are already operating on their minds and influencing their thoughts. If we are not, the deterrent idea has failed.

If our strategy should be to change the minds of the men in the Kremlin how is this to be achieved technically? There seem to us to be two broad lines of approach: the direct and indirect.

The direct approach consists in doing things which might make an immediate impact on the minds of the rulers; the indirect approach is composed of policies designed to influence the minds of the masses in the Communist-controlled countries.

At this moment we are disposed to think that as part of our psychological campaign for defense there are strong arguments for considering whether the United Kingdom should not announce unilaterally that it will not carry out any further tests and that the forthcoming test will be abandoned.

Something dramatic and easily understood by mankind needs to be done to break the deadlock and arrest the drift of disaster.

Do the chiefs of staff really believe that an announcement of this nature would leave the United Kingdom more defenseless against nuclear attack than it is at present?

Having taken this step we should use it as the starting point for a tremendous and worldwide educational campaign explaining the horrors of nuclear war, the dangers of tests, etc., and say: "Now you can see why Her Majesty's Government has taken a lead and perhaps risks in this matter."

I picture a sum of £100 million being spent on this propaganda which ought to be an all-party effort. I refuse absolutely to admit that given imagination, energy, and funds the great educational campaign should not penetrate beyond the Iron Curtain.

In this connection and beginning with the satellite states a really great effort (£50 million) should be made to increase contacts with the masses in those countries. Every effort should be made to organize exchange visits between young people on a very large scale. We should put as much effort and money for this kind of thing as we do into a nuclear-bomb test.

CONVENTIONAL FORCES

No doubt these ideas will be very startling to many people but we beg and entreat them to remember that we are faced today with the old problem of defense in a completely novel setting.

It is almost as novel as if we woke up some day to find that this world of ours was liable to aggression from another planet. Our present problem is of this novel nature.

The Manchester Guardian wrote on April 15 that "Dependence on the ultimate deterrent is inevitable." It went on to say that the alternative was "conventional forces on a massive scale" or "a fully pacifist policy." A point worth thinking about is that if we succeed in producing some form of standstill in development of nuclear weapons and do not succeed in making progress with disarmament in conventional weapons are we likely to be able to persuade the people of the West to stand the racket of conventional forces on a massive scale? We doubt it.

What about a fully pacifist policy?

The truth is that this possibility has never been thoroughly examined from a strictly political-strategical angle. The pacifist policy has usually been defended from a moral point of view.

I am thinking of a policy which it would be more accurate to call defense by passive resistance.

I am not saying it would work. I am saying that no one has thoroughly studied its

possibilities in the light of the novel and unprecedented defense problem which now faces the United Kingdom, Western Europe, and to a lesser etxent the United States of America.

In order to find out some more about this I have reached the conclusion that a royal commission should be established with the task of expressing an opinion upon the problem of whether our way of life could be defended by passive resistance and if so what the plan should be. If a royal commission is not considered to be the best instrument then a special committee of the imperial defense college should be put on the job.

We have said quite bluntly in the white paper that we cannot afford our present expenditure on defense. We have made heavy cuts in our conventional forces and transferred our faith to nuclear weapons with all the imponderables and unknowns which go with them.

I remarked to a well-known member of Parliament: "Suppose Great Britain only had three airborne divisions, a few tactical aircraft, and a very small navy, what would happen apart from the obvious and immense gain to our economy?"

He replied: "My first reflection is that our influence in the world would at once decline"—he paused and added—"at least I suppose it would."

Is this certain? Gandhi's influence rose with the rise of passive resistance; so did that of the African bus boycotters.

Has it or can it be proved that a United Kingdom with an intelligent and sophisticated population educated to regard a national plan of passive resistance as the defense policy of the country would lose influence? I think there is a case for a very thorough investigation of this matter.

GOP Attacks Truman Jobless Aid Record

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article, "GOP Attacks Truman Jobless Aid Record," which appeared in the Washington Star, on Sunday, April 13. In view of the present deluge of irresponsible remarks being levelled at the administration from some quarters, I am of the opinion that we ought to occasionally take a look at the real facts. I am told that ex-President Truman is today testifying before one of our committees concerning present unemployment conditions, and for this reason I think we owe it to ourselves and to the people of this country to review the accomplishments—or, rather, the lack of accomplishments—of his administration in dealing with the 1949–50 recession. Unemployment reached 7.8 percent of the labor force in 1949 during the Truman administration, and it took the Korean war to pull us out of this serious economic slump. Yet, today with unemployment less than 7 percent, we find these same new dealers, or fair dealers, or whatever they want to call themselves, criticizing the present administration. Mr. Speaker, I for one think it is time for the truth to be heard.

The article follows:

GOP ATTACKS TRUMAN JOBLESS AID RECORD

(By Gould Lincoln)

Republicans yesterday leveled a double-barreled attack on former President Truman as an economic expert. Mr. Truman is the first scheduled witness to appear before the House Banking and Currency Committee tomorrow in its inquiry into unemployment conditions.

Republican National Chairman Meade Alcorn charged that Mr. Truman twice left Washington for long vacations in Florida after he had been told of high unemployment figures during the recession of 1949–50, and had done practically nothing to help relieve the economic situation of that period.

Representative TALLE, of Iowa, ranking Republican member of the Banking and Currency Committee, charged that House Democratic leaders have loaded the committee's witness list with antiadministration witnesses, starting off with former President Truman. The Democrats, Mr. TALLE said, are using the hearing as a "loudspeaker for Democratic political propaganda," and described Mr. Truman as the "advance pitchman."

Chairman Alcorn's anti-Truman statement was in reply to Mr. Truman's attack on President Eisenhower in New Haven April 8. In an interview the former President said that if he were in the White House today, with the current economic recession in effect, "I'd be doing something. I wouldn't be sitting still or playing golf."

TRUMAN HIT EISENHOWER

President Eisenhower at the time of the Truman criticism, was planning to spend this weekend—as he is doing—near Augusta, Ga., playing golf.

Mr. Alcorn said that Mr. Truman has the right to offer criticism at any time and on any subject he chooses. But, Mr. Alcorn continued, in his current attack on President Eisenhower, Mr. Truman is demonstrating again "he possesses a rather convenient memory of events in his own administration" he might bear in mind.

"In 1949," Mr. Alcorn continued, "a serious economic recession began in the spring and unemployment grew through the summer and into the winter. President Truman and the Nation were told in November that unemployment the previous month had mounted to 3,823,000 or 6.1 percent of the smaller working force of that time.

"On November 28, President Truman left Washington for Key West, Fla., where he spent 24 days. He returned to Washington on December 21, and 2 days later left on a holiday trip of a week to Independence, Mo.

READS 1950 RECORD

"The recession, meanwhile, deepened through the winter and into 1950. A peak was reached in February when 4,828,000 or 7.8 percent of the working force was out of work—slightly more than the 7.7 percent who were unemployed this March. That figure was announced the first part of March, 1950. On March 13, President Truman again left Washington for Key West where he spent 29 days.

"The latter trip was taken shortly after Mr. Truman said in an interview that up to 5 million unemployed was unsupportable and it was healthy for the economic body if job seeking went on at all times."

Mr. Alcorn added that a search of the record showed that Mr. Truman and his administration did little to cure the 1949–50 recession beyond canceling a tax increase he had proposed and by directing that some defense contracts be channeled to areas of especially high idleness.

"That recession (1949–50) drifted along for 13 months—including all four seasons—from 5.2 to 7.8 percent unemployed each month before the economy was revitalized by the outbreak of the Korean war."

VIGOROUS MOVES CITED

The Republican chairman said that in contrast to the Truman administration's inactivity in the earlier recession, the Eisenhower administration has moved vigorously in 50 ways to stimulate the economy, and that the latest figures indicate the Eisenhower program is paying off.

"Employment," he continued, "is stabilizing after a disturbing period, aggravated by severe bad weather." He said the administration has moved to provide direct aid to the unemployed by recommending an extension of unemployment-compensation payments. If this program is adopted, Mr. Alcorn said, it will be the first such step taken by any administration to meet a downturn of the economy.

Representative TALLE's attack was in the same vein. He said:

"In Mr. Truman's new role as an economic expert he might be able to answer why the cost of living under his administration rose more than 50 percent compared with about 7 percent under the Eisenhower administration, why unemployment reached some 7.8 percent of the labor force in 1949 compared with less than 7 percent today, and why he vetoed an antirecession tax cut measure in 1948 which was later enacted over his veto by the Republican 80th Congress. In Mr. Truman's case the Korean war came along to bail him out of his economic problems.

"Since Mr. Truman obviously fails to qualify as an economic expert his appearance before the committee serves no other purpose than as advance pitchman sent on ahead to set the stage for the flow of antiadministration propaganda to follow in the weeks ahead."

Positive Americanism—Address of Martin D. Schwartz, Chairman, AMVETS National Americanism Committee

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. RHODES of Pennsylvania. Mr. Speaker, last Saturday evening the AMVETS honored former President Harry S. Truman and Mr. Martin D. Schwartz, chairman of the AMVETS National Americanism Committee, with Americanism awards at a formal dinner at the Mayflower Hotel.

Mr. Truman was honored for his exceptional contribution to a positive Americanism program which has strengthened American democracy.

Mr. Schwartz was given the Ray Sawyer award for his part in founding and guiding the Americanism program of the AMVETS.

Under leave to extend my remarks, Mr. Speaker, I include herewith the acceptance address by Mr. Schwartz:

POSITIVE AMERICANISM

Mr. President, Commander Satullo, members of the NEC, distinguished guests, AMVETS. I accept this award with humility, and shall always cherish it with pride.

Its real significance lies not in this handsome plaque about which my grandchildren may someday be curious, but in the excitement and satisfaction of examining ideals which have made the very name America a touchstone which men have used for a century and a half to measure their aspirations for a better life. I am humbly grateful for the opportunity which past commanders and Commander Satullo have given me to make this contribution to my country.

AMVETS is an organization founded on the principle that what is good for America is good for all its citizens—not just for certain individuals or special groups. My contribution to the AMVETS Americanism program was possible only because this organization is more dedicated to the name "American" than to the word "veteran"; because AMVETS sees the strength, the hope, and the greatness of America in citizens who know what America is all about.

Throughout the ages, men have regarded their own times as difficult, alarming and even fearful. Each of us in this room tonight has participated in at least 1 major war and our distinguished guest speaker has been an important historical figure in 2 wars. But world-shaking cataclysms do not suddenly explode out of nothingness. They are the culmination of many other historical events which have tried the souls of men just as present problems demand solutions by us. None of us can measure the long-term significance of day-to-day events. But the past is prologue to tomorrow and history provides clues to today's trends. From knowing and understanding our own development as a civilization we can learn to meet each tomorrow as it comes with strength and without fear or faltering—provided we hold inviolate the way of life we have inherited and are true to its ideals.

On thing upon which there is general agreement is that we are living on the threshold of a new space age. The challenge to America of this new age may be providential. We have been startled by the quality of non-American technology and scientific skills and suddenly realized another facet of world leadership: We must be vigilant for ourselves as well as for the rest of the world. The dawn of the space age has brought both a rude awakening and an invaluable alerting to America—not a disaster but a welcome warning in time. The most important thing we have learned is that while we have maintained a strong military posture we have let down our guard in another equally important area—the education of our people. As a nation we are beginning to realize that the strength of our democratic system stems not so much from our physical wealth as from an enlightened citizenry who can utilize our resources most effectively for our protection and development.

The American dream of freedom and equality carries a more powerful message than Soviet propaganda but we must be able to get it across and keep it foremost—to our own people here at home as well as to the other peoples of the world. We Americans will fail in our traditional role as champions of freedom unless we reaffirm the values of human dignity to each succeeding generation of our children. To teach them we must first teach ourselves.

Here then is the basic premise upon which we base our Americanism program. America is the embodiment of immense ideas. These ideas have been magnificently framed and developed by men of giant stature who helped create the American dream from the first days of Jamestown and the Mayflower compact right up to the present. America is also a unique polyglot culture which has adopted the best attributes of each creed and color which make up our melting pot. What we have today is still a mixture of backgrounds—with little exception all dedicated to perpetuating the American ideal.

Ideas are more important than the men who conceive and implement them. Ideas can die just as men die, the principles of wholesome government can be abandoned unknowingly, the flower of a civilization can fade unless constantly renewed. The fact that we are heirs to the great American tradition does not mean that we all fully appreciate or understand it. Unfortunately, knowledge is not inherited. Neither is love of country nor concepts of human rights. These must all be learned.

We like to believe that Americans have a peculiar affinity for liberty, but the truth is that an instinct for liberty is not enough. "It must be reinforced by understanding—an understanding as widespread as the instinct."

It is this understanding which true lovers of freedom must seek. For freedom means just what it says; that any American may think and say and do what he likes, so long as he respects the right of every other citizen to do the same; so long as he does not act traitorously toward his Nation or deal treacherously with his neighbor. This is positive Americanism. We believe it is better to appreciate and develop the virtues of the American ideal than dissipate our vigor in the fruitless panic of subversive hunts. National security requires that a government possess in addition to a strong military capability, the means to insure its own internal existence. Thus its people and their attitudes toward its laws and institutions are the best guaranty of its continuity. No American, no matter how well motivated, has the right to sacrifice our traditional bulwarks of liberty—the Declaration of Independence, the Constitution and its Bill of Rights—in order to lash out at alleged disloyalty in our midst. Misguided patriotism can be as dangerous as treason and is considerably more difficult to discover. Human dignity and individual liberty are indivisible in a free society. If a single person is ever deprived of the guaranties of our legal system then each of us has lost a little of his own security. It is against such imperceptible erosion of our way of life, painstakingly erected for so many decades, that we in AMVETS have directed our program of positive Americanism—our constant search for better ways in which to rekindle pride and devotion to the American dream.

Rear Adm. Samuel Eliot Morison, a great teacher who more than 20 years ago helped excite my interest in our American heritage, recently wrote these words of solemn warning:

"The passion for freedom may not die, but it grows very cool at times, and our times are one of them. I would that that passion which animated our forebears might revive and conquer the craven fear of communism. What use to defend our liberties by such means as will destroy them? Woe unto America if these political freedoms are continuously scorned and flouted; for they embody not only the experience of eight centuries of struggle by English-speaking peoples; they are founded on immutable principles of justice."

These principles of justice are the birthright of every American—and the heart of the AMVETS Americanism program. Why we are what we are.

Our Americanism program is education for American living, the bedrock upon which the preservation of our country rests. AMVETS recognizes that America must have the best weapons in the world for its protection; but its most powerful weapon is its people who know, love, and identify themselves with America's hopes and traditions. Otherwise we, too, may become in history another great Nation which forgot its heritage and thereby lost itself.

Only educated Americans can fulfill their obligation of good citizenship so each of us can live safely in America and America may live safely in the world. If we are to win the ideological war, our own values and how we live by them will convey to the rest of the world our convictions of the dignity and worth of every human being. We must be as zealous in reaffirming this basic creed as in building ICBMs.

This is the task which AMVETS has undertaken—to promote education in American ideals so that Americans will understand the principles which have made us a great Nation—so that we can intelligently present those principles to the world, that this Nation, so conceived and constantly rededicated may endure.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Tax Reductions

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, for many years than it is charitable to recall, Republican spokesmen have been pointing out a dangerous pattern in our economic life. This is the perilous trend of diverting an ever-increasing share of our national income to government. In fiscal year 1956, about 30 percent of our national income went to meet the combined revenue demands of Federal, State, and local governments. As a consequence, nearly a third of the fruits of our national productive effort were largely lost for purposes of creating new wealth.

While we may disagree as to the extent to which government is nonproductive, I believe we can agree on some basic points. Governments, by their very nature, cannot create as much as they consume—and they most certainly fall far short of the wealth-creating capacities of the private segment of the economy.

If the implications of this situation seem remote or academic, we can approach it from a different point of view. The consequences of this growing burden of government become very clear when we examine its effects on the average wage earner. It then becomes a matter of dinner-table economics. It has been recently calculated that the average worker puts in nearly 2½ hours of each 8-hour working day to pay his total tax bill—the sum of the taxpayments he knows about and the hidden ones in the goods and services he buys. By comparison, food for his family and himself requires a little over an hour and a half. To house his family, this worker must labor about an hour and 25 minutes. The remainder of his family's needs, such as clothing, medical care, transportation, and all the rest are met by his working the remaining 2 hours and 20-odd minutes.

When we put it on this basis, the question of taxes seems to center on some pretty basic questions for the average man:

Should he be required to work nearly an hour longer each day to pay his taxes than to feed his family? Does government give him services which are worth an hour more of each day's labor than that required to house his family? I doubt that many taxpayers would consider nonessential governmental services of higher value than life's necessities.

Quite understandably, there is widespread sentiment at the present time for tax reduction. However, when we come to the question of which tax reduction plan is best, we face a great variety of proposals. Unfortunately, much of the discussion concerning tax reduction is based on the hope of giving the economy a mere shot-in-the-arm. Little attention is being devoted to the reform of the tax system, essential for long-term expansion of the economy.

Some of the tax reduction proposals have been characterized as quickies. This type would grant temporary reduction for a month or more, then go back to present rates. Advocates of quickie plans argue that the extra money left to the taxpayer will pour into the economy and start us on the upgrade. To accept this proposal, we would first have to believe that the public would spend their extra money quickly, and on the rights things. Even granting this highly unlikely eventuality, we are still faced with an eventual return to the present tax rates. It is the present overly progressive system of tax rates which many believe have helped in causing the economic situation we are presently attempting to remedy.

We come then to modification of the rate structure and how best to improve it. We can agree, I trust, that our principal objectives should be the equitable distribution of the tax burden and providing a tax climate which will encourage economic expansion. On March 13, I introduced a bill entitled the "Tax Reduction Incentives Act of 1958." Enactment of this bill would updoubtedly have some stimulating effect on the present state of the economy. This feature, however, is far outweighed by the more permanent and far-reaching objectives of the plan.

As a primary consideration, I proposed the reduction of all personal income taxes by 10 percent. In the case of the low-income taxpayer, the need for tax reduction requires little justification. This is a pure and simple case of hardship which few deny. However, when we come to the middle- and high-income brackets, the enthusiasm of some for tax reduction tends to diminish. Setting aside considerations of equity for the moment, it is in these brackets that tax reduction can have extremely significant long-term effects. If the rates in these brackets are designed to encourage the taking of risks on new ventures, the new jobs of the future will materialize.

The maintenance of present jobs and the creation of new jobs require money. As to how much, the average capital investment for each production worker in America rose to $16,000 in 1957. This amount has been steadily increasing over the years and is approaching double the investment that was necessary but 10 years ago. With this in mind, the question of securing the risk capital of the future assumes great importance.

Historically, a vast amount of risk capital has been obtained from persons in the higher income brackets. The large element of chance involved operates to exclude those who would be destroyed financially by the failure of a new venture. Consequently we must get this part of the capital necessary for business from the people who now pay it in taxes.

The current recession has tended to focus popular attention on the growing shortage of risk capital—a problem which has deeply concerned many economists and businessmen for several years. Human nature being what it is, it should not surprise us that investors have become increasingly reluctant to finance less than a pretty sure thing while taxes prevent a return commensurate with the risk. If we truly wish to encourage personal incentive in the investment field, we must alter our tax rates. We must alter them so that a succesful risk investment is capable of providing a clear financial advantage over the tried-and-true investment.

An additional means of stimulating economic expansion is to grant some relief in the area of the corporation tax. It is regrettable that a segment of public opinion still considers this tax as having little effect on the average individual. Actually it affects all of us very directly in what we pay for products and the number of job opportunities from which the labor force may choose. It is a hidden tax we pay in everything we buy.

It is axiomatic that profits attract outside capittal. With more than half of most corporations' profits going for Federal taxes alone, we must reduce the rate or suffer a prolonged period of economic contraction. Although business is investing billions in plant and equipment each year, recently only about 10 percent can be related to net expansion of fixed assets. This is in contrast to expansions of 30 percent in the years immediately following World War II.

A reasonable reduction in the corporate rate will provide the much needed incentive to corporations and investors to finance the development and marketing of the new products and services necessary for an expanding economy.

Equitable tax reduction, for both individuals and business, promises far better results than a series of hastily conceived pump-priming projects which have little basis in true need. This approach failed before and there is no reason to expect superior results today. Our need is not simply for more dollars. Our need is to remove the obstacles to long-term expansion in our economy. To accomplish this we must restore those financial incentives neces-

sary to an economic environment which fosters the willingness to take chances.

It is not our custom to place much credence in the many self-serving statements emanating from the Kremlin. On those rare occasions, however, when a statement appears to be borne out in some measure by fact, we must take notice. Premier Khrushchev has declared economic war on the United States, to use his unfortunate expression, and there is abundant evidence that this is the case.

Our preoccupation with the Soviet threat of arms has delayed our full realization of that nation's economic power. While Khrushchev's boast that his country will soon assume world economic leadership conveniently overlooks certain basic facts and figures, there is no merit in denying that Russia has come a long way in a comparatively short time. This national record of accomplishment, as with all nations, is largely the result of superior accomplishment by certain individuals.

While it might please us to think that all Russians lead a cheerless existence as vassals of the all-powerful state, we know this is not the case. Although outwardly professing strict adherence to the doctrines of Marxist socialism, the Russian rulers have succeeded in stimulating their scientific, industrial, military and intellectual talent by offering rich economic rewards.

It would seem that we have something to learn here, or more correctly, something to remember. While we have proclaimed to the world the virtues of the free enterprise system, many of our internal actions have operated to reduce its effectiveness. We have permitted a system of taxation to develop which imposes its severest penalties on the talented and creative.

It must, then, be the classic irony of our times when we must be reminded by the Communists of something we practically invented. Perhaps we will be reminded of Lincoln's words on providing economic incentives for outstanding achievement. Abraham Lincoln knew human nature well enough to see the need to add "the fuel of interest to the fire of genius." We have strayed far from this course, but a surpassing virtue of our system is that we can alter direction if we so will.

There can be few accomplishments this Congress might claim which hold greater promise for the continued economic supremacy of our country than the strengthening of personal economic incentives. There are equally few things, which if ignored, carry with them such potential for disaster.

Medical Programs Without Waste

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an outstanding address on the subject Medical Programs Without Waste, delivered in Washington recently by my distinguished colleague, the senior Senator from New Jersey [Mr. SMITH].

There being no objection, the address as ordered to be printed in the RECORD, as follows:

MEDICAL PROGRAMS WITHOUT WASTE

(By Senator H. ALEXANDER SMITH, of New Jersey)

Health is one of our Nation's most precious possessions. Without it, our startling achievements in the laboratory and on the production line, in space research and missilry, would hardly have been possible.

Concerned as it is with safeguarding our Nation from attack and subversion, it seems only logical that the Federal Government would also take high interest and a large measure of responsibility for the Nation's health.

Most of us realize, of course, that the greatest killers in history have not been bombs and bullets and other instruments of war, but disease and pestilence. Gradually, as the world's expanding population testifies, we are gaining the upper hand, but many forms of deadly disease still remain unconquered. We still have a tremendous job ahead.

Government's role in this battle is a large one. Its efforts are directed primarily—and rightly so—toward research and experimentation in the never-ending quest for new and powerful antibiotics and other medical weapons in mankind's longest and most costly conflict.

In fairly recent years, however, the Federal Government has widened its activities and field of responsibility. Not only are Federal dollars going into basic research, but billions more are also spent to provide specific medical service to some 30 million citizens, or about 1 in every 6 in our population.

Some $4 billion to $5 billion is expended yearly in the Government's vast medical program. That equals about 7 percent of our total Federal budget. It is almost as much as we expect to spend in fiscal 1959 in our accelerated missile development and earth-satellite program.

So, by any measurement, the Government's health activities stack up as a tremendous undertaking.

First, let us examine these activities in greater detail. We should know, to begin with, just who is and who is not directly benefiting from the program.

Among the 30 million Americans to whom full or partial medical care at Federal expense is offered are:

Four million persons, mostly military personnel, who are entitled to complete medical care.

Three and a half million veterans, disabled in active service and in the line of duty, who are eligible for complete medical care.

Twenty million persons, including 17.5 million veterans with no service-connected disabilities, who are entitled to medical care on a facilities-available basis. Others in this group are the dependents of military personnel, and retired military personnel.

Some 2.5 million Federal employees who are eligible for limited on-the-job health services for occupational injuries and disease.

These figures speak for themselves. When the Government assumes responsibility, even in a limited way, for the medical care of 30 million people, it has staked out for itself a considerable stake in national health activities.

As in so many cases of burgeoning Federal operations, with more and more control slipping out of the hands of private citizens and settling in Washington, the expansion of Government medical services evolved gradually and a hodgepodge structure of bureaucracy has come into being over the years.

The Hoover Commission and its medical services task force, once they started surveying facilities, found themselves visiting no less than 26 different Federal departments and agencies. And within these agencies, the Commission pinpointed 66 administrative units engaged in health activities.

So it came as no surprise to the Commission's experts to learn that little coordination existed, that duplication and overlap was the rule and not the exception, and that the medical planners forged ahead with projects for new hospitals and other facilities with little regard for, or knowledge of, what other agencies were doing.

This sort of go-it-alone policy extended right into the Defense Department's different branches. The Army, Navy, and Air Force operated their own medical programs, with only the feeblest efforts at cross servicing in the interest of economy and efficiency.

As a result, the Hoover Commission estimated that on an average day in 1955, for example, 63 out of every 100 beds in military hospitals were unoccupied.

Specifically, the Commission estimated the average daily number of military hospital patients at 34,000 in 1955. Some 93,000 beds were available, along with nearly 5,000 physicians, 2,000 dentists, 7,500 graduate nurses, and 71,000 technicians and other medical personnel for a grand total of 85,000 persons.

As you can see, on the basis of these figures each patient in a military hospital in 1955 had two persons available to tend to his needs—possibly to keep him from wasting away in loneliness in wards that were two-thirds empty.

It is also interesting to note that the average daily patient load in military hospitals, in the period 1952 to 1955, declined from 57,000 to 34,000, or 40 percent. During the very same period, expenditures for construction of new military hospitals climbed from less than $12 million in 1952 to $62 million in 1955, or more than 400 percent.

And these data refer only to hospital construction in the United States. The Defense Establishment was also busy building hospitals in other parts of the world. This required less than $18 million in 1952—and $37 million in 1955.

Taxpayers will take sad note of the fact that this situation existed at a time when the need for new civilian hospital facilities was widespread across America, and at a time when many States, counties, and communities were engaged in a desperate search for hospital building funds.

Equally disturbing is the fact that trained medical people, always in short supply to care for our fast-growing population, were pressed into military service to staff half-empty hospitals and clinics.

Many of you will recall the work of the first Hoover Commission, more than 10 years ago. That Commission spoke out vigorously against excessive hospital construction with Federal funds. By the time the second Commission was organized, the problem was aggravated and even more alarming evidence of waste and extravagance was uncovered.

Of course, we often encounter the argument that all these military hospitals are necessary in case of emergency. We are told that 55,000 or 60,000 unused beds does not represent $500 million wasted, but $500 million prudently expended against the eventuality of a hydrogen holocaust and its terrible cost in dead and wounded.

Now all of us want our Nation to be strong and stay strong. We want to be prepared if war comes, and with 60 cents or more out of every Federal dollar going into national defense and security preparation, there is little reason why we shouldn't be prepared if what we hope never happens does happen.

But wouldn't it have been wiser to have taken that $500 million, which represents only one-half of the average construction cost of the unused beds in military hospitals, and

invested it in new civilian hospitals and clinics? Wouldn't these facilities be equally available for war emergency, while giving us a lot more mileage out of our health dollars in peacetime?

By coincidence, Americans spent an estimated $505 million for private hospital construction in 1957, about three-fifths of which came in the form of voluntary contributions.

In other words, the cost of constructing the unused beds in military hospitals, based on 1955 data supplied by the Hoover Commission, equals the current total annual outlay for the Nation's private hospital facilities.

Another authoritative witness to the high rate of Federal spending for hospitals, weighed against the sums available for this purpose outside of government, is the Health Information Foundation, a private organization in New York City which conducts extensive continuing research in this field.

In its latest publication the foundation disclosed that between 1928 and 1956, the number of beds in private proprietary hospitals (as opposed to private nonprofit hospitals) declined 50 percent and the assets per bed in these proprietary hospitals now average only about $4,300, a level half of that for all hospitals.

In contrast the foundation points out, assets in Federal hospitals, including military, increased fivefold in the same period. The number of beds in Federal hospitals tripled, and the assets per bed doubled. In 1956 each bed in Federal hospitals represented over $10,000 in assets, or some 25 percent above the national average.

Thus far I have stressed the waste of dollars and manpower in the Defense Department's varied health programs. Don't get the impression that this waste is confined to the Defense Department. It was found by the Hoover Commission throughout the range of Federal health activities.

Of course, the situation varies from agency to agency, for some make better use of their health budget than others. Nevertheless, the Hoover Commission has clearly shown that the shortcomings in our present medical programs are serious enough to warrant our immediate attention.

The question, then, boils down to this: What is the most effective means for corrective action? Here, too, the Hoover Commission has shown the way with its proposal to establish a Federal Advisory Council of Health.

At the request of the Commission, I introduced legislation to establish the Council at the last session of Congress. The bill, as I am sure you know, would set up a strong council of both laymen and members of the medical profession, whose function would be to continuously evaluate and make recommendations on Federal policies and programs relating to medical care and national health.

It may be that there are other ways in which the purpose of this bill may be accomplished. I should point out that the Secretary of Health, Education, and Welfare is the principal adviser to the President on health programs, and certainly nothing should be done to limit his responsibilities in this area. It has been argued that, rather than set up a new agency, an interdepartmental committee could be established to correlate the health functions of the different departments.

The simple fact that the bill calls for the creation of a new Federal body is enough to raise storm signals on Capitol Hill. There are many Members of Congress—and, frankly, I am one of them—who believe that we already have too many boards, offices, commissions, and councils cluttering up our administrative structure.

Nevertheless, I was honored to sponsor the bill because it deserves a hearing. It properly focuses attention on a very real need, and the Hoover Commission has my profound gratitude for bringing this need to public attention. The question, then, is not whether the bill itself will pass, but whether its objective can be achieved. The objective is simply this: to bring about more central planning and coordination on health matters at the upper level of the executive branch.

It is my hope that you will help generate an active public interest in this objective. That is my appeal to you who have gathered here to help us face the problems which confront our Government.

After all, the inadequacies which the Hoover Commission exposed in our national health programs are too serious to be further ignored in apathy and inertia. In this high-powered, jet-propelled space age, the good health of our Nation depends more than ever before upon top-flight planning, careful coordination of resources, and diligent policy guidance.

No one knows yet what new diseases, what unheard-of forms of bacteria, what new challenges to medical science await us in the mysterious reaches of outer space. When the time comes, we must be ready to meet these problems and overcome them.

Meanwhile, there is still a lot to be done here, not only at home, but in the many lands around the globe. In our relatively brief history, America's men and women of medicine have contributed richly to the world's store of health knowledge. The Jonas Salks, Walter Reeds, John Enders, and uncounted other heroes of health have earned the lasting tribute of grateful people everywhere.

The American tradition in medicine and health is a matter of national pride. With your help, we can make sure that the Federal Government maintains and strengthens that tradition to meet the demands of the future.

Proposed Amendment to Merchant Marine Act of 1920

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Chattanooga Times of March 22, 1958, in support of the provisions in H. R. 9833 and S. 3065 to amend the Merchant Marine Act of 1920 to permit the Bowaters Southern Paper Corp. to own and operate barges upon the inland waterway system.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ADOPT THE AMENDMENT

We can see no reason why the great Bowaters Southern Paper Corp. should be barred from operating its own barges on the Tennessee and Mississippi Rivers in order to bring wood to its east Tennessee plant to be converted into newsprint. It intended to use the inland waterways for that purpose when it constructed the huge newsprint mill, but a Merchant Marine Act of 1920 says that a corporation under foreign control cannot operate barges on the inland waterways. Bowaters is an American subsidiary of a British company.

The Merchant Marine Act was adopted just after World War I. Jitters from that conflict still prevailed, but certainly the authors of that act did not intend to prohibit free shipment of newsprint paper in peacetime.

Senators KEFAUVER and SMATHERS propose an amendment to the act. It would give the right of shipment by barge to any corporation if a majority of the officers and directors and 90 percent of the employees are citizens and residents of the United States and if substantially all the raw material is bought in this country. Bowaters would conform to that amendment and in all fairness the amendment should be adopted.

Farmers Union Endorses Proxmire Dairy Plan

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1958

Mr. PROXMIRE. Mr. President, I greatly pleased by the action of the Wisconsin Farmers Union in its annual convention recently in endorsing the long-range dairy program which I have sponsored in the Senate.

The Farmers Union resolution stated that the delegates "do hereby endorse the basic program as outlined in Senator PROXMIRE's farm bill—and other bills carrying the philosophy of greater farm income—as a means of controlling production and maintaining fair prices for farm products."

The Wisconsin Farmers Union has distinguished itself over nearly 30 years as a militant and effective champion of the family sized dairy farmer. It gives me a great deal of satisfaction to have this splendid organization give its approval to the proposals I have offered for solving the dairy farmers' problems.

Mr. President, I ask unanimous consent to have the major resolutions adopted by the Wisconsin Farmers Union delegates at their 27th annual convention in La Crosse printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS ADOPTED BY CONVENTION DELEGATES

FAMILY FARM POLICY

Whereas there is every indication that the family-size farm is going to be squeezed out of the picture as a farming unit; and

Whereas we believe that the family-size farm is one of the strongest links in our democratic form of government: Therefore be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, petition Congress, President Eisenhower, and Secretary of Agriculture Benson, asking them to cease the policies now being pursued in Washington; and be it further

Resolved, That we demand that all Government price-support measures be designed and administered in such a manner as to favor family-size farms to the extent that this American tradition shall be safeguarded.

DAIRY PRICE SUPPORTS

Whereas dairying is a fairly unchangeable industry, with dairy farmers unable to change to other types of agriculture because of such reasons as investments, dairy herds,

geography, marketing systems, and basic knowledge of dairying; and

Whereas the dairy farmer is now suffering depression, along with other segments of the agricultural economy; and

Whereas we do not feel that 100 percent of parity should ever be considered high: Therefore be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, do hereby go on record as opposing the proposed reduction in dairy price supports from 82½ percent to 75 percent of parity, and be it further

Resolved, That a direct appeal be made to President Eisenhower for assistance at this critical time.

FARM INCOME

Whereas the present administration has shown a singularly consistent intent to deprive farmers of any influence in the national economy; and

Whereas for the welfare of the whole economic structure, farmers must develop methods to insure the survival of the agricultural community; and

Whereas these methods must operate without putting additional burdens upon the United States Treasury: Be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, do hereby endorse the basic program as outlined in Senator Proxmire's farm bill—and other bills carrying the philosophy of greater farm income—as a means of controlling production and maintaining fair prices for farm products.

FLEXIBLE PRICE SUPPORTS

Whereas the administration insists that we keep the flexible price supports system whereby farm prices can be forced down to any level the administration happens to choose; and

Whereas under this administration farm prices always go down and never up except in an election year: Therefore, be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, do insist, that in order to arrange things in a more equitable relationship, the flexibility shall also apply to the rest of the economy. That all salaries of personnel in the Department of Agriculture, including Secretary of Agriculture Benson, and all Government employees including President Eisenhower, shall have their salaries cut to correspond with whatever level of support they deem wise for agriculture. If 60 percent of a fair price is enough for agriculture, it should be good enough for all segements of the economy; and be it further

Resolved, That copies of this resolution be sent to Congress, President Eisenhower, and Secretary of Agriculture Benson.

PRICE SPREAD INVESTIGATION

Whereas the farmer's share of the food dollar is currently only 39 cents, while processing and marketing interests take 61 cents; and

Whereas consumers are upset when they learn that the dairy farmer is receiving less than $4 per 100 pounds of milk when they claim that by the quart it is costing them over $10 per $100 pounds; and

Whereas many consumers have remarked that they would not mind paying 20 to 25 cents per quart if the farmers got at least 50 percent, which would amount to over $5 per 100 pounds: Therefore be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, request a full congressional investigation on the spread between producer and consumer prices, on all farm commodities.

LEGISLATIVE DIRECTIVES

Whereas the Secretary of Agriculture has shown utter and complete disregard for any need to maintain an equitable return to farm people for their labor and investment; and

Whereas directives to the Secretary in existing farm legislation read, "to insure an adequate supply": Therefore be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, do hereby go on record recommending that the words, "to insure a just and fair net return to farmer producers—such return to be on a par with earnings of other people gainfully employed," be added to directives in existing farm legislation.

FARM PROGRAM FUNDS

Whereas there is evidence that the administration is contemplating diverting hundreds of millions of dollars of funds, which ordinarily would be used in the national farm program, into nuclear, missiles, and strictly military projects; and

Whereas farmers as a whole are being discriminated against as compared to other segments of our economy: Therefore be it

Resolved, That the delegates gathered at the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, do hereby voice their vigorous opposition and disapproval of any diversion of farm program or school-lunch program funds to missile development or military defense programs.

WAC MARKETING CO-OP

Whereas we believe the farmer's share of the dollar spent by the consumer for dairy products is inadequate when we realize that only 46 cents of the consumer's dollar is returned to the farmer and that it is 2 percent less than a year ago and 15 percent below the 1947–49 average, and

Whereas it is in our interest as dairy farmers living within the Nation's No. 1 dairy State to bolster and promote the sale of dairy products so that the farmer's share of the consumer's dollar is substantially increased, and

Whereas the Wisconsin Association of Cooperatives has now succeeded in organizing a producers' marketing cooperative, whose purpose it is to coordinate dairy sales on a national scale: Therefore be it

Resolved, That the delegates gathered at the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis, February 21–23, 1958, go on record supporting and helping promote the special dairy marketing organization set up by the Wisconsin Association of Cooperatives.

STATE SALES TAX

Whereas we believe that all taxes should be levied according to the ability to pay, and

Whereas a State sales tax imposes a greater burden upon the lower income groups who spend most of their income for the necessities of life, and

Whereas the sales tax is being put forward as a deceptive inducement to make people believe that property taxes would be reduced: Therefore be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–32, 1958, do hereby go on record as being opposed to any State sales tax.

INCOME TAX SECRECY

Whereas the reenactment of the secrecy clause as affecting our State income tax returns has created a situation wherein the State is losing an inestimable amount of tax moneys resulting in a shortage of revenues derived from this source, and

Whereas these shortages in turn are creating a springboard from which the special interest groups are clamoring for the enactment of a State sales tax, therefore be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, do hereby go on record condemning all secrecy in government and demanding the repeal of the secrecy clause in our income tax laws.

SCHOOL SURTAX

Whereas the Wisconsin farm property tax is so high now that the tax has almost become prohibitive, therefore be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, hereby urge that the legislature pass a surtax on income to be used for elementary and high school purposes for the relief of the property tax.

TAXATION OF FOREST PROPERTY

Whereas owners of forest properties under the regular property tax are severely discriminated against as compared to owners of forest land entered under forest crop law, the regular tax being about five times as great as the forest crop law protected properties, and

Whereas the State constitution provides that the rule of taxation shall be uniform, therefore be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, recommend that the tax costs on timber lands subject to the regular property tax be made similar to forest crop law tax costs through a reduction in assessments of standing timber to 15 percent of true value.

INCOME TAX EXEMPTION

Whereas many of our farmers are of retirement age, and

Whereas they cannot afford to retire because of the amount of income tax taken from their life's earnings: Therefore be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, do hereby go on record urging our Federal Government to provide a statute whereby farmers 60 years of age or over be exempt from income tax on the first $20,000 of the proceeds of the sale of their property.

TAX ON STATE PROPERTY

Whereas taxes are high in townships where the State of Wisconsin owns land or operates institutions, and

Whereas people living on such State-owned property who are employees of the State receive benefits such as school bus transportation, high school tuition, and other services and privileges equal to those received by those living on private, taxable property, and

Whereas the burden of these services puts an unfair tax load on the property owners in these townships, therefore be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, do hereby go on record in favor of legislation which would cause the State of Wisconsin to pay tax on all property occupied by individuals receiving benefits provided in whole or part by local taxpayers.

HIGH SCHOOL AID

Whereas the present system of high-school aids places a punitive burden of taxation against the nonhigh school areas; and

Whereas this discriminatory taxation is being used as a lever to deprive the rural communities of all control of elementary education: Therefore, be it hereby

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23,

1958, do hereby urge that aids for all high-school pupils be on a uniform, nondiscriminatory basis.

* * * * *

REA INTEREST RATE

Whereas the REA has performed services to rural people which should be highly commended; and

Whereas the REA has a record unequaled in the repayment of loans to the United States Government; and

Whereas there is legislation to be introduced in the next session of Congress which will seek to increase the interest rates on REA loans from Government funds; and

Whereas the passage of such a law will cripple and possibly destroy the REA: Therefore, be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, do hereby go on record as being opposed to any increase in REA interest rates.

ANTITRUST ENFORCEMENT

Whereas the Department of Agriculture is neither equipped nor willing to enforce antitrust laws as they pertain to food chains and meatpackers: Therefore, be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, do hereby go on record that this function should be immediately transferred to the Federal Trade Commission.

CCC STOCKS

Whereas, when CCC stocks are sold proper credit is not always given to the farm program: Therefore, be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, do hereby go on record urging the Department of Agriculture that proper credit be given to the farm program when CCC stocks are sold.

SURPLUS FOOD DISTRIBUTION

Whereas, we feel that the distribution of surplus farm commodities to people in need of assistance is a great help in disposing of surplus food commodities through welfare agencies and also a help in keeping assistance cost to local communities to a minimum: Therefore, be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union Convention at La Crosse, Wis., February 21–23, 1958, do hereby go on record as being in favor of continuance of such a program.

INCREASE IN POSTAL RATES

Whereas, there is a movement afoot to increase postal rates on first-class mail in order to raise needed revenue: Therefore, be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union convention at La Crosse, Wis., February 21–23, 1958, do hereby go on record in opposition to the increase on first-class mail, but if moneys are needed, they should come through increasing rates on the heavily subsidized second-class mails, magazines, etc. An increase in rates on junk mail is also in order.

REMOVAL OF SECRETARY BENSON

Whereas we believe Secretary of Agriculture Ezra Benson is representing the interests of processors and distributors; and

Whereas the past performance of Secretary of Agriculture Ezra Taft Benson indicates that he would not be sympathetic to any plan designed to provide parity of income for family farmers; and

Whereas he has thus far pursued a pattern of action obviously intended to destroy all Government price support programs: Therefore, be it

Resolved, That the delegates attending the 27th annual Wisconsin Farmers Union convention at La Crosse, Wis., February 21–23, 1958, do hereby wholeheartedly urge the removal of Secretary of Agriculture Ezra Benson and favor his replacement by a man who will work for the interests of the family-size farm and restore farm income to a level comparable to that of labor and industry.

Political Slatemaking

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. MARTIN of Pennsylvania. Mr. President, in many States of the Union the political parties are naming their candidates for the 1958 elections. In some places slates are formed. When a slate is formed by what is known as the State organization, it creates some opposition. On the other hand, if a slate is not formed many voters criticize the party officials for not making suggestions.

Mr. Milton V. Burgess, the political editor of the Pittsburgh, Pa., Sun-Telegraph, discussed this in last Sunday's edition of that paper, and I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SLATEMAKING O. K. (IF I'M ON ONE)

(By Milton V. Burgess)

The forming of slates by the party leaders is an activity which causes many bruised feelings and bitter reactions in the party membership.

It is necessary if the party is to work effectively as an organization, but the slatemakers are never popular with those who do not win endorsements.

The rank and file of voters also distrust this sort of activity, although many times independent voters are among the first to criticize if a party organization does not offer a strong ticket and a carefully prepared program.

The slatemakers are not to be envied.

In the past, in both parties, conferences of leaders attempting to reach agreement on the ticket have been attended with some attempts at secrecy, although in most cases the newsmen have caught up with these sessions and picked up at least some of the details.

In the recent slating of statewide tickets in both parties, efforts were made by both State chairmen to sound sentiment carefully throughout the State before the endorsements were made.

THE FINAL CHOICE

Among the Democrats a group of about 15 leaders reached agreement on the final selections.

Once such agreement is attained there is little difficulty in gaining ratification from the larger policy committee.

In practical effect, much of the same method was followed by Republican leaders.

Arthur T. McGonigle of Reading, who was indorsed for governor, on a recent trip to Pittsburgh explained exactly how the recommendations were reached: first through regional conferences, then through a committee of about 60, and finally through a smaller committee.

Even candidates who do not receive the organization indorsements realize the necessity for a ticket if they are to win decisively.

Harold E. Stassen, candidate for the Republican nomination for governor, denounced the selection of the organization ticket, but immediately formed one of his own.

He explains, however, that his ticket is merely recommended to the voters and is not to be considered in the same light as the organization slate.

IT ALL DEPENDS

Nor does Stassen object to organization, either, if it is friendly—he expressed the view that he has the suppport of a majority of the organization committee members, if they are free to act.

Lt. Gov. Roy E. Furman who is running against Mayor Lawrence for the Democratic nomination for governor is not against organization as such.

Furman was the organization candidate for lieutenant governor 4 years ago, and sought the organization's endorsement for governor this year.

Furman's objection, too, is to the action of leaders who have not gone along with his candidacy.

He said recently that many members of the Policy Committee would have liked to vote for him but said they were afraid.

The business of becoming docile in the presence of fear is something which does not seem to bother Furman personally.

FALSE PROPHECY

He commented once that when he was first elected to the State committee by defeating the organization in a sticker campaign, he became involved in an argument with party leaders over the seating of certain members and that one of those leaders, whom he did not name, shook a finger under Furman's nose and told him:

"You are through politically."

Since then he has been speaker of the house and lieutenant governor, quite a political career.

The threatening business can be overdone.

Voters regard it as an abuse of organization power, and when such threats are clearly recorded the reaction at the polls has been amazing to even the most cynical.

The Vital Role of River Commerce

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. SMITH of Mississippi. Mr. Speaker, on Thursday, April 10, Mr. Braxton B. Carr, president of the American Waterways Operators, Inc., delivered a very important speech at Greenville, Miss., to a joint meeting of the Rotary, Kiwanis, and Lions Clubs. More than 300 civic leaders of Greenville heard Mr. Carr tell of the vital role of river commerce in the development of the economy of our Nation. Mr. Carr's visit to Greenville was arranged by Mr. Jesse Brent, president of the Brent Towing Co. and a leader in waterways activities in the lower Mississippi Valley.

Mr. Carr's address illustrates the very fine work that he is doing as president of American Waterways Operators. Under unanimous consent I include a copy of his speech:

SPEECH BY BRAXTON B. CARR, PRESIDENT, THE AMERICAN WATERWAY OPERATORS, INC., BEFORE JOINT MEETING OF ROTARY, KIWANIS, AND LIONS CLUBS, GREENVILLE, MISS., APRIL 10, 1958

I am happy to be in Greenville, for this is the first opportunity I have had to visit your city, although I am a native of your neighboring State of Alabama.

I know a great deal about your city from having heard of it through many of your citizens who are members of the American Waterways Operators, Inc.

I have met and listened to your Congressman, the Honorable FRANK E. SMITH, extol the virtues and the values of Mississippi and her great natural resources and her fine spirited people. These men call Greenville a river town and they say it with pride and the expectancy that others will appreciate all the meaning of the phrase "river town."

These men know the unique industrial and commercial strength and power that a river town enjoys today. They know the tremendous growth potential a river town has in the future of this Nation.

I wonder if you fully appreciate and understand this great growth potential you have or if it is lost to you because of your nearness to your own greatest natural resource, the greatest except for you as a people and your own resourcefulness.

Greenville is here because the river is here. A hundred and thirty years ago, settlers stopped here and began building a community because the Mississippi River gave them an avenue of trade and communication. In 130 years Greenville has had its ups and downs, its depressions, its recessions, its periods of economic stagnancy. Your people have hated the river one year and loved it the next. But through the years Greenville has grown. In the last 15 years her population has doubled.

In those 15 years the river was tamed and made to live in its banks.

The packet boat that once made Greenville a center of trade and commerce has shaken off her paddlewheel and her superstructure and her smoke-belching stacks; she has thrown away her wood- and coal-fired boilers.

In the last 15 years the thing that emerged from the ghost of the packet boat is squat, powerful, and ram-fronted. The towboat was not designed for eye-appeal. She was designed and developed as the most powerful working unit—pound for pound and horsepower for horsepower—of any piece of equipment that moves the commerce of this Nation. In power, dependability, and economy the towboat is a thing of beauty. She captures in the thrust of her propellers more of her diesel engines' usable power in proportion to the fuel she burns than any other power unit that is used in the United States to haul freight. She is the master of her movements, with her capabilities to go forward, backward, sideways, or at any angle with equal ease. She has mastered the rivers' currents with her great strength that ranges up to 6,000 horsepower. She probes the darkness of night and the murk of fog and rain with her radio and her radar to push her great loads of commerce up and down the river at steady, unbroken speeds that permit origin-to-destination delivery of her cargoes at 8 miles an hour—at times a better speed for origin-to-destination than some of our 60-mile-at-hour land carriers. Her depth finders probe the bottom of the channels to keep her moving.

More than 30 of these giants of transportation call Greenville, Miss., their home port. They are crewed and serviced and provisioned here. Most of them were built here. The men who sail them over portions of our great network of 29,000 miles of rivers and canals are Greenville men.

In the 15 years that Greenville doubled her population and became home port for 30 modern river towboats, these boats gathered around them a port full of barges to carry the freight that the packet boats once carried on their decks. The barges have even less eye appeal than the towboats, but they are long and big on service and economy. They will hold and carry, singly, from 600 tons to 3,000 tons, with 1 giant barge having been built with a cargo capacity of 7,200 tons. Some are open barges; some have hatch covers; some are tank barges with intricate systems of valves and vents and pumping systems; some are floating thermos bottles for special cargoes; some are steam-coiled to keep their cargoes hot; some are lined to handle highly corrosive acids; some are special deck types to carry automobiles; some are pressurized floating tanks.

Wedded together in tows—some of which are longer than the 1,031-foot *Queen Elizabeth*—these towboats and barges become single carrying units for as much as 30,000 tons of cargo. Where it counts, on the bottom where these tows ride the water, they are wedded together in a smooth surfaced bottom with a raked bow to break the water so that they move with the greatest efficiency of any cargo carrier in use today.

These tows that in the last 15 years have come to call Greenville, Miss., their home port are a strong muscle in the commerce and industry of the United States.

They are part of a total inland waterway fleet of 4,000 towboats and 15,000 barges operated by 1,700 companies.

They feed the producing hand of industry by moving into it the vital raw materials—coal, petroleum ,and petroleum products, chemicals, ores, heavy iron and steel products, grain, and grain products, wood and wood products, building materials, and sand and gravel.

This commerce of the rivers which planted Greenville on the banks of the Mississippi 130 years ago, and which flourished and died when the packet boat died, has come back in relatively the same span of years that Greenville has recaptured her growth cycle. Today the river boats haul over 8 percent of this Nation's freight in their barges.

They will carry even more of this Nation's commerce in the years ahead because they provide the most economical means of moving our bulk raw materials to our production industries. Men in Greenville who operate the towboats and barges, as well as the crews who sail them, are dedicated to rendering transportation services at the lowest possible cost consistent with efficiency and safety. They have sold their service as no one thought 15 years ago that it could ever be sold. As this Nation grows and prospers, as our population increases, as our standard of living rises and our demands grows for more goods and services, the need and demand for two things that Greenville has to offer will grow out of all proportion to what you even dream of today. Those two resources that you have that are most precious to you are really two in one—water in abundance and water transportation.

The river is a precious resource of great potential wealth. You should guard it and cherish it and protect it.

In 15 years it has helped double your population while other cities your size were losing their population, and more importantly, losing their young citizens. In those 15 years the river has given you a fleet of towboats and barges and their service facilities. It has helped give you two of your largest industries and several smaller but very important ones who depend on the river as their transportation avenue to supply their raw materials at transportation costs which allow them to compete in their sales markets. Your port terminal authority estimates, conservatively I think, that 1,500 persons in Greenville are gainfully employed in jobs made possible because of river transportation. Fifteen hundred gainfully employed because of river transportation means that 6,000—or one-seventh of Greenville's population get their livelihood directly from river commerce.

Greenville is a striking example of the role internal commerce serves in the life of a nation.

Let me say, without documentation, that the histories of the world's great civilized empires will show very clearly that those who neglected or allowed their internal commerce to be strangled all perished and died. World trade is glamorous and profitable and necessary—but internal commerce within the United States must be preserved and encouraged or we too will perish.

Do not misunderstand me in my dedication to waterways commerce. It is not the final and only answer to our needs for freight transportation. We need railroads, highways, pipelines, and airlines serving in their proper transportation capacities, rendering that portion of service which they can render most economically. They too serve Greenville with necessary services. I do not suggest any one of them should be eliminated or hamstrung in any way. But I do suggest that without river transportation Greenville would be less attractive to industry.

I think you must look outside your own city to appreciate my point. I think you have to look at what is happening to the overall industrial growth pattern of the United States.

In the fiercely competitive postwar period, when industry sought every advantage in production and marketing, a relocation of plants was started. This trend in relocation of industry gradually assumed revolutionary proportions. We moved into the greatest industrial production boom that this country has ever experienced and probably the greatest ever experienced in history. Industry's appetite for raw materials which had to be assembled from widely dispersed areas grew out of all proportion to anything we had known. A part of industry's hunger for raw materials was an appetite for process water in quantities available only from lakes, reservoirs, or running streams.

This combination of factors sent our manufacturing industries into a search for plant sites which ultimately led them to the navigable waterways. In the postwar period over $13 billion has been expended by industry on new plants and plant expansions in the Ohio River Valley alone. The aluminum industry is one outstanding example of the type of plant that has gone to the Ohio River Valley. In the war years the aluminum makers turned to the Pacific Northwest where they found what they thought to be an inexhaustible supply of cheap hydroelectric energy as well as the process water which the industry needs. But in the postwar years the aluminum industry has found that it needs a more stable supply of electric energy than can be furnished by hydro plants. It found also that in the Pacific Northwest it was so far removed from its principal raw material and its principal markets that it was losing its ability to compete. The aluminum makers turned to the Ohio Valley. Officials have publicly stated that their new aluminum production facilities will go to that valley because in the Ohio basin they have the right combination of factors which will enable them to compete in the production and sale of their product. A part of that combination of factors, and a very important part, is that the valley has the cheapest sources of steam-generated electricity to be

found anywhere in the country. This cheap steam-generated energy is made possible by generating plants which themselves have come to the river banks in order to haul their coal directly from the mine to plant by river transportation.

I do not suggest to you that water transportation and water supply alone has attracted $13 billion of industrial growth and expansion in the Ohio River Valley. Without the availability of other modes of transportation, other modes which haul the high cost products into and out of the valley, without adequate labor supplies, without accessibility to markets, this industrial expansion could not have taken place in the Ohio Valley. But the availability of economical river transportation and the availability of unlimited water supply in the navigation channels were two of the very necessary factors which made it possible to build this tremendous industrial empire in that area.

While the industrial growth in the Ohio Valley is greater in proportion than any that has taken place in any single area of this country in the postwar period, nevertheless this same type of industrial growth in lesser proportion has been taking place along every navigable stream in the United States. The growth of industry along navigable waterways has outstripped industrial growth in areas without this resource.

Over 2,500 plants have been built or have been expanded on water sites in the last 6 years. The chemical industry has invested over a billion dollars annually in new plants in the last several years and almost all of that industry's building program has been on waterside locations.

While we have reached the highest standard of living ever known to a civilized nation, no one has suggested that we have reached the peak. With the prospects of a growing need for more products to add to the standard of living and with our fast multiplying population, we shall need an even greater production plant than has been built in spite of the temporary economic setback that we are experiencing right now.

Greenville has a tremendous stake in the future growth because of the advantages you enjoy from your location, because of the start you have made to complement your predominantly agricultural economy with industrial diversification. You enjoy advantages which can be exploited over and above many cities of similar size.

Plans to improve Greenville's port by the development of an adequate channel to connect with the Mississippi River and to build industrial sites along your harbor front area represent an aggressive step forward to bring to Greenville even greater benefits from the river. No one is more aware of this than your Congressman FRANK E. SMITH who is a distinguished member of the House Public Works Committee and who has worked and fought to get the necessary congressional authorization for the $2½ million harbor development program which is so important to Greenville's future growth and prosperity. It has been an uphill fight to get authorization, but apparently it will be achieved this year and then you will be ready to proceed with the building of your improved harbor channel and waterfront industrial site area.

At the same time that river transportation is making its tremendous contribution to the growth and prosperity of this Nation, there are strong forces at work which seek to cripple and hamstring waterways transportation and water resource development.

The citizens of a town whose past, present and future is so closely tied up with river transportation should be aware of the dangers that lie ahead.

In November of last year the Bureau of the Budget directed that the Department of Commerce make a study to determine the feasibility of imposing user charges on our waterways. This study is underway. It is being made as a staff study without benefit of public hearings. The study is intended primarily to provide a basis of consideration for further administration action on the Hoover Commission report which recommended that tolls be levied against commercial users of the waterways. Such intent indicates something of a preconceived notion that user charges are feasible and should be levied.

At the same time that this study has been going on in the Commerce Department, the Surface Transportation Subcommittee of the Senate Interstate and Foreign Commerce Committee has been holding hearings on the "deteriorating railroad situation and its effect on the national transportation policy." A parade of witnesses appearing before that subcommittee has repeatedly recommended waterways user charges, apparently as a means to correct what is considered inequities in transportation.

Since the rivers of this Nation were first used as avenues of transportation and communication to open up the eastern one-third of the United States to settlement and trade, they have been free highways of commerce. The improvements which have been made to these transportation arteries have been accomplished with Federal funds in the expressed belief and conviction that the benefits which accrue from water resource developments are necessary for the general public welfare and are vital to our internal commerce. A waterways user charge will deny a portion of the benefits of these improvements to the public regardless of how it is imposed or under what guise.

We are heading into a fight to maintain the continued free use of the great Mississippi River system as a busy avenue of commerce contributing to the prosperity and future growth of Greenville. It is your fight as citizens of Greenville, even more than it is the fight of the operators of barges and towboats whose job it is only to render services over these waters which give to Greenville its river benefits.

I hope that you will join the fight when it comes to preserve your interests.

We Need an Across-the-Board Price Reduction

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the chamber of commerce at Milan, Tenn. In this speech I urged a straight, across-the-board price cut on all levels—manufacturing, wholesaling, and retailing as the best boost to the country's economy.

It seems to me that there is some point at which we must call a halt to continuing, month to month, and year by year, rising prices and costs. It also appears to me that prices have reached a point at which the consumer has balked—and balked hard. I believe that following such a voluntary price reduction, we would see a prompt revival of business.

It would hold none of the danger of a tax cut and if business were to be sufficiently stimulated, increased production would more than make up for the reduction in prices and there would be no marked reduction in business profits.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH DELIVERED BY SENATOR ESTES KEFAUVER, DEMOCRAT, OF TENNESSEE, BEFORE THE ANNUAL CHAMBER OF COMMERCE BANQUET, APRIL 12, 1958, MILAN, TENN.

Mr. Chairman, Mayor Webb, distinguished guests, and members of the Milan Chamber of Commerce, it is a great pleasure to have this opportunity to visit in the fine and vigorous city of Milan and to speak here at your annual chamber of commerce banquet.

I have had the chance on many occasions to learn of the activities of the Milan Chamber of Commerce. It is a very valuable institution in this town. I am glad to see by the size of this audience that it has such large support in the community and in the surrounding area.

I know of the efforts which have been made to more fully utilize this great arsenal. I want to salute the Harvey Aluminum Co. for what it is doing in cooperation with the chamber of commerce to utilize the facilities here. And I want you to know that I am continuing my endeavors to keep this arsenal in the mind of the Department of Defense.

I am not going to make a political speech tonight. But I want to tell you that what I have to say is going to impinge on politics. I intend to say something about the current recession and what is being done about it—and what is not being done about it. There is no way I can do this without mentioning the different attitudes on the part of the Republicans and the Democrats. But I hope you will regard what I say as factual rather than partisan.

The first thing we ought to know about this recession is that it was man made. It was deliberately brought about. It was and is the product of a mistaken tight money policy on the part of the United States Treasury and the Federal Reserve Board.

The tight money policy was aimed at inflation. Its intention was to curb industrial expansion and consumption by ordinary consumers. It was believed that the resulting slack in orders for goods and services would bring down prices.

It was a mistaken policy. It did not bring down prices. The cost of living has continued to mount month by month. The cost of living is now about 7 percent greater than it was at this time last year—and it was too high then.

The tight money policy resulted in a scarcity of money and higher interest rates. You will remember that Christmas a year ago merchants were hard put to obtain seasonal loans to help carry their Christmas merchandise. Banks just did not have the money to lend.

The price of mortgage money went up—if you could find a place to borrow money in the first place. Housing construction went down.

The price of everything bought on time went up. And as prices rose the demands of labor for cost-of-living increases also rose.

I say that this recession was man made. But the length of it and the depth of it was certainly unintentional. The people at the White House, at the Treasury, and at the Federal Reserve System did not intend that the situation get out of hand as it has. They did not intend for unemployment to mount as high as it has. But they made a further mistake in not recognizing the economic forces that they had unleashed in

time. Even to this very hour they are divided as to what to do about it.

Just last fall, when the signs of the recession were already clearly becoming evident, President Eisenhower warned the American people against spending.

"I am not advocating any buyers' strike," he said, "but I do know this, we should buy selectively and carefully. * * * We should not be spending recklessly and adding fuel to this flame."

That is what he said last fall, about a week before Detroit put its 1958 models on the market. And I may say that his words sent a chill up and down the spines of the automobile manufacturers.

But by March 5, he sang a different song. Unemployment had gone up to nearly 5 million.

At that time the President said, "I believe, of course, that the upturn in our economy will be the result of millions of citizens making their purchases, having greater confidence."

The President put his finger on the key word—confidence. What we have is a crisis of confidence. It is on confidence that the world of business moves.

Everybody likes to point to the vast amount of savings which Americans have accumulated. They are important. But they are not so important as confidence. Confidence is the basis of credit. It must be present in both buyer and lender. The buyer must have confidence that he will be able to pay his bills, his monthly charges. The lender must have confidence that the buyer's confidence is well-founded.

What is lacking now in both business and the individual that times are going to continue to be good enough in the foreseeable future to warrant using credit.

Most people will not buy a house with payments lastlig as long as 20 years or more without faith in the future—their own economic future. On the short term, many buyers hesitate to sign up for 30 or 36 monthly payments on a new automobile without the faith that they will have jobs which will produce the money to pay for the cars.

What we need obviously is a big dose of confidence. It is on the question of what medicine to use and when and where to apply it, that the political parties divide. And the Republicans, of course, are divided among themselves.

We Democrats in the Congress have taken several actions lately to create jobs. It is important to the Nation, as well as to the individuals who are out of work, that those unemployment figures come down—and come down substantially.

We have passed a major housing bill—which the President signed reluctantly—to put new life into the construction industry. It will make mortgage money more readily available, among other things.

We felt that the stimulation of housing was important because it does not take the housing industry long to toot up and get going. Furthermore it touches almost every community in the country.

New houses do more than stimulate the construction industry. They stimulate the home furnishings business, the appliance business, the textile business and many more.

We hope that the effect of this new housing bill will be felt promptly in communities all over the country.

We have also passed a bill stepping up the great Federal-aid highway program. This program provided increased Federal aid for the construction over a 16-year period of a 41,000 mile highway system. It was a landmark in our approach to the highway problem. But it was slow in getting underway. We hope that by the amendments we have now made that this program in Tennessee and other States will move along promptly so that it can provide its own stimulation in orders for road machinery, cement, steel and all the other products which go into highway construction, along with jobs.

We have also been insisting that the various departments of government, especially the Department of Defense to which most of the money goes, step up purchases and contracts with money which had previously been appropriated.

We hope all of these measures will be effective although we understand that alone they may not be enough to turn the tide.

Now the administration has taken the view all along that it was against what it calls pump-priming public works programs in the light of the fact that we are headed for a deficit this year. On the question of a tax cut to stimulate buying it has been unable to make up its mind.

One week Vice President NIXON and Secretary of Labor Mitchell come out for a big tax cut. The next week the White House pulls the rug out from under them.

I want to make it clear that there are things for and against a tax cut now. I want to be frank about it because I know it is a subject of interest and concern to us all.

Let me point out some of the things which are against a tax cut at the present time.

One is that a tax cut of a size sufficient to have any effect on stimulating purchasing would undoubtedly result in a large deficit in the Federal budget. It appears that there is going to be a budget deficit anyway. A tax cut added to that might run the Federal deficit up to as much as $10 billion or more.

This in turn would require another act of Congress either removing or stretching the present limit on the Federal debt.

What this means in essence is that we would have to issue bonds and start paying interest on the tax cut we would be voting ourselves.

There is a second important objection. This is that a tax cut would add fuel to the price inflation which has in no way been lessened by the recession. Many people feel that a tax cut would merely underwrite already high prices and might lead to still higher prices. This is a very serious objection.

On the other hand it is said in behalf of a tax cut that a tax cut is cheaper than a very large public-works program. It is said that a tax cut would have an immediate effect on the economy whereas it would take many months to get a public-works program underway.

It is also pointed out that if the economic situation gets more serious than it is now, that a stimulation of business would be cheaper—since this in itself would create taxable values—than letting our economy slide, and tax collections along with it.

For my part, I do not think a big overall tax cut at this time is advisable. I think there should be some increase in the personal exemption, which would contribute something to the purchasing power of the individual, and an adjustment of small-business taxes, allowing them additional funds which would expand and invigorate business. But, with these exceptions, I think an overall big cut would be unwise under present conditions.

An overall tax cut would be inflationary, and I must say that I agree in good part with Bernard Baruch who testified before Congress last week to the effect that inflation was our greatest danger.

It seems to me that there is some point at which we must call a halt to continuing, month to month, and year by year, rising prices and costs.

It also appears to me that prices have reached a point at which the consumer has balked—and balked hard.

I think what this country and our economy needs is a straight across-the-board price cut on all levels, manufacturing, wholesaling, and retailing.

I think that if we had such a voluntary price reduction across the board we would see a prompt revival of business. It would hold none of the dangers of a tax cut. If business were to be sufficiently stimulated, increased production would more than make up for the reduction in prices and there would be no marked reduction in business profits.

I am glad to see that prices are coming down in some instances. Aluminum has now been reduced and the price reduction in this basic material should be evident soon in many things in which it is employed.

Both Montgomery Ward and Sears, Roebuck & Co. have sent out large spring catalogs with prices in many cases reduced by 10 percent.

These price reductions are helpful. But price cuts should not be limited just to retailers or to isolated industries. We need a general price reduction to stimulate purchasing and create jobs.

We particularly need price reductions in basic commodities and services whose costs enter into so many other things. A price reduction in steel would be the most effective kind of reduction. It makes possible a reduction in automobiles, in heavy construction, in a thousand other articles and trades.

It is ominous in my opinion that the steel industry does not reduce prices at the present time. Steel is operating at little more than 50 percent capacity. The earning records of the industry show that it could well afford a price cut and also that the present price of steel is unnaturally high.

I hope that the steel industry would see that it is not only a matter of economics which is involved, but a matter of patriotism.

Prices of automobiles have been going up and up for 10 years or more. There can be no doubt but that high prices have a lot to do with the fact that, although the industry is operating at little more than 60 percent of capacity, some 900,000 unsold cars are today in the hands of dealers across the Nation.

The industry has expressed the hope that the current excise tax on automobiles be abolished or reduced. It is possible that this may be done. But the American public deserves a price reduction in addition.

This is a time for statesmanship on the part of the big business and industrial leaders, and also on the part of leaders of labor.

I will say for myself that I would feel far more inclined to vote for tax reduction if I knew that business and industry generally were also going to give the consumer an across-the-board price reduction.

A reasonable, voluntary price reduction now would stimulate business and make jobs. Unless we get it, inflation is still going to take its heavy toll, purchasing power will continue to decline, and jobs will decline as well.

American business and industry in this long period of inflation has become accustomed to competing in every way except in prices. It would be a healthy thing if price competition, contributing as it does to a dynamic economy, would come back to America.

Millions for Dictators

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1958

Mr. PROXMIRE. Mr. President, the Milwaukee Journal, in its Sunday, April 13 issue, pointed to one great weakness in our foreign-aid program. The editorial congratulates Representative

WAYNE HAYS for his criticism of the great error of this Nation in providing generous aid to the corrupt dictatorship of Trujillo of the Dominican Republic, which so extravagantly and wastefully squanders money.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

MILLIONS FOR THE DICTATORS

Representative WAYNE HAYS, Democrat, Ohio, charges that Lt. Gen. Rafael Trujillo, Jr., son of the Dominican Republic's dictator, is spending a million dollars on a year's stay in the United States.

None of our business? HAYS thinks is is, for the Dominican Republic is down for $1,300,000 in American aid.

Young Trujillo is ostensibly attending the United States army command and general staff school at Fort Leavenworth, Kans. He has an entourage of 7, plus a dog. He has a hotel penthouse and a ranch near Leavenworth.

But currently Trujillo is on leave from the army college. His doctor, he says, thought he ought to go to California because of a sinus condition. He's been attending sporting events, squiring movie stars and having a pleasant time generally.

This bothers Representative HAYS. And he has a point. Here is another case of a family dictatorship which milks the people of its country and lives as lavishly as the old moguls of India. It's not a unique case. Batista in Cuba is a good example of a man using position to build private wealth. Peron did it in Argentina. Perez Jimenez did in Venezuela. Bao Dai did it in Vietnam until he was forced out. (See article by Peter Edson on page 1 of this section about Cuban graft.)

In each of these cases the poverty stricken people of a country were victims of extortion to provide private wealth and luxury for their leaders. And while it occurred this country was forking over aid money to help the countries develop—money required at least in part because of corrupt leaders.

There's something wrong here, as HAYS believes. Proper aid is one thing. Aid to help those whose leaders squander a nation's competence is something else.

The Civil Rights Act

EXTENSION OF REMARKS
OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mr. ADDONIZIO. Mr. Speaker, I am pleased to support the full appropriation for the Civil Rights Commission for the next fiscal year, and I trust the administration will delay no longer in implementing the provisions of the Civil Rights Act passed at the last session.

The first Civil Rights Act in nearly a century emerged from Congress in a scarred condition, but it did come out alive. Certainly the fact that such legislation was enacted is in itself very encouraging. It proves that in spite of the very great difficulties encountered in the Halls of Congress, progress in this field can be made. The opponents of this civil-rights bill, armed with the weapon of debate, set out to kill it as they had defeated such legislation in the past; but this time, even though wounded and substantially weakened, it did survive. The real importance of this action by Congress is that, for the first time in many years, the Legislature has done more than talk about civil rights, and has taken a substantial step toward assuring the citizens of this great Nation that it is not merely a paper democracy. I hope you do not feel that this is in any sense a final victory. The real battle is ahead. This is, at most, a beginning.

Let us now examine, briefly, this new law on civil rights, keeping in mind, first of all, what it was originally intended to accomplish; and, secondly, what it probably will accomplish. The main purpose of this bill, when first introduced into Congress, was to supply legislation which would enforce the constitutional right of every citizen of the United States to vote regardless of race, color, religion, or national origin. The bill called for the creation of a Civil Rights Commission with power to investigate cases concerning denials of voting privileges to any citizen. Such a Commission has been established. Part 2 of the bill provided for an additional Assistant Attorney General in the Department of Justice to head a new Division on Civil Rights. This provision was also adopted in the final version of the bill. Part 3 was originally designed to give the Attorney General the right to "seek injunctions in Federal courts in the name of the United States against any person who has engaged or is about to engage in acts which would deprive a citizen of voting rights or other civil rights." Or other civil rights. This very important part of the bill was struck down by the Senate. If this last part of section 3 had not been eliminated, the Attorney General would have had the power to seek an injunction in a Federal district court against any person who would interfere with another's exercise of his civil rights. For example, if a person or a group of persons attempted to halt or interfere with the desegregation of a school, the Attorney General could take action against them. However, part 3, as finally passed, allowed for such action on the part of the Attorney General only in cases of denial of voting privileges.

The original version of the bill also allowed enforcement for its provisions by civil action as well as by criminal action. In other words, the Attorney General could institute action by getting an injunction ordering the violator to cease his interference. Should he persist, he would be subject to arrest and imprisonment for contempt of court. This provision was also modified by Congress. The Senate and House compromised in that, if the fine levied was more than $300 or the imprisonment imposed totaled more than 45 days, the accused could demand and receive a trial by jury. This jury trial compromise is certainly a very debatable issue in the theoretical sense, but in reality it is a partial victory for those who oppose civil-rights legislation. In the first place, if those opponents of civil rights who claim there is no real need for such legislation speak in good faith, they have nothing to fear from the bill whether or not a jury trial is provided. In the second place, it is a well-known fact that such contempt actions as proposed here are generally not subject to jury trial, especially in the States where the most vigorous opposition to this legislation is manifest. In the third place, it is certainly doubtful that any substantial convictions by jury would be obtained against offenders since the people of the area of the Nation where such cases are most likely to arise are, generally speaking, not only bitterly opposed to civil-rights actions, but in some cases have also openly announced their intention to defy such laws as that laid down by the Supreme Court of the United States in regard to school desegregation.

The Civil Rights Act does add one new protection in regard to jury trials. The act provides for uniform qualifications for Federal jurors. The effect of this protection will be to reduce the possibility of discriminatory State regulations being used to keep Negroes off juries trying civil-rights cases.

This has been a sketchy treatment of our new law on civil rights; but I believe it is sufficient to serve my purpose. One can easily see that the final civil-rights bill passed by Congress is substantially different from the original version. During its battle for survival the bill was drained of a great deal of its original strength and purpose. Whether or not it is strong enough to do its job of protecting voting rights remains to be seen. But it will never be able to serve its original purpose of protecting other civil rights. For, if it had been passed in all its facets, it already would have been tested.

No more than a few days after the Civil Rights Act of 1957 was enacted into law, we witnessed one of the sorriest domestic incidents of the last 50 years. I refer, of course, to the tragic and nationally humiliating affair which occurred at Little Rock, Ark. Here was a city which, in compliance with the United States Supreme Court order of 1955 that desegregation proceed with all deliberate speed, had carefully formulated a plan to integrate its Central High School, and was ready to put that plan into effect in all good faith. Then, very ironically, the Governor of Arkansas used his powers derived from law to frustrate the law of the land as laid down by our highest Court. There we had a terrible travesty of justice. There we had troops being used not to protect and enforce the constitutional principle of equal protection of the law, but to flagrantly deny this maxim.

We are all familiar with the events which took place during those few weeks last September. Governor Faubus actually challenged the validity of the Federal Court's order to proceed "immediately" with the integration as planned. Judge Davies, who refused to grant a stay of integration as requested by the local board of education, said:

In an organized society, there can be nothing but ultimate confusion and chaos if court decrees are flaunted—

He meant "flouted"—whatever the pretext.

The Governor announced that he did not intend to call off the National Guard men. Their orders not to admit Negroes to the school stood fast. The Governor, after a conference with President Eisenhower, agreed to abide by the ruling of the Court, hearing to be held on September 20. On that day, Judge Davies granted a temporary injunction against the Governor's use of the National Guard. The Governor complied with the court's ruling, and ordered withdrawal of the troops.

Integration was scheduled to proceed on September 23. A large crowd of more than 1,000 people gathered near the school. Despite the efforts of city and State police, the mob managed to attack newspapermen and Negroes in the area. The eight Negro students were taken from the school and escorted home for their own protection.

The President then announced his intention to use force if necessary to guarantee compliance with the order of the court. The necessity was demonstrated the next day when, despite the President's order to cease and desist, another mob gathered in front of the school. That afternoon the President ordered the Secretary of Defense to federalize the National Guard and to "call out whatever troops might be necessary to insure compliance with the district court order." Paratroopers swiftly moved into Little Rock, and integration proceeded with a minimum of disorder.

Now we come to the question of what might have been done if the civil-rights law of 1957 had not had its teeth extracted by opposing legislators. If part 3 of the bill, as originally proposed, had been preserved, the use of force by Federal troops might have been averted in Little Rock. The Attorney General could have taken action against the agitators who threatened to interfere with the planned integration. It might also be said that most of those who made up the mobs around Central High School would not have been there if they had known they were risking arrest and possible prosecution for violating Federal law. True, this is all conjecture; but the point is that for lack of any law to enforce the integration plan, and to nip interference in the bud, we had to rely on the Presidential power to enforce a court order by use of Federal troops. Would it not have been better to have had such a law?

What the Little Rock incident cost us in national morale and in international propaganda is immeasurable. One fact is clear. We did not gain by this humiliating experience. The President's order and use of troops were not enough to save face, for we had lost face by allowing the whole mess ever to come about.

How many more Little Rocks will there be? How many more flagrant denials of individual civil rights will be perpetrated throughout this Nation because of inadequate legislation to prevent such episodes? How long shall we go on as a Nation denying citizens basic constitutional rights because of such weak excuses as traditions, social systems, and States rights?

Some claim that the protection of civil rights is the task of the States. The States have had their chance to do so. Is it not odd that most of the complaints of violations in the area of civil rights occur in the States which claim that it is their job to protect these rights? Over 50 years ago the doctrine of separate but equal facilities for the races was announced by the Supreme Court. This proposition remained only a doctrine without substance. States most concerned with racial problems did not support this doctrine in good faith. "Separate" remained, but as a matter of fact "equal" was never accomplished. Thus the recent Supreme Court decision that separate facilities are "inherently unequal."

Today we all know that the Supreme Court, by its 1954 decision concerning segregation in the schools, has announced the ends to be accomplished. The need for means by which these ends can more equitably be accomplished has been forcefully demonstrated by Little Rock and other such experiences.

The administration has made clear that it will not press firmly and vigorously for the endorsement of civil rights and civil liberties. As with the other grave problems confronting our Nation at this critical stage of history, the administration refuses to lead the civil-rights problem to a decision. However, a problem of this magnitude, involving basic human rights and a world contest in which freedom itself is at stake, requires more than indifference or inaction. Hence, Congress must press forward the fight begun last year and enact additional legislation to safeguard the constitutional rights of all citizens. I urge early approval of the Civil Rights Act of 1958 which is sponsored by a number of distinguished colleagues and myself who are determined to extend full first-class citizenshp and equality of opportunity to all our citizens without regard to race or creed or color or any other circumstance.

It is over 3½ years since that historic decision by the Supreme Court declared that segregation in public schools is a denial of equal opportunity and violates the 14th amendment. The tragedy of Little Rock and similar outbreaks elsewhere, make clear the need for Congress to provide explicit conditions and machinery for implementation of the Supreme Court decisions. As the Civil Rights Act of 1958 declares, those decisions express the moral ideals of the Nation and the world and point the way to a Nation enhanced in strength and dignity at home and enhanced in honor and prestige throughout the world. It is our clear duty to continue the forward march begun last year.

Why I Am a Democrat

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks I include a very excellent speech entitled "Why I Am a Democrat," written by Miss Linda Allford of my home town, McAlester, Okla.

Miss Allford, who is a sophomore in McAlester High School, was one of the winners in a statewide contest sponsored by the Oklahoma State Democratic Central Committee. Both the committee and the young people who participated in this contest are to be congratulated upon the fine quality of the speeches and essays prepared by the contestants. These efforts are a real contribution to better government.

Miss Allford's speech reads as follows:

I first said I was a Democrat because my father and mother, my grandparents, and as far back as we can remember, have been Democrats. Then, too, the people that I admire and like best are Democrats. They're a friendly, generous, happy people.

These were the reasons I was a Democrat until I started studying the principles and platforms of both major parties. Now I know why I am a Democrat. And it's a good thing all my folks are Democrats; otherwise I'd do my level best to convert them.

I am a Democrat because our party has a special appeal for the youth of our State. It is the progressive, forward-looking party. Our leaders are men of vision and courage. The Democratic Party is flexible enough to meet the changing needs of the people—constantly adapting our policies to meet the new challenge in a fast changing world. Isn't it only natural then that young men and women—with most of their lives in front of them—are eager to identify themselves with the Democratic Party?

The Democratic Party, however, has a long and proud history based on the principles of the "greatest good for the greatest number" and "equal justice for all—special privilege to none."

The Democratic Party is the most successful party that has ever served a grateful people. It must be, to have lasted so long—171 years of service to the people since it was founded—with its principles embodied in the Bill of Rights. Thomas Jefferson, founder of the party, believed that any government should be of, and for the people.

In an article in Life magazine, 55 historians evaluated our American presidents. Six were listed great, and of these 6, 4 were Democrats—Jefferson, Jackson, Wilson and Franklin Roosevelt. And of the two named as complete failures—Grant and Harding, both were Republicans.

We should have large signs at every highway entrance leading into our State with letters 6 feet high: "Oklahoma. Built by Democrats" for our party has been in power in Oklahoma ever since statehood. Oklahoma has grown from tee-pees to towers under Democratic State government. Without the successful leadership of Democrats,

Oklahoma would not hold the proud place she does today, as one of the greatest States in the Nation.

We Democrats are proud of this record. And for comparison only, we feel that the public should be informed that the Republican Party contribution to the glorious 50-year history of Oklahoma may be summed up solely by opposition—a negative record—and futile, frustrated, embittered criticism through the Republican-controlled press.

I am a Democrat because I know that for the working man and woman there is no other choice. Because every law that has been passed for the benefit of working people has been passed by Democrats in Congress who believed in the cause, the dignity and the importance of the workingman's well-being, enough to fight for it. Before these Democratic social reforms we had the notorious sweat shops in factories where men, women, and even children worked long weary hours for starvation wages, where men and boys worked down in mines, from daylight to dark, without hope.

Democrats passed the minimum-wage law, unemployment insurance, farm-support prices, and social security, the greatest of all social reforms, bringing dignity to labor and security for all working people—giving new meaning to the four great freedoms—securing freedom from want and fear.

Woodrow Wilson's Democratic administration attacked monopolies and unfair trade practices, declaring that "The labor of human beings is not a commodity nor an article of commerce." An income-tax law was passed to distribute more equally the burden of government, and to reduce the high towering economic peak between the multimillioned rich and the miserably poor.

Democrats also gave women the right to vote in 1918 and have since championed the cause of women in policymaking posts.

Roosevelt, the greatest of all Democratic leaders, believed in the humanitarian philosophy that the legitimate object of government is to do for a community or people whatever they need to have done, but cannot do at all, or cannot do so well.

Franklin D. Roosevelt not only saved our country from revolution and economic ruin, but saved the lives of countless thousands through his determined promotion of adequate housing, food, and other necessities of life. Even though bitterly criticized, he made an indelible impression on the hearts and minds of man, that the Democratic Party is the humanitarian party—the party with a heart.

During the 20 years of the last great national Democratic administration, we had, as Stevenson said, "Progress in peace and victory in war."

This Democratic record has made a great impression on me and I have decided that I want to be a part of the party that has made our Nation the greatest in the world.

I am a Democrat because there is a warm sincere welcome for me here. We, the youth, are needed. Today, as never before, with the challenge of a threatened loss of world leadership to Russia—high school and college classrooms all over the country have become our first line of defense. Not only for furnishing the manpower for the Armed Forces, but the scientific know-how necessary to preserve our peace.

But we must also furnish the leadership of tomorrow in our Government by taking seriously our responsibilities as citizens today. Politics is the science of government and, as such, affects everything in our lives, from the kind of schools we attend to the price we pay for food, and our standard of living.

The important factor in this great challenge is that the Democratic Party is willing to share it with us—in the exact degree to which we demonstrate our willingness and ability to serve.

More and more voters, of all ages, are turning to the Democratic Party as the party best able to lead the country in the present crisis, according to the latest polls. During the past 5 years of the present Republican administration, a record number of small businesses and farmers have gone bankrupt because of their tight-money policies—while big companies and chain monopolies are spreading their tentacles over the United States.

Democrats believe that the true test of any government is how the average citizen and small-business man fares. We believe in building from the bottom up—instead of from the top down. As Roosevelt said, "We put our faith in, and give our help to, the little man at the bottom of the economic pyramid."

I am a Democrat because the Democratic Party, made historic by Jefferson, vitalized by Jackson, dedicated by Wilson and Roosevelt, has reached the highest degree of service to the people; and put into plain words by Truman, "The Democratic Party is the people's party—dedicated to serve all the people, not the special interest of a few." The record of the Democratic Party is blazed across the face of the Nation in a stronger, better, healthier, happier life for the common people of America.

Lowell Mason's Grace

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1958

Mr. CARLSON. Mr. President, annually, on the opening day of the Washington baseball season, Lowell Mason, a former member of the Trade Commission, arranges a luncheon at the Senate preceding the game. A number of Members of the Senate, the House, and the executive branch of the Government, are in attendance. This year we were honored by the presence of the Honorable Harry Truman, former President of the United States.

The luncheon was opened with grace by Lowell Mason, and I ask unanimous consent that the prayer be made a part of my remarks and be printed in the Appendix of the RECORD.

There being no objection, the grace was ordered to be printed in the RECORD, as follows:

LOWELL MASON'S GRACE

Eternal Father, not because we know how to ask rightly, not because our lives are worthy, do we pray to You this day.

We pray for Thy presence at this gathering.

As these leaders of men partake of food and fellowship, make us aware, this is the way it should be with all men to find happiness in each other's presence.

And yet to also find unrest deep enough within us to make Thy word a reality.

Teach us not to abandon in days of frustration, the ideals and aims we acquired in moments of high resolve.

Grant us faith stronger than circumstance and courage greater than our fears. Only by these things can we make Thy presence meaningful.

Amen.

The Invisible Government

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1958

Mr. KEFAUVER. Mr. President, all thoughtful Americans are interested in better law enforcement and doing what they can to stamp out the power of organized criminal syndicates. A very good discussion of this problem is contained in an address by Paul W. Williams, United States attorney for the southern district of New York, before the New York University Law Alumni Association. I ask unanimous consent that the major part of his address be printed in the appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

STOP THE INVISIBLE GOVERNMENT

(By Paul W. Williams)

(Paul W. Williams is United States attorney for the southern district of New York. The following is adapted from an address last night before the Kings County chapter of the New York University Law Alumni Association.)

In this country today, we have a second government extending throughout the entire country and in its parasitic way it is eating at the democratic and moral foundations of our society. This invisible government has millions of dollars at its disposal. It issues its own edicts. It enforces its own decrees. It carries out its own executions. It collects its own revenue. It includes the major criminals of the country, and it has as its allies some public officials tempted by the lure of money and power, as well as short-sighted business and labor leaders. It is a rotten and vicious empire built on greed, murder, and violence.

The numerous groups in our major cities, which originally derived their income from prostitution in the pre-World War I period, have developed into two major syndicates in Chicago and New York. Each has its own committee which decides policy and allocates various criminal enterprises in certain prescribed territories. One might easily refer to the committee as a board of directors and to the criminal enterprises scattered throughout the country as criminal subsidiaries which purchase their franchise from the syndicate with an annual tribute in return for protection. The syndicate's primary purpose is to establish a monopoly in the area of activity where it operates. The advantages of monopoly to the syndicate are to increase its gross income and its power.

The connecting link between the two syndicates appears to be the Mafia. This tightly built and secret organized group, because of its code and willingness to resort to terror, produces many important criminal leaders. With amazing political skill they organize and link desperate mobs and rule with an iron hand.

These two major syndicates are only interested in those activities which yield sums of money in the millions of dollars. Such petty crimes as burglary, robbery, larcency, and theft are not sufficiently lucrative to attract any great amount of interest from the syndicate. The major sources of income have been prostitution in the pre-World War I period, prohibition in the twenties and thirties, and gambling, racketeering, and

other illicit traffic in the forties and fifties. In 1950 and 1951, it was estimated by the Kefauver committee that $20 billion were involved in gambling. There is little reason to assume that the figure has dropped to any appreciable extent. In Chicago, from 1945 to 1950, $150 million per year were played in the policy racket alone. It is realistic to think of $150 million a year as the amount presently played in New York City.

This concentration of economic power at the disposal of the criminal syndicate and its leaders represents the most serious aspect of the threat to the country. This power is primarily employed first, to infiltrate legitimate business and labor unions; second, to purchase respectability; and, third, to influence and buy elected public officials and law-enforcement agents.

The danger of organized crime to the country is grave, and if organized crime advances in the next 20 years as it has from 1920 to 1958, I do not wish to visualize the consequences.

The responsibility for this increasing danger lies not only with the criminals themselves but with the public at large. For example, those officials who compromise themselves by whatever means in order to aid the syndicate are equally criminal. Those civic groups which look in another direction abdicate their leadership in democratic institutions in favor of the unscrupulous and the corrupt.

The elimination of the criminal syndicate can only be accomplished by a concerted effort.

There must be an agreement among State and Federal authorities that the criminal syndicate and its subgroups will be attacked in every State and in every field of activity in which it operates. Unless such an overall and sustained effort on a national scale is forthcoming, the syndicate can always shift its operations to another county or State, or enter a new field of activity, or lie low until the possibility of apprehension has passed.

This overall effort must come from Congress, the Federal enforcement agencies, the States, the press and the public at large.

Congressional action in the form of investigating committees and legislation serves a number of vital purposes.

The broad power of committees such as the Kefauver committee and the Select Committee to Investigate Improper Activities in the Labor or Management Field has permitted investigations which have focused national attention on a particular facet of organized crime.

These investigations have usually aroused the conscience of local citizenry and resulted in local action.

The investigations have led to specific legislation to remedy the abuses and evils which have been uncovered.

The second important element in this campaign against organized crime are the Federal enforcement agencies. I have particular reference to the Department of Justice and the United States attorneys, working under the supervision of the Attorney General, the FBI, the Internal Revenue Service and the Federal Bureau of Narcotics.

* * * * *

The State, moreover, can make use of its agencies in the same manner as the Federal authorities. Legislative investigating committees, grand juries, intelligent and honest license commissioners, a well-paid and trained police force—each can be effective in its sphere. The crucial factor, however, is probably a State attorney general who has the power of criminal investigation and supervision of the State police. This power would permit action in any part of the State, and he could assist local officials.

The fourth essential element in the fight against the crime syndicate is the crusading newspaper. There are few persons, including criminals, who can withstand the pitiless glare of publicity.

Lastly, the final element in the fight is the public itself. Wherever businessmen, labor leaders, and public officials are known to accept advantageous relationships offered by criminal syndicates, it is up to the business community, labor unions, and the public at large to fight unceasingly with every means at their disposal.

These are five elements which I believe can effectively engage and destroy the invisible government: Congressional action, Federal law enforcement agencies, State agencies, the press, and the general public. Working together, they are invincible; separately, they have proved pretty ineffective.

Mr. Truman's Vision

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. PROXMIRE. Mr. President, yesterday former President Harry S. Truman made a splendid statement before the House Banking and Currency Committee. The Washington Post in an editorial published this morning has commended President Truman for the wisdom of his proposals.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. TRUMAN'S VISION

It is next to impossible for former President Harry S. Truman to make a nonpolitical statement—and just as impossible for Republicans, it seems, to give him a chance to try it. This circumstance tends to dilute the usefulness of testimony by Mr. Truman on a politically explosive issue like the recession. But for those willing to leave aside the Truman references to "do nothingism" and the carping reminders from the other side, of Mr. Truman's failure to prevent a 50-percent increase in the cost of living during his White House tenure, there is much wisdom to be found in the former President's testimony yesterday before the House Banking and Currency Committee.

Particularly to the point where Mr. Truman's enjoinders to the Congress to act and plan for an expanding economy. He advocated large increases in both defense and civil spending, not because this would cure the recession tomorrow, but because there are urgent national needs to be met and because a long-term program to meet them is the indispensable basis for sustained economic growth. Not really forgetting, it would seem, his own reluctance to see taxes cut in 1948, Mr. Truman contented himself with proposing a fairly modest $5 billion tax cut which he insisted ought to be linked with the plugging of various loopholes that, in his view, would nearly compensate for the reductions granted to low- and middle-income taxpayers. Whatever the practical chances of enactment, such a package would have considerable appeal—and it would not invite the inflationary perils of a much larger straight tax cut.

Mr. Truman's call for a bigger budget was perhaps the most significant part of his testimony. It would be unfortunate if his suggestion of modest tax reduction and reform were permitted to obscure this more important aspect of his advice. He would have Congress provide $3 billion more for defense starting next year and $5 billion more annually by 1964—not as much as the Gaither report recommended, but enough to support a badly needed expansion of conventional and tactical nuclear forces and to accelerate military research. His proposal for an immediate 50 percent increase in foreign economic aid and an eventual outlay of $2.5 billion annually for this purpose is equally important, and, like defense spending, has its justification in something far more fundamental than the present business recession.

Similarly, the higher outlays he urges for education, public health, and public assistance programs are part and parcel of any realistic concept of an expanding economy and a growing population, and a refreshing emphasis after the years of near obsession in the Republican administration with cutting off needed future growth in these basic Federal services. Mr. Truman's economics may be as fallible as the next former President's; but his large view of the Nation's destiny, its needs, its capabilities is, just now, exactly what the country needs to hear.

Editorial Commendation of Secretary of Agriculture Benson

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the RECORD two editorials published in Massachusetts newspapers which have just come to my attention. One is from the Christian Science Monitor and the other from the Springfield Union.

Both of these editorials commend the ability and integrity of Secretary of Agriculture Benson and evidence an approval for which Secretary Benson's programs are held in Massachusetts.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Springfield Union of March 8, 1958]

THE $12 BILLION FAILURE

When a Secretary of Agriculture calls 25 years and $12 billion worth of Federal farm programs a failure, it is time for the country to sit up and take notice of the farm bloc heads who, only yesterday, voted to freeze price supports on all farm products at 1957 levels, so that farmers' prices won't be depressed any more than they are.

Yet this tremendous expenditure, says Mr. Benson, has made little or no contribution to the problem of low-income farmers, in whose name farm programs are frequently defended. He has served notice, in the most emphatic terms, that unless the United States begins to take a realistic attitude toward farming, the problems will magnify and multiply.

The technological revolution has robbed the parity formula of meaning. But the more basic reason is the assumption of farm legislators over the years that they could defy, indefinitely and with impunity, the laws of the market place. The classic instance was the continuation for 10 years after World

War II of the rigid 90 percent of parity price support system which had been introduced as a wartime measure to spur maximum production of basic crops for war needs.

The goal must be a gradual return to a free market in agriculture. No other conclusion, indeed, is possible. Government intervention has been tried for a generation and it doesn't work. This plain fact still does not move the members of the farm bloc; they have been ignoring facts for years. But it is a sign of hope that a Secretary of Agriculture has the courage to tell the truth about agriculture.

The Nation, perhaps, could afford this $12 billion. It cannot longer afford laws—and lawmakers—bent on building bigger failures for the future.

[From the Christian Science Monitor of March 4, 1958]

BATTLER BENSON

(By William H. Stringer)

WASHINGTON.—If Ezra Taft Benson doesn't resign one of these weeks as President Eisenhower's Secretary of Agriculture—and there are indications that Ezra is defending his scalp pretty successfully—his triumph will be due in the main to these factors:

1. That he is an honest, courageous individual who is firmly dedicated to carrying through a difficult policy in which he strongly believes. And that President Eisenhower is confident that the Benson brand of farm policy is best in the long run for American agriculture, and that the Benson brand of courage is good for the Eisenhower camp and the Republican Party.

2. That the battle pro and con Benson is by no means wholly one-sided. The Secretary has a lot of support in the cities, where consumers are finding out just how much farm-price supports cost them in terms of taxes and to some extent higher food prices. The Secretary also has support in rural areas, where farmers must consume farm products subject to high supports.

Recently Secretary Benson has been receiving an average of 50 letters per day, of which 90 percent are actually pro-Benson.

3. That the farm picture is rapidly changing in these swift-moving years, with the farm population reduced from the 65 percent of the total population 100 years ago to 12 percent today and with splits and divided opinions plaguing and attenuating the historic strength of the farm bloc.

4. That farm income has been rising slowly, until now per capita farm income is the highest on record and farmers actually may be closing the economic gap somewhat on their recession-hit city cousins—although it is still true that farm income has not risen so fast as has the cost of things farmers must buy.

5. And as a final touch of political realism—or resignation—there is the belief that if Secretary Benson resigned, this wouldn't necessarily lift the entire onus of farm discontent from the Republican Party. Which has led quite probably to the conclusion in President Eisenhower's mind that it's best to stick with a right policy and go down, if one must go down, with flags flying.

It is significant for Mr. Benson's future that on the very day a Midwest congressional delegation was at the White House presenting to the President the case against Benson, eight Republicans rose in the House of Representatives to praise his policies. Two were from Ohio, where the farmer must buy price-supported grain to feed his cattle, poultry, or hogs. Others represented large cities like Chicago and Dallas.

Secretary Benson himself takes the battle in good heart, equipped with a built-in conviction that the cause is righteous. He believes that if it were only possible to do a wide-ranging job of educating farmers to the facts of farm surpluses—their cause, cure, and impact on prices—his present unpopularity would rapidly diminish.

Then more farmers would discover that the post-Korean downtrend on farm prices has ceased. Many more of them would realize that high price supports have helped to price such exports as cotton and tobacco out of the world's normal markets. The world's largest tobacco market is no longer in Winston-Salem, N. C., but in southern Rhodesia.

They would see the American farmer as passing through a long transitional period. There is a trend to bigger farms, more able to cope with lean-and-fat years. The Nation's population is booming and moving more and more into a protein diet which requires more farm acreage. Meanwhile millions of acres are being lifted out of cultivation annually by new airports and highways, to say nothing of urbanization's bites into the countryside.

The farm scene is very intricate. It's still difficult to persuade a farmer that he's getting too high a price for anything when consumer goods hang high. Washington still must come up with more effective measures for withdrawing marginal farm acreages from production, and for encouraging resettlement of marginal farmers.

Many of the letters which reach Secretary Benson—frequently from farmers—tell him he is on the right track, advise him to keep up the fight. He might build even more support if he could find the time and the means to address the whole Nation, and not merely the farmers, on the intricate problems of agriculture, what lies ahead, and the more-than-stopgap solutions which he would propose.

The Cost of Indifference

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1958

Mr. JOHNSTON of South Carolina. Mr. President, I have before me a copy of an editorial which appeared in the Anderson, S. C., Independent on April 12, 1958. This editorial, entitled "Ike's Recession—Senator Russell's Analysis of the Cost of Indifference" was written by former United States Senator Wilton E. Hall who is publisher of the Independent. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IKE'S RECESSION—SENATOR RUSSELL'S ANALYSIS OF THE COST OF INDIFFERENCE

Senator RICHARD B. RUSSELL, of Georgia, Southern spokesman and one of the most influential Members of the United States Senate, blames Ike's recession on indifference.

Speaking before the annual meeting of the Elberton Chamber of Commerce, Senator RUSSELL cited:

1. The indifference of certain big industries.

2. The indifference of big labor union organizations.

3. The indifference of Ezra Taft Benson.

Webster says indifference means unconcerned.

Wall Street, ravenous for higher profits, has fostered monopoly and price-fixing.

Big labor, dues hungry and constantly seeking higher wages without corresponding increase in production, has contributed to higher prices.

Consequently, both have come near pricing themselves out of a market in which consumers' cost-of-living has reached a record high.

Contributing to this high cost of living is the paradoxical situation—a creature of Benson's administration of the farm program—which finds farmers' income going down while food prices go up.

Senator RUSSELL pins a major share of the blame for Ike's recession on the bungling of the farm program.

Many months ago Senator RUSSELL and the other level heads in Government were warning that the declining fortunes of the farmers would sooner or later be reflected in the rest of the economy.

Benson and Ike and the rest of the Republican regime scoffed. They still regard the farmer as expendable.

Benson, Senator RUSSELL said, "has been the most expensive Secretary of Agriculture this Nation has ever had. The farmer's share has shrunk considerably, yet prices on food and clothing are skyrocketing. Benson has taken more money from taxpayers than any three of his predecessors, including Henry Wallace. He has tried to make impractical theories work. He's a typical Republican."

Indifference to the well-being of the average, wage-earning citizen, and the small farmer has been a trade-mark of the Republican Party throughout.

With the possible exception of Theodore Roosevelt, who later broke with the old-line GOP, Republican Presidents have been unconcerned with the problem of the people, and Ike has proven one of the most indifferent of all.

Another Republican trade-mark is placing politics ahead of all else, even national security.

Over the past 5 years the mania to provide Republican politicians with a balanced budget has resulted in loss of both United States power and prestige in a world that has become more hostile by the year.

One doesn't forget that Senator RUSSELL long ago predicted that Air Force and other defense cutbacks engineered in the earlier years of the Eisenhower Administration would place the United States years behind Soviet Russia in the race for air superiority.

Today there is every indication that Soviet Russia equals the United States in respect to air power in most spheres, and excels in some.

The politically-inspired bungling of the security program has confronted the United States with the usual result of pennywise pound-foolishness—we're going to have to spend much more to catch up than it would have cost to keep ahead 5 years ago.

The Georgia Senator warned his listeners there is no magical formula by which the Nation's defenses can be maintained without money.

The point is that we don't want our country to go into oblivion as being the wealthiest Nation on earth—and with little armed might.

The unconcern fostered under Republican regime—the indifference which has resulted in Ike's recession—also represents an undercutting of national security since a healthy economy is necessary to any defense program.

Senator RUSSELL, as usual has made a keen analysis of the situation confronting Americans. We agree with the words of Congressman PAUL BROWN, who, in presenting Senator RUSSELL to the Elberton audience, described Winder's great son as "one of the outstanding statesmen of all time whom I hope will be our next President."

Ceramics and the Future of South Carolina

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. THURMOND. Mr. President, I think it is safe to say that one of the fastest growing industries of the future will be the ceramics industry. A remarkable number of new uses are being found for all kinds of ceramics.

The State of South Carolina is richly blessed with the raw materials used by the ceramics industry. Moreover, the people of South Carolina are alert to the possibilities for industrial expansion in the ceramics field.

On April 12 there was celebrated at Clemson College the fifth anniversary of that school's ceramics laboratory. On the same date there appeared in the Greenville News of Greenville, S. C., an editorial entitled "Ceramics and Our State's Future," which discusses some of the developments in the ceramics field in the State of South Carolina.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CERAMICS AND OUR STATE'S FUTURE

Ceramic materials are among the most abundant of all our resources and, fortunately, South Carolina is richly endowed with these.

Almost without the public's knowing it, (for it has not been a spectacular sort of thing) research and development, much of which has been carried on at Clemson College, has brought us to the threshold of a whole new era of important industrial progress.

This will be commemorated at Clemson today when business and industrial leaders from all over the state will gather to celebrate the fifth anniversary of Olin Hall, the Clemson College ceramics laboratory which was built and equipped with a $630,000 grant from the Olin Foundation.

Charles L. Horne of Minneapolis, President of the Foundation, and other officers will be honored at campus events and a luncheon. Their foresighted gift and their cooperation with officials of Clemson and the State Development Board and others has started an industrial saga which may in time become fabulous.

Ceramic materials essentially are a form of mineral, basic elements of the earth which, when found in sufficient quantity and are readily accessible, may be more valuable than silver and gold. They include clay, sand, kaolin, vermiculite, and many others, some of which may not even have been discovered as far as putting them to use is concerned.

Until a few years ago, the ceramics industry was limited mainly to the manufacture of brick, tile, pottery, cement, and the like.

A little more than 10 years ago, vermiculite was unknown. Now it is used as an insulating material and for other purposes. Ways are being found to combine it with other materials to produce a light but strong and durable structural material. Vermiculite is mined and processed right here in Greenville County, by the Zonolite people and the Olin laboratories at Clemson have done much valuable research and experimentation.

Glass has been manufactured in Laurens County for many years, but in this Piedmont section of South Carolina glass is being turned into a textile fiber. The process by which this is done gave birth to a whole new industry.

Vitreous materials have long been familiar in bathroom plumbing and the like. The Kohler Co. is opening a huge new plant near Spartanburg to manufacture these fixtures. At first, most of their raw material, a special kind of clay, will come from abroad, but it is expected that some day our own State itself will be the primary source.

Furthermore, the space age will bring about wider and even fantastic uses of ceramics. Ceramics can withstand extremely high temperatures and already have found uses in the nose cones of guided missiles.

It is not inconceivable that in time space ships will be coated with a ceramic substance to enable them to withstand and throw off the heat generated by high speeds. That may be only the beginning.

Visionary? Of course. But without a daring vision of the possibilities in the field, and confidence in the future and potential of South Carolina, Olin Hall and the ceramics lab for research and instruction would never have been. It has already paid off in many ways. Directly and indirectly, it has contributed to the establishment of several new industrial plants in our State.

For that reason, we wish to join with Clemson in commemorating the anniversary of the project and in expressing gratitude to Dr. Horne and his associates.

Is Walter Reuther More Dangerous Than the Russian Sputnik?

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. GOLDWATER. Mr. President, the New York Daily News publishes, daily, a very interesting column entitled "The Inquiring Fotographer." On Saturday, April 5, the column was concerned with the question: "Senator GOLDWATER recently said: 'I consider Walter Reuther more dangerous than the Russian sputnik.' Do you?"

The majority of the answers given to that question are very interesting, because they incline to agree with the junior Senator from Arizona. I ask unanimous consent that the column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

THE QUESTION

Senator GOLDWATER recently said: "I consider Walter Reuther more dangerous than the Russian sputnik." Do you?

WHERE ASKED

Various spots.

THE ANSWERS

Harry Stanton, Marshfield, Mass., town moderator: "Yes. At present, the sputnik isn't much of a threat. Neither is Reuther. However, his ideas and philosophy are a great threat to free enterprise. We can defend ourselves from an outer threat much better than one from within."

Jack Heettner, Christopher Street, merchant: "No. Some of Reuther's ideas are good for the country. It was he who fought for and established the guaranteed annual wage. However, Reuther's demand for part of the profits of corporations would be bad for our economy."

William L. Doyle, Providence, R. I., newspaperman: "Yes, because the sputnik is more propaganda than force. Reuther can get a lot of support with the wrong ideas, but as soon as he becomes a real threat to the United States, he will be shut off immediately. There are any number of ways that this can be done."

Al Kasper, Long Island City, salesman: "I'm inclined to agree. You must remember that Reuther spent 5 years in Russia. We can surmise the kind of education he got there. Certainly, his technique as a labor leader is totalitarian. That, to me, represents a threat to our own democracy."

Daniel M. O.Connell, Hartford, advertising: "No. If Walter Reuther should ever become an obvious threat to our country, publicity in newspapers would prompt his union membership to cut him down to size. Union members are among the most vocal opponents of communism."

Richard C. Scott, West 60th Street, investor: "Yes, because the sputnik is no great threat now. However, if the sputnik develops into an ICBM and Reuther projects his ideas to the same extent, I agree that he can become more dangerous because he will tend to divide our people from within."

Address Delivered by Dr. Jose Antonio Mora

EXTENSION OF REMARKS
OF
HON. SPESSARD L. HOLLAND
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. HOLLAND. Mr. President, on last Sunday afternoon, April 13, 1958, it was my great pleasure to be present at Winter Park, Fla., at a special convocation of Rollins College, observing the 25th anniversary of the Hispanic Institute in Florida. For this notable occasion the convocation speaker was the distinguished Secretary General of the Organization of American States, formerly the Pan American Union, Dr. Jose Antonio Mora. The address of this universally recognized statesman, scholar, and effective advocate of peace and hemispheric friendship was so interesting and inspiring that I feel all Members of the Senate will welcome the opportunity to read it. I ask unanimous consent that Dr. Mora's significant address may be included as a part of my remarks, and may be printed in full in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BY DR. JOSÉ A. MORA, SECRETARY GENERAL OF THE ORGANIZATION OF AMERICAN STATES, AT ROLLINS COLLEGE AND THE HISPANIC INSTITUTE, WINTER PARK, FLA., APRIL 13, 1958

This is an appropriate occasion on which to speak of the OAS, because in this month of April we are celebrating Pan American Day and Pan American Week. It was on April 14,

1890, that at the first conference in Washington approval was given to the creation of the Union of the American Republics, with the installation of a small office for the exchange of commercial information. This office was to become, later, the Pan American Union, and finally the Organization of American States, its present form. This year the celebration has a special significance, since it marks the completion of the first 10 years of the charter of the OAS, signed at the Ninth International Conference of American States in Bogotá in 1948, and of the American declaration of the rights and duties of man, approved at the same conference.

This is a good time, then, to examine the work accomplished in this first decade by the Organization of American States, which was created to strengthen the peace and security of the continent, to prevent possible causes of difficulties, to ensure the pacific settlement of disputes that might arise among the member states, to provide for common action on the part of those states in the event of aggression, and to promote, by cooperative action, the economic, social, and cultural development of our regional community.

We should stress one underlying characteristic of this inter-American institution: It is based on moral and juridical principles; it is not set up on a temporary basis or solely for immediate practical ends to meet an emergency. It does not seek merely utilitarian purposes, but rather is a consolidation of the ideals that were born with the emancipation of the colonies of Anglo-Saxon, Spanish, Portuguese, and French America, to serve a common destiny in the New World. "The true significance of American solidarity and good neighborliness can only mean the consolidation on this continent, within the framework of democratic institutions, of a system of individual liberty and social justice based on respect for the essential rights of man," reads the preamble to the Bogotá Charter, and it adds that "juridical organization is a necessary condition for security and peace founded on moral order and on justice."

These fundamental principles are developed in greater detail in the provisions of the charter. They give nobility and spiritual estate to a document that has an important historic significance, because what came about as the result was that the 21 members of the community solemnly signed, and their respective legislatures ratified, principles and standards that had been the subject of polemics, discussion, and opposition for many years. The charter is the culmination of a process begun by Bolívar, one that has been in constant and gradual upward evolution ever since. The Bogotá Charter offers to the peoples of the Americas the tools with which to continue the undertaking started by Bolívar and help fulfill the continent's historic mission. The confidence and the faith that all the Americans have reposed in an international juridical order and in the principles of universal ethics are a valuable force that has produced outstanding results, a force that we should continue to foster unceasingly. The regional collective security achieved since 1947, when the Rio Treaty was signed, is the cornerstone of the inter-American system, because it has demonstrated that the community has the ability to meet effectively any threat to the peace or any act of aggression against any of the member states of the OAS. The treaty was invoked on a number of occasions between 1948 and 1957, always successfully. In the latest instance, in the situation between Honduras and Nicaragua, an extremely satisfactory solution was reached—recourse to the International Court of Justice, to which the conflict will be submitted. This fact does honor to the two parties in the dispute; but it also does honor to the juridical maturity of America, and particularly to the Organization of American States upon whose Council, acting provisionally as organ of consultation, it was incumbent to deal with the matter.

The trend followed by the American countries in this respect differs in many respects from the tendencies apparent in other parts of the world. Of evident concern to those who observe the world picture is the precarious status of international law in the face of the predominance of political force. In these days there is the fear that juridical principles and the traditional doctrines of law will be subordinated to measures of expediency or for the maintenance of the balance of power. One of the most outstanding contemporary jurists, faced with the present situation, has asked: "Is it really justifiable to speak of a deterioration in the juridical methods of settling disputes between states?" Such a deterioration unquestionably exists in world affairs. But it is possible to affirm that, within the inter-American system, confidence in the peaceful methods upheld by international law for solving international disputes has not diminished; on the contrary, it has obviously been strengthened, ever since the Inter-American Treaty of Reciprocal Assistance of Río de Janeiro and the Charter of the Organization of American States entered into force.

During the period since the OAS was set up, the faith of the American countries in their ability to preserve international peace in our hemisphere in view of the effectiveness of the treaties in force, has been greatly strengthened. Confidence in peace is what makes the smooth process of law possible. This shows how right Politis was when he stated that "the reign of justice presumes peace." In inter-American relations, this is the most highly valued gain that can be noted from the 10-year existence of the OAS.

The inter-American system requires and, as a matter of fact, is in itself a dynamic force for peace—a peace that creates new forms of cooperation and of interdependence among peoples. The principles of the Bogotá Charter are open to a continuous development and an upward progress. All the agencies within the system are at the disposal of the member states, to be properly used and to provide effective service. Thus, that basic document brought into being the six organs of the OAS: the Inter-American Conference; the Meeting of Consultation of Ministers of Foreign Affairs; the Council; the Pan American Union; specialized conferences; and specialized organizations. At different levels and with varying authority, all further the development of the Organization and facilitate the creation of new policies to meet the circumstances or the demands of continental relations. The Inter-American Economic and Social Council, which meets in Washington, and the Inter-American Council of Jurists and the Inter-American Cultural Council, with their respective permanent committees in Río de Janeiro and Mexico, make studies and recommend action to meet the situations that arise from day to day in their respective fields of activity.

Perhaps the efficacy of the Bogotá Charter and the achievement of its noble purposes will depend upon the readiness of the governments to have recourse to those organs. After all, it is the governments that have the final say as to whether the agencies will, in practice, do an effective job. The possibilities of the OAS were duly taken into account in the deliberations of the 10th Inter-American conference, held in Caracas in 1954. When the report of the Pan American Union was studied, it was recommended to the member states that they utilize the services of the organization more because its potentialities as an instrument of international collaboration were recognized.

This year the OAS also celebrates the first 10 years of the American Declaration of the Rights and Duties of Man, which was likewise signed at Bogotá, in 1948. Among the virtues of this document is the fact that it is the first declaration of this nature in the history of mankind to be subscribed to by a group of governments. Until then, all documents dealing with human rights were the internal declarations or acts of different countries. The American declaration also served as a precedent for the universal declaration signed on December 10, 1948, and was used as one of the basic documents for drafting the world document that the United Nations is about to commemorate, quite justly, as one of the most significant acts in history. The American declaration had the original feature of setting forth the obligations of man, in addition to his rights.

These principles have been incorporated in the inter-American system, in the form of a proclamation, and are guiding principles for the conduct of the member states. Later, the Declaration of Caracas in 1954, reaffirmed the human rights included in the Bogotá Charter and the American Declaration, and at the same time maintained that they should be developed further. At Caracas all the American states were called upon to unite their efforts "to apply, develop, and perfect the above-mentioned principles, so that they will form the basis of firm action designed to attain, within a short time, the effective realization of the representative democratic system, the rule of social justice and security, and the economic and cultural cooperation essential to the mutual well-being and prosperity of the peoples of the continent."

The aforegoing background shows the interest with which these topics are discussed at OAS meetings, where an effort is made to encourage the application of the doctrines and the principles that it upholds, so that they may be perfected to the degree to which economic, social, and cultural progress of the American peoples is advanced.

It gives me particular pleasure to talk of human rights on this occasion, when I have the honor to speak under the auspices of Rollins College and the Hispanic Institute, both outstanding for their work to promote inter-American culture. One of the fundamental rights proclaimed by the American Declaration is the right to education, which is based, article XII says, on the principles of liberty, morality, and human solidarity. One of the major concerns of the OAS is the matter of educational planning. The Pan American Union is now making preparations for an inter-American seminar, which will be held in Washington this June, to study the overall planning of education in the Americas. The seminar will examine current social, economic, and cultural conditions in the American countries in order to formulate the basic objectives of education and propose long-range programs. It will also serve to evaluate the results obtained so far, so that it may consider the techniques and the work methods needed to insure the continuity of educational plans, with the changes that it seems advisable to introduce.

These plans are designed, after all, to bring about the maximum utilization of the human resources available in the Americas. All the natural wealth and all the efforts for economic development have no other meaning than to serve human beings. There is even more urgent need today to encourage the creative abilities of man for the building of a better civilization, since we are living in a truly new world opened by the astounding discoveries of science and technology. Science and education occupy commanding posts, on the highest government level. The American nations must seek in education the road that will lead to the fulfillment of

their common destiny and their role in the history of mankind.

It has been said that to educate is to train and condition man so that he may become adjusted to changing situations and better serve his community. We must educate Americans to live in the interdependent and unified community composed of the peoples of our hemisphere, and to profit to the utmost from the science and technology of modern civilization. The utilization of nuclear science for peaceful ends—a proposal that was made, we must recall, by President Eisenhower in his atoms for peace plan—is opening vast possibilities for the well-being of all peoples on earth; it will have a very special meaning for those who live in America. The Committee of Presidential Representatives of the American Republics so understood it when, in its report of May 1957, it stated that this matter constitutes one of the most important fields for inter-American collaboration, and recommended that it be an activity in which the OAS should participate. The Council of the OAS has already taken steps to establish the Inter-American Nuclear Energy Commission as a consultative body, composed of one technical expert from each American Republic, to help with national and international plans for the utilization of the atom, by making the training of personnel and research in nuclear science possible. The Pan American Union is to begin by studying the needs of the countries in this respect and looking into the possible information services that the OAS might provide. The Pan American Sanitary Organization will be responsible for research in the field of health, and the Inter-American Institute of Agricultural Sciences, for the application of nuclear energy to agricultural development.

Educating the American peoples makes it necessary for us to redouble our efforts to train technicians, scientists, and research workers in all fields of knowledge. The OAS is about to participate in a campaign to disseminate learning, science, and technical training by means of 500 annual fellowships, distributed among all the American countries. We hope that each fellowship will be an investment that will benefit the entire community by helping to make knowledge—principally scientific and technical—more widespread so as to accelerate the economic and social development of our peoples.

We must do more than promote the education of the masses and combat illiteracy; the times demand that intelligence be discovered thus offering to the mind of man opportunities to reveal new scientific truths through basic research.

The idea of popular education as mere adjustment to the community and to social solidarity once led to the concept of the training of the common man, but today education needs to be used for the training of the uncommon man, the one able to discover the most complex secrets of science. If that is to be done, we shall have to give increasing support to the universities, activate them, and provide them with laboratory equipment, as was recommended by the Economic Conference of the OAS, held last year in Buenos Aires. Although 100 percent success in such continentwide plans may seem too ambitious a goal, these programs are being encouraged and furthered by the OAS, as far as its means will permit. With regional centers for research and training; with programs of technical cooperation and direct technical aid; through seminars, roundtables, specialized conferences; and many other means of international collaboration, we are supporting every effort put forth by the countries to raise their economic, social, or cultural standards. In this connection we look forward to great things from the universities and colleges of the United States, because of their modern teaching methods. Florida is a State whose strategic position, human resources, and extraordinary cultural opportunities make it particularly well fitted to participate in inter-American undertaking. Here the students from our countries find familiar and hospitable surroundings, with a sizable proportion of the population Latin American in origin and an integral part of the community of this magnificent peninsula. European culture and civilization in what is now United States territory were introduced with the conquest of Florida by the Spaniards, who bequeathed us its beautiful name, so redolent of a living garden. I am certain that in the future Florida, whose destiny and progress are assured, will continue to be, as it has been, in the past, a point from which sympathy with and friendship for the peoples of Latin America have always radiated.

We recall here with admiration, the work of those settlers who brought, with the Spanish language, the first church and the first school to the United States; but we also look today with admiration on the gigantic modern civilization of the State of Florida, which has placed in the service of democracy the cultural gains of human progress.

Rate Increase and a New Post Office

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk an editorial from the April 4 edition of the Greenville, S. C., News, entitled "Rate Increase and a New Post Office."

The Greenville News agrees with me and supports my contention that the Postmaster General has no right or authority to attempt to tie new post-office construction projects in with the 5-cent stamp he is advocating, or with any other postal revenues.

The Post Office Department can spend on new buildings only what Congress appropriates to it and all revenues the Post Office Department collects from sales of stamps go directly to the general treasury. Obviously postal rates and new buildings have no connection.

I desire to see new post offices and new Federal buildings in every community in South Carolina where they are needed. So does the Greenville News. But the issue of a postal-rate increase has nothing to do with the need of post-office buildings.

I ask that this editorial from the Greenville News be printed in the Appendix of the RECORD. I believe it is worthwhile reading for all who are interested in the issue of postal rates.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RATE INCREASE AND A NEW POST OFFICE

Greenville needs a new post office, as anyone who makes frequent use of the place and, especially, those who have been behind the public area and have seen the crowding of mail and workers can testify.

While it still appears to be in good condition as buildings go, it was erected many years ago and the city and the surrounding area served by carrier delivery from the office have simply outgrown it.

From time to time, Postmaster C. C. Withington has sought additional space for the storage and processing of mail. The growth of the volume of incoming and outgoing mail during the last decade or two is amazing.

Likewise, the Federal offices housed in the building have reached the point of serious crowding.

But we agree with Senator OLIN D. JOHNSTON that the erection of a new post office building here, as badly as it is needed, along with others mentioned for this and other States, should not be tied to a postal rate increase.

Perhaps Postmaster General Arthur Summerfield didn't exactly intend it that way when he announced that the Post Office Department would consider building new post offices in Greenville and in other places, if Congress would approve the 5-cent rate for out-of-town first-class letters and other increases now pending.

The Postmaster General long has shown concern over the fact that his Department is operating some hundreds of millions of dollars in the red each year. He has repeatedly suggested rate increases and has asked funds for modernization and for research into better and faster methods of handling the mails in the interest of speed and greater efficiency.

Likewise, salary increases have been requested for postal employees, who have gone a long time without a raise. This, too, has been for some reason tied to the proposed increases in rates.

However, it must be realized that an increase in rates will not automatically result in more funds for the Post Office Department for any purpose. As Senator JOHNSTON pointed out, all postal receipts go directly into the Federal Treasury, and the Post Office Department can spend only what Congress appropriates to it. It has no earmarked funds, as do some State institutions and departments in South Carolina.

Thus it is obvious that, even with the rate increase, whether any new post office buildings were erected would depend on whether Congress saw fit to appropriate the funds.

We cite these facts not to undercut the Postmaster General's proposal, but to make plain what must take place before Greenville or any other city can hope for a new post office.

As a matter of fact, since the administration and Congress seem to be intent on making jobs and boosting the economy by Government projects, we can think of no better way to do it than by building needed postal facilities and doing what is necessary to improve the mail service.

But the issue of a rate increase is something apart and somewhat incidental.

The Image of America

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. McNAMARA. Mr. President, on the occasion of Washington's birthday, Rabbi Morris Adler made an inspiring address to the Congregation Shaary Zedek in Detroit, Mich.

I ask unanimous consent that the text of Rabbi Adler's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE IMAGE OF AMERICA

(Address by Rabbi Morris Adler before the Congregation Shaarey Zedek, Detroit, Mich.)

This is a day that has a special significance in the calendar of the American people. It marks the anniversary of the birth of one of the great spirits of American history; one who is high in the ranks of its Founding Fathers; one who served it in peace and in war and whose memory has been an abiding inspiration. I am sure that in many places the minds of Americans will turn to George Washington and perhaps in thinking of his great contribution and his interesting personality, they will also think of the years of development, of change and of movement that separate us from him. They will think of some of the ideals that beat high in his mind and how he and that dedicated and select group of men wanted to build upon this continent something more than another nation; something more than an empire upon which may fall the mantle of glory and power. This, for them and the people they represented, was to be a new world, a new world in all of the comprehensive meaning of that term; a new world in that it would bring a renewal to the human spirit, a renewal of faith and courage, a renewal that would go forth on expanding waves and touch every shore throughout the world. In the minds of many of those who laid the foundations for our country there was the thought of building a shrine, not simply a place of worship and of prayer but a society that will serve as a shrine of all that is sacred, of all that is basic to human life at its noblest. And the image that they have had of America has been one of the most powerful influences in the shaping of American thought and the mentality of American men and women. We sometimes speak of it as the American dream—the American way of life—the American promise, for deeply imbedded in the very cornerstone of this Republic was the great aspiration to make of America a society in which shall be incorporated high values and noble ideals. This image must not be lost. This image of America as something more than a great and rich continent whose natural resources will never completely be tapped. This image of America as something more than a land of power and wealth, must be cherished by the America of our day. One of the problems we face is that Americans no longer see this image of themselves and of their country with vividness and with consecrated loyalty. Another pathetic fact is that the image of America is misunderstood; that where you go throughout the world the picture which impresses itself upon the minds of a people when the word "America" is mentioned, and it is mentioned everywhere, is an image that is false to the truth; that distorts and perverts our original concepts and completely misunderstands our purposes. In many places of the world, America is thought of as a land devoted to pleasure. It is true that probably in no other country today, and certainly in no empire of the past, has the industry of entertaining people been so fundamental to the entire economy of the country. Thousands and thousands of people follow a career which has no other objective than to bring to you and to me momentary relaxation, to evoke from us a smile and perhaps to bless us for a brief interval with forgetfulness about our problems and our anxieties. In no other country is the entertainer, the man who can make people laugh, the man who has a sense of humor which he can express and communicate; in no other place is the entertainer on such a high social level; in no other place is he as well paid as in our country. No other country confers as much fame upon its clowns and comedians and entertainers as do the Americans. Their names become household words and many young people go to sleep with dreams of emulating those who are our most famous and highest earning entertainers. But America is much more than television programs, than movies, than theaters, than that entire round of entertainment to organize which we have exercised so much ingenuity and invested so much money. And they who think of America only in terms of Hollywood, of large screens, of new devices to make the pictures more vivid, do not understand America. Perhaps the fault is to some extent our own; that we who have been able to manufacture and sell every other kind of product—we who have been able to persuade millions of new customers—we who have been ingenious in opening new markets and creating and stimulating new demands and new needs have been entirely inadequate in advertising to the world what America stands for and to millions and millions of people America is pleasure, America is movies, America is television, America is Hollywood.

In some places America is regarded as the symbol of power. What distinguishes us in the eyes of too many countries is that we have great resources; that we probably have the largest budget in the history of the world for any one country; that we have the resources and the factories and the plants and the power to develop those armaments which matter most in an atomic and nuclear age. Every visitor to this country is impressed with our comforts and our luxuries, with the high standard of living attained by millions and millions of humble people. They go back speaking of our assembly lines, of our skyscrapers, of our government with its manifold and ramified bureaus, of our easy spending, and of many other things. And so throughout the world there has arisen a picture of America as a kind of storehouse of power, as a dynamo that can exercise great power and that is blessed with untold wealth. It is true that we are a country of power. No one can fly from here to the west coast and not be impressed by the riches which God has bestowed upon us, by the infinite variety of this continent, by the unimaginable resources with which it has been dowered, by the wealth of this country. One who has traveled in America and has traveled anywhere else comes back with a new sense of appreciation that what are necessities for us are wild and undreamed of luxuries for millions of people elsewhere. But is this all that America is? Is America only plants and factories, muscles and biceps and power? Is it not important that America understand and that the world understand that our power is only an instrument, that beyond the power and beyond our productivity and beyond our factories and our granaries and our plants, there is a purpose which we want to serve. For the symbol of America is not a plant—it's a shrine and we must never forget it.

And there are people in many places who regard America as something primitive for we're so young. How many centuries have elapsed since George Washington? In a world where there are countries that trace back their history for 10 and 15 centuries, we appear in some of the parts of the world, the cultivated parts of the world, as a kind of brash and unpredictable adolescent, as a country that has a surface cleverness, a superficial ingenuity but that hasn't struck deep roots in experience, that hasn't matured, that hasn't developed a culture that is redolent with the ripe wisdom of ages. We're somewhat primitive, powerful, vigorous, curious, enterprising, yes—but also youthful, childish. Read some of the estimates of American culture and you will find they are not treating us as if we were an adult and mature people. A century ago one of the great poets of America wrote about a certain condescension on the part of Europeans when they think of America and that condescension has not dissolved entirely. We are looked upon and sometimes we look upon ourselves as being bereft of maturity, of that assurance that comes from having lived long and on intimate terms with time and with destiny. Consequently in parts of the world our proposals, our books, our thoughts, our ideas, our procedures are not given attention and profound respect because we are so youthful. We came into being only the other day. Relations with other nations are only a recent innovation in our history. We're youthful. We have not yet learned the deepest wisdom of life.

To overcome this image, it seems to me we Americans must begin to live more consciously than we have been doing—in terms of the true image of America. And what is that image? May I describe it very briefly? First America began with a revolt—the most important single event in our early history, the event which preceded our organizing into a Nation was a revolution. We began with a revolution. We began by rebelling against tyranny. We began by opposing the inherited and entrenched privileges of royalty and the aristocratic class which it supported. We began with a fight—a fight against oppression and the whole world must know that that Revolution of 1776 has not yet ended in 1958; that there is still in the American spirit and outlook, a rebelliousness against all tyranny; a revolt against any shiek or monarch or president or dictator who abridges the inalienable rights of people; who curtails their freedom; who deprives them of those freedoms and liberties which were meant for every human being who draws breath. What it would mean, to the undecided and uncommitted portions of the world if in their negotiations with us they recognized that we are not only a country of power but that we are a country of revolution. What America represents is not simply an army but a system of ideas, a system of values, a system of convictions which will ultimately spell the doom of every oppressor, of every tyrant, of every czar, of every dictator anywhere. How millions of little people hungering for nothing more than the sunlight, freedom and humble opportunities, would be heartened if they saw America not only as a country with millions and billions of dollars in trade, but as a country that is the eternal opponent, the everlasting adversary of all dictatorship, of all tyranny. We are not only a people whose history began with a revolt—we are a people that began with diversity. We are a people of pluralism from the very first moment. We never belonged to any one race. We were never dominated by any one established church. We stood for diversity, and we say to every country that if you select any one group and make them the bearers of your tradition, the blueblood aristocracy then you have in America an opponent; for we in our country have a replica of all humanity—all the bloodstreams in the world flow in the citizens of America. All the shrines and altars of the world are to be found in the synagogues and the churches and the temples of America. All the pigmentations of the world, brown and red and yellow and black and white—they're all to be found here. Every ethnic strain, every nationality, every human background has its representative here and none is dominant and none is supreme by virtue of its race. To be sure we haven't completely implemented that characteristic of the American shrine, but we say to all the colored people everywhere, to the brown and the yellow races that have not yet known freedom, America means diversity; America means a freedom that is shared by and distributed among all peoples regardless of appearance or race or color. What it would do to fortify and uplift the spirits of the world if they saw America as the shrine of equality, the equality of those who differ in every basic respect except in their common humanity.

And lastly, America is promise. It's a phrase that Archibald MacLeish, the poet, used not so long ago in one of his books. America is promise. We here in America are engaged in an unfinished enterprise. Ours is an experiment that will never be completed. We shall never come to a rest and say, "all frontiers are closed, all opportunities have been explored, everything that had to be done has been terminated and concluded." America is promise. America says to the world, mankind never stops at one level. Beyond the present there is another horizon. Beyond our attainment today there is a beckoning tomorrow and beyond the twilight and the darkness there is a dawn. If there is anyone characteristic of a free society, it is that it never stops in its tracks—that it keeps searching. People of the world have faith. America is not something that comes to you with finished products. America is not only a country that has a past—it's a country that comes with promise. When Walt Whitman published that remarkable and unforgettable book Leaves of Grass, he sent a copy to Ralph Waldo Emerson whom he so greatly revered and he wrote to him, "Master, I am a man of great faith. Master, we have not come through centuries of caste, of heroism, of fables of oppression in order to halt at this point in this land. The American people will never halt. Always it will seek to extend our freedoms, to deepen them; always it will desire to stimulate the search for truth and more truth so that the errors of yesteryear shall not be perpetuated in the orthodoxes of tomorrow." This is America—a society ever on the march; a society that never becomes reactionary and bogged down by inertia and habit until it is paralyzed and cannot move. The American people, like the human mind and the human spirit ever moves—moves onward, and this dynamic quality of America is not exhausted in developing new engines, devising new machines and new methods of production and administration. This dynamism is the dynamism that will give the American people no rest until all humanity has moved forward to a new and higher plane on its torturous process of development and history. This is the shrine of America, and we could do no better in observing the birthday of George Washington, a name so precious to us as Americans, than by recapturing for ourselves this image of the shrine that he and his associates wanted to build; a shrine of rebellion and revolt against all oppression; a shrine of respect for all humanity, independent of color, or race or background; a shrine that looks forward to the morrow—that sees today only as the promise of a better, a richer, a happier tomorrow. If we could live in terms of this shrine, there would be built in many other places smaller shrines emulating ours and there would be eradicated from the minds of misguided people their misconceptions about America and they would see us as we ourselves see us. In the fulfillment of an ancient phrase that we read today in Hebrew Scriptures "and they shall build unto Me a sanctuary and I will surely abide in their midst," then shall we have built unto God a sanctuary and He will surely abide in our midst.

Amen.

Dulles' Dedication to Nation

EXTENSION OF REMARKS

OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1958

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article by the senior Senator from Massachusetts entitled "Dulles' Dedication to Nation." This article appeared in the Washington Evening Star on April 9, 1958. I subscribe heartily to the statements contained in the article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DULLES' DEDICATION TO NATION—SECRETARY'S STEADFASTNESS IS CALLED BENEFIT TO UNITED STATES AND OBSTACLE TO FOE

(By LEVERETT SALTONSTALL, United States Senator from Massachusetts)

(EDITOR'S NOTE.—This is another in the statesmen's series of columns being written by distinguished personages in the Government, national affairs, business and the military for Thomas L. Stokes, who is seriously ill.)

I am glad to have this opportunity to pinch hit for one of America's best-liked columnists, Tom Stokes. I have always had respect for his integrity, although frequently we are at opposite poles in our thinking on current issues.

Since the beginning of our Nation, courage and fortitude have been hallmarks of America and the American way of life. Our cities, towns and farms were carved out of a wilderness; our Government was created out of a fight for freedom.

We have had to have strong leaders to guide us during the growth of our Nation. Courage and determination are, therefore, among the most priceless qualities of our heritage and of those who serve our country. These qualities have very much distinguished our present Secretary of State.

The primary duty of a Secretary of State is to advance the interests of our country around the world, protect American citizens and their interests in other countries and to do his utmost to keep peace. Secretary John Foster Dulles has done just that.

He has always worked primarily to promote the security of the United States and the cause of peace. He has indeed devoted his entire life to advancing the interests of our Nation in international affairs. Without his guidance of these tremendous international problems, we might well have suffered many more setbacks and achieved much less in our cold war struggles.

President Eisenhower's policies with Mr. Dulles' advice and guidance have kept us out of war without sacrificing our principles and without compromising the objectives which we seek. Although from day to day we cannot be sure that we are free from the threat of aggression, we have maintained under this leadership peace without compromise.

But whether we agree with Mr. Dulles' policies or not, I think all of us must agree on one thing—he has been determined in his beliefs, steadfast in his devotion to America's peaceful objectives. He has stood firm for the principles he knows to be in the best interests of the United States.

He has been bitterly attacked here at home by those who disagree with his handling of our international problems. At one time he was sharply criticized for his statement that our Nation was on the brink of war; yet at the same time he is criticized for giving way in the face of the Communist aggression.

He is attacked for failing to inject any daring new ideas into our foreign policy, yet he is criticized for his personal visits with heads of state all over the world—a Dulles innovation. He is attacked for refusing to accede to the futile gestures offered by the Russians with respect to a summit conference; he is criticized for not being more vigorous in demanding the return of American citizens held by the Communists and in the same breath he has been criticized for not permitting Americans to travel in those areas where the Communists have been known to seize visitors from the Western World.

His steadfastness in the face of bitter attacks has repeatedly paid off in advancing United States interests throughout the world. He stood fast when the last stronghold of Nationalist China stood in the shadow of the Communist tyrant—Formosa was saved. His firmness in the face of the crises in Vietnam and the Middle East has proved to be insurmountable to the Communists.

The recent SEATO meetings in Manila have indicated an unusual singleness of purpose among its member nations. After the first day of meetings, when all of the speakers joined to voice a common anti-Communist purpose, the Soviets renewed their propaganda barrage against Mr. Dulles.

These characteristics of Mr. Dulles have been particularly manifest in his stand on the Russian urgings for a summit meeting. He has been firm in his insistence that all preparatory steps must be concluded before any such conference is held.

He and the President want to insure that a summit conference has a chance for real progress toward the achievement of world peace and that it is not merely a spectacular vehicle for Communist propaganda. At the same time we certainly will not close any avenue, no matter how difficult the task may be, to achieve world peace. But we must not be deluded into a summit conference which because of lack of adequate preparation can only result in an opportunity for increased Russian propaganda.

Mr. Dulles has negotiated more with the Russians than has any other living American. Thus his judgment as to the conditions under which negotiations will best serve the interests of the free world is of utmost importance, not alone to us but also to our allies.

Since the retirement of Winston Churchill, Mr. Dulles has become the No. 1 target of Communist attacks. More propaganda has been directed against him by the Soviets than against any other living person.

This is a tribute to his courage and to his effectiveness as a negotiator with the Russians during the past decade; his only sin is his dedication to America and the principles we stand for. For this I commend him; he deserves the support of all Americans.

I thank Tom Stokes for the opportunity to say these few words. Let us hope he is back with us soon.

Citation for Cervantes Medal Awarded to Hon. Spessard L. Holland, of Florida

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1958

Mr. SMATHERS. Mr. President, earlier today my senior colleague had printed in the Appendix of the RECORD an address by the distinguished Secretary General of the Organization of American States, delivered at a special convocation of Rollins College, observing the 25th anniversary of the Hispanic Institute of Florida. With his characteristic modesty, my distinguished colleague declined to mention the fact that at this April 13 meeting of the Hispanic Institue of Florida, the Senior Senator from Florida was awarded the Cervantes Medal in recognition of and gratitude for his outstanding service in behalf of

Latin America, his own State of Florida, and his Nation. I was most pleased when I learned that the Cervantes Medal was to be presented to my distinguished colleague, for it is indeed a high honor and a much-deserved tribute to his public service.

Mr. President, I think it appropriate to have preserved in the RECORD the citation for the Cervantes Medal awarded to Senator SPESSARD L. HOLLAND, at Rollins College, April 13, 1958, by the Hispanic Institute of Florida, and I ask unanimous consent to have the citation printed in the Appendix of the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

CITATION FOR CERVANTES MEDAL AWARDED TO SENATOR SPESSARD L. HOLLAND AT ROLLINS COLLEGE, APRIL 13, 1958, BY THE HISPANIC INSTITUTE OF FLORIDA

Today marks the 25th anniversary of the Hispanic Institute of Florida. As you know, the purpose of the institute is to create and encourage interest in the Hispanic world and to promote a better understanding and cooperation among the Americas.

One of the first actions taken by the directors of the institute was the establishment of the Cervantes Medal. It was designed by one of its members, Emilio Carles, and financed by another member, Mrs. Sanford Bissell, who always, until her death, kept an active interest in the institute.

The purpose of the Hispanic Medal is to recognize outstanding achievement in the Hispanic field. In the past 25 years the medal has been awarded mostly for outstanding contributions in the field of art and letters. Recently we also have honored men and women whose contributions have been that of public service and unselfish devotion. This year the medal committee has decided to mark the quarter of a century of the institute by awarding two medals.

It is our good fortune today to award the Cervantes Medal to a native son, educated in Florida and honored by every institution of learning in the State. He has served his native State as a lawyer, judge, governor, and as a member of civic and social organizations, holding important executive positions and discharging his duties honestly, efficiently, and as a true southern gentleman.

Since 1946 he has represented his State in the Senate of the United States. It is in this connection that his services have proven invaluable to foster and advance the cause of pan Americanism. It is because of his zeal and effective work in discharging his duties as a member of special committees, delegations, and numerous contacts with Latin American countries that the institute today wants to honor him and recognize the splendid work he has done and all he has accomplished.

In 1950, as a member of a Senate Subcommittee on Agriculture, he was responsible for the successful campaign to eradicate the foot-and-mouth disease in Mexico. In 1952 he served as our congressional representative to the meeting of our Pan-American Highway Congress in Mexico. In 1954 he went to Caracas as an official observer to the Third Pan-American Highway Congress where he received an award for his work in the development of the Inter-American Highway. In 1955 he was a member of the United States delegation to attend the dedication of two new links of the Inter-American Highway.

In 1957 he was able to secure an appropriation of $750,000 to start on the high-level bridge across the south end of the Panama Canal. This bridge will be the final link in the Inter-American Highway. He has assisted Colombia and Ecuador to secure much-needed loans from the Export-Import Bank.

In 1941 he received the degree of doctor of laws from Rollins College, and in 1944 he was the principal speaker at the dedication of Casa Iberia, the inter-American center of Rollins, his alma mater.

We are, therefore, today only paying a just debt of gratitude to him by recognizing the splendid work he has done for Latin America, his own State of Florida, and his country.

It is obvious, I am sure, by now, and everyone is conscious of the fact that the man that so justly deserves the distinction the institute is conferring on him is our own fellow citizen, the dedicated and unselfish public servant, and to many of us our very much esteemed friend, the Honorable SPESSARD L. HOLLAND, senior Senator of Florida.

Catching a Minnow—Ignoring a Whale

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news release and letter to the Attorney General, commenting on the Department of Justice's recently announced case concerning alleged illegal pricing practices by automobile dealers in the District of Columbia.

In my view, proceeding against the dealers, while apparently ignoring the manufacturers, is unusual, to say the least.

There being no objection, news release and letter were ordered to be printed in the RECORD, as follows:

Senator ESTES KEFAUVER, Democrat, of Tennessee, today asked the Department of Justice to consider an inquiry into possible violations of the antitrust laws by the General Motors Corp., to accompany its recently announced case into alleged illegal pricing practices by automobile dealers in the District of Columbia.

In proceeding against the local dealers and neglecting General Motors, remarked Senator KEFAUVER, the Department is trying "to catch a minnow while ignoring a whale."

In a letter to Attorney General William P. Rogers, dated April 9, the Tennessee Senator made clear that he was not questioning the propriety of the Department in launching a case against the auto dealers for possible conspiracy to impose a trading pack giving the buyer the impression of a trade-in allowance.

The Senator noted that at recent hearings by the Antitrust and Monopoly Subcommittee, of which he is chairman, a dealer stated that auto dealers were captive. Other evidence indicated wholesale auto prices are at an alltime high, with comparative models similar in price.

"In view of this information," he noted, "to proceed against dealers without investigating the activities of the automotive manufacturers appears to be an oversight." He added, "I should think that the Department of Justice would be vitally interested in determining whether or not the prices of the automotive industry are the result of competition or the result of monopolistic influences."

Referring to trade figures, Senator KEFAUVER pointed to the remarkable increase in General Motors share of total auto production from 46.5 percent in the first quarter of 1957 to 55.9 percent in the first quarter of 1958. "Does it not bring General Motors' share of the total market perilously close to that percentage indicated as doubtful in and of itself?" he asked the Attorney General.

Senator KEFAUVER cited a number of instances of General Motors' conduct and activities on the basis of which he asked the Department whether it did not now have sufficient evidence of abuses to justify exploration. He referred to General Motors' manufacture of diversified products, alleged coercion of its dealers to use General Motors Acceptance Corp., loans to customers reportedly resulting in purchases of cars, sale of parts to franchised dealers, the relationship between GMAC and General Exchange Insurance Corp., and possibly subsidy of some GM divisions by others.

He also emphasized that President Harlow Curtice had told the subcommittee that General Motors sets the price of its cars high enough to guarantee a return of 15 percent to 20 percent after taxes. "How can such a practice by General Motors be reconciled with competitive behavior?" he asked.

In view of the material cited in the letter, and other facts which the Department undoubtedly has available, the Senator asked Mr. Rogers: "Would it not be appropriate for you to consider accompanying the recent case against the dealers under section 1 of the Sherman Act with a contemporaneous case against General Motors under section 2 of the act?"

Senator KEFAUVER stressed he was making this request as an individual, and does not know the views of other subcommittee members on this subject. Hearings into administered prices in the auto industry are scheduled to be resumed April 29.

The text of the letter follows:

APRIL 9, 1958.

Hon. WILLIAM P. ROGERS,
Attorney General of the United States,
Department of Justice,
Washington, D. C.

DEAR MR. ROGERS: I recently noted in the press that the Department of Justice is launching a case against automobile dealers in the District of Columbia. It is reported that the case involves alleged practices by local dealers of concertedly adding to the manufacturer's list price a "trading pack" which enables the dealers to give the buyer the impression of a generous but partially fictitious trade-in allowance.

If these automobile dealers have in fact conspired among themselves to impose these "packs," they have, of course, been engaging in an outright conspiracy in restraint of trade and in violation of section 1 of the Sherman Act. Obviously, effective enforcement of the antitrust laws demands that such a practice be terminated. Without in any way questioning the propriety of the action against these dealers, in reading this announcement I could not help but wonder if the Department was not seining for minnows when it should be fishing for a whale.

During the recent hearings on administered prices in the automotive industry before the Antitrust and Monopoly Subcommittee, the statement was made that dealers in the automotive industry are not free, but captive. Evidence also shows that automobiles are priced wholesale at an alltime high, with comparative models substantially similar. In view of this information, to proceed against dealers without investigating the activities of the automotive manufacturers appears to be an oversight.

As 1 in every 7 Americans gainfully employed are, directly or indirectly, attributable to the automotive industry, the actions of

the members of this industry bear close scrutiny. I should think that the Department of Justice would be vitally interested in determining whether or not the prices of the automotive industry are the result of competition or the result of monopolistic influences.

I assume that the transcripts of the hearings on administered prices in the automotive industry have been brought to your attention. It is my understanding that such transcripts have been made available to the antitrust division of the Department of Justice. Without prejudging these hearings, I was impressed with much of the data and information that was presented bearing upon the question of monopoly.

According to figures published in Automotive News of March 31, 1958, General Motors has increased its share of total United States production of passenger cars from 46.5 percent in the first quarter of 1957 to 55.9 percent in the first quarter of 1958. This is a remarkable increase in the short span of 1 year. Does it not bring General Motors' share of the total market perilously close to that percentage indicated as doubtful, in and of itself, as stated in *United States* v. *Aluminum Company of America* (148 F. 2d 416)?

I am fully aware that where size alone is not sufficient to prove a violation of section 2 of the Sherman Act, a showing of abuse of power is required. However, in reading the decisions in the Alcoa case, supra, and *American Tobacco Company* v. *United States* (328 U. S. 781), I am impressed with the fact that but little proof of abuse is sufficient. In view of the judicially determined dominate position in the auto industry held by General Motors, it can be held legally responsible for a very high standard of conduct. *United States* v. *General Motors Corp.* (121 F. 2d 376; cert. den. 314 U. S. 618).

It is well known that General Motors is engaged in the manufacture of a diversified line of products. In fact, it was shown during the recent pricing hearings that General Motors is among the first 4 producers in some 30 manufacturing industries. Although diversification is not illegal, nevertheless when it is coupled with tying or other coercive devices, such practices have been violative of law. The General Motors Acceptance Corp. case, supra, is an important illustration. The coercion by General Motors of its dealers by forcing them to use GMAC was a violation of the Sherman Act. The National City Lines case is another example. The offense here was forced reciprocity. General Motors loaned money to National City in return for which it received automotive trade. *U. S.* v. *National City Lines* (186 F. 2d 562). The recent du Pont-General Motors case is another illustration. *U. S.* v. *E. I. du Pont de Nemours & Co., et al.* (353 U. S. 586). The reciprocity in this case was mutually beneficial to both parties.

Quite apart from the Department's action against the dealers, does not the Department now have sufficient evidence of abuses by General Motors to justify exploration? Would it not be productive to examine closely whether General Motors by the practice of reciprocity is not forcing sales of its products in return for loan of capital or purchases? During the recent hearings, Mr. Harlow Curtice conceded that General Motors had made loans of capital to several of its suppliers.

Would it not also be productive to examine the full line forcing or tying practices of General Motors with respect to its dealers to determine how much freedom its franchised dealers have in selecting the parts that they might handle?

Would it not also be productive to examine whether or not General Motors is forcing its dealers to handle its own products exclusively? In this respect, should not an investigation be made into the relationship between General Motors Acceptance Corp. and General Exchange Insurance Corp.? Does GMAC require insurance with GEIC? Does GEIC require that repairs be made in the shops of General Motors' dealers and, if so, can other parts other than General Motors be used?

As General Motors does not make public figures on the profitability of its various divisions, should not an investigation be made of whether some divisions are wholly or partly subsidized by others? An examination of such data is of the very essence in order to determine whether or not the conglomerate economic strength of General Motors is being brought to bear selectively in any divisional field or industry.

During the course of Mr. Harlow Curtice's testimony before the subcommittee, he also stated that General Motors, in establishing its auomotive prices can and does establish the price of automobiles sufficiently high to guarantee a return of 15 percent to 20 percent profits, after taxes. How can such a practice by General Motors be reconciled with competitive behavior?

In view of the foregoing, and other facts which should be available to the Department, would it not be appropriate for you to consider accompanying the recent case against the dealers under section 1 of the Sherman Act with a contemporaneous case against General Motors under section 2 of that act? The record of the recent hearings held before the Antitrust and Monopoly Subcommittee, as well as the hearings held before the same subcommittee in 1955, leave little doubt in my mind other than the hard core of the monopoly problem in the automotive industry is the concentration of production held by the Big Three of that industry, and by General Motors in particular.

In the general context of trying to preserve competition and prevent monopoly, for the Department to attack the dealers while neglecting General Motors is, as I stated, to catch a minnow while ignoring a whale.

Alhough I am chairman of the Antitrust and Monopoly Subcommittee, I have made no attempt to ascertain the views of the other members of this subcommitee on the subject matter of this letter. I have taken this course principally because the subcommittee has not as yet completed its study of administered prices in the automotive industry.

Sincerely,

ESTES KEFAUVER.

The ILO Conference on Mining

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 15, 1958

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report on the ILO Conference on Mining prepared by Kenneth C. Kellar and Denison Kitchel. Mr. Kitchel is a resident of Phoenix, Ariz.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THE ILO CONFERENCE ON MINING

(A report by Kenneth C. Kellar and Denison Kitchel)

Having attended an International Labor Organization conference at Geneva, Switzerland, we are convinced that Alice's Adventures in Wonderland were dull in comparison. We are also convinced that continued participation in the ILO by the United States is not in the best national interest.

The conference to which we were accredited as United States employer delegates was officially entitled the "Tripartite Technical Meeting on Mines Other Than Coal Mines." Convened by the governing body of the ILO, the 2 weeks meeting (November 25–December 7, 1957) was ostensibly called for the purpose of discussing problems of labor-management relations common to the mining industries of the 25 nations which participated. Each delegation consisted of 2 employer delegates, 2 worker delegates and 2 government delegates. Of the Communist nations, Russia and Yugoslavia were represented.

There were four items on the agenda for the meeting:

1. Social problems arising in mines other than coal mines.
2. Accident prevention in mines other than coal mines.
3. Machinery for wage fixing and wage protection in mines other than coal mines.
4. Industrial relations in mines other than coal mines.

In advance of the meeting, the permanent staff of the ILO had prepared reports on each of these items and sent them to the prospective delegates.

The first item, social problems, obviously opened the door to every conceivable and irrelevant topic from childbirth to cemetery accommodations. These social problems were discussed by means of prepared speeches delivered by almost every delegate to the conference at plenary sessions held throughout the 2 weeks period. Captives of the permanent staff of the ILO, we heard speech after speech condemning employers as a class for their ruthless exploitation of the working man. We heard speech after speech extolling the virtues of governmental regulation and intervention in all phases of labor-management relations. We heard speech after speech describing the wonderful freedoms vouchsafed to the workers in Communist countries. And, of course, we heard speech after speech praising the great work of the ILO.

The other three items on the agenda were referred to subcommittees. In this subcommittee framework lay the possibility that we would actually have the opportunity to exchange ideas and discuss mutual problems with the delegates from other nations. But here, again, under the rigid direction of the ILO permanent staff, discussion was reduced to a minimum and the production of embryonic international legislation quickly became the major activity of the subcommittees. Almost at the very outset and as if from out of the blue, there appeared on the desk of each subcommittee member a complete draft of a resolution prescribing in detail the principles, rules, and regulations which should govern all phases of the subject matter under discussion. From then on the discussion consisted of voting on these specific proposals, obviously prepared well in advance of the conference by the permanent staff, acting as the handmaiden of the leftwing international trade unions.

The final day of the conference found us unwittingly convened as an international parliament. For 7 consecutive hours we were maneuvered through the labyrinths of legislative chicanery to produce the end products conceived by the permanent staff long before we arrived in Geneva. In 7 short hours and after 2 short weeks of "discussion," we resolved most of the grave issues of labor-management relations with which the mining industry has been wrestling for centuries.

We can report that the United States employer delegates to the conference were

unique, conspicuous and outspoken in their unwillingness to conform and in their opposition to the socialistic and legislative aspects of the meeting. Taking the position that the conference had not been convened for the purpose of legislating on the internal affairs of their country, their performance might best be described as that of skunks at an international lawn party. We can also report that their independent attitude was the envy of most of the employer delegates from the other free nations, who, because of the ascendancy of labor socialism at home, could not afford to oppose the activities of the ILO no matter how unpalatable they might be.

This is the sinister aspect of this and other ILO conferences. With the exception of the United States and Canada, and possibly Australia, the employers and governments of the world fear the ILO. It is our conclusion that the ILO is the vehicle of the international socialists and the tool of the left-wing international trade unionists.

The United States pays 25 percent of the cost of maintaining and operating the International Labor Organization. We question whether such a contribution, or, in fact, any contribution to national suicide, is in the best interests of our country.

As for the Tripartite Technical Meeting on Mines Other Than Coal Mines, suffice it to say that it was the most interesting, most frustrating, most disturbing, most diabolical and most useless conference we ever attended.

How Are American Institutions Faring in the Cold War?

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. THURMOND. Mr. President, it is sometimes said that if the United States ever falls to communism, it is most likely that the Nation will be the victim of an attack from within. We face the dual problem of preparing ourselves for a military showdown with communism while, at the same time, dealing with the kind of communism that slowly and gradually may infiltrate into every kind of American institution.

I ask unanimous consent that there be printed in the Appendix of the RECORD a thought-provoking editorial entitled "How Are American Institutions Faring in the Cold War?" which was written by the Honorable W. W. Mims, the able editor of the Advertiser, of Edgefield, S. C., and which appeared originally in the Advertiser for April 2, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW ARE AMERICAN INSTITUTIONS FARING IN THE COLD WAR?

Are free institutions holding their own during this cold war? Some journalist suggests an answer in this comment recently made: "The world is an increasingly tough place for the gracious, unsuspecting, and openly friendly individual to live in."

Of course, a lot depends on one's immediate environment. Even in a hot war a lot of people fail to understand the issues or know the sacrifices or the probable consequences, win or lose.

But there are those even in a cold war who must face the critical moments day and night.

When Mr. Lodge was appointed Ambassador to the United Nations, one of his first decisions was that he would not shake hands with members of the Russian delegation. It is understood that he later changed his mind. But the idea of rejecting a friendly association with the murderers of the Kremlin was forcing its way to the forefront of diplomacy then, and the policy, adopted and abandoned, typified the fact that this country did not and does not specifically know how to deal with the international conspiracy of communism, and its main reliance, therefore, is on a bombs-ready posture.

Ambassador Lodge, representing a professedly Christian Nation which placed emphasis on charity and goodness, nevertheless felt that there is among the American people a compunction with regard to sincerity and loyalty. He must have argued with himself and discussed the problem with associates in his way: How can I practice sincerity and be loyal to the ideals of the United States and at the same time shake the treacherous hands of the enemy blooded with the murders of American soldiers in Korea and of the millions of innocent people who have stood against the advance of communism? How can I represent with good grace the people of the United States shaking hands with men who speak words only to mislead and whose handshake is a part of the planned deception?

Certainly the policies and considerations of the American Government are not too different from the feeling of individuals seeing the influences of communism here in our own country.

The Communists have broken more than 40 solemn pledges. They have demonstrated completely their absence of integrity and principle. They have been convicted, by their own record of treachery, as scheming and bloody criminals.

The western democracies officially may only stand by in an effort of preparedness and try now and then to expose some new propaganda advance while our planes hover the earth with atomic bombs waiting against the day a counterattack is the only alternative.

There is a saying that you can't go over to a neighbor's house and whip the neighbor's child. There is no way this country may reach into Russia to discipline its leaders and bring its people to halt the Communist plans for world conquest.

Actually there may be no need for this. The real need in the meantime may be to halt Communist influences here in our own country.

A gifted American recently told with amazing clarity of the infiltration of communism in every kind of American institution scarcely realized by American people. It is a gradual process of subversion in which we as loyal Americans are led to believe that certain changes are good; that corruptions are to be expected; that things are better, not worse, than they used to be; that politics has always been a matter of selfish purpose, and that cheap, selfish and dishonest manifestations are not alarming, but normal to every period.

The prime question is this: Will we in America lose the very things that our science is dedicated to protect by assuming merely a patient attitude, and waiting out the cold war while communism takes over our own country from within?

If indeed the world is an increasingly tough place for the gracious, unsuspecting and openly friendly individual to live in, we'd better begin to find out why right here in the United States.

Three Books About Agriculture

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. THYE. Mr. President, in the winter, 1959 edition of the Co-op Grain Quarterly, is an excellent review of three books about agriculture by a reporter for the Cowles publications, Mr. Charles Bailey, who writes for Minnesota's Minneapolis Star and Tribune. These reviews are quite brief, and I ask unanimous consent to have them printed in the Appendix of the RECORD.

There being no objection, the reviews were ordered to be printed in the RECORD, as follows:

THREE BOOKS ABOUT AGRICULTURE
(By Charles Bailey)

In the field of farm policy, it's hard to tell where economics end and politics begin.

Two new books on agriculture and the people who run it illustrate the impossibility of separating the two disciplines.

One of the books is primarily an economic treatise. It is titled "Farm Prices: Myth and Reality," and was written by Willard W. Cochrane, University of Minnesota agricultural economist. Published by University of Minnesota Press, the price is $4.

The other is primarily a political tract. Called Ezra Taft Benson: Man With a Mission, it is the product of Wesley McCune, long-time Democratic farm aid who is now on the staff of the National Farmers Union.

(The McCune book, published by Public Affairs Press, Washington, D. C., at $2.50, also is available in a paperback edition.)

It is perhaps unfair to Cochrane's scholarly job to discuss it in the same context with McCune's partisan book on the current Secretary of Agriculture. Yet the fabric of Cochrane's work is inescapably treaded with the author's basic credo of proper national policy—and it is politics, of course, that translates policy into action.

Cochrane recognizes (as, unfortunately, so many students of farm problems either do not recognize or pointedly ignore) the fact that politics must play an important part in shaping any national policy for agriculture.

He argues, and persuasively, that "society will not choose" to maintain Federal programs "to transfer into agriculture some amount, ranging from $3 to $6 billion, year after year into the indefinite future."

Present programs, he says, are "hidden under a hocus-pocus of recoverable costs"; the soil bank "has become a farce" that has been used to spread income rather than cut production; and the average farmer is on a "treadmill," forced to adopt new technological practices merely to keep up with the rest of the economy.

Cochrane finds, for varying reasons, that a number of present or proposed programs lead to "blind alleys." He includes the so-called free market approach, the fixed price support program, the flexible price support program, the farm efficiency approach, the domestic consumption increase approach.

"The free market approach solved the surplus problem in agriculture with no regard to the income problem of farmers. The fixed price support approach solves the income problem of farmers with no regard to the surplus problem. Each solves one problem by intensifying another."

The flexible support approach, he says, cannot solve the problem because—and here Cochrane illustrates the inevitable mingling of economics with policy, or politics—"the values and beliefs of society in the 1950's" decreed that supports reached "the lower limits of political tolerance" at about 80 percent of parity.

Cochrane's reasoning leads to the setting up of two "hard policy choices": Should society continue to guarantee the costs of income and price support? What course is best for agriculture to pursue if it receives little or no income support from the rest of the economy?

The author suggests that the first question will be answered "No." He goes on to outline a proposal for controlling farm output—to get farmers off the treadmill—by viewing agriculture as a public utility, with the many small producing units acting together with the help of Government to provide the products required by society at a fair price and at the same time to provide a fair income to producers.

McCune's book is shorter than Cochrane's and certainly less of an intellectual exercise for the reader. It is a study of Benson, as a man and as an official, written by the former Democratic National Committee farm expert and assistant to former Agriculture Secretary Charles F. Brannan.

McCune goes into Benson's past—his youth, his role as a high-level lobbyist in Washington during World War II, his post as a top official of the Morman Church. Also covered are assessments of troubles Benson has run into as Secretary, his relationship with President Eisenhower (Ike likes Ezra) and a critical review of the administration farm program and its results.

Perhaps the most valuable contribution of this strongly slanted political book is the section on the effects of Benson's religious heritage and beliefs on his policy formulation. This is a subject that most newsmen who cover Benson always hesitate to raise.

McCune has no such hesitation. He is not under the reporter's obligation to view public men, whenever possible, in the light of their public acts rather than their personal beliefs. There is no denying, however, that man's personal convictions influence his public behavior; and the reader can find more evidence in McCune's book that economics and politics are inevitably mixed in setting public policy.

He may deduce further, in this case, that the personal moral codes of the political official must also have their effect on his public actions.

Warren Group's Defiant Attitude Seen Divisive

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. THURMOND. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article concerning the Supreme Court entitled "Warren Group's Defiant Attitude Seen Divisive," which appeared in the State, of Columbia, S. C., in its issue of April 10.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WARREN GROUP'S DEFIANT ATTITUDE SEEN DIVISIVE

WASHINGTON.—The Supreme Court has shown a studied indifference and almost a defiant attitude toward congressional and bar associations' complaints that it has exceeded its constitutional power in recent decisions regarded as favorable to Communist and criminal elements.

Headed by Chief Justice Earl Warren, who is the principal target of widespread criticism, the high tribunal has also disregarded the congressional challenge of its alleged actions in making law instead of merely interpreting it.

This controversy over the functions and jurisdiction of the Supreme Court has split that body into two hostile factions, which sometimes make no effort to conceal their bitter feelings. In written opinions and sharp remarks from the bench, they reveal that their differences are irreconcilable, Justice Felix Frankfurter acts as spokesman for the anti-Warren group.

LIBERAL VERSUS CONSERVATIVE

Numerous 5-to-4 decisions on these questions during the current session show that the dispute between the Warren liberals and the Frankfurter conservatives has not been resolved definitely.

Final outcome will probably depend on where the two newest members—Justices William J. Brennan and Charles E. Whittaker—take their stand. So far, they have shown no firm alinement with either group.

In general, Warren exalts the rights of the individual against the authority of the executive and legislative arms. The Frankfurter jurists believe that the Court's awesome power to override the other two branches of the Government should be exercised with the utmost restraint.

BITTER WORDS

The Californian and the Bostonian—the politician and the professor—recently exchanged bitter words in a case involving the right of Congress to establish conditions under which Congress could deprive a person of citizenship.

Warren narrowed congressional jurisdiction in this field, while Frankfurter accepted the boundaries fixed by the lawmakers. When the Chief Justice, in defense, declared that the Supreme Court had overruled Congress on 81 occasions, Frankfurter retorted that there was no reason to boast about this assertion of authority.

Then, departing from his written opinion and speaking in crisp, critical tones, Frankfurter noted that many of these overriding rulings had subsequently been reversed by the Supreme Court itself. He reminded the relatively new member from California that the High Tribunal does not regard itself as infallible.

STILL UNKNOWN

With Justices Brennan and Whittaker still unknown quantities because of their late arrivals, the current court lineup is as follows: Warren, Black, and Douglas against Frankfurter, Burton, Harlan, and Clark.

Based on their latest leanings, it is believed that Brennan will eventually join the Warren faction, while Whittaker teams up with the Frankfurter dissenters.

No matter where they wind up, the fundamental disagreement seems to insure a series of wrangles and 5 to 4 decisions considered to be unsatisfactory and unhealthy by Congress, bewildering to jurists in the lower courts, and puzzling to practitioners before the bar.

CONGRESS DISAGREES

Meanwhile, Congress has shown its complete disagreement with the Supreme Court's philosophy as influenced by the Chief Justice. It is expected to enact legislation to circumvent decisions which have freed confessed criminals and convicted Communists.

In a direct rebuke to the Court, the Senate Judiciary Committee has forced a judicial nominee to swear that he will not deliver a decision contrary to the Constitution.

Despite this plain evidence of adverse reaction inside and outside Congress, Chief Justice Warren has generally been able to round up a majority reaffirming the rulings which Congress condemns. In short, the Chief Justice refuses to be swayed by extrajudicial pressures and protests.

In a certain sense, this feud is more serious than the clash between the Supreme Court and F. D. R. over enlargement of the tribunal. Then, Congress sided with the jurists against the White House. Now, a conservative Congress supports the Frankfurter position and denounces the Chief Justice's liberalism.

The Case for Federal Reclamation

EXTENSION OF REMARKS
OF
HON. CARL HAYDEN
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. HAYDEN. Mr. President, last September the magazine Nation's Business published an article condensed from the report prepared by the Legislative Reference Service, Library of Congress, called The Case Against Federal Reclamation. In the April issue of Nation's Business there is printed a response to the previous article entitled "The Case for Federal Reclamation," prepared by the Honorable George D. Clyde, Governor of Utah. I ask unanimous consent that this able refutation of the earlier article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CASE FOR FEDERAL RECLAMATION

(By the Honorable George D. Clyde, Governor of Utah)

Thoughtful westerners—plus many informed easterners, have lately been shocked, exasperated, angered and embittered, by a new wave of attacks on reclamation.

We should, perhaps, have long since been conditioned against such assaults. To us, reclamation in our Nation is the bringing together of land, water and people to produce foodstuffs, fiber and power, thereby sustaining life itself. To virtually everyone born or reared in a land of scant rainfall it seems as illogical to question the benefits of reclamation as it would seem, to a Hollander, quite senseless to argue the benefits of reclaiming land from the Zuider Zee.

We in the West believe reclamation's enemies are blindly or blandly overlooking the economic facts of life in an entire region comprising one of their own prime markets. For a time we thought that our viewpoint was prevailing.

For a time we in the West cheerfully, if naively, had begun believing the era of obstinate obstructionism to the constructive use of water recources was ending. Water shortages in the industrial seaboard and rural Midwest, coupled with the patently successful work of wedding water to land in our region, should mean an end to the stupidity, or cupidity, of enemies of reclamation.

The very program under attack has meant the fullest blessings of the American way of life for countless Western farm and city families, plus a blossoming of large-scale industry and agriculture.

Obviously, reclamation is still a matter on which debates will continue raging until every drop of water coursing down the beds of our Nation's rivers and streams is put to the best possible use. For water is, obviously, one of the good things of life. And men seem fated, always, to argue about how best to utilize, divide, or control the land, the oceans, the waters, and even the air of our globe—not to mention outer space and the accessible planets.

The position I uphold is simple: Reclamation is good business, not only for the 17 Western States, but for the businessmen, workers, and taxpayers of the East, Midwest, and South. It is good investment in the future for the entire nation from every practical dollars-and-cents standpoint.

This philosophy, the case for reclamation, is based on these solid facts: It pays its own way, yet spreads benefits to all corners of the Nation.

We in the West know the damming of rivers and the bringing of water to land is costly. So does the resident of our coastal or Great Lakes region know the dredging of harbors and the clearing of river channels is costly. In the West, our development and survival depend upon reclamation projects which assure our crop output, our power resources, our very existence. In our port cities, the maintenance of commerce basic to municipal and regional existence stems from the navigability of harbors and rivers. Thus in our Nation, since establishment of Federal Government, ports and waterways are maintained by agencies of this same Federal Government—supported by tax dollars of citizens in all sectors of the Nation who realize the economic health of the country is dependent upon this waterborne commerce and trade.

But, when we turn to the costs inherent in reclamation—costs inherent to the economic well-being of fully one-third of our Nation—there are basic misunderstandings about Federal spending on Federal projects. And this, despite the fact that reclamation projects, in the aggregate and individually, actually return most of their construction costs to the Treasury of the United States.

There exists—unadvertised, but very tangible—a promissory note on every reclamation project. The farmers and power users who directly benefit from federally financed reservoirs, dams, and hydroelectric plants repay the construction costs of reclamation projects over a set span of years. Opponents of the reclamation thesis argue with the schedule of repayment, just as they argue the "excessive" cost of projects. Shrugging off the fact that borrowed dollars are faithfully returned to the Treasury for reclamation loans, they conveniently continue to overlook the very existence of repayment schedules.

These same opponents of reclamation likewise overlook another fiscal fact in their continuous warfare against the development of the West. They forget to note that most of the capital required for construction of irrigation features of reclamation works comes—not from the tax dollars of the Nation's citizenry—but from the reclamation fund built up from proceeds accruing to the United States from the Oil Leasing Act, from the sale and leasing of public lands, and other public-land revenues. Much of the land in the underdeveloped West (more than 70 percent in such States as Utah and Nevada) is owned outright by the Federal Government, which leases desirable acreage for mining, grazing, and oil production.

Accretions to the reclamation fund totaled $484 million on June 30, 1957, and collections representing construction repayments, water rentals, power revenues, and miscellaneous revenues amounted to an additional $702 million—a sum substantial enough to give a sizable start on most reclamation projects now authorized, if used directly for such purposes. It is statistics such as this the enemies of reclamation never cite. A few other figures they choose to avoid are these:

Out of $2,961,763,715 expended in total for plant, property and equipment on reclamation projects in the West during the past half century, $355,514,171 has been repaid, $181,515,797 of additional income representing interest on investment in power facilities was collected, and some $60 million in cash payments is made to the United States Treasury annually—including interest on the Federal investment in hydroelectric and municipal water facilities. Income to reclamation project farmers and farm workers totals $666 million in 1956—with a cumulative total income in the past half century of nearly $8.6 billion, and this from land that would have been virtually unproductive without the reclamation projects.

The total cost of the plant, property, and equipment of all Bureau of Reclamation constructed properties which produced this economic wealth has been some $2.962 billion.

There are some statistics almost impossible to get. For example:

Sales of electric energy from reclamation projects totaled 25,654,251,471 kilowatthours in 1956. We know these sales brought $60 million in revenue to the Federal Treasury. But it is virtually impossible to tally dollar output of plants producing finished products with this power, impossible as well to gage the lessened wartime effort; or the lessened output of aluminum and canned goods, lumber and shirtwaists, airplanes and toy trains we would have faced had not these kilowatts been available; it is likewise difficult to learn what the cost of available goods or even the lessening in overall standards might have been had such hydropower been lacking in major regions of the Nation.

It is, however, quite possible and proper to study the statistics attached to a single, small, typical specific reclamation project—and to speculate on what might have been, or upon what might not have been had this project never been built.

In order to survive in the desert wastelands of Utah, Mormon pioneers turned the waters of City Creek onto the parched earth of the Salt Lake Valley in 1847. Later, settlers brought water to other Utah areas to build a new way of life. However, even with this pioneering people whose very religion urges freedom from debt and cooperative but nongovernmental enterprise, the self-financing of truly major irrigation enterprises proved impractical.

In 1900 residents of the Utah County region along the Spanish Fork River found their choice of crops, and the extent of their farming, restricted by the seasonal flow of the stream being utilized to water their fields. They realized a dam in the Green River Basin east of the Wasatch Range, coupled with a mountain tunnel, would divert plentiful precious water—going to waste unused—to the southern part of their county to supplement natural streamflow.

A group of citizens worked 18 months seeking finances for the project. Unsuccessful, they appealed to the Federal Government for aid under the new Reclamation Act in 1904. The project was authorized in 1906, delivered its first stored water to farms in the summer of 1915—and water users have since repaid $2,678,072 to the Government, or 80 percent of the $3,349,424 repayment obligation.

Utahans know this as the Strawberry Valley project. One of the first Federal reclamation projects ever authorized, it brings 60,000 acre-feet of water to 42,000 acres of new lands and lands requiring replacement or supplemental water supplies.

The cumulative crop value from the time of completion to the present is $78,495,856 or 22 times the construction cost. In addition, the Strawberry produces power, municipal water, and recreation with an annual value of $500,000.

But more important, the personal income directly associated with the project is estimated at $18 million a year. For the population growth in the area has been continuous while contiguous areas, comparable in soil and climate, but lacking sufficient water, have shown population and income declines. Utah County, in which the Strawberry project is located, grew at the same pace as neighboring Juab and Sanpete Counties—until 1910 or thereabouts, when the water supply from natural streams was used at virtually its full potential. Since 1915, when the Strawberry began furnishing its first water, Utah County has gained in population, its neighbors have declined, losing purchasing power as well as residents.

Consumer studies by merchandising firms, Federal surveys and market-data reports indicate 12,000 people of the project area's present 24,000 population live in the county as a result of the Strawberry project.

This project, and hundreds like it, is a sound market for manufactured goods from other regions. During the past 5 years there was an average annual sale of 658 new cars and 225 new trucks in the Strawberry project area. Total value $2,337,000. Farmers annually averaged purchases of 156 new tractors costing $263,860 and $235,500 in new farm implements. Two-thirds of these automotive and machinery dollars left Utah, directly aiding the laborer and the economy of Michigan, Ohio, Illinois, Indiana, New York, and California, and indirectly aiding stockholders of auto and farm-machinery companies throughout the Nation. Purchases of building materials' home furnishings, hardware, clothing, drugs, appliances, and general merchandise shipped to the Strawberry region from all across the Nation totaled $18 million in a recent typical year, of which $10 million left the State.

Continuing our statistics a bit further: The volume of sales involved in interstate shipment specifically attributable to the project amounts to $8,232,000 of which $4,512,000 leaves the State annually. Over $1 million more in products is thus purchased annually from Eastern and Midwestern States than the original cost of the project. And while the population of Utah County rose steadily past the 24,000 mark, the population of neighboring Sanpete County leveled off just above 15,000 in 1920 and has since dropped below the 14,000 mark. Juab County reached a population peak of 10,000 and now has but 5,100 residents.

In part, Utah County's current well-being stems from new industrial plants such as the war-built United States Steel plant at Geneva as well as farm prosperity. This industrial growth was possible only due to water, power, and population resources stemming from the Strawberry project.

Finally, there's the matter of taxes. From 1915 to 1920, the first 5 years of the project, the assessed valuation of the project area jumped from $7,476,837 to $26,890,840, a rise directly attributable to the Strawberry. As for recent years—in 1954—with the project creating jobs and livelihoods which now support 12,000 persons, the total in taxes collected from all sources amounted to $149.83 for State and local taxes and $369.40 for Federal purposes per person. Multiplying these by 12,000 we find the project returning $1,797,960 to the State and local governments

and $4,432,800 to the Federal Government in a single year.

From an investment of some $3.33 million over 40 years ago, the Federal Treasury now receives nearly $3.4 million annually in tax revenues. Not a bad return from an investment in water, land and people. The Strawberry Valley project is relatively small. But in human returns as well as dollar values, it continues to bulk large in the lives of Utahns such as Albert Swenson, one of the early project farmers, who puts it this way:

"Before the Strawberry was finished we used to get one crop of alfalfa on the east bench—and that was it. During a dry year we just burned up."

Now there are three cuttings of alfalfa a season for feeding cattle and sheep, helping provide a stable agriculture and industrial base previously impossible in a semi-arid region.

Just as the Strawberry Valley unit illustrates a typical, sound, obviously successful small reclamation program unit, the upper Colorado River storage project and the much abused Fryingpan-Arkansas project show the scope, complexity, engineering ingenuity—and inherent soundness—of projects now moving forward despite a drumfire of thoughtless opposition. After decades of research, a $760 million basinwide development of the Colorado River is underway, with construction at Glen Canyon dam site in Arizona, and the beginnings of work at Flaming Gorge on the Green River in Utah as initial steps.

The prime contract for Glen Canyon Dam was let for $107,955,522—fully $27.6 million or 20 percent under engineering estimates. Opponents of the overall reclamation program continually charge that costs drastically exceed estimates, but forget to cite such cases in which bids fall well below estimated costs. Enemies of reclamation trumpet that Hungry Horse, Colorado-Big Thompson and similar projects have a poor record as regards to cost estimates—but forget to point out that World War II and the Korean conflicts boosted construction costs considerably between the time first studies were made and the time contracts were let. They forget to point out the vast savings that could have been made had the contracts been let speedily and construction promptly handled before wars intervened.

In pamphleteering efforts to block the Frying Pan-Arkansas project in southeastern Colorado they forget to point out that fully $140 million of an investment of $159,287,000 will be repaid by water users and power sales—much of it with interest—and completely forget the intangible benefits which might result when supplemental water from the Frying Pan reaches a region plagued by periodic drought and crop failure, while bringing no new land under cultivation. Farm incomes will be stabilized; land values rise—and with them taxable values; State and Federal revenues will increase through higher personal and corporate incomes; the purchasing power of the area will rise, meaning more business at national as well as local and regional levels; there will be more water and power for municipalities—providing for growth and industrial expansion, more payrolls, more purchases of raw and finished materials.

Critics of such projects as the Frying Pan-Arkansas fail to see, or at least forget to state, that whole areas of the West must stagnate, must decline, without water. They can only grow through water development. Los Angeles, Phoenix, Tucson, Salt Lake City—such centers obviously add to national prosperity as well as regional well-being. Croplands in California and Arizona producing fruit, cotton, vegetables and cattle for the national market play a role in the economy of the entire United States—as do aircraft plants and aluminum factories in the Pacific Northwest which depend on reclamation projects for hydroelectric power. There will be no such growth in the West as they represent—no further burgeoning cities, no fresh power and crop resources—without such projects as Frying Pan-Arkansas and Colorado River.

What is the Colorado River storage project? Designed to serve an area of 100,000 square miles described as the Nation's last frontier, it will provide water—that most valuable fuel of all—for agricultural development and the progressive growth of cities and towns in much of Colorado, New Mexico, Utah, and Wyoming. The program provides 4 large mainstream dams and 11 irrigation units, participating projects. Regulating the river against floods and preventing further silting at Hoover Dam, creating power and making water available for municipal use are part of the multipurpose uses of project waters, along with the provision of agricultural water supplies. Among those who will benefit as water reaches new farmland, and as supplementary water reaches old croplands, are members of the Navaho tribe, a people badly needing economic aid and security. In creating new, stable, multimillion dollar markets for such eastern products as autos and tractors, clothing and home furnishings, the Colorado River water storage project will not only parallel—but vastly exceed—the proven benefits brought by such a comparatively small reclamation project as the Strawberry.

There is much more, of course. The Colorado program will create a reservoir extending 186 miles up the Colorado and 71 miles up the San Juan from Glen Canyon; Flaming Gorge will provide another beautiful body of water, as will Navaho Dam and Curecanti on the Gunnison. Each will mean recreation of the sort made possible by Lake Mead—attracting new millions of dollars for tourist facilities, gasoline, foodstuffs, sporting goods. The building of dams and access roads will open large sectors of the Southwest and inaccessible portions of the Mountain West, to conservationists, tourists, fishermen and family vacationists.

Finally, such a project, bringing water to the soil, also brings people and power into juxtaposition with natural resources. The upper basin of the Colorado River contains 90 percent of the Nation's known uranium; upward of 30 percent of its copper; 90 percent of its commercially useful oil shale; huge deposits of phosphate rock for fertilizer, vast quantities of oil, natural gas, gypsum, precious metals, tungsten, molybdenum and vanadium. The project will open such resources to development, just as the building of reclamation projects made possible the current growth of the Pacific Northwest; just as the building of dams on the lower Colorado made possible the growth of Los Angeles and the rich farm economy of California's interior valleys.

True, the Colorado River storage project will be underwritten by the Federal Government, but approximately 99 percent of total costs will be repaid by the people who use the power and water—and fully two-thirds of the cost will be repaid in the Federal treasury with full interest.

Which is why, in the West, we equate reclamation with progress, with healthy growth, with healthy industrial and agricultural expansion, which, through the years, have moved America forward.

Problems of Klamath Indians

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. NEUBERGER. Mr. President, many of my colleagues in the Senate frequently ask me about the background of the complicated Klamath Indian problem, which I soon hope will be solved by the passage of S. 3051, the bill which I have introduced at the request of the Interior Department.

One of the best summaries of the entire complex Klamath situation appeared as the opening two articles in a series written for the Oregonian of Portland by Ken David, capable staff writer of that daily newspaper. Mr. David has made a careful and thorough study of the Klamath Reservation situation and all its ramifications.

These articles were published under Mr David's byline in the Sunday Oregonian of April 6, 1958. I believe they will serve to illuminate some of the questions and issues which predominate in our efforts to do justice to the Klamath Indians and, at the same time, to save for perpetual use the great forest, waterfowl marshes, and watershed uplands of the 850,000-acre reservation.

For that reason, I ask unanimous consent that Mr. David's two opening articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

WOES BESET OREGON INDIANS UNDER 1954 EMANCIPATION ACT

(By Ken David)

(The Federal Government's trusteeship over the Klamath Indians of southern Oregon will be terminated August 13, 1960, unless Congress changes the present law, an event considered unlikely. Since the termination law was passed in 1954, its terms have generated continuous controversy and deep concern over the possible economic and social consequences. Following is the first of a series reporting on the termination problem and how it stands to date.)

These are troubled days for the Klamath Indians. Time is running out on the Klamaths as a tribe.

They are confused, most of them, and resentful, even bitter.

No one knows for certain how deep in their past are buried the roots of their present sorrows, but the visible branches are entangled in a series of events of recent years.

The product of these events is total emancipation for the Klamath Indians, a precipitous end to almost 100 years of Federal Government guardian ship of their lives and fortunes.

For years, many of the Indians had sought escape from the restrictive paternalism of Federal Goverment. They dreamed of a distant day of freedom, a day when they could chart their own individual destinies and enjoy the same rights, social, economic and property, as their white neighbors.

Now that day is at hand, and for many of the Klamath tribe, the vague, pleasant dream has assumed the shapeless form of a monstrous nightmare.

LAW BRINGS CONTROVERSY

Emancipation for the Klamath Indians was born of conflict within the tribe and it grew to full flower by the fertilization of hasty, misdirected compromise.

That compromise was pounded together—in the closing days of Congress 4 years ago—into Public Law 587, more commonly known as the Klamath Termination Act, a piece of legislation which has fomented endless controversy, inside and outside the tribe, and generated constant effort to correct its errors and stem the relentless tide tumbling the Klamath Indians toward the brink of emancipation for which only a few of them are prepared and thrusting their 800,000-acre, multimillion-dollar reservation toward what virtually everyone who knows anything about Klamath termination believes will be economic ruin.

The Klamath Indians for centuries roamed, fished, hunted, and multiplied throughout a huge and wild region of the Pacific cotst athwart the boundary of what later became Oregon and California.

Then the white man drifted into this beautiful land claimed by the Klamath and Modoc Tribes and the Yahooskin Band of the Snake Indians. These Indians were forced to yield all but a million acres of the rich region they had populated for hundreds of years.

They chose for their reservation a million-acre area lying northeast of Klamath Lake, Oregon's largest lake, an area abounding in game, its streams alive with fish, and its mountains and valleys thickly covered with magnificent stands of ponderosa pine.

The Klamath's ownership of this million-acre wilderness was sealed by the treaty of 1864, and the wisdom of their choice lies in the value of the timber spread across the mountains and down the valleys.

VALUES SPECULATIVE

But the Klamath Reservation has a value beyond its timber resources, a value which can't be measured in cold, hard cash. Within the boundaries of the reservation is a giant marsh bordered by superb grazing land, some of it reclaimed from the marsh. The Klamath Marsh is a nesting, feeding, and resting area for millions of migratory waterfowl, and its importance to the Pacific flyway is incalculable.

The reservation is an area of abundant water, both underground and above ground. And here again, values are speculative. But conservationists estimate that half the water which pours into mammoth Upper Klamath Lake originates within the borders of the reservation. Preservation of this water resource is vital to the production of power, the irrigation of thousands of acres of farmland and pastureland, and the conservation of waterfowl and other wildlife.

ECONOMY THREAT SEEN

Many believe that the valuable resources of the reservation—water, timber, and wildlife—are in jeopardy because of the inflexible terms of Public Law 587, the Klamath Termination Act. They also believe the law, if carried out as now written, will bludgeon the economy of the Klamath Basin, with repercussions throughout Oregon.

Why? Because the evidence indicates that most of the Klamaths will elect to withdraw from the tribe under provisions of the law, forcing the "fire-sale" liquidation of up to 3 billion board-feet of the more than 4 billion board-feet of timber on the reservation, creating a "boom-and-bust" timber harvest on the region and denuding the forest to the point where it will no longer hold back the water, letting it run off swiftly, unchecked by nature. All the Indians who withdraw from the tribe must be paid in cash for their share of the tribal assets.

TWO FACTIONS COMPLICATE TRIBE LAND PROBLEM

(By Ken David)

The Klamath Termination Act which ends Federal Government trusteeship over the Klamath Indians on August 13, 1960, developed from the recent history of conflict and turmoil within the tribe.

Two factions emerged, neither with enough strength to assume distinct leadership. The nominal heads of these factions were members of tribal council and the smaller governmental unit, the executive committee. Policy disputes became frequent, and each faction adopted the device when council matters went against them of walking out, leaving the council without a quorum to conduct the business. Tribal government broke down.

Out of this strife an idea grew; let those who don't like what's going on withdraw from the tribe. Bills were introduced in Congress to create the machinery for this goal. But disagreements prevented their passage, primarily because the dissidents who wanted to withdraw objected to leaving in tribal hands the decision on how much money they would get and how withdrawal would be carried out.

Public Law 587, the final product of this discontent, was also the product of terrific miscalculations. The Indians got termination without understanding what they had. Congress, which had previously adopted a termination policy for reservation Indians, went along with it.

The second serious miscalculation was in the number of tribal members who could be expected to withdraw. No one intimately involved in developing the bill in 1954 anticipated that more than 5 percent of the Klamaths would choose to get out and convert their share of the tribal assets into cash.

The ink was barely dry on the President's signature on the bill when it became apparent that many times 5 percent probably would elect to withdraw.

LAW SUPPORT STUDIED

The sudden awakening to the realization of the economic and social consequences inherent in the termination law jarred the people of the Klamath Basin and rumbled through Oregon, echoing in the halls of Congress and the offices of the Interior Department whose agents had aided in the architecture of the new law.
